APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

The Silver Coinage.

SPEECH

OF

HON. JAMES L. PUGH.

OF ALABAMA,

IN THE SENATE OF THE UNITED STATES,

January 11 *and* 12, 1886.

The Senate having under consideration the resolution submitted by Mr. BECK December 18, 1885, relative to the payment of customs dues in coin and the execution of the laws relating thereto—

Mr. PUGH said:

Mr. PRESIDENT: Congress has no power more important than that of coining money and regulating its values, and none that has been attended with greater difficulties in its exercise. Every civilized government in the world has this power, and has experienced the same trouble in solving the problems of coin and paper as money of account and contract. With the aid of all the learning in the world the most advanced statesmanship is still grappling with these problems at the precise points encountered in the beginning. All legislation upon finance and currency is necessarily more or less speculative and experimental, dependent as it is for results upon natural laws and conditions over which law-makers can exercise no control. The first question, and the whole question, for Congress to decide is whether existing laws to coin silver and regulate its value should be repealed, suspended, or amended. Is our currency unsound or in danger of unsoundness by the continued annual coinage of 24,000,000 of silver dollars? Is the country suffering or likely to suffer by this annual addition to our coin currency? Where is the proof of unsoundness and suffering and necessity for a change?

I venture the statement that at no time in our history has our paper or metallic currency been as sound and perfectly healthy as it is to-day, and our country never has been freer from financial trouble or in a more universally healthy and prosperous condition. The financial and industrial reports from all parts of the United States concur in the statement that everything has improved and is improving on the situation of last year, except in the amount of our exports, which are short of last year for the admitted reason that the demand and consumption of American commodities have diminished on account of the inability of the industrial classes in gold-using countries abroad to purchase the necessaries of life. Mr. Swank, the best-informed man in the country on the condition of the iron and steel industries in the United States, in his late report states that they are in a promising condition, and not in the least affected by the excitement about silver in financial circles. The same report comes to us in the Manufacturers' Bulletin, published in Boston, as to the condition of the dry goods trade. Whatever affects our currency or our commerce, locally or generally, to-day is liable to affect them forever from causes that exist unavoidably in everything that is human and the work of man.

How much gold coin is there in the United States and how much are we producing? How much silver coin is there in the United States and how much are we producing? What is the capacity of our mines to produce both metals? The following is the last authoritative answer to these questions. The report of the Director of the Mint for 1885, page 27, shows that on the 1st of July, 1885—

> The amount of coin in the country was some $820,000,000, of which $542,000,000 consisted of gold coin and $278,000,000 of silver coin. * * * The gold and silver bullion in mints and assay offices on July 1, 1885, and available for coinage, was $71,501,682, making the actual amount of coin and bullion in the country $802,500,519.

The same report, page 3, shows that—

> The domestic production of gold bullion was on July 1, 1885, $31,584,436, and of silver bullion, same year, $32,250,044. The total coinage value of the gold and silver bullion purchased at the mints was $89,683,850.

How much paper currency have we in the United States? In legal-tender Treasury notes (greenbacks) we have in round numbers $346,000,000 that can not be reduced under existing laws. On the 1st of November, 1885, there were 2,727 national banks in existence, with their note circulation of $315,847,168, including notes of national gold-banks, making in the aggregate of actual coin and paper currency in the United States $1,471,847,000—in round numbers, $1,500,000,000.

What is the matter with this volume of American currency? Is it unsound, or is there any well-grounded apprehension of its serious derangement or unsoundness? How are these important questions to be answered? Our aim as lawmakers, charged under oath with the grave duty of voting upon all propositions to change or suspend the operation of existing coinage or financial laws, should be to get at the truth and be governed by it as free as possible from passion, or prejudice, or the influence of party, or the spirit of crimination or recrimination.

In the examination and discussion of the troublesome questions of finance the opinions, arguments, and conclusions of others should be weighed according to their real merit; and to ascertain how much they are worth we should scrutinize the motives, capacity, experience, practical knowledge, integrity, and disinterestedness of the authors. Is it a fact that those who take part in the discussion of financial questions and make arguments and express opinions to influence legislation belong to the creditor or the debtor class, or are they producers or capitalists? The people understand that those who supply money and those who use it are widely separated in interest. Capitalists and creditors own United States bonds and national banks, and these banks issue paper money on these bonds and aid in making the volume of our circulating medium. Capitalists and creditors mostly own the deposits and use the checks on banks and clearing-houses. Farmers, laborers, mechanics, artisans, and manufacturers own commodities made up of cotton, wool, and other raw material, and wheat, corn, meat, animals, muscle, and brain.

These commodities and human agencies bring money, and the amount depends upon the supply and the demand for them and very largely upon the quantity of money in circulation. If there is but little money and plenty of commodities, the price will be low. If there is a sufficient supply of money, the demand for commodities will be greater and the price higher. Too little money will always buy more commodities, whether the supply be great or small. It is manifestly to the interest of those who have idle money, or money to invest, to make its purchasing power as great as possible. The smallest volume of money will buy more labor, productions, and property than a larger volume. Hence money-holders generally favor contraction of the currency, and commodity-holders favor a volume of circulation that comes up to the point where equality is found between the supply of money and commodities. "The quantity of necessary, useful, or gratifying products is the measure of wealth, and money is the just measure of commerce and exchange and the standard by which contracts are fulfilled."

It is very natural that those who have labor and land and machinery to produce commodities should favor a plentiful supply of money to make market prices more remunerative. It is also very natural that those who have money to lend and to employ labor and purchase crops and other productions should want their money to have as much purchasing power and bring as high rates of interest as possible, and they know that the less money there is in circulation the less competition and the less market price. Those who owe debts can pay them easier when money is plenty than when it is scarce, and the creditor to whom the money is coming wants it to have as much value and purchasing power as practicable.

These are plain truths well understood by the people. I hear no complaint from the people that the amount of currency that is or could be put into circulation is too large. They do complain that the circulation of our supply of currency is withheld and obstructed for the purpose of exciting undue influence upon public opinion and Congress. We all remember the cry against the passage of the coinage act of 1878. It came from the same men and newspapers who are now clamorous

for the repeal of that act. They told us then, as they do now, that cranks and fanatics favor the coinage of silver. That they knew it would load us down with a cheap and useless currency, and according to Gresham's law, which is universal and unvarying in its operation, gold would be driven out of circulation and all currency would give way to the depreciated dollar and cause gold to be hoarded, and discredit of Federal securities; but the cranks and fanatics restored silver to coinage and made it a legal tender, and after seven years trial we call for actual results, and what is reported? We have $215,000,000 of silver and $550,000,000 of gold. Federal securities are 24 per cent. premium. For 1885 our exports of gold were only $8,477,892, while for 1884 they were $41,081,957, or $32,000,000 less. Our exports of silver for 1885 $33,750,633, or more by $8,000,000 than for 1884. While our gold imports the year 1885 increased $4,000,000 over those of 1884.

And what has become of Gresham's law that the cheaper would drive out the better dollar, that silver would supplant all the par currency and occupy the whole field of circulation, when the fact reported by the Treasury officials is that the people do not want silver, will not take it, and the Treasury is overloaded with unused and idle silver dollars?

But how gratifying the admission in the last Treasury reports that the $215,000,000 of silver, the fruit of the Bland bill, that was to spread poison in every direction and produce such dire consequences, can be made as good as gold and absorbed by the people in our circulating medium if we will be so good as to suspend further coinage. What a grim satire upon the financial sagacity of our present instructors in the science of political economy! Is it not a great triumph of the Bland bill that its enemies are compelled to admit that our silver currency has been increased $215,000,000 without driving out a dollar of gold or depreciating Federal bonds, and that all this silver can be utilized in circulation if we will be wise enough to stop the silver mint. As these financiers have shown themselves mistaken seven years ago it is not impossible that they are now mistaken in their opinions and predictions. One request I make, and that is for the Federal Treasury and national banks to stand aside and allow Gresham's law to have full and free operation on silver currency.

There is a most important difference between gold and silver coin and paper currency that is hoarded by individuals or lying in the vaults of banks and gold and silver and paper currency that is in actual active circulation among the people. It is very material that we approximate as near as practicable what amount of coin and paper is required by our people for active use among themselves to make our trade and commerce prosperous on a reasonably permanent, legitimate, and healthy basis. We should never lose sight of the important fact that our entire volume of currency, whether gold, silver, or paper, circulates only among ourselves in the United States. Not a dollar of our gold, silver, or paper circulates or has any purchasing power as money in any other country in the world. All our gold and silver coin is nothing but bullion when it leaves this country, and is marketable by the pound, just as beef and iron. Remember, then, when we talk about gold and silver and paper as money we only mean, and must necesarily mean, that which is made money by a law of Congress and the stamp of the Government. Where is the necessity for legislation?

President Cleveland and Secretary Manning have communicated to Congress the information that our volume of circulation is made up of an incongruous, conflicting, and irreconcilable mass of paper and coin—national-bank notes, legal-tender greenbacks, gold and silver certificates, and standard gold and silver coin. These high officials in discharging their solemn duty according to their honest convictions have recommended to Congress in substance that the legal-tender greenbacks be redeemed and retired from circulation, that no more coin certificates be issued, and that the coinage of silver be suspended. The same information and the same recommendations were made by President Arthur and his Secretary of the Treasury in two annual messages to Congress, and I remember no Republican in either House who was bold enough to introduce a bill to carry out either of these recommendations.

President Cleveland is the Chief Magistrate of this great Republic. I have much confidence in his practical sense, sound judgment, unwavering integrity, manly firmness, and devotion to constitutional principles. He and I and other members of the national Democratic party may and do differ on the troublesome economic questions of finance and currency, and we may and no doubt will differ on questions of detail in the adjustment of revenue and tariff legislation. I know that these subjects are incapable of final and satisfactory solution. They are so far-reaching and complicated in their operation upon the varied pursuits and interests of the people of this wonderful country that I can not consent to be so self-conceited, so intolerant and exacting as to make such differences the cause of quarrel or our separation. These subjects are regulated by laws of Congress that are always open to repeal or amendment. The President recommends measures to Congress and we have to vote for these measures to give them the force of laws. I have given thoughtful consideration to the President's recommendations and feel constrained to withhold from them my support.

The report of the Secretary is the most luminous and powerful presentation of the reasons and arguments in favor of his proposed "currency reform" that have been or can be produced. He avers that our currency is suffering from two disorders:

1. The act of February 28, 1878, requiring "perpetual Treasury purchases of at least $24,000,000 worth of silver per annum" to be coined into unlimited legal-tender dollars and issued to the people as equal in value to gold dollars.

2. "The act of May 31, 1878, which indefinitely postponed redemption and payment" of the $346,000,000 of unlimited legal-tender greenbacks.

The Secretary charges that "these two acts are each a separate menace to the public tranquillity and injurious to the public morals and the public faith," and he "commends to the consideration of Congress the immediate repeal of the clause requiring Treasury purchases of silver bullion and repeal of the act making compulsory the issues and reissues of legal-tender" greenbacks. How is it that the public tranquillity is menaced and public morals and public faith injured? The Secretary answers that "the coinage act of 1878 is overloading the mints with unissued and the subtreasuries with returned silver dollars, and will unavoidably convert the funds of the Treasury into those depreciated and depreciating coins."

These charges unavoidably lead us into a wide field of inquiry.

The first general question to be answered is how much real honest money do our people require to carry on *among themselves* their own trade and commerce on a legitimate, safe, and permanent basis to insure reasonable and healthy results and conditions? The radical and far-reaching changes made in the last twenty years in the agencies and instrumentalities of trade and commerce and in the methods and practices of conducting business transactions have introduced so many new factors as to greatly modify and render inappropriate many of the rules and principles heretofore taught by the ablest financiers.

As illustrative and explanatory of my meaning I desire to quote from the report of the Comptroller of the Currency to Congress in 1881, page 202:

It is evident that the amount of coin and paper currency used in any country depends largely upon the number of banks and bankers it contains, and upon the method of doing business; and no theory is more absurd than that which has been so frequently urged during the currency discussions of the past few years that the amount of money required is in proportion to population. Tables showing the per capita of coin and currency in use in any country are curious and interesting, but almost valueless in determining the amount of paper money required. Through the machinery of the bank, with its system of checks, bills of exchange, and clearing-houses, large amounts of business may be settled without the use of coin or circulating notes. Coin and currency are but the small change u-ed in trade. Checks and drafts are substitntes for money, and in every case, if these were not used, the latter would be required.

Again, at page 198 of the same report he prints tables showing the relative amount of gold and silver and paper, and checks, drafts, and bills of exchange in daily use by the national and other banks in their vast transactions.

This table "exhibits the total receipts on June 30, 1881, of the forty-eight banks in New York city, the fifty-four in Boston, the thirty-two in Philadelphia, and the nine in Chicago, and the proportion which the receipts in each city and the aggregate of all of them bear to the receipts of all the banks on the same date. It also shows the receipts and proportion to the whole of the banks in twelve other cities, and the same as to the remaining banks of the country."

From an examination of this table—

Says the Comptroller:

it will be seen that the receipts of the forty-eight banks in New York city, the fifty-four in Boston, the thirty-two in Philadelphia, and the nine in Chicago comprised nearly four-fifths of the total receipts on June 30, 1881; while the receipts in the sixteen reserved cities, named in another table, on same day were more than 85 per cent. of the whole amount; the receipts of the New York city banks were three-fifths of the whole, which fact shows how closely connected is the business of all the national banks with the great commercial center of the country, nearly every bank and banker in the Union having deposits, subject to sight-drafts, at that point.

The next table shows for same date the receipts of the banks in each State and Territory, exclusive of those above named, with similar percentages. Attention is called to the remarkable coincidence shown in the table in the percentage of checks and drafts for the date named, it being 81.7 per cent. in each instance. The percentages of the cities for the same date also correspond very nearly.

What amount of coin and paper currency and checks and drafts were used in these bank transactions and what is the proportion in the respective amounts used by the banks of coin and paper and checks and drafts on June 30, 1881, an approximate relative amount of business having been done every business day in subsequent years, as shown by the Treasury reports every year since? There were, says the Comptroller, in 1881, "6,796 banks and bankers located in all the principal cities and villages in the Union, and the number of checks and drafts in daily use by our own people is consequently larger, in fact, far greater, than anywhere else in the world."

The Comptroller then furnishes tables giving the amounts and ratios of gold and silver coin and paper money, as well as that of checks and drafts, in each of the cities, States, and Territories of the Union:

The New York Clearing-House Association was formed in 1853, and is now composed of forty-eight national and twelve State banks, and the assistant treasurer of the United States at New York.

Through the courtesy of Mr. W. A. Camp, its manager, a statement of the transactions during the year ending October 1, 1881, has been obtained, which shows that the total exchanges were more than $48,000,000,000 while the balances paid in money were less than $1,800,000,000. The daily average balances paid in money were nearly $6,000,000, or about 3½ per cent. of the amount of the settlements. * * * The average proportion of checks and drafts was 81.7 per cent. * * * The gold coin equaled 1.3² per cent. of the total receipts; the silver coin

0.17 of 1 per cent.; the paper money 4.36 per cent., and the checks and drafts 91.85 per cent., while the checks, drafts, and clearing-house certificates together were equal to 94.09 per cent. of the whole. The total percentage of cash on that day was 5.91 per cent. only.

* * * * * * *

Checks, certificates of deposit, and drafts, or bills of exchange, which are now used so largely as substitutes for money, are the most important and useful parts of the machinery of the bank. The issue of circulating notes is not an essential feature of banking, for there are many banks in this country, chiefly incorporated under State laws, which do not issue such notes. But checks and drafts are almost as indispensable to the successful conduct of the business of banking as capital or deposits.

The foregoing instructive facts and figures are American and relate to American banks and their use of coin and paper money and checks and drafts in their vast transactions.

How is it in European nations? The same Comptroller reports that—

In England banks and bankers are numerous and large numbers of such instruments of exchange are used, particularly in the principal cities. In France, on the other hand, their use is much more infrequent, for, except the Bank of France, with its ninety branches, there are no incorporated banks in that country, and thirteen of these branches were conducted in 1880 at a loss of more than $30,000.

A paper read by Mr. Pownall, which is published in the London Bankers' Magazine for November, 1881, says:

It will be seen that the proportion of checks and drafts used in London does not vary greatly from that of the same items shown in the receipts of the banks in New York city. The proportions used in the banking business of the country districts is less, as in the United States it is less in the banks outside the cities. But the use of checks and drafts in the country districts in the United States is nearly 9 per cent. greater than in the corresponding districts in England.

From the same authority we learn:

The proportional use of credit documents and metallic money in English banks. * * * The paper is elaborate, and among others gives tables showing the proportion of gold coin, silver coin, bank notes, and checks used by banks located in agricultural places, in the metropolitan area, and in the cotton, woolen, iron, pottery, and silk manufacturing districts. * * * The entire paper will greatly interest the economic student.

But the following extracts will be found particularly instructive, as indicating the tendency of modern thought upon banking and currency complications growing out of far-reaching changes in the machinery of banks and their methods of business:

There is—

Says Mr. George H. Pownall, a great English financier, speaking before the Institute of Bankers in London—

a certain grim satire in these figures when one thinks of the libraries filled with blue books full of weighty arguments, all curiously wrought out to help in the settlement of the great note question. It is clear that the check and the clearing system are the main lines upon which banking is destined to run. Dead theories respecting notes and the right of issue belong to the generation to which they were living verities. To us the living fact is the substitution of a new instrument of credit. For the present generation the improvement of the check and the clearing system, the mechanical details of office organization, those details of book-keeping which save time are, from the enormous number of documents passing through the hands of bankers, of more weight than the most learned treaties on notes and note-makers.

Banking statistics, gathered with due patience, would play a great part in industrial statistics. They represent trading totals, they rise and fall with prices, they expand with commercial prosperity, they contract in the day of bad trade. Systematically collected, they would furnish constant lessons. From no other source could we gain so much and so valuable information as to trading currents as from bankers. In their books the trading world is photographed. It has been calculated that 97 per cent. of the transactions of British wholesale commerce pass through the hands of the bankers of the United Kingdom. The sources of that commerce and its distribution must in the broadest way be marked in the totals of the banking world. The cottons of Lancashire, the woolens of Yorkshire, the shipping of Liverpool, the commerce and finance of London are all represented there. The tendency of this generation is to seek to place its theories upon an exact basis. How much would the social and trading life of England be illustrated if we could mark out, though only at intervals, or even for a single day, the magnitude of our great industries as they are represented in the books of bankers? The conversion of the mode of settlement of claims from payment by coin and notes into payment by checks and clearing is not merely a local or even a national movement. The American statistics, so opportunely published, demonstrate the wide-reaching influence of the causes working in that direction. Wherever the English race has planted itself and founded a community, there the tendency toward a common financial organization has shown itself. We see this at home, we see this in America; it is repeated in Australia. There is, therefore, in despite of much diversity, much that is common to all these systems.

Mr. President, I have thus presented to the Senate and the country the controlling influence of banks and bankers in deciding the most intricate and far-reaching question of modern times. The new factors of checks and clearings as substitutes for money had their origin in the war on silver in Europe and America, and these bank implements are and have been the most formidable and destructive with which the friends of silver have had to contend. Checks and clearing-houses have concentrated in banks and bankers, irresistible power in interstate and international trade and commerce, and their mighty influence and agencies in all industrial pursuits connect them necessarily and inseparably with any financial system in any country and make them potential in deciding the volume, character, and regulation of all currency.

See what mighty power banks and bankers possess in determining what amount of money the people shall have in their trade and commerce; when and to what extent the volume of circulation shall be expanded or contracted; whether coin or paper money shall circulate, and in what proportion. Look at the facts and figures I have furnished to prove how this vast power has been exercised. It is useless to tell the people that the banks and bankers will not use their power to promote their own interest. The people fully understand that checks and clearing-houses dispense with the use of money by banks and bankers in their dealings with each other, and make the volume of coin or paper currency in actual circulation a matter of comparatively indifferent interest to them. But it is not so with the people in their trade and commerce with each other. The people have no clearing-houses and but few deposits, and with them checks are a useless substitute for money.

Do not understand me as condemning national or other banks or their honest methods of doing legitimate business. On the contrary I believe our national banking system to be superior to any in the world, and I am its friend to the full extent of the rights and powers of bankers honestly, legitimately, and fairly exercised, but when they prostitute their powers and defiantly disregard the laws and objects of their creation to acquire absolute dominion over our supply of currency and thereby make themselves the soulless regulators of our trade and commerce and of the price of labor productions and property, they become public enemies and deserve instant annihilation.

Mr. President, notwithstanding the almost exclusive use of checks as substitutes for money in business transactions, all payments, great and small, depend for their integrity upon a true measure of value, and that measure must be made of coin of standard weight and fineness. All currency, whether coin or paper, that is entitled to be denominated real, honest money, whatever may be its volume, must at all times and under all conditions be able to stand the crucial test prescribed by Congress in the law which declares what shall be a dollar.

I have already stated the constituent elements of our fifteen hundred millions of dollars, and that no part of this volume of currency has any recognition or purchasing power anywhere in the world except in the United States. It is not denied by any person that everywhere in the broad limits of the United States, in the manifold and vast trade and commerce of our own people among themselves, each constituent element of our entire circulating medium is fully established in its purchasing power over labor, commodities, and property of every description, and is received in all payments as lawful money, each different kind of coin and paper having the confidence of the people that for the uses among themselves it is a uniform part of a harmonious volume of currency not equaled, and certainly not excelled, in its soundness and usefulness by any in the world's history. Then, what is the matter? Where do we find any cause for alarm?

President Cleveland and Secretary Manning and those who urge Congress to repeal and amend our coinage and currency laws have failed to state a single fact or a single cause originating, existing, and operating anywhere in the United States that has produced or can produce any unsoundness or derangement in our currency, or justify any change in our financial legislation in accordance with their recommendations. Every fact and every cause upon which they base their predictions of trouble and express the opinion that serious disorder in our currency and ruinous effects upon our trade and industrial pursuits are impending and threatening are foreign in their origin and existence. Congress is confronted with the highest official announcement that the United States have reached a crisis in their marvelous development and in their industrial growth and commercial relations that can be met and relieved only by concurrent action between our Government and the governments of England, France, and Germany, resulting in an agreement by which there shall be but one standard of value in each and all these countries, and that when such an international standard is thus established our entire home currency must be made to conform to it in equivalency and convertibility.

What are the foreign facts stated by Secretary Manning as being so potential and disastrous in their effects upon American conditions and welfare?

1. That, except for petty domestic uses, silver coinage has been suspended and silver disused as a legal-tender currency in England, Germany, and all the nations composing the Latin Union, and gold made the only standard of value.

2. That such suspension and disuse of silver as money of account and contract by leading European nations with whom we carry on nearly all our foreign commerce "has made that metal of unstable and falling value" and reduced the price of silver in our standard dollar from 100 cents to 80 cents in the bullion market of London.

From the existence of these two facts in Europe the conclusion is drawn that their necessary and unavoidable effect on American currency and commerce will be destructive morally, politically, materially, and generally.

It is not stated with any confidence by the President, the Secretary, or any who agree with them that there is any ground for hope that the Government of the United States will be joined or aided by any leading government in Europe in preserving silver as an equal with gold in the monetary unit of value to be employed by the parties to such union in their trade and commerce with each other.

It is, therefore, useless to blink the issue. The question for Congress to decide is whether the silver-coinage act of 1878 shall be repealed and the coinage of silver thereby forever terminated in the United States. It is a reflection on the common sense of the people and those who represent them in Congress in opposing such repeal to attempt to delude them by the use of terms. Suspension of silver coinage means and is

intended deliberately to have the effect of putting an end to silver except for pocket change and petty home uses on the same basis it occupies in Uurope.

Is this Senate ready for such action, involving as it does the most momentous consequences?

It may be presumption in me to say it, but I am too full of the conviction to retain it, that if the coinage of silver is suspended it will be a step that never can be retraced, and will lead directly and speedily to the consummation of a thoroughly organized conspiracy of the capitalists who own Federal bonds and national banks and two-thirds of the gold in this country to secure absolute control of all the currency in use by the people, as a measure of value, the regulation of its volume, and its consequent purchasing power over labor, property, and all commodities. To the capitalists who are parties to this conspiracy no such prize ever enlisted the energies of man. No wonder those who stand in the track of their endeavor are denounced as fools, fanatics, demagogues, unworthy of public attention and confidence. "The bankers, bondholders, and business classes," we are told, possess all the ability, learning, and experience on money questions, and they alone are qualified to decide what shall be money, how much of it the people need, and what shall be the price of labor, productions, and property.

Secretary Manning informs us that what he has recommended as "currency reform" "is much more than the deliberate judgment of the Secretary of the Treasury. * * * It is attested to him from the centers of trade in all parts of the country, as much from the South as the North, as much from the West as the East. * * * Not alone our able statesmen and instructed economists and financiers advise the stopping of the silver coinage now, but wherever our fellow-citizens are concentrated in commercial cities and towns the business classes engaged in the trade, the enterprises, and manufactures of those centers, and the still larger classes of workingmen employed by them urge the stopping of the silver coinage now." The Secretary further "respectfully submits that there is no compensation for the risk of a continued coinage of silver, and that a judgment so accordant of the great business classes who carry on the exchanges of the country must be accepted as a final estimate of that risk."

Who are "the great business classes who carry on the exchanges of the country?" The report of the Comptroller of the Treasury, from which I have quoted, proves that they are the bankers and bondholders who carry on the exchanges of 97 per cent. of the entire trade and commerce of this country, and that three-fifths of the whole passes through the banks and clearing-house of New York. The Comptroller's report further shows that most of the banks in the United States, numbering 2,727 national banks and over 4,000 other banks, and most of the other "great business classes who carry on exchanges" in all the great business centers in Northern, Southern, Eastern, and Western cities and towns, are bound to New York and her banks and clearing-house with hooks of steel. These are the great business classes who are the final arbiters and whose decision of the question whether the coinage of silver shall be suspended "must be accepted as final" without appeal or question.

I claim some right to speak for the people of the great State of Alabama, and I believe I have enjoyed opportunities equal at least to those had by the Secretary of learning the sentiment of all classes in my State, and I believe I know how the people in the South think and feel on the question of stopping the coinage of silver. I can not be shaken in my belief, except by an actual test, that at least three-fourths of the voting population of Alabama and the other States of the South (not bankers or bondholders or capitalists) would to-morrow vote against the suspension of the coinage of silver. On what do I base my belief? Every State, county, city, and town in the South are in debt more or less. They are all poor and the people are in the same condition. At least three-fourths of the population of the South are farmers and agricultural laborers.

Our mining and manufacturing industries are in their infancy, and our resources and means and advantages for manufacturing are equal to any in the world. The indebtedness of the South was contracted on a silver basis, and we repel the charge as being utterly unjustifiable that it would be dishonest to pay in silver. The people of the South know that if there is to be no more silver coinage and gold alone is to be the only legal tender in payment of their indebtedness their burden will be increased at least one-half, and the farmer and manufacturer know if they are to have no more currency in circulation than the banks are willing to furnish the prices received for commodities will be reduced to the point of bare subsistence.

There is but one fact the enemies of silver parade conspicuously to the front, and, like Day & Martin's blacking, it is always on hand, and that is, that the 412½ grains of silver that the Government makes a legal tender for a dollar is worth only 80 cents; that as American coin in American markets it is made a compulsory dollar, and in the London market (England) the same amount of silver is really worth only 80 cents or less. Banks and bankers, their directors and stockholders, and their subsidized press and other representatives, all able and experienced financiers (?), are greatly distressed that the poor farmer has to sell the fruits of his toil for 100 cents in a dollar's worth, and is compelled to accept only 80 cents in payment, and that the brown-fisted laborer and weeping widow and needy orphan have to take for their hard earnings and small incomes 80 cents when their employers and debtors honestly owe them 100 cents.

I undertake to say that the poor farmers and laborers and widows and orphans never had any idea how they were being robbed or how much they had been wronged by the use of this vile thing called silver until they read a description of their sufferings by their guardians in the official reports and the New York and Boston newspapers or other newspapers established, edited, and supported by the officials and stockholders in national banks or by capitalists interested in destroying silver as a part of our coin currency. I have no doubt there are many exceptions of newspapers and their owners and editors who are free from the influence or control of national banks or capitalists, and who entertain the disinterested opinion that silver should be demonetized or its coinage suspended, but I venture the statement that a large majority of the monometallic newspapers in the United States and a large majority of the delegates who attend conventions to discuss and act upon the silver question are personally interested in the demonetization of silver; but because this class is thus interested it is no reason why they are dishonest, and no reason why they should not be heard, and their opinions and statements respected and allowed to receive fair and full consideration.

But while this is true it is also true that there is a rule, so old and universally accepted without dissent that it has become a part of the common law, that no man, however pure and upright, can entirely free himself from the influence and bias of self-interest, and its existence disqualifies the judge, the juror, and the witness; and when the witness is allowed to testify interest in the result goes to his credibility. While I read what national-bank officials and their representatives and friends say why silver should be demonetized it is received and weighed by me with many grains of allowance as coming from the standpoint of self-interest and the bias formed imperceptibly by association and opinions coined in the mint of the clearing-house. The opinions of manufacturers expressed by themselves or in convention or in their newspapers are received and governed by the same rules when the question is to be decided whether there shall be a revision and amendment of existing tariff laws; and I apprehend that the Secretary will decline "to accept as final the judgment of this great business class on the risk" of allowing existing tariff laws to stand without revision. The same rule applies to those interested in silver mines and silver coinage.

The President and Secretary admit that the fate of silver, beyond its use by our own people as pocket change to the extent of its present amount in this country, depends entirely upon the action of foreign governments. The Secretary says "Bimetallism is essentially an international affair;" that "international bimetallism does not exist since it was upset by Germany; and the international agreement, twice attempted, has failed."

Then the sole question for Congress to decide is: Are we to have no more silver than the present supply (say $215,000,000), and is that amount to be accepted as the limit of the silver coin to be employed by our own people in their trade and commerce among themselves? And shall we now decide that it is now settled that no more of our silver coin will be exported for use abroad? Are we ready to decide these questions on speculative theories and solemn predictions of what may or will happen, against authoritative and indisputable facts found in Treasury records, and against what we know is true, and in favor of what we know to be false?

Are we to accept the mere dictum of the President in his message that the coinage of silver has already gone "beyond the amount needed for a circulating medium?" Where are the facts to support that assertion? The President himself states them, and what are they? He says:

> The necessity for such an addition to the silver currency of the nation as is compelled by the silver-coinage act is negatived by the fact that up to the present time only about fifty millions of the silver dollars so coined have actually found their way into circulation, leaving more than one hundred and sixty-five millions in possession of the Government. Against this amount there are outstanding silver certificates amounting to about $93,000,000.

Was ever a conclusion more unsatisfactory? After stating that only about $50,000,000 had found their way into actual circulation among the people, the admission follows that $93,000,000 more had found their way among the people, who had deposited them where they had the legal right and obtained silver certificates for their convenience. Do these facts discredit silver with the people and prove that no more is wanted or needed by them in our circulation? What other reason for his opinion that the people do not want silver even to the extent of its present amount is given by the President? He says:

> A special effort has been made by the Secretary of the Treasury to increase the amount of our silver coin in circulation; but the fact that a large share of the limited amount thus put out has been returned to the public Treasury in payment of duties leads to the belief that the people do not now desire to keep it in hand; and this, with the evident disposition to hoard gold, gives rise to the suspicion that there already exists a lack of confidence among the people touching our financial processes.

Again I inquire what has become of Gresham's law. Poor silver! What can be done to get a little fair play from its enemies? When its friends pass a compulsory law that it shall be received in payment of duties, as soon as it is done the fact is paraded to show that the people are enemies of the money the law gave them the right to pay for duties.

But who paid these duties in silver, and where were they paid? More than three-fifths of these duties on imports were paid in New York, and a large part in Boston and Philadelphia. Who made these payments? Were any payments made by importers through national banks and the clearing-house? Did the "great business classes who carry on exchanges" have anything to do with making these payments? If so, the explanation is easy where and how the President got the information and used it as a fact supposed to be prejudicial to silver.

But the President and Secretary and all the subordinates in the Treasury unite in the statement that "if silver coinage is continued long enough it will result in the substitution of silver for all the gold the Government owns applicable to its general purposes." How does the President say this result is to be produced? He answers:

Every month two millions of gold in the public Treasury are paid out for two millions or more of silver dollars, to be added to the idle mass already accumulated.

What public law, duty, policy, or obligation requires that silver bullion shall be paid for in gold? Have bullion owners refused to accept silver? Has silver been offered in payment? Has the Secretary allowed the owners of silver bullion to refuse silver dollars when silver dollars are a legal tender in payment? Is it not singular that silver bullion owners would thus discredit the coin from their own mines? If the owners of silver bullion refuse silver dollars and demand gold, then amend the law with a proviso that the Secretary shall not make the monthly purchase unless silver dollars are received when offered in payment. But I apprehend the payment made in gold for silver bullion has been the voluntary act of the Secretary. If so, then the ruinous drain of gold from the Treasury in payment for silver bullion can be easily avoided.

Again, the President says—

We have now on hand all the silver dollars necessary to supply the present needs of the people, and to satisfy those who from sentiment wish to see them in circulation.

It is the sentiment of a large majority of the American people that the interest accruing on Federal bonds and the principal of called bonds should be paid in silver dollars, as authorized by express law and the contract recited in the face of the bonds themselves. Why is "the idle mass of silver dollars already accumulated in the Treasury" permitted to remain there by the voluntary act of the Secretary of the Treasury in failing to offer or tender payment in silver dollars in accordance with the positive law of the contract by which the debt was created and on which the bonds were issued? The following is the law and the contract:

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt, approved July 14, 1870, amended by an act approved January 20, 1871," and is redeemable at the pleasure of the United States after the 1st day of May, 1881, in coin of the standard value of the United States on said July 14, 1870, with interest in such coin from the day of the date hereof at the rate of 5 per cent. per annum, payable quarterly, &c. The principal and interest are exempt from the payment of all taxes and duties of the United States as well as from taxation in any form by any State or municipality.

In the teeth of this solemn act of Congress, passed by a two-thirds vote of the representatives of the people, who have repeatedly indorsed such law by their re-election, and the election of others who have permitted it to remain unrepealed and unamended to this day, the Comptroller of the Treasury has the temerity to use the following language in his report, page 15:

The credit and standing of the country is deservedly high, and it is not believed that the people desire either that the principal or interest on the bonded debt of this country be paid in anything but gold coin or its equivalent. This matter was discussed at the time the bonds were issued, &c., and the conviction is general that the faith and credit of this Government is pledged for the payment of its securities in gold coin or its equivalent.

The law and the contract which govern in every forum in Christendom the obligation of the Government and the rights of the bondholders expressly declare that the gold and silver coin now lying idle in the public Treasury are equivalents in value and a legal tender in payment of the principal and interest of the bonds through all coming time and under all circumstances and conditions. And yet the Comptroller declares that "if we continue to add these silver dollars to our circulating medium, and they continue to accumulate in the Treasury, the Government must of necessity pay some portion of its obligations in that coin; and if the Government should pay its interest and other obligations and redeem its bonds in standard dollars the business of the country would immediately go to a silver basis." The President follows in the same strain. He says:

The condition in which our Treasury may be placed by a persistence in our present course is a matter of concern to every patriotic citizen who does not desire his Government to pay in silver such of its obligations as should be paid in gold. Nor should our condition be such as to oblige us, in a prudent management of our affairs, to discontinue the calling in and payment of interest-bearing obligations which we have the right now to discharge, and thus avoid the payment of further interest thereon. The so-called debtor class, for whose benefit the continued compulsory coinage of silver is insisted upon, are not dishonest because they are in debt, and they should not be suspected of a desire to jeopardize the financial safety of the country in order that they may cancel their present debts by paying the same in depreciated dollars.

The foregoing is a burlesque upon Congressional enactments, which define the obligations of the Government as recited in its bonds, and especially is it promising of the faithful execution by the executive officers of the Treasury of the law contained in section 3694 of the Revised Statutes, requiring that—

The coin paid for duties on imported goods shall be set apart as a special fund, and shall be applied as follows: First, to the payment, in coin, of the interest on the bonds and notes of the United States; second, to the purchase or payment of 1 per cent. of the entire debt of the United States, to be made within each fiscal year, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct; third, the residue to be paid into the Treasury.

Why have the foregoing laws of Congress now on the statute-books been persistently treated as a dead letter every hour of their existence by every President and Treasury official? Can any other reason be assigned than that the wisdom of these laws has been condemned by the "accordant judgment of the great business classes who carry on the exchanges of the country, and whose judgment must be accepted as a final estimate of the risk of obeying the laws of Congress?" Shall Congress abdicate and surrender the financial government of the country to this new tribunal, self-constituted, with no responsibility to the people, and from whose decisions there is to be no appeal? Nor is this all of the disobedience of law and absolute subjection to the demands and decrees of this new tribunal.

On the 21st of June, 1882, the Senate had under consideration "the bill to enable national banking associations to extend their corporate existence." Mark the object of the bill. The charters of national banks were about to expire, and the purpose of the bill was to enable them to renew and continue their lives. The national banks obtained from Congress the right to extend their lifetime by renewing their charters on the terms of the law which is now and has been in operation since 1882.

I quote from the CONGRESSIONAL RECORD of the Forty-seventh Congress, first session, volume 13, part 5, page 5171:

Mr. PUGH. Before the question is put, I should like to submit to the Senator from Texas [Mr. COKE] an amendment which it seems to me will meet all the difficulties, and present squarely to the Senate the question that I am satisfied he aims to present. I think he will accept it. After the word "and," in the twelfth line, I propose to insert, "no national banking association shall become a member of a clearing-house in which such certificate shall not be receivable in the settlement of clearing-house balances," meaning silver certificates. In explanation of this amendment, I stated to the Senate that "that prohibition will operate alone upon the fiscal agents of the Government, and will not interfere with any right of individuals or other banking associations who are members of a clearing-house. It obviates the constitutional difficulty suggested by the Senator from Iowa and the Senator from Ohio."

The clearing-houses are the most powerful agencies in the country to discredit the silver certificates on account of their refusal to receive them in the settlement of balances. We do not seek by the amendment I propose to interfere with the rights of any other members of the clearing-houses, except the members over whom we clearly have absolute control, and they are the national banks. We ought not to permit our fiscal agents to go into any association that employs its power for the purpose of discrediting the silver certificates, for the reasons which have been so strongly stated by the Senator from Texas. Why is it that we will permit the national banks to become parties to an association which is employing its power for the purpose of affecting the credit and circulation of the very certificates we authorize to be issued and require everybody else to receive? I say our power over the national banks ought to be exercised to prevent them from joining an association that will use its power for the purposes I have stated.

We are aiming to put silver certificates upon the same footing with gold certificates. These clearing-house associations are using their power for the purpose of defeating the very object we aim at by this legislation. Is it not our plain duty to interfere and prevent the most powerful parties in such association, the national banks, from becoming parties to that agency which is defeating the object we aim at in our endeavor to carry out the will of the people? To defeat the amendment is to give aid and comfort to the national banks and the parties who associate with them for the purpose of discrediting silver and silver certificates.

The following is the vote on the passage of my amendment:

YEAS—29.

Beck,	Davis of Ill.,	Ingalls,	Van Wyck,
Brown,	Davis of West Va.,	Jonas,	Vest,
Butler,	Farley,	Maxey,	Voorhees,
Call,	George,	Morgan,	Walker,
Cameron of Pa.,	Gorman,	Pendleton,	Williams.
Chilcott,	Grover,	Pugh,	
Cockrell,	Hampton,	Ransom,	
Coke,	Hill of Col.,	Vance,	

NAYS—20.

Aldrich,	Ferry,	Hoar,	Rollins,
Allison,	Frye,	Lapham,	Sawyer,
Anthony,	Hale,	McMillan,	Sewell,
Bayard,	Harrison,	Mahone,	Sherman,
Conger,	Hawley,	Morrill,	Windom.

Since my amendment became a part of the act of 1882 the national banks that extended their existence under it have continued their membership of the New York clearing-house, and have deliberately and defiantly refused to carry out the provisions of the amendment by an agreed evasion of the law, amounting to its nullification. The plan agreed upon was that no member of the clearing-house would ever offer silver certificates in payment of any balances, and none being offered, of course none would be refused; and, what is most remarkable, the assistant treasurer of the United States in New York, who was a member of the clearing-house, was a party to the agreement and co-operated with the national banks in the practice of repudiation and nullification. The New York Times, a paper of great ability and influence on financial questions, is outspoken in its confession and justification of the

policy of evasion and nullification of Congressional law by national banks. In a recent editorial it says, under the caption of "The Banks and Silver:"

Meantime it has been suggested by a banker of very high standing that the banks are bound by every consideration of obligation to the community and of prudence in the care of the interests of their depositors to preserve the general currency on a gold basis, and to continue to treat, as they have hitherto treated, the silver currency "as an unavoidable infliction, to be separated in practical business from current money by marked discrimination." The method of carrying out this principle is to receive from the Government through the clearing-house the currency the Government may have to offer, but setting it apart and treating it as a special fund, "to be paid over to the banks interested in the very money received on their behalf." No silver or silver certificates need be offered by any bank in the settlement of its clearing-house balances, and none would need to be refused. Such as came from the Government would be received and used as opportunity offered. But the clearing-house settlements and the reserves of the banks would be preserved unadulterated, and the international standard would be maintained in its integrity. Silver would not be any more than it has been in New York bankable money, while it would continue in general circulation undepreciated until such time as its volume became too great for such use.

Such a policy is clearly within the law, and it is equally clearly calculated to secure the only solution of the currency problem, and to secure it with the least derangement to business. It will be objected that it is not calculated to promote the permanent incorporation of silver in our currency, and is opposed to the spirit and intent of the silver-coinage act. This is true. It is not intended to promote any such result, and it would lead to the ultimate repeal of the act. Of that there is no doubt. The act was at once a blunder and a wrong. There is not the slightest obligation upon any citizen or body of citizens to suffer injury from the operation of the law if it can be legally avoided. It certainly can be avoided by the banks. The law says silver dollars shall be a legal tender for debts; it does not say that they shall be a legal tender for loans on demand, such as bank deposits. The policy outlined for the banks looks to the repeal of the law, and that is the purpose of the Administration and the hope of all conservative business men.

What other powerful motive of self-interest do we find for this life-long, persistent, and unfair warfare upon silver by national banks as a part of our standard currency?

Silver is the only money that circulates among the people that is beyond the control of national banks. Silver is the only lion in the track of the absolute dominion of the national banks over the volume of currency that circulates among the people. We have $346,000,000 of greenbacks that can not be diminished or increased under existing law. Stop the coinage of silver, and nothing in the future is more certain than that it is a mere question of time when the national banks will become not only the money-kings, but the absolute "monarchs of all they survey." In the language of General Hamilton, "the general state of debtor and creditor, all the relations and consequences of price, the essential interests of trade and industry, the value of all property, the whole income, both of the state and of individuals" will become subject "to the judicious or injudicious regulation" of the currency by national banks.

If silver is demonetized how can there be any increase in the amount of our coin or paper money except at the will and dictation of national banks? Is Congress prepared to delegate this stupendous power over the price of labor, property, and productions in this country to these private corporations? Everybody agrees that the price of everything depends largely upon the quantity of money in circulation. Does silver add to our volume of currency? Would the amount of money in circulation be diminished if silver were dropped out of our currency? The opinion of James G. Blaine ought to have some weight with a large class of people, and in the Forty-fifth Congress he delivered a prepared speech, which will be found in the seventh volume, page 821, of the CONGRESSIONAL RECORD:

On the much-vexed and long-mooted question of a bimetallic or monometallic standard my own views are sufficiently indicated in the remarks I have made. I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in the end throughout the commercial world. The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property, except those investments which yield a fixed return in money. These would be enormously enhanced in value, and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly seven thousand millions of coin or bullion in the world, not very unequally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove distressing to millions and utterly disastrous to tens of thousands.

Alexander Hamilton, after admitting that the quality of fixedness could be more surely found in a single than in a double standard, used the following weighty language in his memorable report as Secretary of the Treasury in 1791:

To annul the use of either gold or silver as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full circulation with the evils of a scanty circulation. On the whole it seems most advisable not to attach the unit to either of the metals, because this can not be done effectually without destroying the office and character of one of them as money and reducing it to the situation of mere merchandise, and this would probably be a greater evil than occasional variations in the unit from the fluctuations in the relative value of the metals, especially if care be taken to regulate the proportion between them with an eye to their average commercial value.

Again Mr. Blaine speaks:

I do not think that this country, holding so vast a proportion of the world's supply of silver in its mountains and its mines, can afford to reduce the metal to the "situation of mere merchandise." If silver ceases to be used in Europe and America the great mines of the Pacific Slope will be closed and dead. Mining enterprises of the gigantic scale existing in this country can not be carried on to provide backs for looking-glasses and to manufacture cream-pitchers and sugar-bowls. A vast source of wealth to this entire country is destroyed the moment silver is permanently disused as money.

I quote from the speech of the distinguished Senator INGALLS on the Bland bill:

Were the proposition to discontinue the coinage of the silver dollar and deprive it of its legal-tender power submitted now for the first time to the people of the United States it would be rejected overwhelmingly. No enduring fabric of national prosperity can be builded on gold. Gold is the money of monarchs; kings covet it; the exchanges of nations are effected by it. Its tendency is to accumulate in vast masses in the commercial centers, and to move from kingdom to kingdom in such volumes as to unsettle values and disturb the finances of the world. It is the instrument of gamblers and speculators, and the idol of the miser and the thief. Being the object of so much adoration, it becomes haughty and sensitive and shrinks at the approach of danger, and whenever it is most needed it always disappears. At the slightest alarm it begins to look for a refuge. It flies from the nation at war to the nation at peace. War makes it a fugitive. No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty that it does not break. It has no friend whom it does not sooner or later betray. But silver is the money of the people. It is the money of wages and retail. Its tendency is toward diffusion and dissemination. It enters into the minute concerns of traffic, and is exchanged day by day for daily bread. It penetrates the remotest channels of commerce, and its abundance, bulk, and small subdivision prevent its deportation in sufficient amounts to disturb or unsettle values.

I next quote from the speech of Senator Wallace, of Pennsylvania, to be found in the RECORD of the Forty-fifth Congress, page 637:

Now, for the first time in the history of this country we are urged by a powerful interest to adopt the single standard, to recognize gold as the sole measure of value of the property of the country, and to place and keep silver in a subsidiary position. Otherwise stated, it is to add to the value of gold by debasing and disusing silver. Our measure of value has always been gold and silver. This policy had its foundation deep in the wise forethought of the men who made this Government for the people. Silver then, as now, was the money of the people. To destroy the use of silver as money was to lessen the quantity of the circulating medium and provide a scanty instead of a full supply of money. Against this sending of silver to a subsidiary position our whole history rises up in protest.

I will next read from the able and exhaustive report of Mr. R. M. T. Hunter, of Virginia, as chairman of the Finance Committee of the Senate in 1853:

But the mischief would be great indeed if all the world were to adopt but one of the precious metals as the standard of value. To adopt gold alone would diminish the specie currency more than one-half; and the reduction the other way, should silver be taken as the only standard, would be large enough to prove highly disastrous to the human race. Indeed, a reference to the history of the precious metals and the general course of human production can scarcely fail to convince us that there has been a constant tendency to appreciate their value as compared with the residue of the property of the world, and that every extraordinary increase of the supply of the precious metals of which we have any account has exercised a highly beneficial effect upon human affairs.

When contracts are made by a standard which is gradually contracting, the advantages are on the side of capital as against labor, and productive energy is cramped by receiving less than a fair share of the profits of its enterprise. Before the invention of substitutes for payments in coin, and before the increased supply of specie from the discovery of America, human history is full of the strifes between debtor and creditor, and human legislation is rife with experiments to limit the encroachment and engrossing power of capital. So much is the value of currency affected by the facility with which it may be counted and its convenience of transportation, that there will always be difficulty in supplying the place of small notes with anything but silver or that of large notes with anything but gold. We require, then, for this reason, the double standard of gold and silver; but above all do we require both to counteract the tendency of the specie standard to contract under the vast increase of the value of the property of the world. And what harm can arise from any probable increase of the precious metals, if both are allowed to swell the volume of currency? On the contrary, a more beneficial event for the trade, the industry, the moral and political condition of the world could scarcely be imagined.

Of all the great effects produced upon human society by the discovery of America there were probably none so marked as those brought about by the great influx of the precious metals from the New World to the Old. European industry had been declining under the decreasing stock of the precious metals and an appreciating standard of value; human ingenuity grew dull under the paralyzing influences of declining profits, and capital absorbed nearly all that should have been divided between it and labor. But an increase of the precious metals in such quantities as to check this tendency operated as a new motive power to the machinery of commerce.

Never were heard sounder or wiser utterances upon the intricate subject of the currency. It will always be an indisputable truth that "when contracts are made by a standard which is gradually contracting, the advantages are on the side of capital as against labor, and productive energy is cramped by receiving less than a fair share of the profits of its enterprise." It is equally well established that "both metals are required to counteract the tendency of the specie standard to contract under the vast increase of the property of the world." This truth has been and is now being fully verified in European and American history. England and Germany are now struggling to retain their gold supply, and the prices of labor, property, and productions in both countries are now on the downward grade on account of the unavoidable tendency of their gold standard to contract under the pressure of the vast increase of labor, property, and productions, and we are now feeling the effects of this contraction in the diminution of our exports. The Right Hon. George I. Goschen, M. P., an eminent English financier, in an address delivered before the Bankers' Institute, in April, 1883, said:

To me it appears that we have a striking phenomenon before us. On the one hand, I do not think any of you will be ignorant of the fact of the withdrawal of an immense amount of gold which under ordinary circumstances would have passed into the currency of gold-using countries. If you take the amount of gold currency which has been absorbed in the last ten years by Germany, Italy, and the United States you will arrive at the stupendous sum of about $1,000,000,000. Germany required $420,000,000, Italy $80,000,000, and the United States have taken more than $500,000,000.

Mark the weighty fact that this amount of gold taken by the United

States was during the ten years from 1873 to 1883. Five years of this time the coinage of silver was dropped, and five years the coinage of silver was renewed, and for the five years the silver mint was turning out $24,000,000 per annum, our gold supply was on the increase, and no gold-standard country in the world has kept pace with the double-standard United States in the increase of its gold supply.

Now—

Continues Mr. Goschen—

We have this phenomenon before us—that $1,000,000,000 of gold has been applied to purposes for which ten or fourteen years ago it was not necessary to apply it.

I next have to ask from what annual supply of gold this extraordinary demand for gold had to be met? Now, many of you may be aware that there has been a falling off in the annual supply of gold, and that while in 1852—the first year after the gold discoveries—the amount of gold produced was $180,000,000 it is now about $100,000,000 per annum. The annual average therefore fell in the years from 1871 to 1875 to $96,000,000 as compared with very nearly $150 000,000 in the years from 1852 to 1856. Thus you will observe that we have had an extraordinary and additional demand of $1,000,000,000 coming upon an annual supply of $100,000,000.

The consequence is that this extraordinary demand has practically absorbed the total supply of gold for the last ten years. But it is not sufficient to state that the total supply of gold available for the needs of circulation in the gold-using countries of Europe has been absorbed. This additional and extraordinary demand falls upon a supply of $100,000,000, which has to furnish the wear and tear of the coinage and the total amount used for the purposes of art and manufacture, besides the purposes of circulation. Now, there are various estimates of the amount of gold used in arts and manufactures. A very eminent French authority accepts an estimate of $50,000.000 as the amount annually consumed for such purposes.

In the report of the Director of our Mint for 1883 on the consumption of the precious metals in the United States, it appears, on page 15, that "gold to the value of $14,223,448 was consumed." And the Director remarks that—

These figures indicate a much larger appropriation of the precious metals for purposes of manufacture and ornamentation than any estimate I have previously made, and are especially significant and valuable in ascertaining the metallic circulation, as they show a large and apparently increasing consumption of the gold coins of the country in such industries.

I continue the quotation from the address of Mr. Goschen that—

If we take the $50,000,000 as the amount required for arts and manufactures and for all purposes other than circulation, and subtract that sum from the $100,000,000 of annual supply, it leaves for the purposes of circulation $50,000,000 only, and on this hypothesis the extraordinary demand of $1,000,000,000 would absorb the available yield. Economists will accordingly ask themselves what result, if any, is such a phenomenon likely to have produced. I think there is scarcely an economist but would answer at once: "It is probable, it is almost necessary, it is according to the laws and the principles of currency, that such a phenomenon must be followed by a fall in the prices of commodities generally." Let us now turn to the other side of the question and examine the range of the prices of commodities, and see whether or not it is a fact that there has been a great fall.

For the figures I am about to place before you I am indebted to Mr. Giffin, of the board of trade. I have examined the prices of commodities as published by the board of trade, but I have also consulted other sources. I have here a classification of articles under certain heads showing prices in the years 1873 and 1883 respectively. [Here he gives the table.] I am bound to say it appears to me that these figures reveal an extraordinary state of things. * * * It appears to me that if it be true that population continually increases, and that there is a certain increase in wealth, an additional amount of circulation will be necessary in order to meet the increased demand unless there are compensating counter economies by the extension of the check system and other methods. On the one hand you undoubtedly have increased population. You also have an increase of wealth. Then again, you require more gold for more transactions. Gold has two or three functions to perform in circulation. It has to supply what I may call pocket-money, and it has to liquidate large transactions between nations and nations, and what is almost an analagous function, it has to remain in the vaults of bankers on deposit against the notes that are issued against it; still it is more simple to treat these two latter functions as one. Such being the two functions of gold, if the population increases the necessary pocket-money must increase, and if the transactions increase, somewhat more is required for liquidating the balances.

Let us now consider whether the economies in the use of gold (checks and clearings) have been as great as the increase in the population and as the increase in the amount of gold required to liquidate the balance of transactions. Mr. Giffin, in an article printed in the Journal of the Statistical Society for March, 1879, expresses the opinion that the United Kingdom was thoroughly "well banked" even twenty years ago, and that there have been no new devices invented during the last twenty years which have much economized the use of gold in the United Kingdom. We have already reduced the use of gold in this country almost to a minimum, and I am confirmed in this view by the statement that the total circulation of gold in England increased, according to the estimate of the authorities of the Bank of England, from $515,000,000 to $620,000,000 between 1870 and 1880. This would mean, and it is a most significant fact, that in this country, which is so "well banked," $100,000,000 more circulation was nevertheless required in 1880 than in 1870.

As regards England, then, I do not see that there has been any economy in the use of gold to counterbalance the increasing demand of the population, nor are we aware—those of us who have been able to look into the matter—that in France or Germany, or elsewhere, the economies have been such as to counterbalance the increasing demand for gold. I am now brought to the point that if there is any truth in the theory that the amount of circulation stands in a certain relation to the question of price, then this strain upon the gold circulation must have produced an effect upon prices. We have to deal with the fact, let us look at it how we will, the sovereign goes further than it used to go. Happy, then, it is for those who have the sovereigns; on the other hand, unhappy it is for those who have commodities left on hand and produce which they have not sold.

* * * * * * *

Let us now assume that there will be a continuance of low prices; that is to say, a continuance of the increased value of gold. Two classes would be permanently affected. One is the class which is entitled to receive gold. They will be much better off. The class of debtors, on the other hand, who are bound to pay a given amount of gold for a long period to come, will be much worse off. In the same way, as the rise in prices is generally to the advantage of the debtor, so a fall in prices will be to his disadvantage. The holders of mortgages would be in a distinctly favorable position. While the mortgages would run, they will continue at a sum that will be on the constant increase in its purchasing power. Those who have borrowed the sum will be in a worse position by having their means of payment constantly diminishing in price. The influence of this circumstance on land owners will not be overlooked. Land owners who have borrowed on their estates will be under contract to pay a sum which represents more value than when the loan was made, while the produce of the land, if it should fall in price like other commodities, would not secure the same amount of gold. It is impossible to see how farmers should be able to continue to pay the same amount of gold for rent if the prices of what they raise from the soil should permanently fall.

* * * * * * *

A distinguished French economist has said that he was not sure whether France would not have been bankrupt in 1848 but for that great increase in the production of gold, which created a degree of commercial prosperity which enabled the French to escape from their difficulties. I have heard another distinguished man suggest that the great difficulties of the old Roman Empire with regard to laws that had to be passed for the relief of debtors was due to the fact that they never had an expansive currency, but that the supply of the precious metals was stationary, at least if compared with the increasing transactions and the increasing population, and that it did not enable the Roman men of business to conduct their operations with that continuously small increase in the supply of the precious metals which was required to meet the increased demands of population and increasing wealth.

Mr. President, this is not the twaddle of a Western or Southern demagogue, or the incoherent nonsense of some "idiot" or "lunatic" who ought to have a room in an asylum, but they are the grave and well-considered views of an English statesman and experienced financier and monometallist, who speaks to his fellow-economists on a great financial phenomenon that now overshadows monometallic England and Germany.

But the London press, speaking for the Bank of England and the Bank of Germany and the Bank of France and their clearing-houses, and the English minister in Washington can safely join with their allies in Wall street and the money kings of the East in demanding of Congress the unconditional abandonment of the coinage of silver and planting gold as the world's standard of value. These crusaders against silver come and tell us "our returns show how small an amount of money enters into our transactions, and how much its use has been superseded by our machinery of banking, with its modern system of checks, bills of exchange, and clearing-houses. The coinage of silver has increased the currency of the country to the extent of $215,000,000, without any necessity or demand for it whatever. Silver certificates are an inexpedient addition to the paper currency. They are made a legal tender, and yet have for their basis only about 80 cents in the dollar. There need be no apprehension of a too limited paper circulation. The national banks are ready to issue their notes in such quantity as they think the laws of trade demand. The embarrassments which are certain to follow the endeavor to maintain several standards of value out of high gold and low silver, and high gold certificates and low silver certificates, are too obvious to need discussion. And then the greenbacks are in our way and fill a place in our circulation that we could supply, and they ought to be redeemed and retired. Let silver and silver certificates go, have no more gold certificates, and sweep away the greenbacks, and the Congress that secures these results will have a monument erected to its wisdom and statesmanship." Then the gold image will rise in full view of an admiring world. Then, indeed, we shall have but one god to worship. What a millennium! Gold the only god and the national banks the only king! One standard, of no use but to worship, and one currency, all paper, issued alone by the king and in such quantities as he may decree.

But a more dangerous class of the common enemies of silver come and propose a compromise. They say, "We, too, are the friends of silver. We agree with you that striking silver out of our currency and confining us to gold as the only unit of value would produce the most serious consequences. But a crisis is upon us in the fate of silver, and as its friends, we must be considerate and make reasonable concessions. Most of the European nations have a deep interest in the proper adjustment of the ratio between gold and silver coinage. We furnish the world with the largest portion of both gold and silver, and our exports command the best money in the world, as they ever should do and will, unless we bind ourselves to accept a poorer. The silver question demands our immediate attention. A continuance of the monthly addition to our silver coinage will soon leave us no choice but that of an exclusive silver standard, and reduce us to a place in the commercial world among the minor and less civilized nations. We can not consent to be placed in the very awkward position of paying for all that we buy abroad upon a gold standard and selling all that we have to sell on a silver standard. Now we are assured that the most potential means of bringing about any concert of action among different nations would be for the United States to suspend, for the present, the further coinage of silver dollars. This is the decided opinion, in both France and America, of the highest authorities on bimetallism, and of those who wish to bring silver into general use and raise its value."

Mr. President, this is a very seductive picture. It looks so fair. It comes with the face of good old common honesty. Can it be a Trojan horse? I do not like some of the company this suspension project is keeping. It comes from the life-long enemies of silver. It looks to me that if we stop the coinage of silver it will be an important point gained

by its enemies, and the necessary and inevitable effect will be to reduce its price far below what it is now selling for in the bullion market, and otherwise discredit it as currency. To expect me to believe by any theoretical reasoning in the face of indisputable facts that the amount of silver bullion consumed or taken for use in the world has nothing to do with its price, is a poor compliment to my common sense. In one breath we are told that silver is selling 20 per cent. under gold on account of the quantity that is being produced; that the quantity is greater than the demand. In the next breath we are told that the surest way to raise the price of silver in the bullion market and make it stronger in public confidence is to suspend the annual consumption of twenty-four millions for coinage, and thus put it under the world's interdict as currency.

Such reasoning excites my suspicion. I know the reasoning is utterly false, and the soundness of a proposition founded on it can never have my confidence and sanction. There is no plainer truth to my mind than that silver has not been fairly treated by the Government, or by the fiscal agents of the Government, or by those whose paramount interest it is to destroy it as currency, and it is those enemies who favor the proposition to suspend coinage. With the powerful agencies and motives that have been actively at work by all sorts of methods here and in Europe to put down silver and put up gold, it is surprising that silver has been able to meet the odds against it and stand as well as it has the shock of the battle. Mr. President, silver is invincible because it has the confidence of the people. If its enemies will turn it loose among its friends there will be no depreciation, no degradation. Let gold stay where it has always been, and where it will always be found and nursed and kept free from hard usage, in the vaults of the national banks and the money chests of the rich, but give the people—the friends of silver—a showing at it and it will have a hearty welcome and find a warm place in their pockets.

When silver has the same treatment as gold from the Government and from banks and bankers and clearing-houses, and a fair trial with gold on the natural laws of supply and demand, and the same chance with gold to get into circulation, and the same recognition as gold under the existing laws of Congress, then if silver fails the failure will be unavoidable and irremediable. When that trial is thus made and the results verify the predictions of its enemies, I will meet the emergency as best I can with the lights then before me. Until that time comes I shall "let well enough alone" on the double coinage of gold and silver. I have no fear of a loss of our gold so long as the balance of trade is in our favor, and the danger of our imports exceeding our exports is a contingency not likely to happen. Such a result is too improbable to require the perilous experiment of the suspension of silver coinage to remedy. And if we were to suspend silver coinage and the balance of trade were to turn against us how would that balance be paid? Should there be a balance how would our gold be any safer on a single than on a double standard?

I have no fear of a redundant coin currency. The addition of $24,000,000 per annum to our silver currency has caused no injurious effects in this country or in Europe. The Director of our Mint in his report in 1881 makes the following statement at page 276:

> For instructive comparison, the circulation, paper and metallic, as far as ascertainable, is given in additional columns. They are worthy of special consideration at this time, and should tend to allay the prevalent fear of impending commercial disaster as a consequence of abundant and increasing monetary circulation, expanding with the growth of business and accompanied by enlarged production and substantial prosperity.

I will support any change in existing laws that will retire from circulation all paper currency under ten or even under twenty dollars, so as to give the entire field for the use of small bills, or small change, to silver and silver certificates. My friend, the Senator from Mississippi [Mr. GEORGE], introduced a bill to make this change the last Congress, and I am glad he has introduced the same bill the present session. I hope the Committee on Finance will give the bill early and favorable consideration. If that field is given up entirely to silver it will not be in conflict with gold or the greenback or national-bank notes in that dominion. Were the United States bonds, hereafter called for payment by the Secretary of the Treasury, paid to the national banks who hold them in silver dollars, and existing laws were amended so as to give the right to such banks to deposit the silver thus received in the Treasury and subtreasuries and to obtain coin certificates therefor in denominations of one, two, five, or ten dollars to circulate as money free from the 1 per cent. tax, it would present a very favorable opportunity for silver and the national banks to become better friends. The field that ought to be occupied entirely by silver and silver certificates would be a very attractive one to national banks, as they are now allowed to issue no bill under $5 and that taxed 1 per cent., and there are no silver certificates now authorized under $10.

But until silver has a fair trial and fair treatment in this country that nature has supplied so bountifully over all others with this metal, I will never agree to suspend its coinage an hour. If the friends of silver allow themselves to be captured by any compromise requiring a suspension of its coinage it will amount to giving up the threshold to its enemies and ultimately end in the loss of the fort.

Presidential Succession.

SPEECH

OF

HON. LEWIS BEACH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 14, 1886,

On the bill (S. 471) to provide for the performance of the duties of President in case of the removal, death, resignation, or inability both of the President and Vice-President.

Mr. BEACH said:

Mr. SPEAKER: I must confess that I was greatly surprised at the remarks of my friend from Illinois in the closing hour of yesterday's session. I can not allow his statements to go unchallenged. His charge that the Democratic party through its representatives in this House was striving to rush this bill through "in hot haste" simply to perpetuate the power of that party in the executive branch of the Government is not warranted by the facts. Who is responsible for this bill? Who began the agitation of this question? Was it not a Republican Senator at the other end of this building? In which branch of Congress did the bill originate? Was it not in the Republican Senate? When was the subject of changing the existing law first mooted? Was it not at a time when the assassination of President Garfield devolved the duties of the Presidential office upon Vice-President Arthur? Why was it then for the first time in our history made the subject of deliberate action by the Republican Senate? Was it or was it not for the purpose of perpetuating a Republican succession?

It may be reasoned that the Republican Senate was not actuated by any partisan motives, because since the circumstances have changed with the accession of a Democratic President it has promptly passed the bill again. But, Mr. Speaker, the belief is gaining ground that the alacrity of the Senate was not without its party aims and purposes. It is thought by many that it is the intention of you gentlemen on that side of the House to defeat this bill and then go before the country crediting the Republican Senate with its passage and debiting the Democratic House with its defeat.

The bill may be defeated in this House. Such a thing is possible. There are grave doubts and serious misgivings in the minds of members on both sides of the House as to whether the bill under consideration is exactly what it ought to be.

I am free to say it does not come up to what I believe to be right and expedient. But I look at this whole question in a practical way. I recognize the necessity of doing something and doing it quickly. The present condition of affairs should not be permitted to continue for a single day longer. The public mind is disquieted and the peace of our President disturbed by the thought of the crisis his death would precipitate. We can not shut our eyes to the fact that assassination—a thing the fathers never dreamt of—has become possible in our Republic. It is our duty then, as wise legislators, not only to provide for the resulting effects of an assassination but to adopt all reasonable precautions to prevent its commission. This bill is in that direction, and that is one of the reasons why I support it.

Much has been said in the course of this debate upon the constitutional right of Congress to provide for a special election. I am of opinion that the Constitution did not contemplate a special election. Others may differ with me, as they have have a right to; but whether a special election was contemplated or not, I take the position that none should be held, and in that position I believe I would be sustained by nine-tenths of the people. The frequency of elections has grown to be an alarming evil. They disturb the business interests of the country and tax the industrial resources of the people. The class of voters whose presence at the polls is particularly desirable are alienated by too frequent demands upon their time at the sacrifice of their business interests. In addition, the enormous expenses of conducting elections, with the attendant turbulence and corruption, should warn us against holding them any oftener than may be actually necessary.

Another point has been made as to the meaning of the word "officer" in that clause of the Constitution which relates to a vacancy in the Presidential office. It is claimed, on the one hand, that the President *pro tempore* of the Senate and the Speaker of the House are not "officers" upon whom the Presidential office can devolve, and on the other hand it is claimed that they are, and upon this point a great deal of breath has been wasted. I do not regard it as material. I am willing to admit for argument's sake that the President *pro tempore* of the Senate and the Speaker of the House are "officers" within the meaning of the Constitution, and yet I hold that the Presidential office should not under any circumstances devolve upon them or either of them. The importance of maintaining the legislative and executive branches of the Government separate and distinct and keeping the one independent of

the other can not be overrated. It was this consideration that influenced Mr. Madison to prefer the line of succession adopted by this bill. And in my opinion such a succession would have been made in 1792 had it not been for the envy and jealousy which prevailed in Congress among the respective friends of Hamilton and Jefferson.

Mr. Speaker, it is almost universally conceded that Congress is confined by the Constitution to the designation of some "officer" to discharge the duties and functions of the Presidential office in case to a vacancy. If this be so, the simple question before us is, what "officer" shall we designate? Shall it be the Cabinet officers who are the trusted advisers of the President chosen by the people, or shall it be some one of the numerous United States district attorneys or marshals, or shall it be one of the judges of the Supreme Court, or shall it be the presiding officer of the Senate or this House? It resolves itself into a matter of taste, and taste, as we all know, differs.

Under the limitations imposed by the Congress, I favor at this time a Cabinet succession, and I do so for one very strong reason if for no other. We all of us, I hope, appreciate the great importance of passing some bill at the earliest moment possible. Most of us are familiar with the fate of bills which receive amendments in one House distasteful in the other. This bill has passed the Senate three times, I believe, after very careful consideration. The Senate has passed it without division. If we pass it, as I think we should to-day, it will become a law by to-morrow, and a great weight will be lifted from the minds of the people. If we do not pass it—if we amend it—it will go back to the Senate and the chances are it will fail to become a law.

Under these circumstances I think it our duty to pass the bill in its present shape, and leave to the future the formulation of some more acceptable plan for the regulation of the Presidential succession.

Presidential Succession.

SPEECH

OF

HON. ROBERT S. GREEN,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 18, 1886.

On the bill (S. 471) to provide for the performance of the duties of President in case of the removal, death, resignation, or inability of the President and Vice-President.

Mr. GREEN, of New Jersey, said:

Mr. SPEAKER: By the pending legislation Congress is seeking to discharge a duty expressly imposed upon it by the Constitution—that of providing by law for the case of a vacancy in the office of President and Vice-President, declaring what officer shall then act as President until the disability be removed or a President shall be elected. In discharging this duty, a law should be enacted, not by hasty legislation, but as the result of deliberate examination and thought, which shall be in harmony with the theory of our Government, and one as free from objections as to its possible operation as such deliberation and thought can secure.

The act of 1792 was passed to meet this constitutional requirement, but its provisions are now seriously challenged and weighty objections are urged against its provision which devolves the duties of President upon the President of the Senate or the Speaker of the House. Passed by a Congress largely composed of men who had also been members of the constitutional convention, at a time almost immediately succeeding the adoption of that instrument, it is plausibly argued that such law should be taken as presumably free from the objections urged. If it was the result of calm, unprejudiced judgment, arrrived at with an approach to unanimity, such argument would appeal to us with great force; but the history of that legislation shows that these provisions which are now objected to were, when the bill was pending, the subject of criticism, and that the act was finally passed by a small majority and not without grave doubts as to the constitutionality of that feature. Not only is this true, but contemporaneous correspondence, which will be found referred to in the debate on the pending measure, shows that personal antagonisms and jealousies entered into, if they did not control, the solution of the question.

Thomas Jefferson was Secretary of State, Alexander Hamilton was Secretary of the Treasury. The latter justly regarded the former as unfriendly to him. Aaron Burr was a Senator from the State of New York, a member of the committee of that body in charge of this measure, at that time friendly to Hamilton, and in a measure a rival of Jefferson.

Hamilton says in a letter that in the part he took he ran counter to Jefferson, but that if he had no other reason for it—

I had already experienced opposition from him which rendered it a measure of self-defense.

Mr. Madison says—

That the decision proceeded mainly, if not exclusively, from feelings of personal and political enmity to the gentleman who then filled the office of Secretary of State, and the jealousy entertained of him by the friends and partisans of the Secretary of the Treasury is rendered apparent by the surviving memorials of the time.

The result was reached after stubborn controversy, and by a vote so close that the absence or change of vote of a few members shifted the measure from the one to the other side.

The legislative history of the law is as follows:

A committee was appointed in the Senate on the opening of the Second Congress to report "a bill determining the time of choosing the electors of President and Vice-President, and the day in which they shall give their votes, and presenting the mode of transmitting the votes to the seat of Government." A bill covering these points was reported by Mr. Rutherford, of New Jersey and was afterward recommitted with instructions to report a clause making provision for the administration of the Government in case of vacancies in the office of President and Vice-President.

The bill of the committee, which was passed by the Senate, provided that the President of the Senate *pro tempore*, or, if there was none, the Speaker of the House, should, in such event, discharge the duties of President. We have no record of the debates in the Senate at that time, nor of the votes on the measure, but when the bill reached the House we find that the very objections now made to this feature were then urged. In Committee of the Whole House, the proposition to strike out the provision relating to the President of the Senate and Speaker of the House was lost, but in the House, when the committee rose and reported, an amendment to strike out the President of the Senate, was renewed and lost by a vote of yeas 24, nays 27, and one to strike out the Speaker of the House was carried by a vote of yeas 26, nays 25. Subsequently the amendment to strike out both the President of the Senate and Speaker of the House was carried by a vote of 32 to 22, and the Secretary of State substituted as the officer to discharge the duties of President. On the bill going back to the Senate, the last amendment made in the House was disagreed to, and the House finally receded by a vote of 31 to 24.

We see that the selection of the President of the Senate *pro tempore* or the Speaker was a measure upon which the members of that Congress were nearly evenly divided.

There was, however, a feature of the act of 1792 which did not meet with objection, and that was the provision which appealed to the people to fill the vacancy, making the service of the President of the Senate *pro tempore* and of the Speaker of the House provisional only. In the first Congress, on the discussion of a similar measure, it was said by William Smith, of South Carolina, that "he thought that, by the Constitution, a new election was not to take place till the term for which the President and Vice-President had been elected was expired." He was a member of the Second Congress, but neither he nor any one else seems in that Congress to have suggested such an opinion, and there is nothing in the reports to indicate that the periodicity of elections, of which we have heard so much of late, was considered as an element to be seriously regarded.

For the reasons stated and because of the objections which are now and were then urged, in my opinion the act of 1792 should, so far as it provides for the acting of the officers of the Senate and House, be superseded, and the pending bill, in so far as it devolves those duties on the officers named therein, meets my approval, but in so far as its provisions permit such officers to act as President, not provisionally until a new election or some other resort to the people can be taken, but for the unexpired term for which the President had been elected, it seems to me to be radically wrong, presenting difficulties of greater importance even than the defects of the act sought to be repealed.

Defects other than the one named, to which objection may be made, may be faults connected with the operation of the law, and might be corrected by amendment; but this feature is to my mind contrary to the theory of the Government and not within the spirit, if it is within the letter, of the Constitution.

By this provision we have Congress declaring that a person who happens to occupy a certain office shall, in case of a vacancy in the Presidency and Vice-Presidency, act as President for the unexpired term, it may be in a certain event the whole term of four years. This officer does not come from the people. He is appointed by the President with the advice and consent of the Senate; and while it is proper that he should be selected to act provisionally until a new President can, under the forms of law, be chosen, that service should end as soon as a President from the people can be put into office. The theory of our system is that we are a government of the people, that they have the selection of their rulers, that we are a democracy. Let us as legislators bring the officer as near the people as possible, securing to him the confidence, sympathy, and support of the whole country.

This act ignores this theory entirely. Under it, as it stands, in the event of the death of the President and Vice-President elect between the declaration by Congress of election and inauguration, the then Secretary of State, or other Cabinet officer, becomes President for four years, although it may be that the people have at the very election put their

seal of condemnation upon the administration with which they have been identified, and declared that there should be a change. It perpetuates a policy the people have rebuked. It is no answer to say that such contingency is not likely to happen. It is true there is little probability of it happening from natural causes, let there be no incentive to bring about such a condition.

The proceedings of the constitutional convention seem to me to demonstrate that it was never the purpose to permit Congress by enactment or other action to fill the Presidential office with its untrammeled choice for a term of years. The question was continually before the convention.

In the resolutions proposed by Edmund Randolph, it was provided that the national Executive be chosen by the National Legislature. It was almost immediately antagonized by a proposition from Mr. James Wilson, of Pennsylvania, providing for the selection by electors, which was lost, and the proposition of Mr. Randolph at first adopted.

The question, however, was again agitated. Alexander Hamilton's plan was like Mr. Wilson's, that the Executive be elected by electors "chosen by the people."

The propositions of William Paterson, of New Jersey, provided for the election of the Federal Executive by "the United States in Congress."

On the question being considered again in the convention, it was agreed that the Executive be chosen by electors appointed for that purpose by the State Legislatures. This was afterward amended by providing that the electors be chosen by the National Legislature. This was afterward changed so that the national Executive was to be chosen by the National Legislature.

These different propositions were then referred to a committee of five, which reported that the President shall be elected by ballot by the Legislature.

The whole matter was again referred to a committee of eleven, which reported the provision for the election of President by electors appointed in each State, equal in number to the Senators and Representatives from the States respectively. Again there was submitted the proposition that "he shall be elected by joint ballot by the Legislature, to which election a majority of the votes of the members present shall be required." This was lost, and the report of the committee of eleven adopted. The power of Congress was limited, in the event of a failure to elect, to the selection of a President by the House voting, not individually but by States, in the case of a tie, which of the two should be President; and in the case of no one having a majority, then to choose by ballot one from the five highest on the list. The Vice-President was to be the person receiving the greatest number of votes after the choice of President; and in the case of a tie the Senate was to choose from them the Vice-President.

The twelfth amendment changed the former provision, in requiring the electors to vote distinctly for Vice-President as well as President, and in the event of a failure to elect, restricting the House in a choice of President to the selection from the persons having the highest numbers, not exceeding three, on the list of those voted for as President. Thus has the Constitution, as originally framed and as amended, sought to keep from Congress the power to arbitrarily choose who shall be the President or Vice-President, the choice by the House and by the Senate being restricted to a selection from first five, then three of those who had received the highest number of votes of the electoral colleges, as instructed by voice of the people.

Certainly there is design, method, plan to be recognized in this; we must see that it was the purpose to secure to the people the right to elect the President and Vice-President and at the same time preserve the individuality of the States, these two purposes being secured by the adoption of the plan of an electoral college in each State chosen by its own people, leaving to each State the right to decide upon the manner in which it would appoint its electors and give expression to the will of its voters; further providing if the voice of the people was not so pronounced as to give a clear majority to any one, that the House of Representatives, voting as States, and not per capita, should select a President from among those receiving the highest number of electoral votes; the Senate, in which each State is represented equally, to select, in like manner, the Vice-President, preserving in the manner of voting the individuality of the States and enforcing, in the restriction of choice to one of the highest candidates, the expressed wish of the people. This was no scheme of hasty determination, no measure of expediency; it was the calm judgment, after consideration of proposition and counterproposition, perfected by consultation and argument, of men who were identified with the severance of the colonies from the mother country, and who were met to establish a government "of the people, by the people, for the people."

We have immediately following these provisions, so clearly indicating the design that Congress should not be clothed with the unrestrained power to select a President, the provision under which this legislation is being enacted, declaring substantially that in the event of a vacancy in the office of President and Vice-President Congress may by law declare what officer shall act as President until the disability be removed or a President shall be elected. In the light of the struggle that had taken place in the convention, resulting, as stated, in limiting the interference of Congress to a choice by States from certain candidates who had received to a certain extent the indorsement of the people, I can not regard the clause in question as giving Congress the power by enactment to fill the office of President for a term of years, or as anything more than an authority to fill the office provisionally until the machinery of election could again be put into operation.

This certainly was the view of the members of the Second Congress in providing for the new election as speedily as practicable; and that it was so intended seems clear, from the action of the convention which struck out of the clause, as reported by the committee of eleven, that such officer should act as President until the disability be removed, *or the period for choosing another President arrive*, the words in Italics, the effect of which is exactly that of the bill under consideration, and substituted the words "a President shall be elected." I can not regard this clause of the Constitution as conferring on Congress any greater power than to make provision for the temporary filling of the office and until a new President should be as speedily as possible chosen by the constitutionally prescribed methods.

If, in the judgment of the House, none of the amendments suggested to obviate this difficulty be adopted, and the bill as presented for final passage retains this objectionable feature, my convictions will require that I vote in the negative.

Presidential Succession.

SPEECH

OF

HON. SETH C. MOFFATT,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 18, 1886,

On the bill (S. 471) to provide for the performance of the duties of President in case of the removal, death, resignation, or inability of the President and Vice-President.

Mr. MOFFATT said:

Mr. SPEAKER: Having the honor of being a member of the committee which reported the pending bill, justice to myself demands that I briefly state the reasons which induced me to join the majority of said committee in favorably reporting said bill and in advising its passage by this House.

This bill is designed to meet an emergency which has never before occurred in the history of this nation. It is purely and simply an emergency bill. No one claims it to be perfect. No member of the committee which reported the bill nor any gentleman who supports it on this floor claims that it meets very many cases which may arise in the future. The ingenuity of able and distinguished lawyers has been exercised in supposing exigencies which may occur for which the provisions of this bill do not provide. With the highest respect for the ability and ingenuity of these gentlemen, in my judgment very many of the cases supposed are so unlikely to occur as to be but faintly discernible in the dim horizon of probability.

I do not believe any bill can be framed under the Constitution which will not be open to the criticisms of not meeting every conceivable case which able gentlemen may suggest. But we do claim for the bill under consideration that it meets fully and completely the present emergency.

The gentleman from Ohio, who has so ably presented his views as a minority of the committee, in his skillful defense of his report called attention to the fact that six times in the history of the nation there has been no Vice-President to assume the office of President in case of death of the Chief Magistrate, and no serious results have followed; but the gentleman will recollect that in each case the death of the President would have occasioned no change in the political administration of the country. This is the first time, if I mistake not, when by the death of the President the control of the Government would be lost to the party to whom the suffrages of the people had committed it.

The whole theory of our Government is that the people shall once in four years determine the political policy which shall control for the succeeding four years, and any law which affords an opportunity for the defeat of this expression of the will of the people is, in my judgment, unwise and dangerous and a violation of the spirit of the Constitution. The President is but the representative of his party; his election is not so much a compliment to the man as an indorsement of the principles of his party, and that indorsement should be irrevocable for the succeeding four years. I yield to no one in my devotion to the Republican party. I am proud of its past and have the greatest of faith in its future, but I should deplore to see it called to power by the voice of death. The Republican party wishes no chance to draw a prize in what has been so aptly termed the "lottery of assassination." There is but one life between the present situation of affairs and this contingency and I submit to this side of the House that we can not afford to

take the chances. In this I apprehend we all agree and a law which affords a chance for a defeat of the recently expressed will of the people should not remain on the statute-books a day longer than is necessary to repeal it.

We should lose no time in providing for every contingency, but in the presence of the emergency now existing we should pass this bill, and then proceed to perfect such legislation as the judgment of Congress may deem necessary to provide for all other cases that may arise.

The main objection to this bill expressed by the gentleman from Ohio and other able and distinguished gentlemen upon the floor of the House is that it repeals that part of the present statute providing for an election to fill the vacancy occurring by the death of both the President and Vice-President, and the gentleman from Ohio proposes to amend the bill by striking out the repealing clause. I have failed to find, sir, in the power granted to Congress any authority to provide for such an election. I am aware that it is claimed that it is implied under general and sweeping provisions of the Constitution; but I submit it is a question not altogether free from doubt. Certain it is that distinguished jurists and statesmen, before whom I would not dare to hold up my rush-light, have expressed the opinion that Congress has not this power. Again, it is conceded that if a special election be held that the President elected will hold office for four years. This would be a great inconvenience, would break in upon the established system existing from the foundation of the Government, and be productive of untold and incalculable confusion.

The question in regard to the constitutionality of an intermediate election, the certain confusion that must result therefrom, and the delay which an amendment to this bill must necessitate, are sufficient reasons to my mind for rejecting the amendment proposed by the gentleman from Ohio.

We are advised by the highest authority that "true statesmanship consists not in blindly groping after the desirable, but in striving to obtain the attainable." The attainable in this emergency, in my judgment, is the present bill. Let us pass it and then submit to the States a carefully prepared constitutional amendment which will remove the question of succession to the high office of President from the region of doubt and debate.

Admission of Dakota.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Friday, February 1, 1885,

On the bill (S. 967) to provide for the admission of the State of Dakota into the Union and for the organization of the Territory of Lincoln.

Mr. PLUMB said:

Mr. PRESIDENT: I do not wish to detain the Senate at this late hour to any considerable length, nor in fact to make a set speech on this subject after the very thorough manner in which it has been discussed by the Senators on both sides of the Chamber; but there are some facts bearing upon the attitude of parties to this question which seem to have been overlooked in the discussion and which I think are pertinent to it that I shall be glad to bring to public attention.

So much has happened since 1861 that the memories of very few persons go back of that very important period in the history of the country. So many important events have transpired since that date that what occurred before it has come to be quite ancient history. At this moment it seems wise to refer to it.

In 1857 the Legislature of the Territory of Kansas, then being in the hands of the pro-slavery party, under a government which was instituted not by the people of the Territory of Kansas but by the people of South Carolina and Missouri chiefly, passed an act for the assembling of a convention to frame a constitution for the proposed State of Kansas. The members of the constitutional convention were elected in the spring of 1857, and at that election only about 2,000 votes were cast; that is to say, the entire vote cast for members of the convention to frame the constitution was only about 2,000. The convention met in the succeeding summer, and then, for reasons which it is not necessary to enumerate, adjourned until October. Pending their reassembling the regular annual Territorial election for the choice of members of the Territorial Legislature was held, and at that election for the first time in the history of the Territory the Free State men prevailed and elected a very considerable majority of the members of both houses of the Legislature notwithstanding the fact that there were a very large number of fraudulent votes cast in behalf of the pro-slavery or Democratic candidates, 1,600 votes for the Democratic candidates having been returned from Oxford, a village of six houses, on the line between Missouri and Kansas, where it was shown only about 50 people lived and where but about 30 votes were actually cast; and 1,200 votes being returned for the Democratic candidates from McGee County, in which not over twenty families resided and in which not a vote was cast and no election held.

The constitutional convention thus called met at its adjourned session in the month of October and continued in session until some time in November following. It framed a constitution, which was subsequently submitted to Congress, and which is known in the history of that time as the Lecompton constitution. By the ordinance of that constitution there was to be submitted to the people of the Territory of Kansas, at an election called and to be held on December 21, 1857, not the question of the adoption of the constitution nor the question as to whether the people desired to be admitted into the Union under it, but simply the question as to whether they would have the constitution with slavery or the constitution without slavery. They were to have the constitution and admission under it in any event. The form of the submission was this: After stating that the vote should be by ballot, and naming how the judges and clerks of the election should be appointed, &c., the ordinance goes on to say:

> The president, with two or more members of this convention, shall examine said poll books, and if it shall appear upon said examination that a majority of the legal votes cast at said election be in favor of the "constitution with slavery" he shall immediately have the same transmitted to Congress of the United States, as hereinbefore provided; but if, upon such examination of said poll-books, it shall appear that a majority of the legal votes cast at said election be in favor of the "constitution with no slavery," then the article providing for slavery shall be stricken from this constitution by the president of this convention, and slavery shall no longer exist in the State of Kansas, except that the right of property in slaves now in this Territory shall in no manner be interfered with, &c.

The submission, it will be seen, was not for the purpose of ascertaining the sense of the voters of the Territory of Kansas as to whether they desired to be admitted into the Union at all, nor as to whether they desired to be admitted into the Union under that constitution, but only whether in case they had to be admitted, that being assumed, they desired to be admitted under the constitution with slavery or the constitution without slavery; and it was so framed, as will be observed by the language which I have quoted, that slavery in any event was to be maintained in the State of Kansas. By the terms of the constitution it could not be amended until the year 1864. It was well understood that a large majority of the people of Kansas were for making it a free State, and that as soon as they could get their hands on the constitution, if they should be admitted under it, they would make it an instrument of freedom and not an instrument of slavery; but the constitution, as I said, was so framed that it could not be amended before the year 1864, and thus if the people of the Territory of Kansas voted for the constitution with slavery they were certain to have that institution with them as a part of the fundamental law until that year; and if they voted for the constitution without slavery then they were to have slavery forever to the extent that they then had it; in other words, in the very expressive and happy language of Mr. Seward in his speech on that subject in the Senate:

> Each voter was permitted to cast a ballot "for the constitution with slavery," or "for the constitution with no slavery;" and it was further provided, that the constitution should stand entire, if a majority of votes should be cast for the constitution with slavery, while on the other hand, if the majority of votes cast should be "for the constitution with no slavery," then the existing slavery should not be disturbed, but should remain, with its continuance, by the succession of its unhappy victims by descent forever.

At the election which was held, at which these two questions were voted upon, the result was announced to be, constitution with slavery 6,226, constitution with no slavery 569, a total vote of less than 7,000, and two-thirds of the affirmative votes were fraudulent.

The ordinance of that constitution provided for the election of a State ticket, the election for that purpose to be held on the 4th day of January, 1858.

Immediately after the adjournment of the Lecompton constitutional convention it being discovered then that the constitution itself was not to be submitted to the people, and the full scope of the determination and conspiracy to force Kansas into the Union under a pro-slavery constitution being appreciated, leading Free State members of the Legislature-elect united in a request to the acting governor of the Territory, Hon. F. P. Stanton, to convene the newly elected Territorial Legislature in extra session in order that measures might be taken if possible to prevent the success of this vile conspiracy against the rights of the people. This request was acceded to, and on the 1st day of December the proclamation was issued convening the Legislature to meet on the 7th. On the 17th the Legislature passed an act submitting the Lecompton constitution to the people on the day appointed (January 4, following), for the election of State officers under that constitution, and on that day, December 17, Secretary Stanton received notice of his removal from office by the President, because of his having thus convened the Legislature in special session.

Both elections were held as ordered, the result being that over 10,000 votes were cast against the constitution and only about 150 for it. At the same election the Free State men chose a full ticket of State officers under the Lecompton constitution, elected under protest and in order to make more manifest to the Congress and the people of the United States the position they occupied in reference to that instrument and

with reference to the attempt to put them into the Union under it. Every member of that State government so elected joined in a protest to Congress against the admission of Kansas under the Lecompton constitution.

The gentleman who was the president of that convention, Mr. Calhoun, of Illinois, who went to the Territory as its surveyor-general, bearing the commission of the then President of the United States, Mr. Pierce, disappeared very suddenly after the first election, moved to such disappearance by the fact that he was liable to be indicted, as he undoubtedly would have been, for his participation in the frauds occurring at the election of December 21. He came to be known in the local vernacular of that time as "Candle-box Calhoun," because of the fact that certain fraudulent returns which had been forwarded from the Delaware, Oxford, and other precincts were concealed in a candle-box under a wood-pile at Lecompton, the seat of the Territorial government. Mr. Calhoun turned up after a mysterious passage from Kansas to Washington along about the last days of January, 1858, and presented to President Buchanan a copy of the Lecompton constitution, which Mr. Buchanan by a special message, dated on the 2d day of February, transmitted to Congress. The message covers about twelve pages ordinary document size, in which the President argued the Kansas question at great length. A portion of that message I will read for the purpose of exposing now, in connection with this debate, the Democratic position at that time on the question of the admission of new States into the Union.

It will be remembered that the election at which the people of Kansas had voted, and the only election at which they had had a chance to vote on the question of their desire to be admitted into the Union under the Lecompton constitution, had been held nearly a month before Mr. Buchanan presented this message to Congress, resulting in a nearly unanimous vote against admission under the Constitution. The result of that election was not only known to Mr. Buchanan but to every other person in the United States who could read. Mr. Buchanan, in arguing the question, treats of the rights of the people of the Territory of Kansas under the Kansas and Nebraska bill as follows:

> That this law recognized the right of the people of the Territory, without any enabling act from Congress, to form a State constitution, is too clear for argument. For Congress "to leave the people of the Territory perfectly free" in framing their constitution, "to form and regulate their domestic institutions in their own way, subject only to the Constitution of the United States," and then to say that they shall not be permitted to proceed and frame a constitution in their own way, without an express authority from Congress, appears to be almost a contradiction in terms. It would be much more plausible to contend that Congress had no power to pass such an enabling act than to argue that the people of a Territory might be kept out of the Union for an indefinite period, and until it might please Congress to permit them to exercise the right of self-government. This would be to adopt not "their own way," but the way which Congress might prescribe.

It will be observed that the organic act of the Territory of Kansas simply remitted to the people of that Territory the right to "regulate their domestic institutions in their own way," a term which was not liable at that date to any misconstruction; that was well understood to refer simply and only to the question of slavery; and Mr. Buchanan upon that premise argued that for Congress to refuse to admit a State into the Union which had exercised, as he assumed the Territory of Kansas had exercised, the right to regulate this domestic institution was a denial of the right of self-government. This provision in the organic act is no broader in terms, even as construed by Mr. Buchanan, than the Louisiana treaty by which we acquired what is now the Territory of Dakota from France. That is in the following words:

> The inhabitants of the ceded territory shall be incorporated in the Union of the United States, and admitted as soon as possible, according to the principles of the Federal Constitution, to the enjoyment of all the rights, advantages, and immunities of citizens of the United States; and in the mean time they shall be maintained and protected in the free enjoyment of their liberty, property, and the religion which they profess.

It will be seen, I think, that this provision of the Louisiana treaty is a much more comprehensive one than the one which Mr. Buchanan found in the organic act of Kansas. He goes on to say:

> It is impossible that any people could have proceeded with more regularity in the formation of a constitution than the people of Kansas have done. It was necessary, first, to ascertain whether it was the desire of the people to be relieved from their Territorial dependence and establish a State government. For this purpose the Territorial Legislature in 1855 passed a law "for taking the sense of the people of the Territory upon the expediency of calling a convention to form a State constitution" at the general election to be held in October, 1856. The "sense of the people" was accordingly taken, and they decided in favor of a convention. It is true that at this election the enemies of the Territorial government did not vote, because they were then engaged at Topeka, without the slightest pretext of lawful authority, in framing a constitution of their own for the purpose of subverting the Territorial government.

Mr. Buchanan, it will be seen, admits that the Free State men, who were in an undeniable majority of more than 4 to 1, did not vote. The returns show that but 2,592 votes were cast for a constitutional convention at this election and 454 against it. Of these 1,300 were cast in a single county, and one-half at least were fraudulent.

It is not necessary to recall in detail the history of those days to show why the Free State voters did not participate in that and subsequent elections, though in the majority. The Territorial Legislature which called the election was the creature of fraud and violence. Many of its members were citizens of Missouri, and a large majority of both bodies were chosen by votes cast by invaders from Missouri and other slave States. "They seized the ballot-boxes, replaced the judges of elections with partisans of their own, drove away their opponents, filled the boxes with as many votes as the exigencies demanded, and, leaving the results to be returned by reliable hands, they marched back again to their distant homes to celebrate the conquest and exult in the prospect of the establishment of slavery upon the soil so long consecrated to freedom."

Instead of a free republican government in the Territory such as popular sovereignty had promised there was then and thenceforth a hateful usurpation. This usurpation proceeded without delay and without compunction to disfranchise the people. Laws designed to reduce the white Free State settlers of the Territory to a condition of practical slavery were passed. All judges, sheriffs, justices, constables, and other county officers, including officers of elections, were appointed by the Legislature or by agents created by it. No person could vote without taking an oath to support the fugitive-slave law. Every member of succeeding Legislatures, every judge of election, every voter, must swear to his faithfulness on the test questions of slavery. Every officer in the Territory, judicial, executive, or legislative, every attorney admitted to practice in the courts, every juryman weighing evidence on the rights of slaveholders, must attest his soundness in the interest of slavery and his readiness to indorse its most repugnant measures.

To all this was added a reign of terror in which the life and property of Free State men were rendered insecure. The Territory was traversed by armed bands of pro-slavery men from Missouri and other Southern States; indictments were found against the leading Free State men, and such as did not flee the Territory were arrested and imprisoned. The whole civil and military power of the United States Government was wielded under the direction of the pro-slavery leaders to the purpose of intimidating and driving from the Territory the Free State majority in order that the small minority of pro-slavery men might, backed by their non-resident allies, make of Kansas a slave State.

It is not surprising, therefore, that the Free State majority did not participate in the so-called election of October, 1856. But their absence stamped as convincingly as their presence could have done the usurping character of the whole proceeding.

It was from such sources that the Lecompton constitution sprung—the creature of violence and fraud, of the most atrocious conspiracy against the rights of a free people which had ever been practiced upon the American continent.

It was this constitution, conceived in fraud and brought forth in iniquity, which the convention framing it had refused to submit to the people for their approval, which established and perpetuated slavery, and which the people of the Territory at an election called for the purpose by the Territorial Legislature had voted down overwhelmingly, which Mr. Buchanan commended to Congress as the "exercise of the right of self-government," and under which he urged the admission of Kansas into the Union—practically asking Congress to force Kansas into the Union as a slave State.

I have found it instructive to re-examine the Congressional history of that time, and my memory was not at fault in telling me that those who led the fight in favor of forcing slavery upon an unwilling people and in the effort to force Kansas into the Union against the all but unanimous vote of her people, were those who then represented the States of Missouri and South Carolina in both Houses of Congress.

The Senate of that day, giving swift heed to the request of Mr. Buchanan, by the vote of every Democratic member except those of Douglas and three or four followers from the Northern States, voted to admit Kansas under the Lecompton constitution. The House majority, less resolute in its determination to force Kansas into the Union as a slave State, substituted for the bill of the Senate what came to be known as the English bill, which submitted to the people of Kansas the question of their desire to come into the Union under the Lecompton constitution at an election to be held in the following August, and the Senate subsequently yielding the bill became a law.

This was supposed to be a reasonably certain way of bringing Kansas into the Union under the Lecompton constitution, on account of the evident desire of the people of Kansas to be admitted into the Union and the great inducements offered. The bill not only offered to the people of Kansas the greatest quantity of land for public purposes ever offered to a new State in case they voted to come into the Union under the Lecompton constitution—and in case of the vote being in the affirmative the President was authorized to proclaim the result, and thereupon, without further proceedings of Congress, Kansas should at once become a State of the Union—but in the event that the people should reject the Lecompton constitution it was provided that the Territory should not be admitted until by a census, thereafter to be taken, there should be shown to be a population equal to the ratio of representation required for a member of the House of Representatives, in which event a convention to frame a new constitution might be called, &c.

But the temptation was unavailing. Much as the people of Kansas desired admission into the Union for the purpose of being rid of the infamous and hateful persecutions of the Federal Government, they could not be coaxed or bribed to abate one jot or tittle of their determination to come in only under a Free State constitution, and one, too, of their own framing, and so at the election ordered by the English bill they buried the Lecompton constitution out of sight under an overwhelming avalanche of their votes. Out of a total vote of over 13,000 all but about 1,800 were cast against the constitution.

Then the census was taken, members of a constitutional convention duly chosen, a constitution framed, which was in turn submitted to the people for their approval or rejection. A majority of more than two to one voted in its favor in the largest poll of votes ever cast in the Territory, and the constitution was transmitted for presentation to the first session of the Thirty-sixth Congress in December, 1859. In the following April an act passed the House by the votes of the Republicans and Douglas Democrats admitting Kansas under the new constition, and on the 21st day of the following January (1861) the Senate passed the bill with an amendment, the vote on the same being classified as in the House; and on the 29th day of the same month President Buchanan signed it, and Kansas was finally, after a great and bloody struggle, admitted into the Union as a free State.

This struggle is significant to be recalled because of the historical parallel it furnishes to what is transpiring now.

The last in a long line of Democratic Presidents, until the present, made indecent haste to urge, officially, that Kansas be forced into the Union under a constitution which established slavery on soil consecrated to freedom, notwithstanding the people to be affected by it had overwhelmingly repudiated it. The representatives of the national Democracy of that time, led by the Senators and Members from Missouri and South Carolina, were the actors in this conspiracy against free soil and free States. Subsequently, when Kansas presented itself with a free constitution, the choice of its people, with more than the requisite population, the same Senators and Members, followed by all the Democratic Representatives except the few who consorted with Mr. Douglas, resolutely and vindictively fought against her admission.

Is not history repeating itself? Is there no significance in the fact that the fight against the admission of Dakota, a free State, is led in the Senate by the Senators representing the same States of the same political faith, the lineal successors of those who first tried to force Kansas as a slave State into the Union and later tried to keep her out as a free State? The fight against Dakota is under the same banner and under the same leadership as was the fight against Kansas, and with the same purpose to keep out of the Union a free Commonwealth.

This is not only worthy of consideration as a historical parallel, but I present it as a part of the dispute I make to the position assumed by the Senator from Alabama [Mr. MORGAN]. He says the Democratic party has always been favorable to the admission of new States, and I reply that the Democratic party has never favored the admission of new States unless such States were in political affiliation with that party. No other test except that of party affiliation has ever been applied by the Democratic party, and it has consistently opposed the admission of all States into the Union which were not in political accord with it.

Are we on the threshold of a contention about the admission of new States which will be carried out of these halls and divide the American people as they divided upon Kansas? The Kansas struggle foreshadowed the greater one which followed for the preservation of the Union. It was in those days "bleeding Kansas," "abolition Kansas," abolition traitors, Yankees, higher-law men—any and all terms which expressed for the Free State settlers of Kansas contempt, and designed to cover them with obloquy, to show their utter worthlessness and unfitness for self-government. The felicitous language of the Senator from Missouri enabled him to characterize the people of Dakota in something like the same virulent fashion; and yet I appeal to facts within the knowledge of every Senator on this floor when I say that the Kansas of that early time was worthy of association with the States then or since composing the American Union. The Kansas of bitter contention, treated with indignity and contumely by the slave oligarchy and its servile tool, the Democratic party, became, in the language of Mr. Sumner, "the ministering angel of the Republic."

Kansas came into the Union when the Union was breaking—seemingly beyond the hope of ever again recovering—as the States whose representatives in House and Senate had persecuted her and caused her fair face to be defiled with blood were leaving their places in the Union to join in a wicked and causeless rebellion. It did not seem an attractive place to get into—a Union assailed by nearly one-half its inhabitants—but the people of Kansas were not dismayed. Admission to the national Union as a free State had been for all the weary years of their struggle the goal of their ambition, and they cheerfully came in, knowing that the toil and blood by means of which their ambition had been wrought out would necessarily be followed by similar sacrifices to maintain the Union, a place in which they had at last achieved. In that hour of supreme peril they never doubted that the principles of freedom for which they had contended and by the sign of which they had conquered would save the Republic, and so they not only willingly, joyfully cast their fortunes into the balance with what was left of the American Union of States and people, but having literally fought to get in, they fought under the flag of the Union to bring the seceding States back—fought out all that long struggle, manfully giving to the ranks of the Union Army more men than there had ever been votes cast in Kansas, more in proportion to population than any of the States which adhered to the Union.

The one hundred thousand people in Kansas in 1861 have become one million and a half. The settlements of that day which were mainly found in the tier of counties which bordered on Missouri now cover nearly all the 80,000 square miles composing the State. The burden of the desert has been lifted. The industrious, energetic, and adventurous people of Kansas stamped their feet upon the ground and there came forth not only fruits of the soil in abundance, but pleasant and comfortable dwellings, orchards, school-houses, churches, railroads, towns, cities, and all the appliances and blessings of a high state of civilization, of a State free in fact as in name—one not ashamed to hold up its head alongside the oldest and proudest members of the Republic. They have nothing to be ashamed of by comparison with those who persecuted them in the days of their trial. They do not boast of their ancestry; they have been too busy to gather up much in the shape of a pedigree, but the results of their labors—civilization, prosperity, liberty—they will put against any lineage, however proud. Four thousand miles of railroad, school-houses of the value of $7,000,000, a present annual expenditure for school purposes of nearly $3,000,000—these are no inconsiderable results from the poverty of twenty-five years ago, but they are the result of ambitious, well-directed labor inspired by a determination which has been appalled at no obstacles and shrunk from no difficulty.

No suppliants they of national bounty, no jealousy of other communities desirous of a place in the national Union. They know that the more props under the national arch the stronger it is; that the Union of States increases in strength as new and virile communities are added to it; and when, as in the case of Dakota, there is embraced within her limits the blood and brawn of all the races and conditions of men whose association on the North American Continent has made the greatest republic the world ever saw, they gladly welcome her. They are willing that two Senators representing Dakota shall sit on this floor. The added power to the Republic will more than make up for any loss of power to Kansas. Kansas says to all the Territories possessing the requisite population and struggling for that which she struggled for and paid for with the price of her blood, "Come into the Union; we know you are equally virtuous with us, and we know that your hopes and aspirations are as ours are, and we would clasp and bring together under the ægis of the Republic in the exercise of the precious right of self-government every American citizen who has an honest aspiration for freedom and a determination to defend and perpetuate it."

Perhaps, Mr. President, the voice of South Carolina and of Missouri is more entitled to weight than that of Kansas. They are older States; they boast of their generations of able and distinguished public men, of an ancestry that goes back to the earlier days of the Republic. I would not speak lightly of this, but Kansas shrinks from no comparison as to present condition in all vital particulars. She asks no question about age, birth, or previous condition; all she asks is what the person coming within her borders proposes to do for the future. If to be a good citizen, then he is welcome. And so Kansas espouses the cause of Dakota, perhaps a little stronger because she sees her contending with the same influences in the Senate, against the same leadership and the same following which she herself encountered twenty-five years ago. In many ways it is the same contention, and I hope destined to the same result.

It is indeed significant that here, in the first days of the first Democratic administration which the country has had for twenty-five years, the forces in this Chamber are dividing precisely as and upon substantially the same questions that they divided upon at the close of the last Democratic administration. The last step of 1861 is the first step of 1886. The Democratic party newly restored to power is beginning where it left off. History does thus repeat itself. It will be instructive to observe hereafter how far the parallel continues.

The people will not be more considerate to-day of a conspiracy against the rights of Dakota than they were twenty-five years ago of the conspiracy against Kansas. Now, as then, resistance within will cause the tide to rise higher without—and to use the words of Mr. Seward in another forum, "The people will pick strong matter of wrath out of the bloody finger-ends of a successful conspiracy."

Fitz-John Porter.

SPEECH
OF
HON. WILLIAM D. KELLEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 17, 1886.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 67) for the relief of Fitz-John Porter—

Mr. KELLEY said:

Mr. CHAIRMAN: With sincere thanks to the gentleman from Michigan for the courtesy he has done me, I avail myself of the fifteen minutes, not for the purpose of attempting to review the testimony elicited on

the trial that resulted in the conviction of General Fitz-John Porter, but to ask leave to submit a review of that testimony which was made by the Judge-Advocate-General, Hon. Joseph Holt, and was, through the War Department, submitted to President Lincoln, pending his consideration of the record and findings of the court, which conscientious consideration led him to cause the following order to be issued:

Sentence: And the court does therefore sentence him, Maj. Gen. Fitz-John Porter, of the United States Volunteers, to be cashiered and to be forever disqualified from holding any office of trust or profit under the Government of the United States.

Second. In compliance with the sixty-fifth of the rules and articles of war, the whole proceedings of the general court-martial in the foregoing case have been transmitted to the Secretary of War, and by him laid before the President of the United States.

The following are the orders of the President: The foregoing proceedings, findings and sentence, in the foregoing case of Maj. Gen. Fitz-John Porter, are approved and confirmed; and it is ordered that the said Fitz-John Porter be, and hereby is, cashiered and dismissed from the service of the United States as a major-general of volunteers, and as colonel and brevet-brigadier general in the regular service of the United States, and forever disqualified from holding any office of trust or profit under the Government of the United States.

JANUARY 21, 1863.

This order is signed by Abraham Lincoln, than whom, sir, I have high military authority for saying an abler theoretic soldier never lived; than whom, sir, few abler lawyers have ever lived; than whom, sir, no more humane man ever breathed the breath of life. It was made, too, when the facts of the case were all fresh in his memory, for he had watched for nearly four days and nights the progress of the betrayal of the Army of Virginia by a great soldier—for such I believe Fitz-John Porter to be by training and natural gifts—the betrayal, I say, of that army by a great soldier, who, having forgotten country and patriotism, sunk himself to infamy by regarding military office and duty as a personal trust for the benefit of himself and his clique or coterie. I have just heard it maintained by the gentleman from Nebraska [Mr. LAIRD] that Fitz-John Porter was loyal to Pope. If he were loyal to Pope he did not know it. If he were loyal to Pope he shamefully belied himself. On this point I appeal to the testimony of one who was known to and respected by all of us who were members of the Forty-seventh Congress. I refer to the late William Blair Lord, who so long graced one of the seats at the desks of the reporters of this House, and whose marital relations were so beautiful as to have made them noteworthy in the esteem of all who knew him and "the little woman," as he fondly called the wife to whom for many years he had been supremely devoted.

I appeal to Mr. Lord, with his memory enforced and refreshed by the fact that, shocked at hearing the man whom he worshiped, Fitz-John Porter, during his trial by the court-martial declare that he had not been loyal to Pope, had transmitted a statement of it to his wife, and now produced before the commission which re-examined the case his book containing a press-copy of his letter. With this book in hand he testified as follows:

Q. Will you state substantially what that interview was, and what General Porter said?

A. I had been directed by the judge-advocate of the court to proceed to the rooms of General Porter, and to look for some telegrams that had been introduced in evidence that day, and that had been mislaid in some way. While there looking over some papers General Porter made the remark: "I was not loyal to Pope; there is no denying that."

Pope was his commanding general and represented the majesty of his Government; and therefore, even though he had blundered and had ordered Porter and his men, as the six hundred of Cardigan's troop were ordered, with cannon to the right of them, cannon to the left of them, cannon in front of them, into hell, he should have plunged rather than have slunk from dangerous duty in the hour of battle. But let me read further from the testimony of Mr. Lord:

Q. Do you recall anything else that he said in that connection?

A. I can not say that I do, and I doubt that I should recall that now but for the peculiarity of the circumstances, and the fact that I made a record of it myself a few days afterward. Otherwise I think likely I should have forgotten it.

Q. That was during the progress of the trial before a general court-martial?

A. It was.

The PRESIDENT OF THE COURT. The decision is that the letter is admissible for the purpose stated by the counsel, namely, not to prove the fact, but to test the credibility of the witness.

By the RECORDER:

Q. You have stated in your cross-examination that the feelings which had actuated you you expressed at the time you wrote that letter to your wife. It was not called for by the counsel for the petitioner. I will call for it. Please let me know what you stated on the subject, if you have that letter here.

(Witness produced a book.) Shall I read?

Q. Just that part and no more.

This is what he wrote to "the little woman"—his dear wife:

I have been a little bothered about General Fitz-John Porter. I had to go to his room on Monday to get some papers that belonged to the court that he had had to copy. One of the reporters of the New York Times was along with me. While in the room, after some conversation, General Porter made the remark, "Well, I wasn't loyal to Pope; there is no denying that." Now, that is really the charge against him before the court-martial—that he did not do his duty as an officer before the enemy, and that he did not act rightly toward General Pope, his commanding officer.

Yet gentlemen here say that Porter did not know he was disloyal—that he was in fact loyal; and the speech to which we have just listened seemed to me to come as near to the facts of the case, generally, as its author did in insisting upon it that Porter did not know his own feelings—his state of loyalty or disloyalty.

Again, it was idle to appeal to Porter by motives of patriotism. The appeal that would move him must be personal to himself and his friends. So long as he was under Pope's command he was slow, treacherous, and false; but when, by his inaction, Pope had been driven within the defenses of Washington, and by McClellan's superior rank became subject to his orders, his alacrity revived. But on this point he required assurances from headquarters. I will therefore close my remarks by reading a brief note from Maj. Gen. George B. McClellan, first asking leave to print an official paper which I have not time to read—the review of the evidence by Judge-Advocate-General Holt.

WAR DEPARTMENT, *September* 1, 1862—5.30 p. m.

I ask you—

For your country's sake? By the sense of military duty that was instilled into you by the Government in your boyhood when it was educating you for military life? By your love of country? Oh, no! General McClellan knew his correspondent too well for that.

I ask you for my sake, that of the country, and of the old Army of the Potomac that you and all friends will lend the fullest and most cordial co-operation to General Pope in all the operations now going on—

Which were then chiefly the gathering of his hungry, bleeding, disheartened troops within the defenses of Washington, and so bringing them under the command of the writer of this letter.

The distresses of our country, the honor of our arms are at stake—

They had not been, it seems, during the four days preceding this. I had thought they had, but I have learned this afternoon and from the general discussion on the other side that there was nothing going on during those days that required Major-General Porter to bring his troops into action.

The distresses of our country, the honor of our arms are at stake, and all depends now upon the cheerful co-operation of all in the field. This week is the crisis of our fate. Say the same thing to all my friends in the Army of the Potomac, and that the last request I have to make of them is that for their country's sake they will extend to General Pope—

Now out of command by having been driven back within McClellan's lines—

the same support they ever have to me.

Mr. BRAGG. Certainly the gentleman would not intentionally make a misstatement.

Mr. KELLEY. No.

Mr. BRAGG. General Pope was not then within the lines of Washington; he had not yet been driven back, and that dispatch was answered from the field.

Mr. KELLEY. He was falling back, and his troops were coming within the lines of the defenses of Washington.

I am in charge of the defenses of Washington—

Now he gives his pretty boy assurances that no harm shall come to him—

I am in charge of the defenses of Washington. I am doing all I can to render your retreat safe, should that become necessary.

But, Mr. Chairman, I fear that my interjections have prevented gentlemen from fully appreciating the rhetoric in which the self-absorbing patriotism of this dispatch is clothed. I will therefore repeat it in unbroken continuity. It is as follows:

I ask you for my sake, that of the country, and of the old Army of the Potomac that you and all friends will lend the fullest and most cordial co-operation to General Pope in all the operations now going on. The distresses of our country, the honor of our arms, are at stake, and all depends now upon the cheerful co-operation of all in the field. This week is the crisis of our fate. Say the same thing to all my friends in the Army of the Potomac, and that the last request I have to make of them is that for their country's sake they will extend to General Pope the same support they ever have to me. I am in charge of the defenses of Washington. I am doing all I can to render your retreat safe should that become necessary.

GEO. B. McCLELLAN,
Major-General, Commanding.

Major-General PORTER, *Centreville,*
Commanding Fifth Corps.

Mr. BRAGG. Now, will the gentleman read Porter's response to that dispatch?

Mr. KELLEY. It is not in my possession. How painful a contrast to Porter's conduct while under Pope's command is presented by Dessaix at Marengo and that of Richepanse at Hohenlinden. Dessaix, with his cavalry, was 15 miles from what proved to be the field of battle and marching from it when his ear caught a dull thud, which, with his experience, he thought might be the roar of distant cannon. Listening a moment, he became convinced, and though his orders would have protected him in leaving the battle farther in his rear he changed front and, with the utmost speed his cavalry could attain, reached the field, and hurling his cavalry upon the enemy's rear at the cost of his life converted defeat into victory and added one of its most splendid glories, that of Marengo, to the story of the great Napoleon. The conduct of Richepanse was, if possible, in even more striking contrast to that of Porter, for in disregard of orders that would have kept him out of the battle, with sword in hand, amidst his grenadiers, he penetrated into the forest, sustained a violent discharge of grape-shot, and falling on the Austrian rear in the defile accomplished a complete rout of the Austrian army, which lost 20,000 men, with nearly all its artillery and baggage. But we need not go to the story of foreign wars for brilliant illustrations of the truth that soldierly instinct and military training

unite in leading a soldier to participation on a field in which his fellow-soldiers are maintaining an unequal fight. Recall the story of Porter's inaction from the day that he learned, at or near Acquia Creek, that Pope, not McClellan, was now to command him until he was assured that he was again to pass under McClellan's command, and imagine, if you can, Phil. Sheridan or Hancock, or any other soldier whom you and I and all of us are ready to honor, living safely as he did through the 27th, 28th, and 29th of August, 1862. Such conduct on the part of such a soldier is inconceivable. And that Porter, after arraignment and a fair and protracted trial for his misconduct, should at the end of nearly a quarter of a century appeal to the country to obliterate the finding against him which Abraham Lincoln, despite his boundless humanity, was constrained to approve, and to restore him to the Army, will be regarded by future historians as one of the marvels of these times.

[Here the hammer fell.]

Mr. KELLEY. I renew my request for consent to incorporate Judge Holt's review of the testimony with my remarks.

Mr. BRAGG. And I object.

Friday, February 19.

Mr. KELLEY. Mr. Speaker, with entire respect to the House and all its members, I renew my request to incorporate in my remarks on the bill disposed of yesterday for the relief of Fitz-John Porter the review of the testimony which I originally proposed to substitute for a review of my own. I ask leave to print it in connection with my remarks, which in their incomplete condition I still withhold.

The SPEAKER. The gentleman from Pennsylvania [Mr. KELLEY] asks unanimous consent to incorporate in his remarks on the bill for the relief of Fitz-John Porter a review of the testimony by Judge-Advocate-General Holt. Is there objection?

Mr. BRAGG. Mr. Speaker, the war being over, the tide of battle having moved away, I am in favor of general amnesty; and, therefore, I am entirely willing that the gentleman should print all he desires.

The SPEAKER. There being no objection, the leave requested by the gentleman from Pennsylvania will be granted.

REVIEW OF THE JUDGE-ADVOCATE.

JUDGE-ADVOCATE-GENERAL'S OFFICE, *January* 19, 1863.

SIR: In compliance with your written instructions, under date of the 13th instant, "to revise the proceedings of the court-martial in the case of Maj. Gen. Fitz-John Porter, and to report fully upon any legal questions that may have arisen in them, and upon the bearing of the testimony in reference to the charges and specifications exhibited against the accused, and upon which he was tried," I have the honor to submit the following report:

As the animus of the accused toward his commanding general, in pursuing the line of conduct alleged against him, must largely affect the question of his criminality, and may furnish a safe and reliable light for your guidance in determining points otherwise left doubtful by the evidence, it is proper that it should, if possible, be ascertained before entering at large upon the review of the case which you have instructed me to make.

General Porter, with his command, belonged to the Army of the Potomac, which had closed its disastrous campaign on the Peninsula just before the moment at which the narrative of the events set forth in the record before you is taken up by the witnesses who have deposed. General McClellan and Assistant Secretary of War Tucker state that he displayed great energy and zeal in debarking his troops and hastening their departure for Acquia Creek. The former, however, adds that it was not then known to the accused that he was to be placed under the immediate command of General Pope, the question of the command not having at that time been decided. It should likewise be borne in mind that the transfer of the Army of the Potomac, once begun, was a movement of extreme peril, and that extraordinary efforts on the part of all engaged in it were prompted, not only by those high considerations of patriotism which must be supposed to have been present, but also by the equally urgent instincts of self-preservation. The order of General Halleck, directing the junction of the command of the accused with that of General Pope, seems to have reached him at Acquia Creek. From this he proceeded, in obedience to the order, to effect the junction, and at that time, as we learn from General Burnside, he lacked confidence in General Pope, and shared the distrust alleged by the witness to have been entertained by many officers of his capacity to conduct the campaign in which the Army of Virginia was then engaged. He reported to General Pope by note on the 26th, and in person on the morning of the 27th of August, 1862, at Warrenton Junction. In the brief conference which ensued between them in the forenoon of that day he must have acquired all the information he then possessed as to the plan of the campaign and as to the disposition of the forces of the contending armies. After this conference, at 4 o'clock p. m. of that day, he sent to General Burnside the dispatch first referred to in the testimony (in that dispatch, interspersed amid various items of military intelligence, are found the following expressions:

"We are working now to get behind Bull Run, and I presume will be there in a few days, if strategy don't use us up. The strategy is magnificent and tactics in the inverse proportion." "I was informed to-day, by the best authority, that in opposition to General Pope's views this army was pushed out to save the Army of the Potomac—an army that could take care of itself." Most of this is private, but if you can get me away do so." In another dispatch to the same officer on the 27th of August he says: "Please hasten back the wagons I sent down, and inform McClellan, that I may know that I am doing right." Again, at 2 p. m. of the 28th, he dispatches: "All that talk about bagging Jackson, &c., was bosh." "That enormous gap, Manassas, was left open, and the enemy jumped through; and the story of McDowell having cut off Longstreet has no foundation." "The enemy destroyed an immense amount of property at Manassas—cars and supplies. I expect the next thing will be a raid on our rear by Longstreet, *who was cut off*." Another dispatch to the same, dated Bristoe, August 28, 1862, 9.30 a. m., and introduced by the accused, concludes as follows: "I hope for the best. My lucky star is always up about my birthday, the 31st, and I hope McClellan's is up also. You will hear of us soon by way of Alexandria." To the same officer, from Bristoe, 6 a. m., 29th, he telegraphs: "Heintzelman and Reno are at Centreville, where they marched yesterday. Pope went to Centreville with the last two as a body guard, at the time not knowing where was the enemy, and when Sigel was fighting within 8 miles of him and in sight. Comment is unnecessary. I hope Mc's at work, and we will soon get ordered out of this. It would seem, from proper statements of the enemy, that he was wandering around loose, but I expect they know what they are doing, which is more than any one here or anywhere knows."

The precise import of these remarkable words, in their connection, can not be mistaken, nor can it fail to be observed how harshly they jar upon the proprieties of military life. It may be safely affirmed that they express, on the part of the accused, an intense scorn and contempt for the strategy and movements of the Army of Virginia, a weariness and disgust for his association with it, added to a bitter fling at his commanding general, as found in the extraordinary declaration that he had taken two divisions of his army as a "body guard" to Centreville. The words, as quoted, disclose also a looking by the accused not to General Pope, but to General McClellan as his guide, and a reliance upon his exertions and influence to relieve him from his connection with the Army of Virginia, and an expectation, if not a hope, that they would all soon arrive at Alexandria. This, it is true, would involve the discomfiture of that army, but it would also involve the discredit of its commander, and would restore the accused to his former position under General McClellan. Such must have been the anticipation, and such certainly was the result.

In explanation of these dispatches, and with a view to relieve the mind of the impression they tend to make, it was alleged in the defense, and was proved by General Burnside, that they were official in their character, and that the accused had been requested to furnish him information in reference to current military events occurring in connection with the army with which he was serving. So far as the purpose for which they were offered by the Government is concerned, it is wholly immaterial under whose promptings or for what end they were written. If the words make it manifest that the accused entertained feelings of contempt and hostility toward the Army of Virginia and its commander, it matters not whether they were spoken in a private and confidential or in an official communication. The fact, however, that such words are found in a grave and formal official correspondence must serve to show how strong these feelings were, and how difficult it was to repress their utterance.

In reply to what must be regarded as the prevailing sentiment of the language quoted, there was read in the defense a dispatch from the accused to General McClellan—which was not sent—dated September 2, 1862. It is full of fervent patriotism, and of professions of devotion to his duty in connection with the Army of Virginia and its commander. The court undoubtedly gave to this paper the consideration it deserved. Unhappily, it came too late. The Army of Virginia had suffered, in the way of disaster, all that the enemy and the inaction of the accused could inflict upon it; and at the very moment this dispatch was written the field for the "cordial co-operation and constant support" which it promised was being swept away by the order issued that morning for the Army of Virginia to fall back within the intrenchments of Washington, and, of course, under the command of General McClellan.

The testimony furnishes yet other indications of the animus of the accused. General Pope was warned by General Roberts and Lieutenant-Colonel Smith, and by others, that the accused "would fail him." In his frank and unsuspecting nature he seems to have flung the imputation from him. He had not then the light which the pages of the record before you now furnish. When, afterward, on his arrival at Washington, he was informed of the dispatches sent by the accused to General Burnside, his mind appears to have been very differently impressed.

In the afternoon of the 28th of August General Roberts became satisfied that the accused was not doing his duty in good faith to General Pope. He arrived at this conclusion as well from his alleged disobedience of the order to march at 1 a. m. of that morning, as from the declaration of General Kearny. General Roberts had previously held the accused in high estimation, and when mentioning this to General Kearny the latter said that "he (General Roberts) did not know him, and that he would fail General Pope."

Lieut. Col. Thomas C. H. Smith, an aide-de-camp on the staff of General Pope, called on the accused in the afternoon of the 28th of August. He had not heard of his disobedience of any orders, and had, like General Roberts, the most favorable opinion of his character and conduct as an officer; yet, such was the impression made upon him by his manner and conversation, that, at the close of their interview, he left him fully satisfied that he would fail General Pope, and would withhold from him his support in the then pending operations of the Army of Virginia. Soon thereafter he arrived at the headquarters of General Pope, and said to him that he had just seen General Porter on his way there, and that he would fail him, and added: "So certain am I that Fitz-John Porter is a traitor, that I would shoot him to-night, so far as any crime before God is concerned, if the law would allow me to do it." The impression thus expressed he still retains, and reiterated in his testimony. This evidence is of a most striking character, and should be closely examined with a view to the ascertainment of the weight to which the opinion of the witness is entitled. It has been stigmatized in the defense of the accused as "ravings," and as "wild fantasies," which "encumber the record" as "rubbish." Such epithets were not warranted either by the language or manner of the witness. While expressing himself thus forcibly, it was evident that he was a man of fine intelligence, and equally evident that his conscientiousness rendered him careful and guarded in his statements. Certainly the particular impression referred to was deposed to with a depth and solemnity of conviction rarely paralleled in judicial proceedings. Under the pressure of the severe cross-examination to which he was subjected, he endeavored to lay bare the foundations on which his belief of the accused's meditated treachery rested. The task, however, was a difficult one, and he may not have been entirely successful. In reference to a large quantity of ammunition ordered by and forwarded to the accused, but which had not been received, he manifested utter indifference, stating that "it was going where it belonged; that it was on the road to Alexandria, where we are all going"—a favorite thought, as appears from his dispatches. His manner was sneering throughout, whenever allusion was made to matters connected with General Pope; and "his look was that of a man having a crime on his mind." It was physically impossible for the witness to reproduce the manner, the tone of voice, and the expression of the eye, and the play of the features, which may have so much influenced his judgment; yet these often afford a language more to be relied on than that of the lips. He could not hold up before the court, for its inspection and appreciation, the sneer of which he spoke; and yet we know that a sneer is as palpable to the mental as a smile is to the natural vision. It is a life-long experience that souls read each other, and that there are intercommunings of spirits, through instrumentalities which, while defying all human analysis, nevertheless completely command the homage of human faith. Great crimes, too, like great virtues, often reveal themselves to close observers of character and conduct as unmistakably as a flower garden announces its presence by the odors it breathes upon the air. The witness may have misconceived this "look," but from the calamities likely to follow such an act of treachery, if indeed it was then contemplated, it must be admitted as altogether probable that the shadow of such a crime struggling into being would have made itself manifest. In view of the fearful perils which then menaced the Army of Virginia, to which they owed a common duty, is it not passing strange that during this interview the accused uttered not to the witness one word of kindness or cordiality, of encouragement or determination in reference to the sanguinary conflict in which the morrow was to involve them with a common enemy?

With this exhibition of the disposition of the accused toward the service in which he was engaged, I will proceed to review, as briefly as possible, the testimony in its bearing upon the charges and specifications of the record.

The order of General Pope, set forth in the first specification of the first charge,

directed the accused, then at Warrenton Junction, to start at 1 o'clock on the morning of the 28th of August, and to march with his whole corps so as to be at Bristoe Station, distant 9 miles, at daylight. It recited that General Hooker had "had a very severe action with the enemy, with a loss of about three hundred killed and wounded;" that the enemy were retiring along the railroad, and that it was necessary to drive them from Manassas and clear the country between that place and Gainesville. The urgency of the necessity under which the order was issued was further expressed in these words: "It is necessary, on all accounts, that you should be here (Bristoe Station) by daylight. I send an officer with this dispatch, who will conduct you to this place." The order was delivered by the officer referred to (Capt. Drake De Kay) at between half past 9 and 10 o'clock of the evening of the 27th. On delivering it he stated to the accused: "The last thing General Pope said to me, on leaving Bristoe Station was, that I should remain with General Porter and guide the column to Bristoe Station, leaving at 1 o'clock, and that General Pope expected him certainly to be there by daylight." General Hooker's command was out of ammunition, and an attack from the combined forces of Jackson and Ewell was expected early on the morning of the 28th, and hence the urgency with which this prompt and vigorous movement was pressed upon the accused. The order was not obeyed.

The march, according to several of the witnesses, did not begin until daylight. Captain De Kay, who acted as guide, and moved at the head of the column, states that he was waked up just at dawn, and that he breakfasted before the march began. Captain Monteith, called by the accused, when asked if, in point of fact, the march commenced before daylight, replied: "I think it was about dawn of day." General Sykes, also a witness of the accused, deposed that his division led on that morning; that he generally allowed from one and a half to two hours between reveille and the advance; that on the morning of the 28th the reveille was beaten from a quarter to half past 2 o'clock, and that the advance was sounded as soon as they could distinguish the road—thereby evidently referring to the dawn of day. General Pope having been asked whether, on the receipt of certain messages from the accused, the latter was on his march in obedience to the order of the 27th of August, answered:

"I do not know that he was. On the contrary, from a note I had received from him, I did not understand that he would march until daylight in the morning."

While the weight of the testimony is to the effect that the troops did not move forward until daylight, none of the witnesses represent them as having done so earlier than 3 o'clock, and the arrival at Bristoe Station took place, not at daylight, as directed by the order, but at twenty minutes past 10 of the forenoon of the 28th. If our Army—a large part of it without ammunition—had not, in the meanwhile, been fallen upon and beaten, it was not because of any exertions made by the accused to prevent such a catastrophe, but simply because the enemy had not thought proper to make the anticipated attack.

The violation of this peremptory order is sought to be excused, or rather fully justified by the accused on three grounds: First, the fatigue of his troops; second, the darkness of the night; third, the obstructions on the road growing out of breaks and difficult places in it, and the presence of wagon trains in motion.

A part of the troops had marched on the 27th from 17 to 19 miles—the remainder not so far. The command of General Sykes had marched but from 12 to 14 miles. A portion of them did not arrive at their encampment at Warrenton Junction until about sundown—half past 6 o'clock; the others arrived earlier—some of them as early as 10 o'clock in the morning. The generals who advised and participated in the determination not to move at 1 o'clock deposed that their troops were very much exhausted. Had the order been obeyed, the troops reaching their encampment earliest would have had fifteen hours, while those arriving latest would have had six hours and a half for rest. Would not this have been sufficient to prepare them for a march of only 9 miles? Had they reached Bristoe Station at daylight, the march for none of them would have exceeded 28 miles in twenty-four hours, while for a large part of the command it would have been less. Does not the military history of the world show that in great emergencies such forced marches often occur, and that soldiers are fully capable of enduring them?

The early part of the night was starlit, and not unusually dark. At about 11 o'clock the sky became overcast, and the night grew very, or as some of the witnesses express it, "extremely dark," and so continued until morning. It was a darkness, however, not complicated with cold, or rain, or storm. It is a noticeable fact, also, that the determination not to move at 1 o'clock, in obedience to the order, was not occasioned by this extreme darkness, but had been taken before Captain De Kay lay down, which was at 11 o'clock.

The first answer to the position taken in the defense, that in consequence of this darkness it was impossible to obey the order, is found in the testimony of Captain Duryea, who deposes that on the night of the 27th of August he marched with his command from Warrenton, and did not halt until about midnight, and that "he did not experience any unusual difficulties growing out of the night." Maj. F. S. Barstow was also on the march that night until 9 o'clock and was up the following morning before daylight, and says: "I have no vivid recollection of that night beyond other nights. It seemed to me to be very much like other nights on which we moved." He adds that no difficulty was experienced in marching the troops up to the hour at which they encamped. Lieutenant-Colonel Myers, who, as chief quartermaster to General McDowell, had charge of the trains passing over this road on the night of the 27th, states that he was up nearly all that night. He was asked the following question:

"Question. In view of the condition of the road, as you have described it, and also the character of the night, was or was not the movement of troops along that road practicable that night?"

He replied:

"I do not know of anything to hinder troops marching along the railroad there. There was a road running each side of the railroad. I should think it would have been easy for troops to move along there, although I may be mistaken in that."

General Reynolds, called by the accused, and who entertained a very strong estimate of the embarrassments in the way of the march of troops on the night of the 27th over the road to Bristoe Station, admitted, on cross-examination, that, dark as was the night, troops could have marched provided they had had a road and a guide to conduct them—both of which the command of General Porter had. General Heintzelman testifies that it was not impossible for troops to have marched over that road on the night of the 27th, but that there would have been a great many stragglers, of which, he said, there are more or less on all night marches. He describes the road as narrow, but "in tolerable good condition."

General Pope was asked this question:

"Question. If there were any obstacles in the way of such a march as your order contemplated, either growing out of the night or the character of the road, will you please state them?"

He answered:

"There was no difficulty in marching, so far as the night was concerned. I have several times made marches with a larger force than General Porter had, during the night. There was some obstruction on the road, in a wagon train that was stretched along the road, marching toward the Manassas Junction, in rear of Hooker's division, not sufficient, in my judgment, to have delayed, for any considerable length of time, the passage of artillery. But even had the roads been entirely blocked up, the railroad track was clear, and along that track had passed the larger portion of General Hooker's infantry. There was no obstruction to the advance of infantry."

There were a very few breaks in the road, but its general condition is shown to have been good. General Pope made the following statement on this point:

"Along the road between Warrenton Junction to Kettle Run, which is, perhaps, 3 miles west from Bristoe Station, the track had been torn up in places; but during the day of the 27th of August I directed Captain Merrill, of the engineers, with a considerable force, to repair the track up to the bridge over Kettle Run, which had been burned. He reported to me on the night of the 27th that he had done so; so that from Warrenton Junction to the bridge over Kettle Run there was no obstruction on the railroad of any description. The bridge to Kettle Run had been burned, but a hundred yards above the bridge the road crossed the creek by a ford. And from there toward Bristoe Station the most of the country, in fact nearly the whole of it, was open country; that is, as I remember the country, riding along on the afternoon of the 27th of August."

General Roberts, who passed from Warrenton Junction to Bristoe Station on the 27th, says: "The condition of the road was good generally;" and in another part of his testimony General Pope used this language: "The road was in good condition everywhere. At most places it was a double road on each side of the railroad track. I am not sure it was a double road all the way; a part of the way I know it was." Captain De Kay states that "the road was good," and Lieutenant Brooks, who was well acquainted with it, that it was "very good." Lieutenant-Colonel Myers was asked:

"Question. What was the condition of the road between Warrenton Junction and Bristoe Station at that time (27th), so far as regards the passage of wagons, artillery, &c.?"

"Answer. It was in excellent condition at that time."

The chief obstructions upon the road, however, and those most elaborately presented by the evidence and argument of the accused, were wagon trains. Captain De Kay thinks that, had the march begun at 1 o'clock, the greater part of these wagons would probably have been in camp, and would thus have been avoided. A part of them are shown to have been on the road throughout the night, and between 2 and 3 o'clock Colonel Cleary found them so jammed as to constitute a serious obstruction for some 3 miles. But even here the railway track was alongside of the road, and could easily have been used by the infantry. For the first 3 miles from Warrenton Junction it was in proof that the road was wholly unobstructed.

Captain Fifield, a witness of the accused, deposed that with one hundred men he could have prevented the jam of the wagons, and that with one hundred and fifty he could have kept the road entirely clear. Why did not the accused detail this force, and at once remove the obstacles which are now relied on to excuse him for this alleged disobedience of orders? The testimony leaves no doubt but that he could have done so, and that every wagon might thus have been taken out of the way of his troops by 1 o'clock. The subject does not appear to have been discussed, or even thought of. It is true that at 12 o'clock on the night of 27th Lieutenant Brinton came from Catlett's Station to Warrenton Junction, and on having an interview with the accused, he spoke to him of the wagons on the road; whereupon accused directed him on his return to have the road cleared. On his arrival at Catlett's Station he told the adjutant "to send out some men to get these wagons out of the way." He does not know that the direction he gave was complied with. This was at 1 o'clock, the hour at which the troops should have been in motion. All the circumstances surrounding this direction on the part of the accused leave the impression that he could not have anticipated from it the removal of the obstacles in his way. It was accidental, and was without vigor or precision, and given at an hour that showed the subject had not been with him one of any solicitude. It is observable, also, that even this feeble and inefficient provision looked to clearing the road, not for a march at 1 o'clock (for all thought of that had been abandoned), but at daylight, or, at earliest, at 3 o'clock.

On the consultation which took place between the accused and his generals when the order was received, the opinion was expressed by the latter (and it has been repeated in their testimony), that nothing would be gained in the way of time by starting at 1 o'clock, instead of a later hour—say 3 or 4. As starting at 3 would require a night march of one hour, and starting at 1 a night march of three hours, this opinion imports a declaration that the troops could march no further in three than they could in one hour, the darkness for the whole period of time being the same. If the opinion referred to a starting at daylight, then it carries with it the assumption that during the three hours, from 1 to 4 o'clock, the troops would have been unable to make any progress whatever, and this notwithstanding the 3 first miles of the road from their encampment is shown to have been entirely unobstructed. Surely these opinions have not been well considered.

There are certain other facts disclosed in the testimony which go far to indicate a settled purpose on the part of the accused to disregard this order of his commanding general. It was couched in terms as strong as a military man could employ in addressing a subordinate; and yet its urgent language was not commented upon, and does not seem to have attracted any attention, as appears from the conversation that ensued between the accused and his generals after its receipt. The accused, as we learn from Captain De Kay, handed it to one of his generals present, saying, "There is something for you to sleep on"—not something that you are to prepare to execute—not something which announces that the army with which we are connected is threatened by great perils, which we must make extraordinary efforts to meet, but "something for you to sleep on." The whole tone of that conversation was to the last degree saddening and discouraging for those who believe that in the prosecution of this war much vigor is much wisdom.

Again: General Griffin, called by the accused, testified that after having marched about a mile with his brigade, he came to a halt, and remained there until two hours after daylight; and the remainder of the forces no doubt did the same. This explains why the arrival at Bristoe Station was not until twenty minutes past 10. No reason that deserves a moment's consideration is given for this long delay. It is true that General Griffin says: "I know the artillery which followed the brigade—that is, a carriage or two of the artillery which followed the brigade—got stuck in the mud or in a little creek, and had trouble in getting out." When more closely questioned as to the cause of the halt, he said: "I halted because I found, when I got to the point where I did halt, that I had only a portion of my brigade with me. In the darkness, by some accident or other, we had become separated, and I halted to get my brigade together. And the artillery, I presume, is what detained us there until we started again. That is my impression. I do not know that positively. General Morell was in command of the division." This may explain the halt, but not the delay until the late hour mentioned. It was in summer, and a season of drought, as appears from the clouds of dust which are continually brought to our notice by the testimony; and we can not be misled as to the amount of obstacle the mud in such a stream, at such a season, would offer to the onward march of soldiers determined to do their duty.

Again: When the forces were in motion there was no haste or vigor displayed. Captain De Kay says "the march was at the rate at which troops would move if there was no necessity for a rapid movement;" and, he adds, "they could have moved faster than they did." General Pope deposed: "I sent back several officers to try and see General Porter, and request him to hurry up and report to me where his troops were, as I was very apprehensive that after day had dawned we should have an attack upon us from the enemy. I think they all returned. The report made to me was that General Porter was coming along very slowly, and was pushing the wagons out of the road."

Whatever may be thought of the difficulties in the way of the night march required by this order, it was the manifest duty of the accused to make a sincere and determined endeavor to overcome them. If, after having promptly and vigorously made this effort, and started as ordered, he had failed to arrive at Bristoe Station at daylight, either from the exhaustion of his troops, the darkness of the night, or the character of the road, the responsibility of the failure would not have been charged upon him. The contemptuous and unfriendly feelings disclosed in the dispatch to General Burnside—which was written but about five hours and a half before this order was received—will probably furnish a more satisfactory solution of the question why this effort was not made than can be found in the nature of the obstacles themselves.

Nor is it believed that the conduct of the accused finds any shelter in the Napoleonic maxim quoted in the argument for the defense. The discretion it allows to a subordinate, separated from his superior officer, is understood to relate to the means, and not the end of an order. When the accused determined that, instead of starting at 1 o'clock, he would start at 3 or 4, he did not resolve that he would arrive at Bristoe Station by daylight in a different manner from that indicated by his commanding general, but that he would not arrive there by daylight at all. In regard to this—the end of the order—he had no discretion.

The order set forth in the second specification to first charge was addressed to Generals McDowell and Porter, jointly, and a copy, or, rather, duplicate, of it was delivered to each of them, it may be inferred from all the evidence on the point, at about 10 o'clock in the morning of the 29th of August. Previously to this they had met with their forces, and, under the sixty-second article of war, General McDowell had assumed the command. The order directed them to move with their joint command towards Gainesville until they should effect a communication with the forces of Heintzelman, Sigel, and Reno, and then to halt, taking care to occupy such a position that they could reach Bull Run that night or by the morning of the following day. The order contained these further words: "If any considerable advantages are to be gained by departing from this order, it will not be strictly carried out." At the time this order reached Generals McDowell and Porter they were on the road between Manassas Junction and Bethlehem church, and were proceeding in the direction of Gainesville, as the order contemplated. The order being issued to them jointly showed that it was the purpose of General Pope that they should act independently of each other, and each in direct subordination to himself; and he testified that such was his intention. Under these circumstances, it may be well questioned whether, under the sixty-second article of war, General McDowell could continue the command which he had assumed over their joint forces. That article excludes the idea of the presence of an officer superior in rank to those commanding the different corps of which it speaks. In this case General Pope was absent but a few miles—was in fact occupying the same field of military operations with Generals McDowel and Porter, and claimed to decide the question (which it certainly belonged to him to determine) that these generals were so far in his presence that he might command them directly, and not through each other.

Their forces continued their march—those of the accused being in the advance—until the front of his column had reached some three miles beyond Bethlehem church, and until a small part of General McDowell's command had passed that point. General McDowell then rode forward to the head of the column of the accused, where an interview and conference took place between them, to which reference is frequently made in the testimony. They discussed the joint order, and General McDowell determined, for himself, that there were "considerable advantages to be gained by departing from it," and by moving with his forces along the Sudley Springs road toward the field of a battle then being fought by the main army of General Pope, at the distance of three or four miles. His purpose was to throw himself on the enemy's center, and he wished the accused to attack his right flank. He therefore said to him: "You put your force in here, and I will take mine up the Sudley Springs road, on the left of the troops engaged at that point with the enemy;" and he left him, at about 12 o'clock, with the belief and understanding that he would put in his force at that point. Why this expectation was doomed to disappointment may possibly be gathered from the following extract from General McDowell's testimony as to what occurred during his conversation with the accused:

"Q. You have said that the accused made an observation to you which showed that he was satisfied that the enemy was in his immediate front. Will you state what that observation was?

"A. I do not know that I can repeat it exactly, and I do not know that the accused meant exactly what the remark might seem to imply. The observation was to this effect (putting his hand in the direction of the dust rising above the tops of the trees): 'We can not go in there any where without getting into a fight.'

"Q. What reply did you make to that remark?

"A. I think to this effect: 'That is what we came here for.'"

These words will certainly stand in memorable contrast with the sad utterance to which they were a reply.

General McDowell, on parting with the accused, ceased to exercise any authority over his command, and he was thus left untrammeled and in possession of the joint order still in full force. Soon after General Griffin's brigade—a part of the corps of the accused—was ordered to move to the right, as if for the purpose of advancing on the enemy, as directed by General McDowell. It had proceeded, however, only about 600 yards, when, coming into "some small pine bushes," and somebody saying there were obstacles ahead, a retreat was ordered, and they fell back to their original position. General Griffin saw no obstacles himself, and he made no reconnaissance. This was all that was done toward carrying into effect the stirring and soldierly direction of General McDowell.

Some time after this faint demonstration—it may have been an hour or more, General McDowell having left at about 12—a rebel battery threw three or four shot at the head of the accused's column. It was at once replied to and silenced, and then came the order to fall back, of which Col. B. F. Smith, who witnessed the artillery firing, speaks so distinctly. The note of the accused to Generals McDowell and King, which was read in evidence and is without date, must have been written immediately after this artillery firing, and after the order to retreat which followed it. It is in the following words:

"Generals McDowell and King: I found it impossible to communicate by crossing the roads to Groveton. The enemy are in strong force on this road, and as they appear to have driven our forces back, the firing of the enemy having advanced and ours retired, I have determined to withdraw to Manassas. I have attempted to communicate with McDowell and Sigel, but my messengers have run into the enemy. They have gathered artillery and cavalry and infantry, and the advancing masses of dust show the enemy coming in force. I am now going to the head of the column to see what is passing and how affairs are going. Had you not better send your train back? I will communicate with you.

"F. J. PORTER, *Major-General.*"

This note appears to have been written for the purpose of explaining why the accused had not "put his force in" at the place which General McDowell had pointed out. It announces most energetically a determination "to withdraw"—*i. e.*, retreat—to Manassas, because of the approach of the enemy, and because the battle seemed to be going against the Federal forces. That this purpose was promptly carried out, substantially, if not to the letter, is made evident from the fact that at between 5 and 6 o'clock the accused was found at or near Bethlehem church, surrounded by his troops, whose arms were stacked. It is further proved by Col. B. F. Smith, who was in the front at the time of the artillery firing, and alleges that he and the troops of his command then fell back, under orders, to within a mile or two of Manassas, where they passed the night, having arrived there in the afternoon. It is yet further shown by General Griffin, examined by the accused, who says his brigade retreated from a mile and a half to two miles. This retrograde movement might have been excused had it been made in good faith for the purpose of reaching Bull Run that night; but no such purpose was entertained, nor has it been insisted that it was, either by the testimony or the argument. General McDowell says the accused might have attacked the enemy and would have still had ample time for falling back on Bull Run. Indeed, as appears from the map, such an attack would have been an advance in the direction of Bull Run. He might have found justification, too, for this step, had it been taken from a conviction that, in the sense of the order, "considerable advantages" were to be gained by departing from its terms. No such position, however, could be successfully taken in the defense. The only "advantages" which the retreat promised were the personal safety of the accused and staff, and the exemption of his troops from any participation in the sanguinary battle then being fought immediately to his right. Surely such advantages as these, purchased, as they were, at the imminent hazard of the sacrifice of the whole army, were not those contemplated by the order. The advance of the accused, either along the Gainesville road or to the right, would have brought him into conflict with the enemy. The court concluded, and justly, that his falling back, under the circumstances and for the purpose mentioned in his note to Generals McDowell and King, was a violation of the joint order to himself and General McDowell.

It would seem, also, to have been a manifest violation of the duty resting on him as a soldier, in the position in which he was placed, without reference to any specific order or direction leading or directing him to engage the enemy. In forward, aggressive movements it is an established principle of military science that the column shall be so held in their advance as to be ready to afford mutual assistance in time of need. Another elementary principle of such movements is that, in the absence of positive restraining orders, the march shall always be toward the sound of the guns—thus confirming the sentiment of the words of General McDowell, that it is the soldier's mission to fight. Both these fundamental rules of the military profession were disregarded in the retreat of the accused. He fell back precisely at the moment that the obligation to co-operate which was pressing upon him required him to advance, and his march was not toward, but from, the sound of the enemy's cannon.

The order of 4.30 p. m., August 29, directed the accused "to push forward into action at once on the enemy's right flank, and, if possible, on his rear." It was not obeyed, nor was any attempt made to obey it.

It was claimed in the defense that the accused should not be condemned for this disobedience: first, because the order was received too late to be obeyed, and secondly, because obedience to it was impracticable in consequence of the presence of the enemy in overwhelming force, and in consequence of the character of the country over which the movement would have to be made.

There is a decided conflict in the testimony as to the hour at which the order was received. It bears date 4.30 p. m., and Captain Pope, the staff officer who bore it, says that he proceeded direct from General Pope to the accused, and delivered it "as early as 5 o'clock, or probably three or four minutes after 5." Charles Duffee, the orderly who accompanied him, testifies that they left General Pope at about half past 4, and went on to the headquarters of the accused at a pace "about as fast as they thought their horses could travel." He thinks about an hour was occupied on the road, and that the order reached the accused at about half past 5. These statements are corroborated by the evidence of General McDowell as to the time and place at which he met them, and read the order. General Pope says: "I know that an aid-de-camp, riding rapidly, could go from the field of battle to Manassas Junction, or to any point west of Manassas Junction, on the Gainesville road, if he found General Porter in advance of Manassas Junction, within an hour, by going at speed." General Roberts, who was present when the order was issued, expressed the opinion that it should have been delivered "in half an hour or less, as orders are generally carried on such occasions." Adopting the latest estimate—that of General Pope and the orderly—this would give the accused two hours of daylight within which to make the attack.

On the other hand, there are five witnesses introduced by the accused—three of them being his staff officers—namely: General Sykes, Lieutenant-Colonel Locke, Captain Monteith, Lieutenant Weld, and Lieutenant Ingham—who depose that the order was not received until about sundown. One of them, indeed, though he is not supported by the others, fixes the hour much later. If, in ascertaining the value of testimony, witnesses were counted, and not weighed, the question would be at once settled by the relative numbers as given. Such, however, is not the rule of law, and it may be that after carefully considering all the circumstances, the court felt that the explicit and intelligent statements of Captain Pope and his orderly, fortified by the corroborative evidence of Generals Pope, McDowell, and Roberts, were not overcome by the opinions of the five officers named. There was, outside of the positive testimony, a consideration strongly supporting this view, and it is this: There is no question as to the time at which Captain Pope left with the order; it was at 4½ o'clock; he rode as fast as his horse could carry him, and had but about 5 miles to travel; and yet, according to the theory of the defense—that he did not arrive until sunset, or half past 6—he was two hours on the way. Is it credible that a staff officer, bearing an important order, in the midst of a fiercely contested battle, would have traveled at this rate; and this, too, when he was conducted by an orderly acquainted with the road, and encountered no obstable to his progress? Is it not much more probable that but a single hour was occupied, and that, in point of fact, he arrived at half past 5?

Conceding, however, for the sake of the argument, the position taken by the defense, that the order was not received until sunset, this would have left the accused an hour of daylight within which to make the movement. The enemy had been so far encouraged in their advance by the inaction of the forces of the accused, and by their falling back, that at this late moment the front of his column was not separated from the advance of the rebels by more than a mile or a mile and a half. But little time, therefore, was required to make the attack. It is admitted that it was not made; but was there any earnest or vigorous effort on the part of the accused to obey the order? Colonel Locke states that soon after the receipt of the order from General Pope, he bore one from the accused to General Morell, directing him to engage the enemy—which, as appears from the statement of Colonel Marshall, was to be done with but four regiments; but General Morell testified that before there was time to carry this order into execution—say within about half an hour after its receipt—it was countermanded by another, directing him to pass the night with his troops where he was. This was all that was done toward attacking the enemy; and yet General McDowell testified that an attack even at this late hour—indeed, at any hour before the battle closed, which was at dark—would have resulted in a victory for our arms.

There is one fact—probably the most remarkable one disclosed by the record—which must have impressed the court as going far to manifest the true spirit of the conduct of the accused on this occasion. The forces of General Morell were in the front, and those of General Sykes were immediately in their rear, and supporting them. In the progress of any determined movement against the enemy, therefore, the command of General Sykes would be necessarily involved, and the presence of that general would be required; yet General Sykes states that he was with General Porter when the order from General Pope was received, and when that to General Morell was sent; that he remained with him all the evening and night; and that he never heard that an order to attack the enemy had

been received from General Pope, or had been forwarded to General Morell.* What conclusion is necessarily drawn from this? If the accused had seriously determined that the order to General Morell should be executed, would he not have apprised General Sykes of its character, and directed him to proceed at once to his command? When we add to this the feebleness of the attack directed—being but with four regiments—and the further fact that the order was revoked before it was possible to make the movement, can we escape a painful impression that the order itself was issued without any expectation that it would, or any purpose that it should, be obeyed?

There is yet one other fact presented in connection with this order which deserves a passing notice. Captain Pope found the accused with his troops halted, and the arms of some of them stacked. After delivering the order, and during his stay of fifteen or twenty minutes, he did "not observe any orders given, or any indication of preparation for a movement in the direction of the battlefield." On his return, nearly an hour afterward, the same condition of things existed. The following extract from the testimony of Mr. Duffee, who accompanied Captain Pope, will yet further illustrate the absence of all anxiety, if not of all interest, on the part of the accused:

"Question. Did you see the order delivered into the hands of General Porter?

"Answer. Yes, sir; I saw him take the order from Captain Pope.

"Q. Was he in his tent or out of doors?

"A. He was lying down under a shade tree when he took the order.

"Q. Did he change his position on reading the order, or did he continue to lie down?

"A. I can not state positively whether he rose to his feet or not; but at the time he was reading the order I noticed that he was lying in this position on the ground [describing him as resting on his elbow, his head upon his hand].

"Q. Did you leave him lying down on the ground when you came away?

"A. Yes, sir."

The accused had, for between five and six hours, been listening to the sounds of the battle raging immediately to his right. Its dust and smoke were before his eyes, and the reverberation of its artillery was in his ears. He must have known the exhaustion and carnage consequent upon this prolonged conflict, and he had reason to believe, as shown by his note to Generals McDowell and King, that our army was giving way before the heavy re-enforcements of the enemy. He had a command of some thirteen thousand fresh and well-appointed troops, who had marched but a few miles, and had not fought at all on that day. Under these circumstances, should not an order to charge the enemy have electrified him as a soldier, and have brought him not only to his feet and to his saddle, but have awakened the sounds of eager preparation throughout his camp? But the bugle-note of this order seems to have fallen unheeded; and after reading it, and at the close of an interview of from fifteen to twenty minutes, the messenger who bore it turned away, leaving the accused still "lying on the ground."

There is some contrariety in the evidence as to the force of the enemy by which the accused was opposed. The weight of the testimony is that it was small—decidedly so in the early part of the afternoon, when the attack directed by General McDowell should have been made. General Roberts thinks there was only a cavalry force, with some light artillery. Col. B. F. Smith, who was at the head of the column at the time the rebel battery was silenced, and who fell back with his command half an hour afterward, noticed clouds of dust beyond the trees, but whether there were troops advancing or moving in another direction he could not tell. He saw nothing to induce him to believe that they were retreating before the enemy, but supposed that they had been making a reconnaissance in force, and having completed it were falling back for some other duty. General Griffin, a witness for the accused, who was also at the front, and enjoyed every opportunity of observation, having been asked as to the position of the enemy in relation to General Porter's corps, between 5 and 7 o'clock of the 29th, replied: "It is a hard question to answer. I do not know much about the enemy; I only know that during the day large clouds of dust were going to our front and to our left, from a point stated to us then to be Thoroughfare Gap. The batteries which opened upon us at 1 o'clock were within 1,200 or 1,500 yards of us. We saw no force at all; we saw scattering groups of horsemen or of infantry. I do not believe we saw in any one group over forty men."

Major Hyland, who belonged to Colonel Marshall's regiment of skirmishers, and was some 800 or 1,000 yards in advance of General Morell, says the enemy began to form in his front and to the right between 2 and 3 o'clock. He saw none to the left. Thinks the force was very large, and although unable to give even a proximate estimate of their numbers, believes they were strong enough to have resisted an attack of General Porter's corps. Second Lieutenant Stevenson supposed the enemy's forces to consist of from twelve to fifteen thousand; but he was a young man, with limited experience, and when he stated that the enemy's line of battle was but a mile long, it was sufficiently evident that a large abatement was to be made from his estimate. Colonel Marshall set the enemy's troops down at twice the number of the corps of the accused. It is obvious, however, that he was largely influenced in forming this opinion from the clouds of dust, which may have arisen as much from the movement of ambulances and wagons as from the march of troops. He states that they came from toward Thoroughfare Gap, and separated into two columns, one of which proceeded in the direction of the battlefield at Groveton, and the other came down on the Gainesville and Manassas road. Now, we learn from General Buford that the enemy's forces passing through Gainesville that day from Thoroughfare Gap, and, counted by himself, did not exceed fourteen thousand men, and dividing these into two columns, it is believed that at no time on the 29th could the accused have been confronted by a rebel force exceeding seven thousand—a little more than half the strength of his own corps. The strong probability is that the force was not so large; but supposing the enemy to have had quite as large a force as his own, was that a reason why he should not make the attack, seeing that a severely contested battle was then pending?

The course of the inquiry on the part of the defense would seem to imply an impression that the accused could not attack the right flank because he found an enemy in his front, and could not attack the front because the order was to engage the right. A dead-lock, however, in military movements could scarcely be suffered to be produced by such a process as this. General McDowell solves this question by saying that if the enemy's forces were posted in the front of the accused in the manner indicated by the witnesses, they must have constituted his right flank, so that a movement in that direction would have been a literal compliance with the order.

A conclusive reply to the suggestion that the ground between the enemy and the accused was impracticable for military movements is found in the testimony of Lieutenant-Colonel Smith. He says: "I infer that the corps of the accused could have moved up, its right wing joining with the forces engaged, and have flanked the enemy. This is not all an inference merely from the general character of the country. It is based also on the fact that that portion of the country over which, as I understand it, the corps of the accused would have moved upon the enemy, *was sufficiently practicable to enable the enemy, as they did, to make a similar movement on our left on the next day.*"

Some of the witnesses of the accused declare that artillery could not have passed over this ground, while others testified that infantry could not have been marched through the woods in any order. Under a cross-examination, however, the obstacles on which these opinions were based were much reduced in the attempt to enumerate them. The general description of the country given is that it is open, with fields and woods and occasional ravines, but not remarkable for its ruggedness. There were no impassable streams, or morasses, or precipices. General McDowell deposed that he did not consider that there were any insuperable obstacles "in the way of the advance on the part of General Porter's command upon the flank of the enemy;" and he proved the sincerity of this opinion by directing him to make the movement. After reciting in detail certain facts leading to this belief, he thus concludes: "These movements by these two divisions of my corps, my own movements, and the movements of the enemy, give me the belief that troops could move through the country comprised between the Warrenton turnpike and the Sudley Springs road and the road from Bethlehem church to Gainesville. I will mention, further, that that country is a mixture of woods, cleared ground, and hills, and that it is easy for troops to march without being seen or seeing the enemy." A glance at the map which accompanies the record will show that the ground in question is embraced by this boundary and description.

It may be admitted—and perhaps the testimony requires the admission to be made—that in falling upon the enemy on the afternoon of the 29th the accused would have encountered both difficulty and danger; but difficulty and danger, in time of war, are daily and hourly in the category of the soldier's life. Their presence should be for him not a discouragement, but an inspiration. To grapple with them should be his ambition; to overcome them, his glory.

That a vigorous attack upon the enemy by the accused, at any time between 12 o'clock, when the battle began, and dark, when it closed, would have secured a triumph for our arms, and not only the overthrow of the rebel forces, but probably the destruction or capture of Jackson's army, the record fully justifies us in maintaining.

This opinion, in effect, is emphatically expressed by Generals Pope, McDowell, and Roberts, and by Lieutenant-Colonel Smith, all of whom participated in the engagement, and were well qualified to judge. General Roberts, who was on the field throughout the day, says: "I do not doubt at all that it would have resulted in the defeat, if not in the capture, of the main army of the confederates that were in the field at that time." To the same effect is the following explicit language of General Pope: "Late in the afternoon of the 29th—perhaps toward half past 5 or 6 o'clock—about the time that I hoped General Porter would be in his position and assaulting the enemy on the flank, and when General McDowell had himself arrived with his corps on the field of battle, I directed an attack to be made on the left of the enemy's line, which was handsomely done by Heintzleman's and Reno's corps. The enemy was driven back in all directions, and left a large part of the ground, with his dead and wounded upon it, in our possession. Had General Porter fallen upon the flank of the enemy, as it was hoped, at any time up to 8 o'clock that night, it is my firm conviction that we should have destroyed the army of Jackson." Even had the attack itself failed, General McDowell states that the number of troops which would have been withdrawn from the main battle by the enemy to effect this result would have so far relieved our center as to render our victory complete. When we recall the calamities already suffered by our country, and contemplate the untold griefs to the homes and hearts of its people which may yet follow from the escape of that army on that day, we can appreciate with some approach to accuracy the responsibilities incurred by a line of conduct which so certainly and so fatally led to that disaster.

The first, second, and third specifications of the second charge arraign the conduct of the accused on the 29th, under the fifty-second article of war, as "misbehavior before the enemy." If a soldier disobeys the order of his superior officer before the enemy he commits a double crime, by violating both the ninth and fifty-second articles of war, and he may be prosecuted and convicted of either or both offenses. So any other breach of duty, connected with military movements and occurring in the presence of the enemy, has assigned to it by the articles of war a depth of criminality which would not belong to it under other and ordinary circumstances. This results from the increased disaster likely to follow from misconduct in such a conjecture, and from the fact that insensibility to duty is doubly criminal when displayed in the midst of those dangers which ever inspire the true soldier with renewed devotion to the honor and interests of his flag. The accused is shown to have been, with his command, in the presence of the enemy, from the beginning to the end of the battle of the 29th—a period of at least seven and a half or eight hours. His troops were fresh and well equipped; and that from his position he was bound to have taken part in the engagement, and that his failure to do so was to the last degree culpable, can not be denied, unless it can be made to appear that he was restrained by some uncontrollable physical necessity, or by some positive order of his commanding general. The attempt has been made to justify his conduct on both grounds. The examination already made of the testimony warrants the conviction that the material obstacles in his way, growing out of the proximity and strength of the enemy and the nature of the country, were not sufficient to excuse his inaction. His chief of staff, however, Lieutenant-Colonel Locke, called by the defense, deposed that in the afternoon of the 29th he bore a message from the accused to General King, whom he found near Bethlehem church with General McDowell; that General McDowell sent back by him to the accused a reply in the following words: "Give my compliments to General Porter, and say to him that I am going to the right, and will take General King with me. I think he (General Porter) had better remain where he is; but if it is necessary for him to fall back, he can do so upon my left;" and the witness testified that he regarded this as an order, and communicated it to the accused—and this, it is insisted, restrained him from attacking the enemy.

In the first place, it is to be remarked that this language does not import an order, but simply a suggestion and counsel from one companion in arms to another. Again, General McDowell was not then in a condition to command the accused, and this both he and the accused must have well known. They were separated from each other, and were not, in the terms of the sixty-second article of war, "joined or doing duty together." General McDowell was proceeding at the moment, with his forces, upon an entirely distinct service from that in which the accused was engaged. But the whole of Lieutenant-Colonel Locke's statement in regard to this message was swept away by the evidence of Generals McDowell and King. The witness had stated that the message was given to him in the presence of General King, and was heard by him. General King, however, testified that he was not with General McDowell at all after the morning of the 29th, and that he heard no such message; while General McDowell declared that none such was sent by him. It is further urged in the defense, that although the evidence may thus fail to show that such a message was sent, yet that it was delivered to the accused and he was justified in obeying it. This position is assumed in disregard of the maxim "*falsum in uno, falsum in omnibus.*" The same witness who deposed to the receipt of the message from General McDowell deposed to its delivery to the accused, and in neither point was he supported by the testimony of others. Having been discredited as laboring under a complete misapprehension in regard to the first, this discredit necessarily attaches to the second, and, under the maxim quoted, his entire statement falls to the ground.

But even if it had been established that this message had been sent and received

*The troops of General Sykes extended along the road from those of General Morell toward, and, may be, to where General Porter was. It is not, therefore, intended to intimate that, in being with General Porter at the moment, he was out of place; but to say that had it been General Porter's purpose that his order to General Morell to engage the enemy should be vigorously carried out, he would, from General Sykes's necessary relation to the movement, have advised him of it, and have directed him to go forward and prepare for performing his part in its execution.

and that it was in form an order, and given by proper authority, still it is not claimed that it reached the accused before about 3 o'clock. This would leave his inaction, from 12 to 3 o'clock, in the presence of the enemy and in the midst of a battle, unexplained, and therefore unpalliated in its culpability by anything that is contained in the record.

Although that portion of the defense which would justify the inaction of the accused because of the enemy and of the difficult nature of the ground in his front and to his right has been commented on, it may not be inappropriate to add that history shows these obstacles to be insignificant as contrasted with those which have been often in great emergencies overcome by military commanders. The battle of Hohenlinden furnishes an illustration, and in one respect bears a striking analogy, while in another offering a remarkable contrast to the events of 29th August. A few extracts from Thier's History of the Consulate and the Empire, vol. 1, pp. 217–19, Lippincott & Co.'s edition of 1861, will suffice to show the appositeness of the reference.

Moreau, with sixty thousand French troops, was met by an Austrian army seventy thousand strong. "Richepanse and Decaen's divisions," says the historian, "were sent by Moreau an order, somewhat vaguely expressed, but positive, to throw themselves from the right-hand to the left-hand road, to get into the latter, into the environs of Maltenboet, and there surprise the Austrian army, entangled in the forest. He neither indicated the route to be pursued, nor provided against accidents which might occur. He left everything that was to be done to the intelligence of Richepanse." "At length, as the battle progressed, a wavering was observed in the Austrian troops of the center, which proved to be Richepanse falling on their rear." "He had started without waiting for Decaen and daringly penetrated into that tract of thickets and ravines which separated the two roads, and marching while the fight was going on at Hohenlinden, and making incredible efforts to drag with him over that inundated ground six pieces of small caliber." "Richepanse, reckoning upon Decaen to extricate Drouet's brigade, had marched without losing a moment for Maltenboet, for his military instinct told him that was the decisive point. Though he had left but demi-brigades of infantry, the Eighth and Forty-eighth, a single regiment of cavalry, the First Chasseurs, and six pieces of cannon, with about six thousand men, he had continued his march, dragging his artillery by hand almost always through the quagmire." "He then fell to the left and took the bold resolution of falling on the Austrian rear in the defile of the forest." "Marching, sword in hand, amidst his grenadiers, he penetrated into the forest, sustained, without flinching, a violent discharge of grape-shot, then fell in with two Hungarian battalions which hastened to bar up his passage. Richepanse would have inspirited his brave soldiers with words and gestures, but they had no need of them. 'Those fellows are our prisoners,' cried they; 'let us charge.' They charged accordingly, and completely routed the Hungarian battalions. Presently they came to masses of baggage, artillery, infantry, accumulated pell-mell at this spot. Richepanse struck inexpressible terror into this multitude, and threw it into frightful disorder. At the same moment he heard confused shouts at the other extremity of the defile. It was Ney, who, advancing from Hohenlinden, had penetrated by the head of the defile and pushed before him the Austrian column which Richepanse was driving the other way by attacking it in the rear." A complete route of the Austrian army ensued. Its loss was some twenty thousand men, with nearly all its artillery and baggage, and "what," as the historian observes, "was of still greater importance, its moral courage." "This battle," continues M. Thiers, "is the most brilliant that Moreau ever fought, and certainly one of the greatest in the present century, which has beheld such extraordinary conflicts."

What were the difficulties that appalled the accused on the 29th as compared with those surmounted by Richepanse with but 6,000 men? This example is an impressive proof what a general can and will achieve when his heart is in his work, and when he finds himself in the presence of the enemies of his country. General McDowell, as a soldier and a commander, deposed that it was the duty of the accused to have attacked the enemy on the 29th, and it would seem this duty was so manifest, and so clearly the result of his position, that no order to that effect could have added much, if anything, to its force and urgency. What General McDowell prescribed for his associate in arms he unhesitatingly accepted for himself. He had no summons to arouse him, and no guide to conduct him, but the sound of the cannon, following which he, with his command, found his way to the battlefield, where his instincts as a soldier told him both his duty and his honor required him to be. And it is, no doubt, to his timely arrival and active participation in the conflict that we are largely indebted for General Roberts's declaration that at the close of the day the advantages were decidedly on the side of the Federal troops. Had the accused, obeying the same impulse that carried General McDowell up the Sudley Springs road, made a movement upon the enemy with the vigor and heroism which the occasion demanded, it is altogether probable that the glory of Richepanse would have been his, and the fate of the Austrians that of the rebel army. After carefully considering all the impediments which have been so elaborately arrayed as in the way of the accused on the night of the 27th and throughout the day of the 29th, we can not but realize that they shrink away and are scarcely to be named beside those obstacles of darkness, and tempest, and snow, and morass, and Alpine precipices, and frowning batteries which the warriors of other times and lands have unhesitatingly confronted and bravely overcome.

But there is one feature of the inaction of the accused on the 29th which it is especially sorrowful to contemplate. How, unrestrained as he was, and with the cannonade of the battle in his ears, and its smoke and the dust of the gathering forces before his eyes, he could, for seven and a half or eight hours, resist the temptation to plunge into the combat it is difficult to conceive. But this alone is not the saddest aspect in which his conduct presents itself. This aspect is distinctly set forth in the third specification of the second charge. Colonel Marshall states that from the cheerings and peculiar yells of the enemy, heard on the evening of the 29th, he and every man of his command believed that General Pope's army was being driven from the field. General Morell also says that from the sound of the artillery the battle seemed to be receding, which indicated that it was going against the Federal forces. The accused, in his note to Generals McDowell and King, speaking of the enemy, says: "As they appear to have driven our forces back, the firing of the enemy having advanced and ours retired, I have determined to withdraw to Manassas;" and in further justification of this step he adds: "They have gathered artillery and cavalry and infantry, and the advancing masses of dust show the enemy coming in force." In the afternoon, then, of the 29th, it is clear that the conviction was entertained by the accused and his officers that our forces were being driven before the enemy—a conviction which, in tones above even the roar of the artillery, should have appealed to his soldier's heart to rush to the rescue; but, heedless of the summons, he turned, not toward, but away, from his struggling companions in arms, in the direction of Manassas.

Must we seek an explanation of this want of sympathy with the brave men who were doing battle that day in the feelings, as shown by his dispatches, which unhappily possessed him in reference to the Army of Virginia and its commanding general? That army, as he seems to have been aware, was sent forth not to capture Richmond or to occupy the South, but simply to harass and baffle the march of the advancing masses of the enemy, while the Army of the Potomac was being extricated from the perils that surrounded it on the Peninsula—a service which should not have provoked a sneer from the accused. It can not be improper to add, what the record will sustain me in saying, that, so far as light is shed upon the subject by the testimony, the Army of Virginia appears to have nobly performed the arduous and perilous work committed to its hands. Its campaign was brief, but marked by signal vigor and ability, and animated by a spirit which, shrinking from neither toil nor exposure nor danger, bravely struck the enemy whenever and wherever it could be found.

The accused presents two general grounds of defense, which apply to all the accusations against him. They are—first, his general reputation for zeal and loyalty; and, secondly, the expression of satisfaction with his conduct which General Pope is alleged to have made at Fairfax Court-House on the 2d of September.

In reference to the first, the testimony is full and earnest as to his former services and character for faithfulness and efficiency as an officer. The law admits such proof in criminal prosecutions, because a presumption of innocence arises from former good conduct as evidence by general reputation. The presumption, however, is held to be entitled to little weight except in doubtful cases. Where it comes into conflict with evidence that is both positive and reliable it at once gives way.

In regard to the second, Colonel Ruggles testified that at the close of a conversation on the 2d of September, at Fairfax Court-House, between General Pope and the accused, the General expressed himself satisfied with his conduct, referring, as the witness believed, to the transactions on which the present charges are based. Colonel Ruggles admits, however, that he was not a party to the conversation; that he heard it only in scraps, and endeavored not to hear it at all. General Pope, on the other hand, deposed that he was not satisfied, and could not have been; and that the expression heard by Colonel Ruggles related to explanations made by the accused as to certain disparaging telegrams which he was understood to have sent to General Burnside. In view of the relation of these two officers to the conversation, the court, of course, could not hesitate to accept the version of General Pope as the true one. Even if General Pope had declared himself satisfied, it would not have affected the status of the accused before the law. His responsibility was to his Government and country, and not to the commanding general. Nor can any presumption arise against this proceeding from the failure of General Pope to prefer charges against the accused. It was his privilege to prefer them, but he was not bound to do so. He discharged his whole duty when, in his official report, he laid these transactions before his Government for its consideration.

This case has been most patiently investigated. If, in war, and in the midst of active hostilities, any government has ever devoted so long a period of time—some forty-five days—to the examination of a military charge, it has not come to my knowledge. The court was not only patient and just, but liberal, and in the end everything was received in evidence which could possibly tend to place the conduct of the accused in its true light. It is not believed that there remains upon the record a single ruling of the court to which exception could be seriously taken.

The case is important, not only because of the gravity of the charges and the dignity of the officer arraigned, but also because of the fact that it involves a principle which lies at the very foundation of all discipline and of all efficiency in military operations—the principle of military obedience. A standard author, treating on this branch of jurisprudence, says: "Hesitancy in the execution of a military order is clearly, under most circumstances, a serious offense, and would subject one to severe penalties; but actual disobedience is a crime which the law has stigmatized as of the highest degree, and against which is denounced the extreme punishment of death." (De Hart, page 165.) The same author continues: "In every case, then, in which an order is not clearly in derogation of some right or obligation created by law, the command of a superior must meet with unhesitating and instant obedience." So vital to the military system is this subordination of will and action deemed that it is secured by the most solemn of human sanctions. Each officer and soldier, before entering the service, swears that he "will observe and obey the orders of the officers appointed over him;" and it is from this, probably, that the offense of disobedience derives much of the depth and darkness of the criminality with which it is stamped by the Articles of War. Obedience, indeed, is the very jewel of the soldier's life. It adorns him more even than laurels, which are so often plucked by unholy hands. The soldier who has given to the order of his superior officer a prompt, an earnest, a heartfelt support, has triumphed in the field of duty, even though he may have fallen on the field of arms.

The offenses for which the pleadings and testimony arraign the accused are the very gravest that a soldier can possibly commit—being neither more nor less than the willful violation of the orders of his commanding general in the midst of momentous and perilous military movements, and the shameful abandonment of a struggling army which it was his solemn duty to support, in the very presence of the enemy and under the very sound of his artillery. The court was careful to give to the accused the benefit of all well-founded doubts that arose in their minds in reference either to the fact of disobedience or in reference to the measure of criminality that prompted it; and hence they found him not guilty of the fourth and fifth specifications of first charge; and in the same spirit the fourth specification of second charge was withdrawn. While, however, the court felt that of crimes such as these no officer should be convicted but upon the clearest and most convincing proof of his guilt, they must also have felt that the honor of the profession of arms and the most enduring interests of our common Government and country imperatively demanded that there should be no acquittal when that proof had been made.

J. HOLT, *Judge-Advocate-General.*

To the PRESIDENT.

Mr. BRAGG. I shall object to the printing of the argument of Judge-Advocate-General Holt in the RECORD.

The CHAIRMAN. The Chair hears no objection to printing——

Mr. BRAGG. I object to the printing of the argument of Judge Holt.

The CHAIRMAN. There is objection to printing in the RECORD the argument of Judge Holt.

Mr. KELLEY. May I have as much of it as possible read in the time that can be spared?

Mr. NEGLEY (to Mr. KELLEY). Go on, Judge, I will give you ten minutes of my time.

The CHAIRMAN. The time belongs to the gentleman from Michigan [Mr. BURROWS].

Mr. NEGLEY. There are ten minutes reserved belonging to me.

The CHAIRMAN. The Chair has recognized the gentleman from Michigan.

Mr. KELLEY. I am aware that the time belongs to the gentleman from Michigan.

Mr. STEELE. I would like to raise a point of order. The gentleman from Pennsylvania [Mr. KELLEY] asked leave, and no objection was made at the time. I claim that objection now comes entirely too late.

Mr. CUTCHEON. The gentleman from Pennsylvania asked leave pending his argument.

Mr. KELLEY. I opened my argument with a request for leave——

Mr. BRAGG. No, sir.

Mr. KELLEY. However, I can better afford to have it excluded on the objection of the gentleman from Wisconsin than he can.

The CHAIRMAN. The Chair did not submit to the Committee of the Whole the request of the gentleman from Pennsylvania until he had concluded his remarks.

Mr. BRAGG. That argument is a libel on humanity, and it shall never be printed with my consent.

Mr. BURROWS. I would most cheerfully yield the balance of my time for the reading of the document were I not under obligations to other gentlemen to yield some portion of my time.

Mr. KELLEY. Will you permit me to read a brief extract, occupying three minutes or five?

Mr. BURROWS. Certainly.

Mr. NEGLEY. I have ten minutes of my time reserved. May I not by some understanding yield that time now to my colleague?

The CHAIRMAN. The Chair can not take the gentleman from Michigan [Mr. BURROWS] off the floor.

Mr. NEGLEY. I do not wish to have that done. I simply ask the courtesy of the House, that by unanimous consent I may at this time yield, in conection with the time given by the gentleman from Michigan, sufficient time to my colleague for him to read a part of the official narrative of this case.

The CHAIRMAN. The gentleman from Michigan has already yielded the time desired out of his hour.

Mr. BURROWS. Yes, I will yield to the gentleman from Pennsylvania for the purpose which he states.

Mr. BRAGG. I dislike to be discourteous to my colleague on the committee, but by unanimous consent that will not be read.

The CHAIRMAN. The gentleman from Pennsylvania is entitled to the time yielded him by the gentleman from Michigan. How much time does the gentleman from Michigan yield to the gentleman from Pennsylvania.

Mr. BURROWS. I understand five minutes will be sufficient.

Mr. KELLEY. I would like as much time as would be necessary. My colleague [Mr. NEGLEY] has yielded to me the ten minutes of time which he had reserved.

Mr. BURROWS. Very well; I will yield that much time to the gentleman.

Mr. THOMAS, of Illinois. There will be an understanding, of course, that the floor will be yielded to the gentleman from Michigan as soon as the gentleman from Pennsylvania has closed his remarks.

Mr. KELLEY. I will take my chances, Mr. Chairman, to get in again. I am on the list, in my own right, and I will try to get in then the paper which I desire to have read. [Applause.]

Fitz-John Porter.

SPEECH

OF

HON. JOHN R. THOMAS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 17, 1886.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 67) for the relief of Fitz-John Porter—

Mr. THOMAS, of Illinois, said:

Mr. CHAIRMAN: No one realizes more than I my utter inability in thirty minutes' time to discuss this question with anything like the fullness with which I would be glad to discuss it if I had sufficient time. I find myself met by a further difficulty, and that is to offer anything new in this discussion after so many able and elaborate speeches have been made for and against the bill. In the short time allotted to me (only thirty minutes, remember) I can only hope to discuss in a most cursory manner the salient points of this case, without being able to go into details, without being able to read from the evidence adduced before the court-martial, or from the evidence gathered by the Schofield board. I can only look at the question as a whole and deal with certain prominent features of it.

In the very outset I find myself confronted by a paradoxical and anomalous state of affairs. We are treated to the delectable spectacle in the House of Representatives of the United States Congress attempting, without constitutional or legal authority, to change its powers and prerogatives from legislative to judicial. There has been an impression abroad, not only in this country but throughout the whole world, that this Government was divided into three co-ordinate branches, that each within its realm was independent, having power under the Constitution to deal with the questions which came within its legitimate province. Although judicial subjects under our Constitution are given in charge to the judicial branch, here the legislative branch of Government is now attempting to usurp those judicial functions in violation of the Constitution by reviewing a case which has been tried by a competent court in a constitutional manner long after that case had been tried and, as it were, rounded up under constitutional authority.

We have been in the habit of regarding courts as above the ordinary plane of politicians, as above those partisan influences which characterize legislative assemblies, and especially the popular branch of Congress. Judges are supposed to act upon evidence and law, to be governed by the Constitution and to dispassionately and fairly seek the ends of justice. But here, with all the prejudices, with all the extraneous influence surrounding and controlling this House, we are asked to assume the functions of judges and pass upon this case.

Now, I deny most emphatically the right of Congress to retry Fitz-John Porter. I deny the right of Congress to overturn the judgment of a constitutional court of the United States which has been supposed to be and ought to be now and forever at rest.

The attempt has been made here, not only in this Congress but in other Congresses as well, to wash from Fitz-John Porter the brand of infamy which was placed upon him twenty-three years ago. His advocates have been parading him here as a patriot who had suffered under the stings and unjust malignity of his comrades and peers at that time. It is claimed that he was not fairly tried; that there was not an opportunity for the serious and earnest investigation of the case; that the times were troublous, and the land was full of war, and, therefore, that men's minds could not grasp the subject, could not deal with it fairly and dispassionately. But, sir, when we remember the fact that this case was not only tried by one of the most distinguished bodies of military men that ever assembled upon earth, that they gave forty-five days to its consideration, that it passed the scrutiny of that illustrious war secretary, Edwin M. Stanton, and that it rested beneath the shadow of the wing of mercy of Abraham Lincoln, it is safe to say that justice was meted out at the time when the minds of men were full of the facts, when they had not been dimmed by accumulating years and cares, and that those facts led them instinctively to a proper conclusion.

Fitz-John Porter a patriot! Where do you find the man who so regards him? In the hearts of the loyal people of this country, in the minds of those who loved the flag and our Government, the impression has lasted for more than twenty-three years that Fitz-John Porter was anything but a patriot, that in other words he was a traitor to his military commander who represented the flag and the Government, and in being a traitor to his commander he was also a traitor to his country. The platitudes indulged in here by those who admire and glorify Fitz-John Porter will not change the opinion in the minds of the people of this country that he merited the punishment meted out to him by the court before which he was tried.

Mr. Chairman, one of the advocates of Fitz-John Porter has to-day seen fit not only to traduce the living but to blacken the memory of the dead in order to sustain Fitz-John Porter. Maj. Gen. John Pope is referred to as the Falstaff of the times, and held up to ridicule. Let any one who cares to acquaint himself with the facts look at the history of General Pope, a man who graduated with high honors in his class at West Point; who was three times brevetted for gallantry on the field in Mexico; who lead our armies and won victories for the country when he was properly supported; and who was rewarded by his countrymen by being placed in a conspicuous position, that of major-general of the United States Army, where he has shed credit and honor upon his country to this day.

And yet, sir, Fitz-John Porter, this admitted traitor to his commander, is held up here as the peer of Pope, as a patriot to be honored as Pope is honored; honored as one who has received the commendation of his countrymen, both those living to-day and those who died since the memorable occasion referred to.

We are admonished, Mr. Chairman, that we should investigate and try this case now as a court and without political prejudice. I should have been glad, sir, if we could have approached the consideration of it in that manner and spirit, believing its result would be only to affirm the sentence of condemnation heretofore pronounced upon Fitz-John Porter. But we find from the very beginning that it has assumed a political aspect; that it has been the pet of the Democratic party from the time it first showed its head here, receiving the almost unanimous support straight along of that party, with one solitary individual exception; and by way of recompense that man, the only Democrat who had the courage to vote his convictions, was ignominiously defeated by his party for renomination and re-election.

We find Porter to-day brought in and exhibited before the country in the leading-strings of a cavalry general of the late so-called confederacy. We find the charge upon the public conscience and upon the public mind led by General WHEELER, of Alabama, who figured quite conspicuously as a confederate cavalry general in the late attempt to destroy the Government. There is no difficulty in finding the friends of Fitz-John Porter. The late confederates have a proper regard for Fitz-John Porter. They realize that he rendered them an invaluable and an inestimable service on that field, and they reward him with their votes and their influence accordingly.

Every one who has observed the course of the Democratic party, not

only during the war, but since, has seen that it has in every way that can be imagined by the mind of man, in season and out of season, attempted to overturn the victories and results of the war. It is not necessary to enumerate instances nor to go into a detailed account of all the efforts made to wipe out and belittle everything accomplished by the Union side of the country, and to emphasize and magnify those things which were done on the confederate side. It was said on the floor of this House that the Democrats were in their fathers' house, and that they had come to stay. Who helped them to enter and stay in their fathers' house? They are here, but they are here because the men who were loyal to the flag and country whipped them back into the house of their fathers. And now they have come to stay? And, as one of their first acts, they propose to reward the man who helped them in their day of trouble.

Looking into the philosophy which lies beneath the action of the regular Army officers during the earlier part of the war, we find this state of affairs: on both sides, for the leaders of the army of the rebellion were West Point graduates and the leaders of the forces on our side were West Point graduates; and we remember that the teachings and the influences of West Point in ante-bellum days were of the most aristocratic character. The graduates of that institution are commanders of men and they look with contempt upon those beneath them. Very naturally then they were pro-slavery men. They looked upon slavery as right. If you analyze their conduct and the impulses by which they were governed you will see they hoped to hold the putting down of the rebellion in their own grasp—to settle it under an armistice, giving greater guarantees to slavery. But when the rebellion reached its greatest proportions and the Government began to lay its iron hand upon the insurgents with the evident intention of suppressing the rebellion, then the disaffection of Fitz-John Porter and men of his ilk began to manifest itself. The people awoke to the fact that the country must be saved, that the flag was in danger, that the existence of the Government was in peril. We saw men like Fitz-John Porter sent to the rear. We saw men who were willing to save the country without slavery brought to the fore. John Pope had been known as an anti-slavery man; he was known as an abolitionist and was hated accordingly; and when brought to command the Army of Virginia he was at once assailed by pro-slavery Democrats in Congress and out of Congress, in the Army and out of the Army.

The distinguished services rendered by Fitz-John Porter before the events complained of, and for which he was tried, show that he was a gallant soldier indeed. It is known that he was educated at public expense, that he was commissioned an officer in the Army, that he sustained an unblemished reputation up to a certain point when political prejudices entered the Army and affected him the same as political influences affected other men. Therefore I say he was not willing to see the country saved under an anti-slavery man like John Pope when a pro-slavery leader like McClellan had been deposed or had ceased to command. Then I say that if not a traitor to his country by overt act of treason he was a traitor to his country in this, that it is shown conclusively that he disobeyed proper orders and was unfaithful to his superior officer, General Pope.

Admit, if you please, for the sake of the argument, that Pope blundered. Admit, if you please, that at the time he was incompetent. Still under military law, under the law of the land, he was Porter's superior; and it was Porter's duty to obey his orders implicitly and without question. It is said that Porter being a corps commander had certain discretionary powers, that he had a right to exercise a certain discretion. I want any one to show me where he ever tried, where he ever made the slightest effort to obey the orders which he complained were physically impossible of execution. It is said that he had a right to use his discretion. Let us illustrate it. We will take a common illustration. Suppose a constable goes and arrests a man without a warrant, charging him with the commission of some crime. Any one knows the constable has the right to make such an arrest, yet every lawyer knows that he makes the arrest at his peril, and unless the man is convicted, he is liable for trespass and false imprisonment, and so a military commander if he sees fit to use his discretion must take the consequences with it. Porter used his discretion and he reaped the reward. And now let him rest in peace.

The promotion or the appointment of Fitz-John Porter to a position in the regular Army would be the rewarding of one who was an enemy to his country and an enemy to liberty. He it was that staid the tide of victory when it was turning in his country's favor. His restoration would be an insult to the living officers who fought from the beginning to the end of the war. It would be an outrage to the dead who fell in their country's defense. It would be an outrage to those dead soldiers who sleep the sleep that knows no waking and are embalmed in the mantle of their country's patriotic pride and affection.

In conclusion, for my time is well-nigh consumed, I can only say that I protest against the passage of this bill, first, on the ground that I believe it to be unconstitutional; secondly, I protest against it on account of the wrong of honoring the man who was tried and condemned by his peers and associates when the facts were fresh in their memory and when all the evidence was before them. I protest against it because the restoration of Fitz-John Porter shows on its face an infamous attempt to blacken the memory of Lincoln, of Stanton, of Garfield, and the other members of the court-martial by declaring their judgment erroneous, and influences by which they were surrounded and governed impure, unjust, and unpatriotic.

The advocates of Fitz-John Porter may try, but they never can obliterate from the minds of the people of this country that Abraham Lincoln, James A. Garfield, Edwin M. Stanton, and the other officers and men who performed their duty in the suppression of the rebellion were patriots, and that Fitz-John Porter was a traitor. [Applause on the Republican side.]

Subtreasury at Louisville, Ky.

SPEECH

OF

HON. ALBERT S. WILLIS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 6, 1886.

The House being in Committee of the Whole on the state of the Union for general debate—

Mr. WILLIS said:

Mr. SPEAKER: In the early part of the present session I introduced a bill (H. R. 902) for the establishment of a subtreasury at Louisville, Ky. The object in view is so important, both to the general public and to the people whom I have the honor to represent, that I have felt called upon to present some of the reasons for the passage of the bill.

ORIGIN OF THE SUBTREASURY SYSTEM.

A brief reference to the origin of the subtreasury system may not be out of place. The first United States bank was used as a depository. Legislation, however, making that institution a depository first occurred in 1816 in the charter of the second United States bank. Prior to that time and after 1833, when Jackson removed the public funds the various State banks were also used. The financial crisis of 1814, as well as that of 1837, brought ruin to the State banks and consequent loss to the Treasury, which was their chief depositor. Finally, after an exciting political contest, a divorce of banks and States was effected in 1840, but repealed in 1841. Afterward, when public attention was drawn to Texas and the Mexican war, the independent treasury act was re-enacted in 1846, and has since remained in force.

The system as created in 1846 has been since but slightly modified. In the exigencies of the first war loan in 1861 deposits were again authorized to be placed in certain State banks. The only other change took place on the organization of the national banks in 1864, at which time power was given to the Secretary of the Treasury to designate certain of the national banks as depositories of public funds. Observing, however, a distinction between different kinds of Government funds, it forbids that "receipts from customs" shall go into any national-bank depository, but authorizes receipts from internal revenue and other sources.

DEPOSITORIES OF PUBLIC MONEY.

The act of June 3, 1864, indicates a very decided departure from the policy of 1846, which demanded the total separation of the Treasury from the banks. Under the act of 1846, none of the public money was to be deposited with any banking institution whatever. A complete separation of the Government from all banking institutions was the principle of the bill. The deposit of the revenues in the banks was not, in the opinion of the Congress which passed that bill, placing them actually and *bona fide* in the Treasury; and permission to the banks to use the deposits in their banking business and various operations was in its opinion an employment of the revenue which exposed it to hazard and loss; and was substantially a loan of all public moneys on deposit to the several institutions. The experience of the Government up to that time had been a very disastrous one. The losses arising from such deposits were estimated in the report of the Treasury Department on 11th February, 1881, at the enormous sum of $15,492,000. In the same report of the Secretary of the Treasury the total loss in 1879 to the people through the existence of the banks and the use of bank paper was computed at $365,451,497.

SUBTREASURIES NOW IN EXISTENCE AND THEIR HISTORY.

The act of August 6, 1846, authorized the establishment of subtreasuries at four places: New York, Boston, Charleston, and Saint Louis. These were for the "receipt, safe-keeping, transfer, and disbursement" of public funds, and were also by section 6 authorized to act as pension agents. The mints at Philadelphia and New Orleans were also, by the act, to be used for the same purposes. By the acts of February 12, 1873, these mints and the one at San Francisco were formally designated subtreasuries. On the 15th of June, 1870, a subtreasury was established at Baltimore, and on the 3d of March, 1873, Cincinnati and Chicago were added to the list. In 1876, the subtreasury at Charleston was discontinued.

The whole monetary transactions of the Government are now con-

ducted through the office of the United States Treasurer, one hundred and forty-one national bank depositories, and the nine assistant treasurers at New York, Boston, Philadelphia, Baltimore, Saint Louis, Chicago, Cincinnati, New Orleans, and San Francisco.

NECESSITY FOR AN ADDITIONAL SUBTREASURY.

The statement of population and business since the establishment of the last subtreasury could be presented as conclusive reasons for further facilities in this direction. At that time the total revenues of the Government were only twenty-six millions against three hundred and twenty-four millions last year. It is, however, unnecessary to refer to such statistics. The official reports of the Government for several years past clearly set forth the necessity for an additional subtreasury and urgently demand the relief afforded by the pending bill.

As far back as the year 1882 we find from the report of the Secretary of the Treasury that there were in the subtreasury at New York about $19,000,000 in standard silver dollars while the subtreasury and mint at San Francisco held nearly $41,000,000. The Secretary assigns as the reason for not bringing away a part of these silver dollars from San Francisco that "there was no unsatisfied call for them elsewhere and the expense of carriage is great, never less than 1 per cent.

Besides that—

He continues—

the vaults on this side are inconveniently taxed in the storage of what is here. Indeed, the storage capacity of the mints and other vault room of the Government is everywhere severely taxed. There were on hand in the subtreasury on November 1, 1882, $26,884,337.62 of fractional silver coin. In all, there were 2,400 tons of silver coin stored in the public vaults. If the coinage of standard silver dollars is kept up * * * it will be a serious question where the Treasury Department will find, in public receptacles, storage room therefor. (Report of Secretary of the Treasury for year ending June 30, 1882, page 12.)

In the following year, 1883, the Secretary again called attention to the subject in the following words:

The accumulation of standard silver dollars in the custody of this Department at the date of its last annual report was such as to cause serious inconvenience, actual and prospective, for the want of safe storage room. The vaults owned and hired by the Treasury are still heavily taxed for room, and frequent transfers must be made, at risk and cost.

The Treasurer in his report for the same year states:

The vaults of the Treasury offices are taxed to their utmost capacity to contain the funds of the Treasury, including the $114,576,044 in standard dollars and $26,792,519.83 in fractional silver coin. Frequent transfers of such coin are necessary from an office that has become filled to its capacity to some office in which vault room can be found.

Upon these statements Congress authorized the construction of a large vault, with the capacity of forty-five million standard dollars, in the Treasury building at Washington, and of another, with the capacity for twenty-eight millions, in the treasury office at New Orleans. These additional accommodations were inadequate to the demands of the public service, and in the next year after their construction the Secretary of the Treasury again calls the attention of Congress in the following words:

Attention is again invited to the crowded condition of the vaults in the subtreasury offices, occasioned by the great accumulation of standard silver dollars and redeemed fractional silver coins. The new vault just completed in the office of the Treasurer of the United States at Washington is the only one now available for further storage, the new vault at New Orleans being needed for the storage of silver accumulated at that point and that coined at the mint in that city. * * * The assistant treasurer at San Francisco has reported that his vaults are nearly full, and that there is no further space in his office available for the erection of another vault. He recommends the purchase of adjoining property for the purpose of providing additional vault room.

There are also many millions of standard silver dollars in the mint at San Francisco which encumber the vault space required to accommodate the current coinage. (Report of Secretary of the Treasury for year ending June 30, 1884, page 38.)

NECESSITY FOR ANOTHER SUBTREASURY AS SHOWN BY THE LATEST OFFICIAL REPORTS.

The latest reports of the Department are very clear as to the necessity of another subtreasury. The Secretary of the Treasury in his last report states:

The monetary transactions of the Government have been conducted through the offices of the Treasurer of the United States, nine assistant treasurers, and one hundred and forty-one national-bank depositaries.

The gross receipts of the Government, amounting during the fiscal year, as shown by warrants, to the sum of $568,887,009.58 ($245,196,303 of which were on account of loans, United States notes, and certificates and conversion of refunding certificates), deposited as follows:

In the Treasury and subtreasuries	$451,210,995 09
In national-bank depositories	117,676,014 29

Owing to the large movement of moneys caused by the exchange of standard silver dollars for silver certificates, the deposits of legal-tenders in exchange for like certificates, and the redemption of fractional silver coin, the duties of the officers and employés of the different subtreasuries have greatly increased, and I would, therefore, recommend that inquiry be made by Congress as to the present condition of these offices, and such method of relief be adopted as may be deemed proper. (Report of Secretary of the Treasury for the year ending June 30, 1885, page 14.)

The Treasurer in his report for the same year, under the head "standard silver dollars," page 25, says:

The amount of silver dollars shipped from the Mint to points by express to June 30, 1885, was $96,516,067, of which there remained outstanding on that date only $38,348,527, as stated above. The cost to the Government of moving these coins was $430,313.76, an average of $4.46 per $1,000.

The average rate per $1,000 from the several mints was as follows:

From Philadelphia	$3 94	Cincinnati	$1 04
From New Orleans	2 21	Chicago	1 37
From Carson City	14 47	Saint Louis	2 31
From San Francisco	9 23	New Orleans	1 76
		San Francisco	5 79

The vaults in the mint at New Orleans having become filled with dollars, it was determined to remove as many as practicable to the vault in the Treasury Department. In order to avoid the payment of a large sum for this transfer, $10,400,000 were safely moved by means of United States naval vessels in September last, at an expense which saved the Government about $40,000. There was also moved by registered mail from San Francisco the sum of $12,800,000 in gold coin without any expense to the Government except the transportation from the post-office to the subtreasury.

Special contracts have been made with the express companies to transport to Washington or New York $10,000,000 in silver from San Francisco and $3,700,000 from Carson City, at the rate of $8 per $1,000, and $15,000,000 from New Orleans to Washington, at $3 per $1,000; also, for the transfer of $17,200,000 of gold coin from San Francisco and of $900,000 from Carson City, at $2 per $1,000.

On July 1, 1885, the clause in the sundry civil appropriation act of 1885, authorizing the shipment of silver coin from subtreasuries, became operative. The shipments made since that date to September 30 have been at an average cost of $1.74 per $1,000. The average rates from the several points were as follows:

Washington	$2 08	Cincinnati	$1 04
Baltimore	2 01	Chicago	1 37
New York	1 04	Saint Louis	2 31
Philadelphia	1 45	New Orleans	1 76
Boston	1 04	San Francisco	5 79

It is recommended that the appropriations for this purpose be continued, and that the authority given by the act referred to be extended to include shipments of silver coin from depository banks.

If the coinage of silver dollars is to continue, a new vault will be needed in New York city, and additional vault room in the Treasury building at Washington.

The following table shows the amount of standard silver dollars and of fractional silver coin in each office of the Treasury on September 30, 1885, and on that date last year:

Office.	Standard silver dollars.		Fractional silver coins.	
	September 30, 1884.	September 30, 1885.	September 30, 1884.	September 30, 1885.
Treasury United States, Washington	$4,494,616	$14,334,245	$198,405 67	$264,274 28
Assistant Treasurer United States:				
Baltimore	3,123,065	3,380,708	474,097 45	538,935 70
Boston	1,866,971	687,805	1,512,701 05	1,393,974 00
Chicago	6,648,800	7,322,000	3,848,157 00	4,147,010 00
Cincinnati	635,500	737,000	132,063 00	149,725 00
New Orleans	7,923,208	10,112,004	713,977 27	719,901 80
New York	25,908,000	28,900,000	8,877,504 65	2,954,122 32
Philadelphia	9,384,360	10,009,330	3,690,270 00	3,631,380 00
San Francisco	18,558,000	21,000,000	7,776,797 77	7,496,281 80
Saint Louis	7,819,750	10,119,400	2,098,100 00	2,237,080 00
United States Mint:				
Denver	6		1 40	98
Carson City	2,876,730	18,080	13,630 58	7,047 76
New Orleans	12,642,620	4,042,165	25	52
Philadelphia	7,798,269	14,441,065	34,777 72	51,523 89
San Francisco	32,740,620	29,404,002	34,214 88	11,452 74
United States Assay-Office:				
Boisé City	708		8 00	
Charlotte, N. C.				
Helena, Mont.	350		19,217 35	
New York	9,834	1,624	71	48 45
Saint Louis		12	14 30	17 50
Total	142,431,407	154,509,380	29,424,029 05	23,602,776 84
Add amount in transit between offices	10,000	11,069,000	71,856 78	
	142,441,407	165,578,380	29,495,885 83	23,602,776 84
Deduct amount required to fill orders unpaid	91,998	147,297	19,170 20	76,425 40
Total	142,349,409	165,431,083	29,476,715 63	23,526,351 44

The foregoing official statements require no explanation or comment. They are, I submit, sufficient of themselves to justify action by this Congress, and are indeed presented to us with that view. The force of the suggestion is, however, increased when we find, upon further examination of the last official reports, that not only are the subtreasuries of the country overcrowded both with funds and with work, but that the Department has been compelled against its own judgment and against the law to permit the mints and assay offices to be used as subtreasuries.

UNLAWFUL STORAGE OF BULLION AND COIN IN MINTS AND ASSAY OFFICES.

This phase of the question has been fully presented, both by the Treasurer and the Director of the Mint. From the statement appended to the last Treasurer's report it will be seen that the Treasurer is charged in the account with $148,504,628.77 held in the mints and assay offices as a bullion fund. While receiving daily reports from these offices, showing the changes in the fund, he has, as he shows in his last report, page 15—

No means of verification except by calling upon another bureau; the condition of these offices has never been examined heretofore by any one representing the Treasury. The results of the annual examinations made under the direction of the Mint Bureau are not communicated to the Treasurer, and these examinations are therefore not sufficient, it is submitted, to confirm the statement that the funds are held as represented.

If these prudent suggestions of the Treasurer are not sufficient to induce action on the part of Congress I would call attention to the following forcible presentation of the matter by the Director of the Mint. In his last report, page 32, referring to the improper use of the mints and assay offices, he states:

STORAGE OF BULLION AND COIN IN MINTS AND ASSAY OFFICES.

The mints of the United States were never designed to be repositories either

of large stocks of bullion or of coin. This is indicated by the small capacity and number of their original vaults. The best of these in the mint at Philadelphia are very primitive in design and in safety appliances. Indeed, all of the institutions, as far as I am informed, with the exception of the mint at San Francisco, are supplied with vaults the security of which mainly depends upon the integrity and efficiency of guards and patrols by night and upon the presence of officers and employés by day.

But, as a matter of fact, still further dependence is placed on the legal preservation of public order and the efficiency of local police. Confidence in such personal, as distinguished from structural, means of security seems happily to have suffered no relax from serious disturbances of public order. Yet it may well be asked should even this long immunity from popular violence be accepted as a guarantee against the possibility of any future occurrence of the kind in large cities like New York, Philadelphia, and New Orleans? Or should indeed such immunity in the past serve as a justification on the part of the Government for not exhausting all practicable structural means for the safe custody in the mints not only of their regular store, but also of coin, for which the Treasury and subtreasuries at present offer but a scant asylum?

The demand upon the mints for facilities for the storage and safe custody of bullion and coin becomes more and more urgent as their available capacity becomes taxed through the accumulation, especially of coin, of which the Treasury and subtreasuries of the United States are unable to relieve these institutions, through similar exigencies on their own part, or through considerations of expense attending every movement of specie.

Regarding the mints and assay offices in their true character as manufacturing establishments, and, on the other hand, the subtreasuries as the proper repositories of the finished product of the mints, there seems to be no reason, except that of absolute necessity, for continuing to charge the several mints with the custody of specie over and above what is necessary for the prompt payment of depositors, as provided by section 3545 of the Revised Statutes. Again, as a matter of fact the vault capacity of the several mints has been provided only within limits apportioned, first, to the storage of stocks of bullion, small in amount as compared with such stocks as are now carried under the special requirements for the coinage of the standard silver dollar; and, second, to relatively small stocks of coin. Especially is this the case since the action of the Department in dividing the coinage of the standard silver dollars between the two Eastern mints.

As the storage and safe custody of coin for obvious reasons call for the greatest possible degree of security, preference is given to the stock of coin, and only secondary consideration to that of silver bullion. This is of so bulky a character as sometimes to be left unduly exposed. At the mint at Philadelphia thefts of fine bars have occurred, as above reported, on two separate occasions during the last fiscal year, through want of sufficient protection.

The lack of ample security at the mints under the necessity of make-shifts to provide even a tolerably safe storage, becomes a source of great anxiety to the officers in charge, the requirements of whose original trusts are seen to be greatly exceeded by the additional responsibility as custodians of vast sums of public moneys. When, too, it is remembered that the vaults provisionally arranged to meet the present emergency for the storage of coin are far from what they should be as such repositories, the accountability of the officers in the mints becomes one which in strict justice should not be imposed. Some of the provisional vaults, which I have personally examined, in the most active mint in the country, are scarcely more than closets or ordinary cellars opening into workshops, thoroughfares, and dark recesses, and depending more on neighboring traffic for security than on any structural security of their own.

The vaults of the assay office at New York, while not severely taxed for the storage of silver bullion, are also far from what they should be under the requirements of its business, to keep on hand very large amounts of gold bullion in the form of stamped ingots.

It thus appears by official report that all the subtreasuries throughout the country and at Washington are overburdened with coin and bullion, and that the mints and assay offices, institutions not directly set apart for such purpose, have been used for the storage of bullion and coin. The hazard, inconvenience, and expense resulting from this condition of things are fully set forth in the reports which I have read. If, therefore, the necessity for another subtreasury rested solely upon the inadequacy of accommodations at the disposal of the Department it would be fully recognized by Congress. I need not call attention to the fact, however, that such inadequacy of accommodations is insignificant as compared with the demands of business and commerce throughout the country. It is unnecessary to go into statistics upon this point. If forty years ago six subtreasuries were deemed necessary for the proper conduct of the pecuniary affairs of the Government, will it be doubted that additional facilities should be furnished to-day when our population is threefold greater and our wealth has increased more than twenty-fold?

FACTS GOVERNING THE LOCATION OF SUBTREASURY.

Conceding, then, the necessity for another subtreasury, where should it be located? What considerations should operate in determining this question? I submit that the most material points would be geographical position, accessibility to surrounding country, distributing power, amount and character of present and prospective collections and disbursements of public moneys.

The briefest reference to the facts will, I am satisfied, convince this House that the city which I have the honor to represent more fully comes up to these requirements than any other place in the United States.

GEOGRAPHICAL POSITION AND NATURAL ADVANTAGES OF LOUISVILLE.

Louisville, the metropolis of Kentucky, is located on an elevated and beautiful plain at the falls of the Ohio River, 368 miles from its mouth. Its area is 18 square miles. It is laid out with great regularity, the principal streets running parallel with the river and being intersected with others at right angles. It has a population, in connection with the cities around the falls, of over 200,000, and is fast increasing in numbers and wealth. The rapidity of this numerical increase may be seen from the statement that since 1850 its population has trebled. A single glance at the map will make it evident that the position occupied by Louisville is of peculiar importance with reference to the great feature lines of the continent.

The Mississippi River system is the key to the continent; those parts which lie beyond its borders are either limited area, or their severe conditions of climate make them relatively of minor importance. In this system the State of Kentucky, and Louisville, its chief city, occupy a most important place. The western border of our State is only 1,070 miles from the mouth of the Mississippi, while its eastern boundary is within 500 miles of the Atlantic ports. The special feature of position to be considered in measuring the importance of the location of Louisville, is its central place with reference to the valley of the Mississippi, and the advantages it has from its extended contact with the river system of that valley. It is by water 598 miles below Pittsburgh, 132 miles below Cincinnati, 368 miles above Cairo, 607 miles above Memphis, 1,377 miles above New Orleans, and 558 miles from Saint Louis. Situated midway between the Gulf of Mexico and the northern lakes, and also between the eastern and western ranges and the North American mountains, Louisville becomes the focal point of the great Mississippi Valley. The extent, fertility, and boundless resources of that valley in agricultural and mineral wealth need not be here enlarged upon, nor is it necessary to refer to the importance of its future destiny whether from a political or commercial standpoint.

But not only is Louisville in the heart of the Mississippi Valley, but it is also in the heart of the valley of the Ohio, a valley without doubt comprising a larger quantity of fertile land, and a more extensive and diffused interior navigation, together with a more salubrious climate than in any other portion of the temperate zone on the globe. It comprehends an area of 201,720 square miles, which is about double that of France, more than twice that of Great Britain, and nearly as much as Germany. Its internal navigation is over 5,000 square miles, with access to navigation on the great northern lakes of 82,750 square miles. The resources of the finest iron and lead ore and salt are stretched over this section of the United States in a profusion unequaled in the world. This valley of the Ohio extends from latitude 40° 29′ north to latitude 34° 12′ north, and in an eastern and western direction it stretches from the head of the Ohio River to its mouth; that is, from 78° 2′ west, from Greenwich, to 89° 2′ west. This valley is destined to become the greatest source of these productions that require cheap labor and cheap food in the world, and its population in the near future will undoubtedly equal that of the oldest-settled areas in the great European States. Thus centrally located with reference to the great valleys of the Mississippi and Ohio, I submit it to the judgment of my colleagues on this floor whether in geographical position the city which I have the honor to represent does not possess special advantages.

ACCESSIBILITY.

While possessing these advantages, by reason of its geographical position, Louisville has direct water communication and railroad facilities for reaching the remotest parts of these great valleys. She has a river frontage of 12 miles, and a river trade in the South and in the West combined of over 12,000 miles. There are no less than thirty navigable rivers accessible by the steamers from her wharves and tributary to her commerce. With her river facilities she has opened avenues of trade to a vast and wealthy domain, comprising sixteen States, with a population of over 7,000,000 people. Her immediate communications with her own State are also direct and numerous. Of the one hundred and seventeen counties in the State of Kentucky one hundred and eight can be reached by water or railroad communication. The successful completion of the Eads jetties will, with proper improvement of the river, within a few years bring within easy access ships of the largest tonnage. The invaluable advantages of river communication, which in consequence of the mildness of the climate is never interrupted for more than ten or fifteen days in the year, in floating to her doors in the greatest abundance salt, coal, and lumber, will be readily perceived.

This system of railroad gives easy communication with every point of the compass. The Louisville and Nashville and Great Southern, the most important of the trunk lines of railroad in the South, and second only to the Mississippi River, its total mileage being 3,600 miles of Southern roads, including the line to Cincinnati under one management, that road laid with steel rails on the main stem, is the great through line from the Southern States to the Eastern and Northern markets, and is to the South what the New York Central and the Pennsylvania railways are to the trade of the Northeast and West.

The Chesapeake and Ohio Railroad connects Louisville directly with Newport News on the Atlantic coast, 729 miles distant, with the Southern Pacific and Mexican Central Railroads; the Chesapeake, Ohio and Southwestern Railroad, a continuation of the Chesapeake and Ohio road, opens up a direct line of communication with the southwestern portion of the State of Kentucky, abounding in choice iron and coal beds and forests of splendid timber.

The Louisville Short Line, running through Kentucky, reaches Cincinnati and thence all the railroad communication of the North. The Ohio and Mississippi leaves Louisville and makes the same connection with Cincinnati as the latter road but upon the opposite side of the river. It also connects Louisville with Saint Louis. The Jeffersonville, Madison, and Indianapolis Railroad connects Louisville with all East and West lines and with Chicago, as also does the Louisville, New Albany, and Chicago. The Louisville, Evansville, and Saint Louis Railroad runs through southern Indiana and southern Illinois, 260 miles to

Saint Louis, and the Cincinnati Southern is connected with Louisville through the Louisville and Nashville road.

From this brief sketch it will be seen that the railway system of Kentucky gives her direct communication with all parts of the country by trunk lines, and, taken in connection with her unparalleled river system, it is clear that but few, if any, of the cities on the continent are more accessible or possess greater facilities for transportation. As an illustration of the advantages resulting from this it may be stated that at the present time the freight rates from the Lower Ohio to Liverpool will permit the profitable shipment of the cannel coal and the native ores direct to Europe with one transshipment at New Orleans. A detailed statement upon this point could be made which would conclusively demonstrate this fact. It is to be noted, too, that it is possible for many months in each year to bring ships of large tonnage to the landing points on the Ohio River and load them for direct trade for Europe. It may also be noticed that the cost of transportation by water being lower than by rail in most countries, is particularly cheap on the Mississippi River and its principal tributaries, for the reason that coal is lower than in any other country, as is also timber for boat-building. Moreover, there are no tolls on the steamers, and the currents near the shore are generally slow, admitting of easy ascent.

The last census shows that the center of population is in the State of Kentucky, and Louisville is near that center. The density of population surrounding Louisville may be realized from the following statement: Within a radius of 300 miles of Louisville there are eleven million people; that is within half a day's journey for the most remote of this vast population live one-fifth of the entire population of the United States. This 300 miles radius, sweeping around Louisville as a center, traverses in every direction only land, and land occupied by a full population on every side. Such a circle about the most crowded seaport is half, and in many cases more than half, water. Such a circle farther West embraces large areas of unpeopled lands and uncultivated waste. Such a circle farther North takes in the waters of the great lakes and the thinly-peopled lands of the far North. Such a circle circumscribed about Louisville not only holds within its circumference the largest population of any like circle around any city, but it embraces sections of all the various productive belts delineated on the census maps of productive areas. Every color indicative of peculiar production used on the census maps is found within the circumference described around Louisville by this remarkable radius, and hardly an appreciable section of this circle is, as we have seen, without direct railroad or water connection with Louisville, whether it lies to the north, the south, east, or west.

The bearings of the above facts upon the question involved in the pending bill will be readily seen. Granting that other points may be nearer the supply of bullion, their remote communication with the country to be supplied with coin from the subtreasury must be taken into consideration. The coin is not only to be received but it is to be distributed, and the latter is much more important from every standpoint than the former. At San Francisco, New Orleans, and other places where subtreasuries are now established, the coin must be largely distributed as an article of freight chiefly, and, of course, at an expense to the Government. How great the expense is I shall presently show from the official reports. Should coin deposited in a subtreasury at Louisville need to be sent to other points the extended facilities by river and rail will enable this to be promptly and cheaply done.

LOUISVILLE AS A DISTRIBUTING POINT.

The above facts also set clearly forth the advantages of Louisville as a distributing point. While at many cities the coin would be distributed at an expense to the Government, the particular products of the State of Kentucky, the extensive business and manufacturing interests of the city of Louisville would secure its distribution through the natural channels of trade without such expense. The briefest reference to well known facts will illustrate and confirm this statement.

There are in Louisville one thousand three hundred and fifty-two manufacturing establishments in active operation, which have an invested capital of $40,000,000 and a commercial credit for five times that sum. These employ over twenty-four thousand workmen and put in the market annually finished wares amounting to more than $60,000,000. Some of the leading branches contributing to this magnificent total I will call attention to. In the manufacture of furniture, both in point of quantity and quality, Louisville is the second city in the United States, having a capital invested of over $2,000,000, and employing over two thousand operatives, and sending its manufactured goods of this kind to all parts of the South and West. It turns out an annual product of between two and three million dollars. The price of timber for furniture-making is lower here than in any other lumber market in the world.

Louisville is also one of the leading pork-packing cities of the country, having a capital invested in the pork and ham trade of nearly $3,000,000. It is the largest plow manufacturing city in the world, the united capacity of its plow manufactories being over 1,500 per day, these establishments having an extensive trade in Europe and sending thousands of plows every year to that part of the world. Over 200,000 plows and 50,000 cultivators are annually manufactured. There are in the vicinity of the Falls 23 tanneries, 17 being located in the city of Louisville. These tanneries represent an invested capital of $2,500,000, and their annual business is over $5,000,000.

Louisville furnishes the largest supply market in the world for sole leather, it being in greater demand and bringing higher prices than the product of any other market in the world. In the article of jeans and jeans clothing the annual sales in our city are 5,500,000 yards, representing over $1,500,000. One hundred and twenty tons per diem of cast gas and water pipe are manufactured, or 30,000 tons per annum. The capacities of our manufactories in that direction are 180 tons per diem. Other divisions of iron work aggregate a manufactured product of $8,000,000 per annum. The largest plate-glass works in the United States are located around the falls, one being located in Louisville and the other and larger in New Albany. The works in New Albany cover very nearly 30 acres of ground, and cost over $2,000,000, affording employment to fifteen hundred men.

The paper-mills of Louisville employ a capital of $1,000,000. Its architectural foundries are now doing Government work for custom houses at Columbus, Chicago, Saint Louis, and other cities, competing with home firms at these points. The boot and shoe trade amounts to $6,000,000 annually. The capacity of the flour mills in the city is 1,000 barrels per day, one of these being the largest in the world. Pig-iron is cheaper and in greater abundance than in any other place in the United States, it being the market point to a large extent of the Alabama and other Southern irons, and is the largest storeage point for iron in America. There are eight cement mills with $1,000,000 invested in them, manufacturing 830,000 barrels of cement annually, which finds a market all over the country. The sales of tobacco from January 1, 1885, to January 1, 1886, amounted to over 127,000 hogsheads—the value of which was between twelve and thirteen millions of dollars. Louisville is also the largest market on the continent for fine whiskies, and millions of dollars are invested in its manufacture. Some idea may be formed of the vast business in this direction from the statement that the revenue from this source and from tobacco last year amounted to over $7,000,000. To these two branches of business I will presently refer more at length, as they have a direct and intimate connection with the question I am discussing.

In nine of the foregoing industries Louisville leads the world. I refer to tobacco, jeans and jeans clothing, cast gas and water pipe, plows, live-stock, cement, fine sole leather, plate glass, and fine whiskies. These branches of trade illustrate the commercial importance and consequently widespread communications which Louisville has, and through which the desired distribution of Government funds could be effected readily and without expense.

OPERATIONS OF BANKS AND CLEARING-HOUSE OF LOUISVILLE.

Aside from being a commercial and industrial center of acknowledged size and importance, equal to other cities where subtreasuries are now established, Louisville is fast becoming a very important financial center. Its banking institutions now number twenty-four, employing $8,871,300 of capital. These, Louisville being a national banking reserve city, are daily opening new accounts with correspondents from Western and Central Kentucky and Tennessee, Southern Indiana and Illinois, Western Alabama and Georgia, and a large part of Arkansas, Mississippi, and Texas. The radius of territory in direct financial relation with Louisville is growing in size every day.

As an evidence of this steady and uniform expansion, and as a further index of its commercial condition, I call attention to the exchanges of the Louisville clearing-house for the past nine years, which were as follows:

1885	$217,748,602	1880	$149,587,212
1884	211,062,250	1879	127,653,057
1883	224,845,981	1878	108,219,963
1882	193,667,491	1877	114,563,999
1881	198,170,532		

Comparing the year 1885 with the first year of specie payments, there is a gain in clearings of $90,095,565.

REVENUE COLLECTED AT LOUISVILLE DURING PAST YEAR.

The objects to be secured by the establishment of subtreasuries is defined by the act of 1846 to be fourfold—(1), the receipt (2), safe-keeping (3), transfer and (4), disbursement of public funds. In the light of the facts which I have already presented, it will not be denied that the last three of these can be accomplished as fully at Louisville as at any city in the Union. It remains to consider what "receipts" of public funds at that city is to be annually expected. However centrally located a city may be, however great its facilities for wide distribution and cheap transportation, it is still more important to know what are its Government receipts.

The internal-revenue collections for the year 1885 in the nine States where subtreasuries are now located, as stated on page 8 of the last report of the Commissioner of Internal Revenue, are as follows:

Illinois	$23,075,864	Maryland	$2,774,384
New York	13,823,644	California	2,613,199
Ohio	12,565,516	Massachusetts	2,287,453
Pennsylvania	7,271,209	Louisiana	538,804
Missouri	6,276,165		

The internal revenue collected in the State of Kentucky during the same period was $14,482,476, the largest amount, therefore, except one, in the country.

As seen by this statement, the receipts of this character in Kentucky were twenty-eight times as great as Louisiana, over six times as great as Massachusetts, over five times as great as California or Maryland, and over twice as great as Missouri or Pennsylvania; or, if you add together the amounts received from the last five States in the above list, the total will be found only $7,500 more than the single State of Kentucky.

In all of these States the subtreasury cities are the financial and commercial centers, but this is more true of Louisville than of three-fourths of them. If, however, a comparison is made between the cities themselves, the claims of Louisville as a revenue-paying city will be found well established.

The following, as appears from official reports (see page 6, report Internal Revenue Commissioner for 1885), were the amounts of internal revenue received during the past year at the points designated:

Cincinnati	$8,737,148	Philadelphia	$2,892,819
Chicago	8,001,784	Baltimore	2,774,384
Louisville	7,076,453	San Francisco	2,342,080
New York	5,057,715	Boston	1,970,722
Saint Louis	5,011,585	New Orleans	538,814

A comparative idea of the amount which was actually collected last year from the Louisville district from this source may be formed when it is known that the States of Alabama, Arkansas, Colorado, Connecticut, Delaware, Florida, Georgia, Kansas, Maine, Minnesota, Mississippi, Nevada, New Hampshire, Oregon, Rhode Island, South Carolina, Texas, and Vermont, and the Territories of Arizona, Dakota, Idaho, Montana, New Mexico, Utah, Washington, and Wyoming paid last year the aggregate amount of $3,463,195, which is less than half that district paid; in other words, this single district at Louisville had more than twice as much public business in this direction as eighteen States and all the Territories of the Union combined.

The receipts of the Louisville office are temporarily lessened several million dollars per annum by exportation of spirits, but even upon present receipts it ranks fourth in importance of the eighty-one offices, paying over one-sixteenth of the total amount of internal revenue collected.

It will thus be seen that only two of the subtreasury cities—Chicago and Cincinnati—collected more internal revenue than Louisville, and that the aggregate receipts of four of them—Baltimore, San Francisco, Boston, and New Orleans—hardly equaled that city.

REVENUE FROM CUSTOMS.

The total ordinary receipts of the Government for the fiscal year ended June 30, 1885, were $323,690,706; of these the receipts, excluding customs and internal revenue, were $28,812,578. From the last two sources the receipts were—

From customs (including fees, fines, &c.)	$182,379,403
From internal revenue	112,498,725
Total from customs and internal revenue	294,878,128

In other words, over five-sixths of all the revenues which are paid to the Government come from these two sources—customs and internal revenue. The amount of these, therefore, affords a criterion, at least so far as the receipts of public money are concerned, for determining the necessity for a subtreasury. The internal-revenue receipts of the subtreasury cities and of Louisville have already been given. The question of customs receipts in the interior cities is relatively unimportant in the comparison, as imports have always been largely made at seaboard cities.

The customs receipts at the three seaboard cities of New York, Boston, and Philadelphia were respectively $125,493,472, $19,610,356, and $12,429,625; total, $157,533,453—deducting which from the whole amount ($182,379,403) received from that source will leave $24,845,950 as the whole amount collected from customs at all the remaining ports of entry (interior and exterior), including the six other subtreasury cities.

The revenue receipts at these six cities have already been given. Adding to these the customs receipts as stated in last report of the Register of the Treasury, we will have as the total customs and revenue receipts as follows:

Chicago	$12,151,988	Saint Louis	$6,061,379
San Francisco	8,984,929	Baltimore	4,798,130
Cincinnati	8,837,438	New Orleans	2,050,981
Louisville	7,182,956		

It thus appears that Louisville maintains her prominence, collecting of both customs and internal revenue more than any one of the last three cities, more than the last two combined, and nearly as much as two others. In this connection I will state that the increase of customs duties at Louisville has been more than 100 per cent. in the last four years. The transportation of foreign goods to inland ports without appraisement is destined to revolutionize the methods of collecting revenue in the United States, and will every year increase the business of the interior at the expense of the seaboard ports.

PROSPECTIVE INCREASE OF REVENUES FROM CUSTOMS DUTIES.

This annual increase of revenues from customs Louisville can expect in common with all interior ports of entry; but as to its internal revenues, it not only has precedence now of all but two of the subtreasury cities, but that precedence in the future will be very much greater.

The chief sources of internal revenue are whisky and tobacco. Both of these articles have largely increased in production at Louisville, and for well-known causes will continue to enormously increase, and thus swell the revenues of the Government at that point.

By the law of 1878 whiskies are permitted to remain in bond three years before paying the tax. Since the passage of that law withdrawals have only been made to meet the wants of trade, and consequently a large per cent. of whisky has been left in bond, thus creating a temporary reduction of the internal revenue within the last six years under the operation of this law. In 1880 the number of taxable gallons of spirits produced in the Louisville district was 4,651,090. In 1881 the number of gallons produced was 14,233,860, thus showing in one year an increase of 9,582,770. This enormous increase is owing to the increased number of new distilleries and the increased capacity of the old ones, and as this increase is permanent the internal revenue alone of the Louisville district will hereafter exceed $10,000,000 per annum. Except for the exported spirits the revenue from this source last year would have been over $9,000,000.

LOUISVILLE EXCEPTIONAL IN THIS PROSPECTIVE INCREASE OF INTERNAL REVENUE.

But it may be asked, are not all districts affected alike by the law of 1878, and will not this increase be general? An examination of the last report of the Commissioner of Internal Revenue will answer this question. On page 96 of the report is a table showing by districts "the quantity in taxable gallons of spirits in warehouse June 30, 1885." From this it appears that outside of the State of Kentucky the aggregate number of gallons in bond at that time was 21,211,143. The total number of gallons, including Kentucky, was 54,724,916, which were distributed among the different districts in very unequal quantities.

In twenty-one districts, being over one-fourth of the whole number, there were no spirits in warehouse at the end of the fiscal year, and consequently they are not represented in the Commissioner's statement. Of the remaining sixty districts outside of Kentucky, two, Pittsburgh and Baltimore, had in bond between three and four million gallons. In only six was the number of gallons between one and two millions. In thirty-five of the sixty districts enumerated by the Commissioner, that is, seventh-twelfths of all, the number of gallons was under a quarter of a million. The State of Kentucky had in bond 33,513,773 gallons, being more than three-fifths of the whole amount. The number of gallons in the Louisville district is stated at 16,015,190, which, deducting one district (the twenty-second) in Pennsylvania and one (the fifth) in Tennessee, is more than all the other districts in the United States, including the nine sub-Treasury districts, outside of Kentucky, combined. The Louisville district is, therefore, exceptional. At 90 cents per gallon the amount of tax thus ready to be paid from that district on the 30th of June last was $14,400,000. Should the recommendations of the present Secretary of the Treasury and the Commissioner of Internal Revenue be adopted and the bonded period for spirits be made the same as for cigars, beer, and tobacco, this large amount would be increased by several millions more from the spirits now fled to foreign ports for sale and protection. The estimate, therefore, of $10,000,000 per annum from receipts of internal revenue is within the official statements.

THE LARGEST MARKET FOR TOBACCO AND FINE WHISKIES IN THE WORLD.

An examination of the report of the Commissioner of Internal Revenue will show that the proportion of the enormous revenue business of Kentucky which is transacted at Louisville, always great, and now more than one-half of the whole amount, has been steadily on the increase. Nor is this surprising to any one familiar with the facts. On the 8th of January, 1876, the fourth internal-revenue district, composed of fourteen counties, was consolidated with the fifth district. Louisville thus became the commercial center of the largest whisky-producing district in the State. The counties of Nelson, Owen, Bullitt, La Rue, Marion, Washington, and Anderson, which are included in this district, have for half a century been noted for the manufacture of fine whiskies. The product of more than one-half of the State of Kentucky comes to Louisville, thus making it the first market of the United States, if not in the world, for this class of goods. This concentration of trade has given increased activity to the business. The statement is equally true as to the manufacture of beer, both common and lager. The storage capacity of nearly all the lager-beer breweries has been increased, some 50 per cent., some 75 per cent., and two of the largest more than double that of 1878.

As to another chief source of internal revenue, tobacco, it is well known that Louisville holds precedence over all other markets. It is, indeed, both in the variety and magnitude of the offerings, the largest and best leaf-tobacco market in the world. From 1850 to 1886 the total sales at Louisville of this staple have reached the enormous total of 1,492,730 hogsheads, equivalent to 1,492,730,000 pounds! Louisville accomplished last year what has never been achieved or even approached by any other city of the world, the sale of 127,046 hogsheads of tobacco in one year—an event which was celebrated by a magnificent industrial parade over 8 miles in length. These immense sales are not confined to our own country but include Germany, Italy, Russia, England, Africa, Australia, the islands of the South Pacific, and six of the South American republics. Many of those nations have permanent buyers to represent them.

A comparison with Cincinnati, Saint Louis, Clarksville, Evansville, and Nashville, the five great tobacco markets of the West and of the world, will show the advantage which Louisville has.

I call attention to the following tabular statement:

Statistics of the tobacco sales in the Western markets for the last eleven years.

Years.	Louisville.	Cincinnati.	Clarksville.	Saint Louis.	Evansville.	Nashville.	Totals.
1885	127,046	60,579	28,228	8,436	6,776	5,155	268,400
1884	81,359	50,908	17,717	6,081	5,185	2,233	184,804
1883	88,919	62,681	17,757	8,714	4,818	4,288	213,455
1882	61,441	48,491	14,649	7,358	4,571	2,947	158,219
1881	67,408	48,519	12,475	8,844	5,559	2,882	164,975
1880	65,281	45,797	16,296	2,621	4,197	3,903	158,[illegible]
1879	58,103	31,425	14,048	5,221	3,384	3,852	134,141
1878	71,080	37,335	19,486	9,013	4,421	6,364	182,635
1877	55,218	35,268	12,624	13,046	....	4,738	140,408
1876	60,986	32,167	14,408	12,227	.....	7,461	161,924
1875	27,875	17,038	3,515	9,466	.....	1,765	69,181

It will thus be seen that the sales at Louisville during the past year were twenty-five times greater than Nashville, twenty-one times greater than Evansville, fifteen times greater than Saint Louis, over four times greater than Clarksville, and over twice as great as Cincinnati.

A brief glance at the statistical history of the Louisville tobacco market presents a remarkable example of rapid expansion. As compared with previous periods of five years, the sales in the last five are 158 per cent. greater than in the period ending in 1879; as compared with the period ending in 1874, 174 per cent.; with 1869, 243 per cent.; with 1864, 259 per cent.; with 1859, 594 per cent., and with 1854, 633 per cent. The money value in 1870 was $4,616,459, and in 1885 over $12,000,000.

What city in the world can present a parallel to this rapid progress in any staple department of trade.

Situated in the heart of the tobacco-producing regions of the world—the metropolis of the State which produces more than one-third of 1 per cent. of the entire tobacco yield in the United States, accessible at less cost than any other market—Louisville is destined not only to maintain her position as the largest and best leaf-tobacco market in the world, but to largely add to her present vantage ground.

This immense and yearly increasing trade in leaf-tobacco has had its influence in stimulating the manufacturing interest. New factories have been established every year, and old firms have enlarged their capital and capacity. The same causes which have operated to make Louisville the largest leaf-tobacco market in the world will in time make it the largest manufacturing tobacco market. The revenue from this source, already great, has been, and will continue, steadily on the increase.

DISBURSEMENTS AT LOUISVILLE.

Another question bearing both directly and indirectly upon the establishment of a subtreasury is the amount of public money disbursed. In this particular also it will be found that Louisville will compare favorably with the majority of the subtreasury cities. I call special attention to two branches of the public service wherein large payments are annually made—pension agencies and post-offices.

The pension-list of the United States on the 30th June last amounted to 345,125 persons. The total amount paid last year for pensions was $64,933,288.12. This enormous business is now transacted by eighteen agencies, one of which is located at Louisville. Of the nine subtreasury cities only five—New York, Boston, Philadelphia, Chicago, and San Francisco—have pension agencies.

The disbursements at Louisville on this account last year were $1,815,926, an amount yearly increasing, and which is now greater than the disbursements of any two of the subtreasury cities where no such agencies are located.

The disbursements on account of the post-office business at Louisville are also very large, and compare favorably with the subtreasury cities. In evidence of this I call attention to the following table:

Statement of postal funds deposited by the postmasters at the following-named offices during the fiscal year ended June 30, 1885.

Office.	Amount.	With whom deposited.
New York	$3,626,143 10	Assistant treasurer at New York.
Philadelphia	715,568 03	Assistant treasurer at Philadelphia.
Chicago	708,944 03	Assistant treasurer at Chicago.
Boston	463,244 44	Assistant treasurer at Boston.
Saint Louis	218,751 08	Assistant treasurer at Saint Louis.
San Francisco	208,914 07	Assistant treasurer at San Francisco.
Baltimore	206,623 19	Assistant treasurer at Baltimore.
Louisville	145,635 09	Assistant treasurer at Cincinnati.
New Orleans	101,892 13	Assistant treasurer at New Orleans.
Cincinnati	80,481 26	Assistant treasurer at Cincinnati.

There not being an assistant treasurer at Louisville the postmaster is a postal depositary and received from other offices during 1885 $27,953.64, which, with his surplus revenues, was transmitted to the assistant treasurer at Cincinnati.

D. McCONVILLE, *Sixth Auditor.*

It will thus be seen that Louisville deposited more last year than either New Orleans or Cincinnati. As a further evidence of extent of the postal business of Louisville I find from a statement for year 1883, which is the last one I have at hand, that the receipts of that office were $319,253. I also call attention to the following items of receipts:

	Number.	Amount.
Domestic money-orders issued	19,293	$363,016
Drafts on postmaster at New York	251	672,000
Deposits from postmasters	7,853	846,263

The total receipts were $1,816,398.

Also to these items of disbursements:

	Number.	Amount.
Domestic money-orders paid	110,478	$1,774,381
Postal notes paid	11,504	22,589

The total disbursements were $1,816,398.

RECAPITULATION.

I have thus hastily and imperfectly, Mr. Speaker, presented the facts upon which the claim of Louisville for the establishment of a subtreasury is founded. Neither as to their substance or verbiage do I present them as original with myself. They are well known to our people and have been repeatedly made public through our press. I call attention to them now in connection with the pending bill. I have shown the central location of our city with reference to the two great valleys of the Ohio and Mississippi, whose phenomenal growth in wealth and population are a part of our common history.

I have called attention to the extraordinary facilities of rail and water transportation which enable our business men promptly to reach every part of their great tributary territory. I have called attention to some of the leading industries of our city and the immense capital employed in them for the purpose of demonstrating our advantages as a distributing point, thus rendering unnecessary the expense incident to the transfer of coin or bullion. I have presented in detail the actual and prospective revenue of our city showing that its present rank as a revenue-paying city is higher than half of the cities where subtreasuries are now located. I have presented the facts from official sources to show that this rank will be higher in the future than in the past, that all our sources of revenue will steadily and greatly increase in the immediate future. I have endeavored to show from the official reports an existing and pressing demand for another subtreasury. All the vaults of the Government are now full to overflowing. "Persons," to quote from the last report of the Treasury, page 15, "occupying the positions of messengers and laborers are now engaged in handling, counting, shipping money, and doing other clerical labor." Banks have not usually the means of holding coin and bullion.

In modern times large safes and large vaults are not kept even by the largest banks. The subtreasuries are the only proper receptacles for Government funds. The urgent necessities of the case and the immense cost of transportation induced the present Secretary of the Treasury to resort to the extraordinary expedient of using war vessels to transport the coin of the Government, and in this way over $10,000,000 were brought to Washington from New Orleans. The local and governmental needs unite in urging further subtreasury room. The propriety of immediate action upon the present bill results from the fact that a new custom-house is now in course of erection at Louisville, and vaults could be put in without additional expense.

Resting, then, upon these facts, I now, Mr. Speaker, submit this bill to the decision of the House, with the full reliance that it will do whatever is just and right in the premises.

The proceedings of the Board of Trade of Louisville, Ky., together with letters from leading bankers and citizens, I will ask to append to my remarks.

APPENDIX.

LOUISVILLE BOARD OF TRADE.
Louisville, Ky., January 30, 1886.

DEAR SIR: The undersigned has been instructed to forward to you the enclosed communication, under date of the 25th instant, from the members of the Louisville Clearing House Association suggesting some reasons why the bill introduced by you to establish a subtreasury at Louisville, Ky., should in their opinion pass.

At a meeting of the board of directors of the Louisville Board of Trade, held on the 29th instant, the inclosed resolution was adopted, and the undersigned was instructed to forward same to you.

Very respectfully,

H. A. DUDLEY, *Secretary.*

Hon. A. S. WILLS, M. C.,
Washington, D. C.

LOUISVILLE BOARD OF TRADE, *January 29, 1886.*

At a meeting of the board of directors of the Louisville Board of Trade, held this day, the following resolution was adopted:

"*Resolved*, That the board of directors of the Louisville Board of Trade having considered the reasons for establishing a subtreasury of the United States at

Louisville, Ky., set forth in a communication dated January 25, 1886, from the members of the Louisville Clearing House Association to Hon. A. S. WILLIS, M. C., respectfully approve and adopt the same, and submit the arguments therein presented as an expression of the opinion and wishes of this commercial community."

From the minutes of the board.

HARRY WEISSINGER, *President.*
H. A. DUDLEY, *Secretary.*

LOUISVILLE, KY., *January* 25, 1886.

Hon. ALBERT S. WILLIS, *M. C.*,
Washington, D. C.:

DEAR SIR: The undersigned banks, members of the Louisville Clearing House Association, beg leave to express their pleasure at your introducing House bill No. 902, for the establishment of a subtreasury of the United States at Louisville, Ky., and beg leave to suggest the following reasons why that bill should, in their opinion, pass, to the honorable members of the Committee on Coinage, Weights, and Measures:

First. The undersigned respectfully call attention to the commercial and industrial importance of the city of Louisville, having with the cities of New Albany and Jeffersonville, at the Falls of the Ohio, a population of 200,000 inhabitants, being almost the center of population of the United States, and is an important entrepôt to the commerce of Kentucky, Tennessee, Arkansas, Northern Texas, Mississippi, Northern Alabama and Georgia, and Southern Indiana and Illinois, and which is headquarters of the second largest internal-revenue collecting district. The interest and convenience of the people in this large section of the country would be greatly promoted, as well as that of the city of Louisville and her sister falls cities, by the establishment of a subtreasury.

Second. The South has at present but one subtreasury (at New Orleans), located at the extreme southern part, and we think is entitled to another such institution in the northern section. We think the gentlemen of the committee to be perfectly aware of the growing importance of the Southern States from an industrial and commercial standpoint to concede this point.

Third. If the silver dollar is to become an active factor in the disbursements of the Government, it will undoubtedly be advantageous to have as many points as possible, where silver dollars may be paid out, exchanged into silver certificates, and paid out again until the people become more accustomed to the handling of that class of coin. We think Louisville would be a good point for that purpose.

Fourth. The banks in Louisville are now compelled to send their surplus silver and uncurrent United States moneys to subtreasuries in other cities, causing them a heavy tax for transportation and loss of interest, which is the more burdensome as the Louisville banks act as correspondents to many country banks throughout the territory above indicated. They, as well as the Louisville banks, would be benefited by the establishment of a subtreasury here.

Fifth. If a subtreasury would be established at Louisville, the Louisville banks would be enabled to deposit on account of their correspondents 5 per cent. funds, which they can not do at home now, thus placing the banks here at a disadvantage as against other established reserve cities.

Sixth. The pensioners of the United States, who draw their pensions at this agency, get their pay in checks on New York and other points, except the number now drawn on the First National Bank of Louisville, thus putting these people to cost and delay in getting their pay, which would be avoided by the drawing of their checks on the subtreasury here, and which would be a convenience and saving to this large class of worthy people.

Seventh. The custom and revenue offices of this district, as well as the banks and the people of Louisville, would certainly be benefited by being able to make interchange of one kind of currency into another at home if a subtreasury was established at this point.

Eighth. The custom-house, now being built here, could easily and with little cost be completely and conveniently arranged for suitable offices, safes, and vaults for the reception of the Government funds. This will, without doubt, be necessary at some time, and it would certainly be cheaper and better to build such vaults while the building is being erected than to postpone the work, thereby causing expensive and objectionable alterations afterward. In the mean time quarters in our present custom-house can be provided at moderate cost.

Hence the undersigned respectfully request you to urge the above considerations upon the honorable Committee on Coinage, Weights, and Measures, and beg a kind consideration of their petition for the passage of your bill No. 902 as above.

(Signed by Thomas L. Barrett, president Bank of Kentucky; Sam'l Russell, president Bank of Louisville; John B. Smith, president Bank of Commerce; J. H. Huber, cashier People's Bank of Kentucky; Jacob Kringer, sr., president Masonic Savings Bank; J. F. Barret, cashier of German Security Bank; George Davis, president Fourth National Bank; Jno. E. Green, president Second National Bank; James A. Leech, cashier Louisville City National Bank; James M. Fetter, president Kentucky National Bank; Falls City Bank, by W. Tillman, cashier; Merchants' National Bank, Louisville, Ky., by J. H. Lindenberger, president; Louisville Banking Company, by John H. Leathers, cashier; German Bank, by P. Vigline, president; Third National Bank, E. C. Bohné, cashier; Farmers and Drovers' Bank, by J. W. Nichols, cashier; The Western Bank, by Henry Hurter, cashier; German Insurance Bank, by J. D. Fischer, cashier.

THE THIRD NATIONAL BANK,
Louisville, Ky., January 16, 1886.

DEAR SIR: In reply to your favor of the 12th instant I beg to state a few reasons why your bill to establish a subtreasury in this city should be passed, in my opinion.

First. If the silver dollar is to be made an active factor in commercial transactions, the Government agency will be necessary to introduce it among the people, as the banks are not in a position to force that bulky metal into use. For this reason I believe that a subtreasury should be established in every city of 100,000 or more inhabitants. As it now stands, the banks are compelled to take the silver dollars from their retail customers, can not force them out again on the clearing-house, or on any one presenting checks, to any great extent, and have to deposit the surplus in a subtreasury. Louisville, having no such institution, is compelled to ship its surplus silver to the nearest subtreasury (Cincinnati), and the banks of Louisville are thus compelled to pay a considerable tax for the benefit of the Government's silver. (This bank pays often as much as $15 to $25 per month express charges on silver dollars to the subtreasurer in Cincinnati. This makes about $200 per annum, and for twenty-two banks in Louisville this tax is equal to $4,400, which could be saved to Louisville banks if the silver could be deposited here.) Silver, thus buried in a few subtreasuries, becomes naturally a burden to the Government, while, if there were more subtreasuries, it could be paid out for interests due by the Government, pension checks, salaries, &c., and thus kept in active circulation, when people would gradually become more accustomed to it, and especially if Congress would abolish paper money below $5, the present stock on hand might be totally absorbed.

Second. Under the national-bank system Louisville is a reserve city. But national banks in the country can not get the necessary accommodations out of Louisville as a reserve center, because Louisville banks can not make deposits with subtreasuries on account of their corresponding banks' 5 per cent. fund. I know from experience that this fact is hurtful to the banking interest of this city.

Third. The pensioners of the United States who draw their pay at this pension agency get checks on New York and other places in payment, and are compelled to dispose of them here, often at a discount. The frequent occurrence of indorsements not scrupulously correct and the frequent return of these checks are an everlasting source of annoyance and loss to the poor and ignorant people who hold them. All such annoyances and losses could be avoided by the establishment of a subtreasury here, where pension checks could be drawn on this city, cashed, and, if necessary, corrected *in loco* without trouble or expense.

Fourth. Louisville is headquarters of the second largest revenue collection district in the country and its customs collection business is on a steady increase. A subtreasury would no doubt be a great help to the officers in the revenue and customs service.

Fifth. If new vaults for the reception of silver dollars must be built by the Government it will be just as cheap to build a few of them in our new custom-house here, in charge of a subtreasurer, as anywhere else, and the convenience of the Government to have them scattered over the country is evident.

As practical illustrations of the necessity of a subtreasury in this city, I beg to add a few instances which occurred in this bank to-day and which frequently take place. A corresponding bank in Alabama sends us a bag of legal-tender silver dollars for exchange into silver certificates. We have to ship that silver to the subtreasury at Cincinnati at an expense of 80 cents per thousand to make the desired exchange. Another bank in Indiana requests us to place a certain sum with the Treasury of the United States for credit of its redemption fund. We have to do this through our correspondent in New York or some other subtreasury city at the cost of the ruling rate of exchange.

The above examples show that Louisville as a financial center is placed at a decided disadvantage as against other places where subtreasuries are established.

Very respectfully, yours,

E. C. BOHNÉ.

Hon. A. S. WILLIS, M. C.,
Washington, D. C.

LOUISVILLE, KY., *January* 18, 1886.

DEAR SIR: The establishment of a subtreasury in our city would give great satisfaction to the banks and bankers of our city and State. A subtreasury would facilitate business, save time and labor, and reduce expenses in all transactions of collecting Government checks, redeeming mutilated paper, and exchanging notes, gold and silver coin, which now have to be transmitted to or procured from cities of the Middle and Eastern States as Cincinnati, Ohio, New York or Washington, D. C.

In these benefits for the banks would of course largely share the producing, manufacturing, and commercial classes of the State, towns, and cities.

As you are all aware, Kentucky has great natural resources of soil, timber, and mine, and on account of her whisky and tobacco interests stands fourth among the States of the country with regard to tax-paying capacity. Louisville, most favorably situated geographically, is the industrial and commercial metropolis and railroad center of the State, and has an estimated population of 160,000 and value of assessable property of $65,000,000; true value, $100,000,000.

The city contains 1,300 manufactories, representing capital to the extent of $28,000,000, with 22,000 operatives, producing annually $50,000,000 of goods.

There are many great and growing branches of industry and trade, as leather, furniture, plows and cultivators, wagons and carriages, iron works, cement, woolens, distilled and malted liquors, manufactured tobacco, live-stock, and others, and corresponding therewith financial transactions.

More particularly Louisville is located in or near the center of the tobacco-growing regions of our country and pre-eminent as a leaf market. There have been sold in this market during the year of 1885, 127,946 hogsheads of leaf-tobacco of from 1,000 to 2,200 and more pounds each, and representing a value of $12,000,000 to $14,000,000, earning for our city the undisputed title of the greatest tobacco market in the world.

Hence Louisville is entitled to some consideration and has as fair a claim to a subtreasury as most of the larger cities in the East, or as Cincinnati, Ohio, or Saint Louis, Mo.

Most valuable, advantageous, and important as a subtreasury here would prove for Louisville and Kentucky and surrounding sections of the country with our present state and management of national finance, currency, and coinage, and system of national and State banking, the probability of silver continuing as one of the legal-tender metallic moneys of our country, and the contingency of its remaining such in a large part of the commercial world, supported by wise legislation, may make a subtreasury in our city an actual necessity with a view to daily or hourly deposits in such institution of gold and silver coin, and eventually bullion or bars in exchange for notes or certificates for circulating purposes or reverse transactions.

I remain, sir, yours very respectfully,

C. L. FRANKE.

Hon. ALBERT S. WILLIS,
House of Representatives, Washington, D. C.

MERCHANTS' NATIONAL BANK OF LOUISVILLE,
Louisville, Ky., January 19, 1886.

DEAR SIR: When you consider the large amount of internal revenue as shown by the Department records collected in this and the contiguous districts in this State, and the large number of citizens directly and indirectly interested in the business resulting therefrom, whose convenience will be promoted by the ordinary facilities afforded through the operations of a subtreasury, the equity and fitness of the establishment of one here becomes apparent.

It should be borne in mind that the traders and dealers in an area of territory making this city their financial and commercial center, embraces a very considerable part of Arkansas, Texas, Kentucky, Tennessee, North Alabama, North Mississippi, North Georgia, Southern Indiana, and Southern Illinois, and that the importance of this city as a central commercial point is entitled to national recognition.

I do not doubt that the committee will report favorably on your bill.

With regards, very truly yours,

J. H. LINDENBERGER.

ALBERT S. WILLIS, Esq.,
Washington, D. C.

LOUISVILLE, KY., *January* 20, 1886.

DEAR SIR: At the annual meeting of our Clearing House Association, held yesterday, we voted unanimously to request you to push your bill in the House for the establishment of a United States subtreasury in this city. A petition to this end is being prepared for presentation in Congress and will be signed by all our banks, both State and national. As you are fully aware we are entitled to this by our geographical position, and very much can be said in our favor while little can be advanced to the contrary—nothing so far as we can see beyond the argument of economy. We will highly appreciate your assistance and hope the measure may be carried without difficulty.

Yours, truly,

JOHN B. SMITH, *President.*

Hon. ALBERT S. WILLIS,
Washington, D. C.

LOUISVILLE, KY., *December* 30, 1885.

DEAR SIR: I saw from the papers some days since that you were making an effort to have a subtreasury or assistant treasury established here. This is something needed here, and especially if silver is continued to be coined in such quantities as heretofore. As it is now we have to send our surplus silver to Cincinnati at our own expense, and we frequently have large quantities of it. If this is not done then silver ought to be carried at Government expense to and from points at which there is no subtreasury. Something will have to be done with the silver question. What should be done is a difficult question. If the coinage could be suspended for a time and the Government adopt some plan by which to get silver in circulation through the country the present feeling in regard to it will be dissipated. It is a very popular money, especially with the masses. Many poor people will hide it away when perhaps they never see paper or gold. The trouble is that silver has only found its way to the larger cities in great quantities, while in the smaller towns and in the country it does not circulate to any great extent. It seems to me that if some plan could be adopted by which the smaller towns throughout the country could be supplied without the expense of transportation vast quantities of it could be used, and it would cease to be such a nuisance to the larger commercial centers. In no event should it be demonetized nor any step taken looking to it. Neither can we safely add to the present silver dollar. The Government can not change to meet the varying value of bullion. To do so would be to unsettle values, a thing to be avoided if possible.

Yours, truly,

SAM'L RUSSELL,
President Bank of Louisville.

Hon. A. S. WILLIS,
Washington, D. C.

LOUISVILLE, KY., ——, 188-.

DEAR SIR: The establishment of a subtreasury in our city would be of very great importance and benefit not only to our city, but to the entire scope of country tributary thereto, of which Louisville may be called the gateway between the North and the South. It would further seem to me that the millions of revenue collected annually in this and the surrounding districts would render it a great convenience to the Government also. I am thoroughly satisfied that it is a measure that should pass, and believe the act will meet the hearty approval of the citizens not only of Kentucky, but of Southern Indiana, Southern Illinois, Tennessee, a good portion of Arkansas, Texas, Mississippi, Alabama, and North Georgia, who largely rely upon Louisville for their general supplies. The measure is most heartily indorsed by our merchants, manufacturers, and those who contribute most largely to the revenues throughout this district, and I sincerely hope your efforts in its behalf may prove successful.

Very respectfully, yours, &c.,

J. M. ROBINSON.

Hon. ALBERT S. WILLIS,
House of Representatives, Washington, D. C.

NOTE.—On the 26th of last month, since the foregoing statement was made, the Treasury Department through the acting Secretary of the Treasury, Hon. C. S. Fairchild has sent to Congress a letter asking for an appropriation of $100,000, to be immediately available for additional storage and transportation of silver.

"The last appropriation for this purpose," says Mr. Fairchild, "was $100,000 made in 1883, of which there remains unexpended the sum of $1,707.28. In view of the fact that the amount of standard silver dollars required to be coined under existing law is about $27,000,000 each year, and that the remaining space available in the vaults of the subtreasury offices other than at New Orleans is not sufficient for the storage of the coinage for the ensuing twelve months, it is deemed advisable and prudent to ask that a suitable appropriation be made to enable the Department to erect vaults in some other of the subtreasury offices, leaving the vault at New Orleans free for the storage of the accumulation of the coinage executed at the mint in that city."

Silver Coinage.

And Moses returned unto the Lord, and said, Oh, this people have sinned a great sin, and have made them gods of gold.—*Exodus*, xxxii, 31.

SPEECH

OF

HON. SEABORN REESE,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 20, 1886,

On the bill (H. R. 5690) for the free coinage of silver, and for other purposes.

Mr. REESE said:

Mr. SPEAKER: There have been very exhaustive debates on this question at both ends of the Capitol and reasons cogent enough to convince any one, except those who regard their own interests rather than those of the country, that there should be not only a continuance of the coinage of silver under the Bland act, but that an unlimited coinage for several years at least would be advantageous to the people and to trade, commerce, and manufactures. The aggressive movements of organized wealth against the masses of this country are remarkable alike for their persistent and unrelenting power. Let us take a rapid review of some of them since 1865.

In 1869 Congress passed an act to pay the bonds of the United States in gold and silver coin. When the bondholder purchased his bond with greenbacks it would have taken two dollars in greenbacks to get one dollar in gold or silver coin, and in 1869, when they procured the passage of that act, one dollar in greenbacks was only worth 70 cents in coin. In other words, they loaned the Government one dollar in paper money, worth only 50 cents at the time in coin, and received interest on it at par in gold ever since, and in 1869 said to the tax-payers: "I will not take back the same money I have loaned you, although you have paid me interest on it in gold, but you must pay me back my principal in gold and silver coin." Was not this the most impious piece of impudence? They would have taken and been satisfied, in 1869, with silver coin. They schemed for it, prayed for it, demanded it, and tried to make it appear that unless the act was passed the public credit was in danger.

Why would they have been satisfied with silver in 1869? Because it was then at a premium of 30 per cent. over the money they had loaned, and the poor tax-payer, the brawn and muscle, the yeomanry, the wealth-producer, the men who were digging millions of wealth from the earth in the great West, and the impoverished, though resurrecting, South, these moving, living masses, upon whose shoulders this great nation was being lifted into splendor and power, were then and there being cheated by their lordly creditor, the bondholder, and were duped by their misrepresentatives in this American Congress into promising not only to pay the debt, but to pay 30 per cent. premium besides the interest on the loan. This seemed to satisfy the ravenous maw of insatiable "money-bags;" but, alas! it was soon discovered that this act could not operate to suit them, and on the 14th of July, 1870, "money-bags" was again at the front, and the act then passed by Congress extended the time of payment of the bonds, exempted them from taxes, Federal, State, &c., lowered the rate of interest, and had printed on them that they were to be paid in coin of the standard value of that date.

Another attack upon the rights of the people! This did not suffice. No sooner than resumption had taken place, and Congress to supply a sufficient circulating medium to meet the growing necessities of trade and commerce by the passage of the act 28th February, 1878, known as the Bland act, than these same favored classes, who pay scarcely any taxes, who care nothing for the toiling millions of their fellow-citizens, cry out in their disturbed luxury, "If you force us to take silver coin in payment of our bonds you will ruin us and the national credit, and inconvenience us in hauling off silver coin," which they schemed and clamored for in 1869 and 1870; and when the representatives of the people awoke to the inroads being made upon the rights they were intrusted to guard, and cried, "Halt! you shall receive what the people have to take and what you demanded and cunningly obtained by the acts of 1869 and 1870," and say to them, "You shall not debase and depreciate our silver, the circulating medium of our trade and commerce," these favored, law-pampered "money-bags" raised their hands in pleading gesture and rolled their eyes to Mammon, and with an Aminidab Sleek voice cried out:

> Let ragged virtue stand aloof,
> Nor mutter accents of reproof;
> Let ragged wit a mute become
> When wealth and power would have her dumb.

It is not new in the history of legislation that attempts are made to divert its most important work from the wants of all to those of the few who need it least. A just legislation discriminates neither in favor of individuals nor classes. It owes and it gives protection to the possession of the rich, whether acquired by inheritance or fortune or the successful employment of industry or talent. But it gives also protection to the poor in defending them from oppression and encouraging them to persistence in rewarded toil. Every reader of Roman history knows what oppressions were put upon the peasantry of the empire by farming out to special favorites the revenues.

It seems almost incredible, yet it is true, that at last under such a policy nine-tenths of the real estate of the whole empire was owned by not more than twelve hundred wealthy citizens of Rome. Lessons like this from the past can always be studied with advantage by those who sincerely wish for the good of all. It would seem singular, but for so many examples, that the same sort of attempts should be made in a country like ours, so large, so powerful, so generous, while yet in its infancy, where immense territory is undeveloped, rich in every resource of nature and in a government founded upon principles for the protection of the governed. But the bondholder in this country like the Roman senator, the senator under the empire, seems to be seeking to own all the land as well as the proceeds of the sweating toil of those who work it. The bondholder, yet like that subservient favorite of the emperor, does not wish to take the trouble and the risk of adventures in the various fields of human endeavor, but he prefers to sit at home or disport in his yacht and let the showers of gold daily refresh him as he lounges, eats, and drinks, careless, oblivious, forgetful, and even indifferent, to the condition of the masses of the people.

Harmony between capital and labor is the normal condition, and they are reciprocally dependent. There should be no clash of interests, and there would be none if the Government would offer no greater protection or assistance to the one than the other. Experience has taught that the concentration of wealth in the hands of a few has produced an abnormal condition, and while I am no sympathizer with communists, socialists, or agrarians, nor do I antagonize wealth nor condemn its accumulation, yet I am unwilling to grant protection to

the few at the expense of the many. What a spectacle is now presented to the American people.

Notwithstanding all the favors the bondholder has received from the Government under the acts of 1869 and 1870, and of the various Secretaries of the Treasury, and the calls made and the determination past and present to pay them in gold coin instead of silver coin, they are now using all their ingenuity and power to strike down and bring into disrepute, by open and covert means, our silver coin. Do they not know that silver is the money of the masses? Do they not know that the great and wealth-producing part of our country, the agriculturists, are suffering from Maine to Oregon, from the lakes to the Gulf, for want of markets, and that they are compelled to rely upon home consumption mainly? That scarcity of money will still more depress and the stoppage of coinage will produce this money stringency? Of course they do. But what care they who hold the bonds of the Government and pay no taxes, who hold mortgages on the lands of the West and South, if they can make the debtor work two days instead of one to pay his debts, because they live on money, by money, and the hard, sleepless interest of money.

The time has been when the people slept in fancied security from the danger of this organized power of wealth in the hands of a few, and they would have slept on had not their power of rest been gradually drawn from them; and now there is unrest, unrest among all classes, the farmer, the miner, the laborer, the artisan, and mechanic. Continued oppression has aroused the masses, and to-day guilds and all kinds of organizations are being born, growing like giants all over the country. Born of necessity, nurtured by want, and clamoring at the doors of Congress for protection! The time has been when to oppose the fearful power of concentrated wealth would have been to "swim with fins of lead, and to hew down oaks with rushes."

But now, the antagonism is demanded and the people are at the back of their representatives and they must resist it for them. While I am no alarmist and there is no member of this House who would shrink from uttering one word or sentiment that would add to the already widening breach between classes than I, yet, judging the future by the past, I believe that the great danger to this nation is the concentration of capital. By this I do not mean the man of ordinary wealth who has made it in a legitimate and honorable way, but I refer to that class whose accumulated millions consist of the blood and sweat of their fellow-men. This produces a pride which Mr. Carlyle in his graphic and philosophic work on the French Revolution says was the worst of all prides—"pride of birth, pride of office, any known kind of pride being a degree better than purse pride."

Such a condition of course would be most distasteful to the masses, and then antagonisms dangerous to peace, good order, and security would follow; then upon the other hand the demand would come for strong government. Alarm will drive the law making power to advance to the preservation of order and security, and we would soon learn to rely upon the central powers of government, and step by step the government of the people would become the government of centralized power, and our boasted liberty would be swallowed up in the vortex of concentrated power to protect concentrated wealth.

> Wealth heaped on wealth nor truth nor safety buys;
> The danger gathers as the treasures rise.

What are the reasons assigned by the advocates for the suspension of the coinage of silver? Perhaps there is no better way of stating them than as I find them set forth in a printed circular sent out by those advocates all over this country for signatures to be sent to members of this House, every one of whom I presume has received one. It reads as follows:

To the honorable Senate and House of Representatives of the Forty-ninth Congress of the United States, at Washington now assembled:

Your petitioners respectfully represent that it is their conviction that the law requiring the Secretary of the Treasury to coin not less than $2,000,000 per month of standard silver dollars should be immediately repealed.

The law has now been in operation for over seven years, and experience has shown that not only has it failed in every promise prophesied by its projectors, but it has proven to be of great inconvenience to the people, detrimental to mercantile, manufacturing, and legitimate banking interests, dangerous to the credit and welfare of the Government, and at this time is retarding the increase of prosperity and menacing the finances of the country.

We are therefore impelled to recommend the repeal of said law, and, as in duty bound, will ever pray.

And I may add another reason advanced and confidently pressed by them: that it will drive gold from this country. Let us examine some of the most important of these reasons. That it will drive gold from this country has been clearly refuted by the statistics of the imports and exports of gold since the passage of the Bland act in 1878. Since 1878, and including that year, the importation of gold coin and bullion has exceeded the exportation $187,280,257, and the exportation of silver coin and bullion has exceeded the importation in the same period of eight years $68,230,256. This certainly is sufficient to satisfy any unprejudiced mind that the coinage of silver has not repelled if it has not attracted gold to this country. But experience teaches us that the influx or efflux of gold depends largely upon the balance of trade. Now let us examine the imports and exports of merchandise for the eight years succeeding the passage of the Bland act.

Imports and exports of merchandise.

Year.	Imports.	Exports.
1878	$422,896,834	$680,683,298
1879	433,679,124	698,340,790
1880	656,262,441	823,946,353
1881	624,213,229	883,925,947
1882	707,337,049	733,239,732
1883	703,565,144	804,223,632
1884	652,148,936	724,964,852
1885	562,020,520	726,682,946
Total	4,762,123,277	6,076,008,050

Imports of merchandise, 1878 to 1885	$4,762,123,277
Exports of merchandise, same period	6,076,008,050
Excess of exports	1,313,884,773

From this table it will be seen that the exports exceed the imports for that period $1,313,884,773. Now let us examine the

Imports and exports of merchandise and coin and bullion for the eight years next preceding the passage of the Bland act.

IMPORTS.

Year.	Merchandise.	Coin and bullion.
1870	$419,803,113	$12,147,315
1871	505,802,414	7,231,395
1872	610,904,622	6,664,395
1873	624,689,727	10,777,909
1874	550,556,723	21,524,187
1875	518,846,825	12,625,704
1876	445,938,766	9,469,070
1877	438,518,130	27,746,914
Total	4,115,062,320	108,186,889

EXPORTS.

Year.	Merchandise.	Coin and bullion.
1870	$376,616,473	$43,883,802
1871	428,398,906	84,403,359
1872	428,487,131	72,789,240
1873	505,033,439	73,905,546
1874	569,433,421	59,699,686
1875	499,284,100	83,857,129
1876	525,582,247	50,038,691
1877	589,670,220	43,134,738
Total	3,932,505,939	511,721,191

Imports of merchandise from 1870 to 1877	$4,115,062,320
Exports, same period	3,932,505,939
Excess of imports	182,556,381
Imports of coin and bullion, 1870 to 1877	108,186,889
Exports, same period	511,721,191
Excess of exports	403,534,302

This shows an excess of imports of merchandise for that period to be $182,556,381, and an excess of exports of coin and bullion to be $403,534,302. Therefore, it clearly demonstrates that with the balance of trade in our favor, which has been the case since the act of February 28, 1878, there is no real foundation for the alarm of the gold-bugs. Has the coinage of silver impaired the public credit? The query answers itself. The idea of the credit of this great country being injured or even impaired because we have coined $203,000,000 of silver or may coin two hundred and three millions more, with the strides of development going on from ocean to ocean, with science, art, and industry ablaze in the hands of the most enterprising population upon earth; with undeveloped resources that would make the mines of Golconda pale into insignificance, and an increasing population from natural causes as well as immigration requiring an increased circulating medium to meet the demands of internal commerce that will keep the machinery of the mints hot for years!

Indeed we need no further credit. Our credit, if such a thing could be possible, is too good. The pledge of this nation's faith, the greatest and most powerful on earth, and its grand possibilities, is sufficient collateral for the money-lenders of the balance of the world if not for Wall street. How can we hurt our credit by offering the bondholder silver and gold coin for what we owe? Is there an American citizen holding a bond, who took it under the act of July 14, 1870, unpatriotic enough to refuse credit, if the emergency should arise to ask it, provided we paid him his bond in gold and silver coin, when he sought it, in the acts of 1869 and 1870?

And as there is only about one-tenth of 1 per cent. of the bonds held abroad and only an infinitesimal part of the bonds which can be paid before 1892 held by foreigners, oh, sir, this is a weak design of the enemies of the people to parade a phantasm before their representatives to frighten them from the care of the toiling millions.

What can be the causes which impel this attack upon silver?

The logic of statistics is absolutely overwhelming against it; the experience of eight years refutes the principal reasons advanced by its advocates. Then why do we find such strong supporters of the gold-standard theory? I venture to assert that among them here upon this floor and in the Senate there is hardly a man who is not directly or indirectly interested in money or bond speculation. Understand me, Mr. Speaker, I do not impute intentional wrong doing to any supporter of the theory in this House or the Senate, but we all know that—

> When self the wavering balance shakes,
> 'Tis rarely right adjusted.

Let any of these gentlemen open their ears and they will hear an unmistakable sound from the people, rising from all sections of the country; from the mining camps of the far West; from the fertile plains and valleys of the West and South; from the primeval forests, where untold wealth lies bound up in stately trees awaiting the stroke of the woodman's ax and the hum of the saw to strike asunder its chains of nature and turn it loose upon the world to meet the demands of civilized man; from all quarters, from all classes the cry has gone forth and has reached the capital of the nation, demanding silver as their coin, their money, or its representative, the legal certificate for the same. Only a wail from the few money centers and a feeble cry from provincial bankers to give them one standard of value and one more chance to unsettle values and grow richer by the legerdemain of cunning speculation. These hungry gold-bugs have closed the ears of some of the peoples' representatives by a trick of figures and dire forebodings, and they seem to be deaf to the demands of the great masses of their countrymen for whom they should legislate.

It is also inconvenient, we are told. It is said of old that the Sybarites would not allow the artisan to engage in his vocation within the limits of their city lest the noise would inconvenience them. Neither would they allow a cock to be in their city because his crowing at the dawn disturbed their slumbers. But the American people do not intend to have their heads cut off or wrung off merely for the sake of deeper repose to bloated bondholders or Wall street gamblers.

Issue certificates and make the silver convenient and portable. Do not restrict the issue; do not in the face of such a demand for silver certificates as arose under the circular issued by Hon. John Sherman, Secretary of the Treasury, on the 18th of September, 1880, shut off the people from obtaining silver certificates as was done by the discontinuance of it on the 1st day of January, 1885, but allow the Treasury offices of the country to at least issue silver certificates for gold coin deposited under such a circular. The people of the West and South had sufficient confidence in the silver coin to deposit gold and take silver certificates for it to the amount of $80,730,500. Then, where is the occasion for the alarm? Is not a silver certificate as easy to carry about as a gold certificate of the United States? It is no more expensive and useless than a gold certificate. Yet the Treasurer in his report, page 24, says:

> The further issue of silver certificates should be discontinued, being both expensive and useless.

The Treasurer must have been looking through gold spectacles to have arrived at that conclusion. If silver certificates, not only of the denomination now authorized by law would be issued whenever requested by the holders of gold and silver coin, but also in denominations of one, two, and five dollars, then we not only have an increase of circulating medium suitable to the necessities of the country, but convenience added, and the delicate fastidiousness of the bondholder would not be so sorely taxed to transport his wealth. Indeed it does not appear that either the efflux of gold or the impairment of the national credit or inconvenience has as much to do with the fears of the Wall street speculators as their desire to contract the currency and make money scarce and give them an opportunity to realize their fondest hopes—a premium upon their hoarded gold.

Let us not turn a deaf ear to the appeals of the struggling millions who produce and sell and conspire with those who speculate and buy, because forsooth the representatives of the bondholder proclaim with a flourish of banners that "in the commercial world gold is king;" but let us adhere to the money of our fathers and let our riches consist as of old—in cattle, silver, and gold; for we are taught by Holy Writ that "Abraham went up out of Egypt, he and his wife and all that he had, and Lot with him, into the south, and Abraham was very rich in cattle and silver and in gold."

Perhaps the swollen dwellers on Fifth avenue would disdain the degree of wealth posessed by this favored servant of the Most High. Indeed, not long after his day we hear the great lawgiver complaining of what effect mere gold had produced upon the people: "And Moses returned unto the Lord, and said, Oh, this people have sinned a great, sin and have made them gods of gold."

Yes, and there are those in this great, free American country who have made them gods of gold and year after year cry out to us, the representatives of the people, "Come, fall down and adore with us." I, for one, representing a toiling people who seldom see a piece of gold unless it may be in simple ornaments on the bosoms and fingers of their wives and daughters, will not bend the knee, because their gods are not my people's gods.

Hon. Joseph Rankin.

REMARKS
OF
HON. EDWARD S. BRAGG,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 25, 1886.

The House having under consideration resolutions of respect to the memory of Hon. JOSEPH RANKIN, late a Representative from the State of Wisconsin—

Mr. BRAGG said:

Mr. SPEAKER: The House is convened under special order as a mark of respect to the memory of my deceased colleague, the late Hon. JOSEPH RANKIN, a Representative from the fifth district in the State of Wisconsin, and to permit his friends and associates in this body to pay their tribute to his character as legislator, soldier, citizen, husband, father, and friend. Those who knew him best esteemed him most.

He was a native of New Jersey, born at Passaic September 25, 1833, but in his childhood was removed to New York, and was educated at the Homer Academy in Cortland County, then justly celebrated for the thoroughness of its teaching and the impress of manhood it stamped upon the character of its students.

In his earliest manhood he determined to cast his fortune and fate with the then young and growing West, and settled in Wisconsin in 1854, and from that time until his death he remained a citizen of that State, identified with its interests and legislation, and became a thoroughly Western man in his habits and instincts. When the black cloud of internecine strife broke and deluged the country with blood, the name of JOSEPH RANKIN was quickly attached as a volunteer upon the muster-roll of his country, and with his life in his hand he went to battle for the Union of the States and the preservation of the nation. He was no laggard in war, but for three years did service in the field, participating in many bloody engagements; always cool and nonchalant, winning the respect of his superiors and his subordinates by his gallant example and the love of his men by his kind and considerate attention to their comfort and welfare.

The close of the war found him in Tennessee, where he remained temporarily engaged in private business enterprises until 1868, when he returned to his home in Wisconsin. He was almost immediately called into public life in his county in the management and conduct of the local business of its people, and served them so well to their satisfaction that he was advanced by them to a position of higher grade, with a more extended field for operation, and for eleven years he proved an honest, upright, and faithful representative in the Legislature of the State. In recognition of this service, with full trust and faith in his honesty and capacity, the people of his Congressional district promoted him from the councils of the State to the National House of Representatives.

In 1884 he was re-elected and came to this House with the hand of death upon him, and at the opening of the session took the oath as one of its members, determined to die, if must be, with the harness on. On the 24th day of January of the present year, after a long and painful illness, at an angel's touch "the silver cord was loosened," and his spirit went hence, leaving his mortality at rest.

When I stood by this lifeless clay and looked upon the face once bright and pleasant with life and humor, the light of which had gone forever, I could not but thank the Great Father of the universe for a hope and faith instilled in me by a mother long since in quiet rest, "that death is not the end of man," but is only "sleep's twin sister," and from out that sleep will spring new life, and the body we give to earth to-day will be reproduced, in His own good time, by the processes of the Infinite, whose ways are past finite comprehension, "but who doeth all things well."

It was my good fortune, sir, to have known and associated with Mr. RANKIN for many years. He was a stanch friend, but a plain, unpretending man, who had a thorough contempt for ostentation. He could not move bodies of men by appeals to their passions or to their reason, but he was a clear, practical thinker, with quick, keen perception and an intuitive knowledge of the springs of action which control the action of men as individuals, and herein was his power to accomplish wonderful results. When brought face to face with the man, he rarely failed; hence I class him rather as a manager than a leader of men. He was an experienced legislator, and, by the combination of his qualities of perception and practicality, he was a wise and prudent one, and conservative in all his leanings. As a soldier he was brave and generous, tender and sympathetic as the brave only know how to be.

I was one of the committee of this House charged with the duty of delivering his remains to his State and superintending their committal to their resting-place at his home. And to speak of him as a citizen and the respect in which he was held, I need only say the throngs of people of high and low degree, from Chicago to his home in Northeast Wisconsin, who crowded every station as we passed, and who followed the funeral cortege as it wended its way to the cemetery, is a better recognition of his worth than any words spoken by me.

I feel, sir, that I shall trespass on sacred ground to speak of his inner life in the domestic circle, but I can not forbear saying he was a marvel of tenderness and affection to his wife and children, and he enjoyed in return the wealth of their unbounded love. May the God of the widow and fatherless ever protect and preserve them with His blessing!

As a friend JOSEPH RANKIN was strong and steadfast, and, could he speak from the tomb, would ask no more eulogistic epitaph upon the tablet at his grave than "He was true to his friends."

And now, sir, I must bid my friend farewell.

I shall go to him, but he will not return to me.

Post-Office Appropriation Bill.

SPEECH

OF

HON. JOHN M. TAYLOR,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 5887) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1887—

Mr. JOHN M. TAYLOR said:

Mr. CHAIRMAN: Being a member of the Committee on Post-Offices and Post-Roads, and having been one of the subcommittee specially charged with the appropriations for this service, it will be permissible for me briefly to explain some matters in the bill. The postal service reaches to every nook and corner of our country, and is the vehicle of intelligence to every household comprising our widespread population. This is really the people's bill. They are more interested in this appropriation for efficiently carrying on this service than any other, as all are directly affected. Its importance is beyond calculation, and its efficiency should be promoted by just and liberal appropriations rather than retarded by a parsimonious policy. In other words, nothing should be left undone that would for a moment interfere with the expedition of the service and the supplying the necessities of a well-regulated postal system.

In the preparation of this bill the committee have been considerate and painstaking, desiring to observe the requirements of economy, coupled with the necessities of honest and faithful service, at the same time intending to deal fairly with the questions involved, and have recommended such sums as we thought the exigencies demanded. With a view to an intelligent understanding of the growing needs of the service we have examined expenditures in the several preceding fiscal years, instituting comparisons as to revenues derived from the service, the necessary outlay of money, and the per cent. of increase.

In looking over these we find that the financial summary shows an increase in the deficiency of the postal revenues. For the year ending June 30, 1883, the revenues were in excess of the expenditures, and there was a net revenue derived from the service of $1,633,233.17. For the year ending June 30, 1884, there existed a net deficiency of $5,246,951.42. For the year ending June 30, 1885, there appears to be a total net deficiency (partly estimated) of $8,381,571.41.

It will therefore be observed, Mr. Chairman, that the Department has changed in two years from being more than self-sustaining by nearly $2,000,000 to an outlay above appropriations of more than $8,000,000.

The Postmaster-General in his able and carefully prepared report assigns as a cause for this change a decrease in the revenues and an increase in expenditures, the latter amounting to more than six millions. The decrease, however, is chiefly attributable to the reduction in the rate of letter postage from 3 to 2 cents upon the half-ounce, which was the unit of weight. This reduction under the law took effect on the 1st day of October, 1883, and the decrease of one-third of the letter postage was materially felt in the Department and lessened the revenues considerably, if not correspondingly. The service is growing rapidly with the development of the country and growth of population, and it is expected that if existing laws are undisturbed as to rates there will be pretty soon a net increase.

The estimates upon which the bill of the committee is based amount to $54,987,166.89, which is considered necessary and at the same time to approximately meet the requirements of the service for the fiscal year ending June 30, 1887. We have, after careful consideration and examination and a grouping of all the facts and data attainable by the committee, recommended the appropriation of $54,326,588.07, being $659,578.82 less than the estimates furnished by the Department.

The first item of appropriation is for mail depredations, inspectors, &c., authorized by act of June, 1872, empowering the Postmaster-General to employ special agents and such other agents as the good of the service and the safety of the mails might require, fixing the salaries and traveling expenses of such agents. This section was amended by the act of 1878, inserting for "special agents" the words "post-office inspectors." The estimate was placed at $250,000, but upon an examination of the subject thoroughly and instituting comparisons with expenditures during the years immediately preceding this, taking into account the work of these inspectors and their number, grades, and the duties contemplated to be performed, we have recommended the appropriation of $200,000.

We have been sustained in this reduction by the letter of the Postmaster-General stating that the service would not suffer with this amount.

For advertising and miscellaneous items we have adopted the recommendation of the Department, believing the same to be reasonable and necessary.

For compensation to postmasters we have recommended the appropriation of $11,700,000, being $300,000 less than the estimates and $456,548.94 more than was expended in 1885. The expenditures of the last fiscal year exceeded the appropriations to the extent of $243,848.94, creating a deficiency. We have 48,899 postmasters of the fourth class, and their average compensation is $151.09, aggregating the sum of $7,388,239.94. The number of Presidential offices on the 1st of October, 1885, was 2,249, and the amount thought to be necessary is stated at $3,800,000. An increase is contemplated of some sixteen new Presidential postmasters to the quarter, estimating, as suggested in the report, from the standpoint of a hopeful and prosperous outlook for a season of "peace, prosperity, and plenty" and an improvement and revival generally in business interests.

While our sanguine expectations and desire would lead us to this conclusion, we have not been enabled, looking through the horoscope of the future, to discern that abundant prosperity our hearts might desire. Therefore we have not drawn too liberally upon the public Treasury upon bright anticipations of the near dawn of plenty and prosperity.

We have looked at both sides of the picture, considering present depression and prostration as a clog upon that rapid stride to business prosperity, and consequently reduce the amount $300,000, leaving, in our opinion, a sufficient margin for the growth of the business in this Department.

The next considerable item is that of $5,150,000 as compensation to clerks in post-offices, being the amount recommended and corresponding with that appropriated for the year 1886, for which latter year was an increase of 3½ per cent. over the year preceding. The appropriation for that year was inadequate to meet the demands of the service and an additional appropriation required. This amount is specially for the payment of clerks in the offices who, as a general rule, are closely confined to their duties and, in many instances, poorly paid. The appropriation should be sufficient to warrant the payment of clerks in the fourth-class offices, where mail is distributed and separated. Take for illustration many of the offices in the interior, and we find upon examination that they are central, separating offices for all offices in the county and frequently adjacent counties. They are reached by a number of star routes, necessitating confinement and attention to business by the frequency of incoming and outgoing mails.

These clerks are essentially the servants of the public, and the people are interested to the extent of fair and reasonable compensation to insure efficiency in the prompt delivery and proper handling and distributing the mails. The postal service, as suggested, ramifies the whole country until like net-work it is checkered over with routes extending in every direction. It is the proper and popular means for the dissemination of literature and the news of the world, reaching to remote corners not visited by telegraph; and those whose energy and attention contribute so largely to meet the wants of the people should be rewarded.

These allowances for clerical assistance in separating offices, depend measurably upon the changes in the service, and can be reduced, increased, or discontinued by the Department as the exigencies of the service may require. We find in the report that the separating offices number twenty-three hundred and five with an average allowance of $242.23 for clerk-hire, &c. The demands of the service will require, we confidently believe, an increase for the present year commensurate with the amount recommended. A satisfactory conclusion was obtained by running over the estimates for several preceding years, and the actual expenditures, making an average, and adding 3½ per cent. to the sum of $455,000, calculating for two years, allowing a margin, and have recommended $495,000.

Similar reductions have been made, Mr. Chairman, in several of the succeeding items in the bill amounting to $10,000 each. It is unnecessary, however, to follow each provision in the bill, as I apprehend there are but two to which there has developed in committee or will develop on the floor of the House any serious or tangible objection. Quite a considerable portion of all appropriations for this service is made up of fixed expenditures and matters governed entirely by contract and by statutes authorizing and fixing the amounts.

This is specially true as to the office of the Third Assistant Postmaster-General, and we have, therefore, been governed by existing laws and the contracts.

The same may be said of the free-delivery service, which shows a rapid growth since its inauguration July 1, 1863, at which time the number of carriers was only six hundred and eighty-five and the num-

ber of offices supplied sixty, with an annual cost of $317,061.20. This service has grown until its provisions and benefits are extended to one hundred and eighty cities with four thousand three hundred and fifty-eight carriers, with the cost of the service amounting to $3,985,952.55. At these local deliveries the postage on local matter is $5,281,721.10, leaving an excess of postage on local matter of $1,295,768.55.

The Department recommends as necessary, and we have adopted the same for this service, $4,928,531.25, being an increase over the appropriation for the current year of $443,531.25.

The law as it now stands is only applicable to places having a population of 20,000, and which furnishes a gross postal revenue of $20,000. The propriety of extending it to thriving communities whose local circumstances are adapted to the free-delivery system has been discussed by the levy of special assessments, but under existing law we could not recommend allowances for the same. In making the estimates for the year 1887, recognition of the increased pay of twelve hundred and ninety-five clerks for nine months at the annual rate of $225 each was considered. I append here a tabular statement taken from the report of the Postmaster-General, which fully sustains the increase made:

TABLE D.—*Showing the growth of the free-delivery service from its inauguration, July 1, 1863.*

Years.	Number of offices.	Number of carriers.	Cost of service.	Postage on local matter.	Excess of cost.	Excess of postage on local matter.
1863-'64	66	685	$317,061 20			
1864-'65	45	757	448,664 51			
1865-'66	46	863	589,236 41			
1866-'67	47	943	699,934 34			
1867-'68	48	1,198	995,934 59			
1868-'69	48	1,246	1,183,915 31			
1869-'70	51	1,362	1,230,079 85	$681,864 70	$548,215 15	
1870-'71	52	1,419	1,353,923 23	758,120 78	595,802 45	
1871-'72	52	1,443	1,385,985 76	907,351 93	478,633 83	
1872-'73	52	1,498	1,422,495 48	1,112,251 21	310,244 27	
1873-'74	87	2,049	1,802,696 41	1,611,481 66	191,514 75	
1874-'75	87	2,195	1,880,041 99	1,947,599 54		$67,517 55
1875-'76	87	2,269	1,981,186 51	2,065,561 73		84,375 22
1876-'77	87	2,265	1,893,619 85	2,254,597 83		360,977 98
1877-'78	87	2,275	1,824,186 96	2,452,251 51		628,064 55
1878-'79	88	2,359	1,947,706 61	2,812,523 86		864,771 14
1879-'80	104	2,688	2,363,693 14	3,068,797 14		705,104 00
1880-'81	109	2,861	2,490,911 54	3,273,630 39		773,718 85
1881-'82	112	3,115	2,623,232 74	3,816,576 09		1,193,313 35
1882-'83	154	3,680	3,173,336 51	4,195,230 52		1,021,894 01
1883-'84	159	3,890	3,504,206 52	4,777,484 87		1,274,278 35
1884-'85	178	4,358	3,985,952 55	5,281,721 10		1,295,768 55

Section 3865 of the Revised Statutes provides that "letter-carriers shall be employed for the free delivery of mail matter as frequently as the public convenience may require at any place containing a population of 50,000 within the delivery of its post-office, and may be so employed at any place containing a population of not less than 20,000 within the delivery of its post-office." The first provision of this statute is mandatory as to cities having a certain population, and the salaries are fixed by law; and hence an observance of the law, and desiring to promote efficiency of the service, the amount stated has been deemed necessary.

For inland transportation by star routes the sum of $5,850,000 is estimated to be needed to meet the requirements of this extensive branch of the service. This is a decrease of $50,000 when compared to the appropriation for the current year.

For inland transportation by steamboat routes there is a decrease from the present year of $40,000. A number of these routes have been discontinued and are now carried by star routes at less expense. This service has been falling off for a number of years, the expenditures in 1881 being $826,975, dropping down to $558,000 in 1885.

As was stated by our courteous and distinguished chairman, Mr. BLOUNT, we have inserted the mail messenger service or "special facilities" without finding any law authorizing the same, but realizing its importance, sanctioned by custom and the preceding annual appropriation bills for nine years, we did not at the risk of a point of order desire to assume the responsibility of leaving it out of this bill.

The country has become accustomed to it, and as stated a moment since, attention was called to it by the report that it might be fully understood.

I call attention to the reasons given on page 4 of the report of the chairman for the insertion of the necessary amount for this particular service:

> The mail-messenger service, which is the means by which the Government delivers the mails at post-offices which are more than 80 rods from the depots of the railroads which transport the same, likewise appears to rest upon no statute, but upon custom and the exigencies of the service. It has been inserted in the bill because great confusion would arise if it were omitted, and the attention of the House is also called to this matter with a view to relieving the committee from any appearance of an improper attempt to insert sums of money in the bill in disregard of the rules of the House.

The Postmaster-General, in the Book of Estimates, recommends the appropriation of $15,725,432 for transportation of mails by railroad lines. Using the cost on June 30, 1885, of $13,735,202 as a basis and calculating upon an increase of 7 per cent. for the preceding years, and also considering the increase in mileage for the year at about 6,000 miles, the committee arrived at its conclusion. Upon the same basis, and using the increase for several years, we have calculated it at a cost of $45 per mile instead of $60, the maximum paid for said service, and also that the increase for the fiscal year will be gradual, and hence we recommend $15,595,432, and feel confident this will be sufficient.

But, Mr. Chairman, there are other matters in this bill, but, as heretofore stated, only two have provoked opposition from any one of the Committee on the Post-Office and Post-Roads, and these are the compensation to railway postal clerks and for the transportation of foreign mails.

As to the first of these, the bill recommends $4,800,000, being $77,000 less than the estimates. The expenditure, it is stated, for the current year will not exceed $4,601,000, and the increase is asked upon an anticipated demand for additional force on existing lines and for railway postal cars and the requirements of new lines, placing the increase upon approximately the same ratio as the growth of railroad transportation. This assumption of an increase in the clerical force is upon the belief that new lines and extensions will be built amounting to some 10,000 miles. Such an increase is hardly to be anticipated, and we will be gratified if the same reaches one-half the sanguine expectations expressed.

On the 31st day of December, 1885, the number of postal clerks was forty-five hundred and twelve, the salaries of whom are regulated by law. By the law approved July 31, 1882, entitled "An act to designate, classify, and fix the salaries of persons in the railway mail service," are the following terms:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That persons in the railway mail service, known as railway post-office clerks, route agents, local agents, and mail-route messengers, shall, on and after the passage of this act, be designated as railway postal clerks, and divided into five classes, whose salaries shall not exceed the following rates per annum:
>
> First class, not exceeding $800; second class, not exceeding $900; third class, not exceeding $1,000; fourth class, not exceeding $1,200; and fifth class, not exceeding $1,400: *Provided*, That the Postmaster-General, in fixing the salaries of clerks in the different classes, may fix different salaries for clerks of the same class, according to the amount of work done and the responsibility incurred by each, but shall not in any case allow a higher salary to any clerk of any class than the maximum fixed by this act for the class to which such clerk belongs.
>
> SEC. 2. That the sums appropriated in the act entitled "An act making appropriation for the service of the Post-Office Department for the fiscal year ending June 30, 1883, and for other purposes," approved May 4, 1882, for the compensation of the railway post-office clerks, route agents, mail-route messengers, and local agents, be consolidated into one fund, and applied for the compensation of the clerks embraced in the five classes under the title of railway postal clerks provided in this act.

This act clearly states the salaries for the different clerks, giving discretion to the Postmaster-General to so classify them, fixing salaries for clerks of the same class according to the amount of work performed and responsibility incurred.

It therefore, Mr. Chairman, appears that the criticism of my colleague on the committee can not be against the amount appropriated, but must break its force against a stubborn, existing law, which under the rules we can not remedy on a general appropriation bill. It is certainly error to oppose the classification of these clerks. One who has a run of 75 miles per day should not receive the same compensation as he who makes a run of 150 miles, being twice the run in miles and incurring twice the risk, as to responsibility and danger.

The argument of my friend BURROWS might well be directed to the committee when considering the propriety of changing the law or advocating the passage of additional provisions.

In the discussion, as I have suggested, but two prominent issues have been presented, the one involving the proposition of an increase in the pay of railway mail clerks, and the second as to the compensation for the transportation of foreign mails. Had the discussion been restricted to the first proposition it would of necessity have been brief, and would doubtless have resolved itself into an opinion founded largely upon local experiences, every one being to some extent influenced by the rate of wages in his own section. But the gentleman from Michigan elected to give debate a wider berth, and arraigns the Postmaster-General for not obeying a mandate of Congress, and for not affording sufficient compensation to the postal clerks for the services rendered, and then concludes with a swoop and assault upon the present administration for its enforcement and practical recognition of the provisions of civil-service reform.

I desire to show, Mr. Chairman, that the strictures of the gentleman from Michigan [Mr. BURROWS] are unjust and wholly unwarranted by the facts, and that the Postmaster-General did nothing but his duty as an honest man to his Government.

On the 19th of February last the following resolution, introduced by he gentleman from Michigan, was adopted by the House:

> Whereas the act of March 3, 1885, appropriated the sum of $4,682,300 for the payment of railway postal clerks for the fiscal year ending June 30, 1886; and
>
> Whereas it is alleged that $81,300 of such appropriation was made for the purpose of enabling the Postmaster-General to pay the postal clerks of classes 4 and 5 the sum and salary of $1,200 and $1,400, respectively, for the year ending June 30, 1886; Therefore,
>
> *Be it resolved*, That the Postmaster-General be, and he hereby is, directed to inform this House what portion of the said sum of $81,300 has been used for the purpose aforesaid, and if no portion of such sum has been so applied why the same has been withheld, and whether any portion of said sum has been used for other purposes.

On March 4 the Postmaster-General acknowledged the receipt of a copy of the same, and sent his reply to Congress, being Executive Document No. 110, from which I read explanatory of his action:

(1) The salaries of the clerks of these classes were, in 1876, fixed by the Postmaster-General to begin July 1 of that year at the respective sums of $1,150 for clerks of class 4, and $1,300 for clerks of class 5, because, as I am informed, the action of the Congress in making appropriations for the service made it necessary, if it did not impliedly require it; and they have during nine years since so remained, and the Congress has annually made appropriation for their compensation based upon that rate of pay without directing any change, and no reason is known to exist why that compensation is not as adequate during the current year as during any of the years since it was fixed.

(2) In view of the fact that such salaries have been under the cognizance of the Congress during so many years, and have by repeated appropriations received its sanction as sufficient, it appeared improper for the Department to increase the salaries of all clerks of those classes without expression from the Congress of its purpose that such increase should be made, and instructive information on this point was sought in the debates and proceedings of that body which accompanied the passage of the act of March 3, 1885, to disclose the true purpose of the Congress in enlarging the appropriation. The only definitive expression of that purpose, to be collected from the report of such proceedings, appears to be found in the sixteenth volume of the CONGRESSIONAL RECORD, on page 1766, from which volume the following extract is made of proceedings occurring in the House of Representatives when this item of the appropriation for the postal service was under discussion, to wit:

(Page 1750.)

"The House accordingly resolved itself into Committee of the Whole on the state of the Union (Mr. SPRINGER in the chair) and resumed the consideration of the bill (H. R. 8138) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1886, and for other purposes."

* * * * * * *

(Page 1766.)

"The Clerk read as follows:

"'For railway post-office clerks, $4,482,300.'

"Mr. HORR. I move to strike out '$4,482,300' and insert '$4,682,300.'

"Mr. WARNER, of Ohio. Before the vote is had on that let us know whether that increase is an increase of the number of postal clerks or of the salaries of the number now provided by law.

"Mr. HORR. It is the amount needed to put sufficient service on the new roads which have been already built and will go into operation during the next year.

"Mr. WARNER, of Ohio. And is not to operate to increase salaries?

"Mr. HORR. No, sir. The Postmaster-General estimates that it will take every dollar of it to provide for the increase in the service for the coming fiscal year.

"Mr. RYAN. The salaries are already fixed by law in amount, and can not be increased.

"The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from Michigan.

"The question was taken; and on a division there were—ayes 95, noes 51.

"So the amendment was agreed to."

These proceedings so unmistakably show that the purpose of the enlarged appropriation, as stated at the time of its consideration and enactment, was to put sufficient service on the new railroads which had already been built and would go into operation during the present fiscal year, and that the intention to increase salaries was expressly disavowed, that no right to impute any other object was admissible, much less to adopt the disavowed purpose; and, although in point of fact it has not yet appeared to me necessary to put such increased service into operation as will require the whole of the increase in the appropriation, this can not, without further expression, authorize an expenditure which the Congress clearly intended not to have made.

* * * * * * *

4. It would have been manifestly prejudicial to the discipline of the service and promotive of future dissatisfaction and discontent to have increased the salaries of clerks of these classes for a single year, and again reduced them in the next to the amounts at which they now stand; and therefore it was inexpedient to raise them under the current appropriation without a justifiable expectation of continuance.

Mr. Chairman, I have called attention to this, and the colloquy in the House, in which a distinguished gentleman from Michigan, then a member of the House and of the Committee on Appropriations, distinctly disavowed that this $81,000 was for an increase of salaries of clerks of classes 4 and 5, but replying to Mr. WARNER, of Ohio, stated the specific purpose for which it was intended.

Notwithstanding all this, Mr. Chairman, the fact that the answer of the Postmaster-General was before him, the gentleman, my colleague on the committee, Mr. BURROWS, gave utterance to the following:

It seems to me there can be no question but $81,300 of this sum was appropriated for the special purpose of paying clerks of classes 4 and 5 the full amount of their salary allowed by law. It is demonstrated by the estimates and by the appropriation which followed, and in no other way can it be explained how this appropriation came to be for the exact sum of $4,682,300. Yet the clerks of classes 4 and 5 are being paid at the old rate of $1,150 per annum for clerks of class 4, and 1,300 for clerks of class 5. Why? The Postmaster-General declines to execute the law and apply the appropriation in obedience to the will of Congress. At page 419 of the report of the Postmaster-General for the year 1885 will be found the following:

"The annual appropriation for the pay of railway post-office clerks for the current fiscal year is $4,682,300. Of this amount, $81,300 was presumably appropriated for the special purpose of increasing the salaries of clerks of the fourth and fifth classes to the rates of compensation paid prior to 1st of July, 1876; but, inasmuch as the appropriation bill, as approved, does not state specifically that such was the intention of Congress, the Postmaster-General is of the opinion that this fund can not be drawn upon for that purpose. With this amount deducted, the sum available for the pay of postal clerks for the present year is $4,601,000."

Mr. BLOUNT. What are you reading from?

Mr. BURROWS. From the report of the Superintendent of the Railway Mail Service, page 419, from which it will be observed the superintendent states he has not used the $81,300 "presumably appropriated for the special purpose of increasing the salaries of clerks of the fourth and fifth classes to the rate of compensation paid prior to July 1, 1876," because the "Postmaster-General is of the opinion that this fund can not be drawn upon for that purpose." The Postmaster-General looks only to the letter of the law, and in the letter of the law he finds no mention of $81,300 for this specific purpose, and therefore he refuses to make use of the appropriation. "It is not so nominated in the bond." But if he had examined the estimates he would have discovered the items entering into the appropriation of $4,682,300, and would have observed that this amount was reached by including $81,300 to enable the Postmaster-General to pay clerks of classes 4 and 5 the salary allowed by law. But for some reason the purposes of the Postmaster-General are better served by looking only to the letter of the law, and so, declining to examine the estimates or obtain any information beyond what the statute conveys, he declines to execute it.

But admitting the $81,000 to have been appropriated for the purposes alleged by the gentleman from Michigan, one of three things must be true—either the appropriation was procured by an indirection that did not state specifically the purpose, or Congress did not assume the responsibility of directing the expenditure, or it voluntarily left it within the discretion of the Postmaster-General, he being the proper executive officer. If the first of these propositions is true the Postmaster-General should be applauded for refusing to become a party to the expenditure of public moneys authorized by questionable practices. If the second proposition be true it would ill become a legislative body which declined to assume the consequences of its act to find fault with the executive officer for declining such responsibility. If it be conceded that Congress vested the matter in his discretion and he exercised the same within the limits allowed, he is not subject to censure by any fair-minded, unbiased mind. It certainly was the intent and purpose of Congress to leave this matter wholly within the discretion of the Postmaster-General, and the question naturally arises, did he as the agent of the Government deal justly with its employés occupying the positions of postal clerks, and at the same time honestly with the Government?

The Postmaster-General had no special purpose to serve except the interest of the Government, and in doing so he looked to the law and the intent and meaning of Congress that invested him with authority. He did decline, and properly, to become a party to a doubtful and unauthorized expenditure of money, for which the enlightened judgment of the nation will accord him praise.

Instead of a reckless disregard of law and a profligate waste of money, the Postmaster-General executed and reflected the will of Congress. Where else could he go but to the CONGRESSIONAL RECORD containing the proceedings of Congress when the bill was under discussion? There can be no ambiguity as to the interpretation of Congress on this question. A different course would have been subject to censure rather than approval for such a wanton disregard of the clearly expressed purpose of Congress. Again, it is a demonstrable fact by calculation that to pay all these clerks the maximum salaries allowed would have required a larger sum of money than estimated by the Department.

To reply fully and fairly perhaps, involves an inquiry into the relative status of a postal clerk as compared with other wage-earners. The General Superintendent of Railway Mail Service, page 425, Postmaster-General's report of 1885, says:

Any young man possessing a good constitution, unimpaired eyesight, a retentive memory, and an ordinary education, if he be not afraid of hard work and sees fit to apply himself, can readily pass to the regular (postal) service.

Here we have the requirements. The physical condition which nature bestows when there is an observance of her laws, and the education which most of the States offer to all their children free. The qualifications necessary do not require as long apprenticeship as falls to the man who would handle the saw, the hammer and chisel, or drive the plane, and in fact such as are necessary in all the trades and occupations; no mental culture and severe technical training as falls to the lot of those struggling to enter upon the various professions, but the "novice can readily pass to the regular service," and enjoy from the outset of this appointment a rate of pay far above that of almost any unskilled labor in the land.

Mr. Chairman, we have had their duties portrayed here by my friend from Kansas, Judge PETERS, in a pathetic appeal, and he embodies in his speech a bill introduced by him for their relief. Let us analyze their duties. The Postmaster-General, in his report, page 17, says:

And the entire number of miles actually run gives a daily average to each clerk of 120.94 miles.

Placing the average rate of speed of our mail trains at 20 miles per hour—a low estimate—would give a daily run of six hours per day. It is true they handle a number of pieces exclusive of registered matter, and this is increasing, amounting altogether to about five million pieces during the past year. This is their duty to distribute the mails along the route. The Government requires the post-road to furnish cars lighted and warmed for their occupancy. With the salary attached, six hours per day on a train, with heat and light furnished, with changing localities and scenes, does not strike the average man, and specially the laborer, as being that character of arduous labor that demands an increase of compensation.

As an evidence of this fact I feel warranted in declaring that this service to-day is more sought after than any in the Government. Applications by the hundred have poured into the Department asking for employment in this service. Some are debarred by a ruling in the Department disfranchising all persons over thirty-five years of age, and others meet with the statement, "There are no vacancies," and removals must be for cause. Those who have been fortunate in securing these positions refuse to relinquish them, and are not making that stupendous effort indicated in the other end of the Capitol to avoid being incidentally connected with the present administration.

But it is alleged that the duty is extra-hazardous. This is possibly true, but it has its compensation. The law is liberal and permits "a

leave of absence with pay during convalescence from injury not exceeding twelve months," and the railroads are liable for damages by suit at law for injury of life or limb. The opportunities are great; ability, skill, or talent are sure to meet proper recognition by those who require such qualities.

While I would not raise my voice, Mr. Chairman, in opposition to labor enjoying the fullest reward in this or any other service, I give it as my deliberate judgment that postal clerks are as amply provided for as any class who serve for wages in the Government. Their labor is not so onerous; their quarters are comfortable and hours of labor short, their pay regular and certain, and the Postmaster-General has meted out to them the fullest justice under the law. Notwithstanding all this, Mr. Chairman, these postal clerks are clamorous for an increase of wages, and also insist by their friends that they should be provided with a life estate and be billeted upon the bounty of the Government as pensioners after serious disability or incompetency arising from age or the service of a certain number of years. As evidence of this fact, I desire here in my remarks to insert a part of a report I made as chairman of a subcommittee, which will explain the situation and the attempted raid upon the Treasury in the future:

The Committee on the Post-Office and Post-Roads, to which were referred House bills 2113 and 4489, having had the same under consideration, report as follows:

The first named (H. R. 2113) is "A bill granting a gratuity to persons having served faithfully twenty-five continuous years in the postal service of the United States, or who after ten years of faithful service shall become physically or mentally disabled."

The latter (H. R. 4489) is entitled "A bill for the relief of aged, disabled, diseased, and worn-out postal clerks who have devoted the best years of their lives to the (transit) mail service, and who have been or may hereafter be in the employ of the Post-Office Department in the arduous and extra-hazardous service therein mentioned for a period of not less than twenty years."

The two bills being of a kindred nature, we have considered them together and report accordingly.

The number of railway mail clerks now in the service is between forty-four and forty-five hundred, and the estimated appropriation for the next fiscal year for the payment of this special class is $4,877,000, which is supposed sufficient.

These bills contemplate a pension list and the retirement of postal clerks or route agents and messengers who become disqualified from any cause for future service after a certain number of years of continuous service, or who after ten years' faithful service shall become physically or mentally disabled. One of the bills proposes to retire them on pay equal to two-thirds of the compensation they were receiving, and the other to full pay.

We are opposed to the policy of establishing by legislation a pensioned civil list, and especially to the adoption of a statute with such broad provisions as are embraced in these bills. We do not realize the necessity or propriety of creating this additional retired-list embracing all persons employed in any capacity in the postal service of the United States, in preference to those employed in other branches of the Government service.

This is not a compulsory service; these employés are not conscripted into the service, but voluntarily ask for and accept such appointments, to the exclusion of others, that they may be the beneficiaries of the Government and receive a salary. This service is eagerly sought by numbers of persons unable to obtain them, but who would gladly accept the same, with all the attending dangers and hardships, for the compensation allowed, and give the Government immunity from granting these pensions. Again, there are numbers of employés in other capacities in the postal service who are not exposed to danger and have no "extra-hazardous duties" to perform. Why single out from the different branches of the public service this special class? It was never anticipated by the framers of our Constitution, under our theory of government, that the people should be taxed for the support of a favored few who have for a continuous term of years drawn salaries from the Government, and failed to provide for themselves.

All nationalities recognize the propriety of granting pensions to soldiers and sailors disabled in battle, or who have become helpless in the service of their country, but their right to such recognition is based upon a different principle to that embraced in these bills.

The taking of this step would eventually lead to the pensioning of almost all classes of persons in the employ of the Government, and entail upon the people a constantly increasing and enormous debt. There is no moral, and should be no legal, obligation upon the Government to tax the people and take from them their hard earnings in order to support those less thoughtful, who have lived upon the Government and wasted the salaries paid by the same. We are opposed to according to this class of employés superior privileges and provisions to other classes of persons.

We recommend said bills do not pass.

The principal opposition, however, Mr. Chairman, manifested to the committee's bill, is the appropriation for the foreign-mail service, and the reasons are expressed in the views of the minority heretofore submitted to the House and reiterated on the floor by the gentleman from Michigan [Mr. BURROWS] during his arraignment of the Postmaster-General.

Before proceeding to a statement of the reasons governing my action, and presumably the majority of the committee, a brief review of the laws regulating the foreign-mail service will not be inappropriate.

The act of 1864, found in section 3976, Revised Statutes of 1878, is as follows:

The master of any vessel of the United States bound from any port therein to any foreign port, or from any foreign port to any port of the United States, shall, before clearance, receive on board and securely convey all such mails as the Post-Office Department, or any diplomatic or consular officer of the United States abroad, shall offer; and he shall promptly deliver the same, on arriving at the port of destination, to the proper officer, for which he shall receive 2 cents for every letter so delivered; and upon the entry of every such vessel returning from any foreign port, the master thereof shall make oath that he has promptly delivered all the mail placed on board said vessel before clearance from the United States; and if he shall fail to make such oath the vessel shall not be entitled to the privileges of a vessel of the United States.

Subsequently, and in 1877, it was provided as follows (section 4203 of the Revised Statutes of 1878):

All vessels belonging to citizens of the United States, and bound from any port in the United States to any foreign port, or from any foreign port to any port in the United States, shall, before clearance, receive on board and securely convey all such mails as the Post-Office Department of the United States, or any minister, consul, or commercial agent of the United States abroad shall offer, and shall promptly deliver the same to the proper authorities on arriving at the port of destination, and shall receive for such service such reasonable compensation as may be allowed by law.

The foregoing was the law upon the subject and under which our foreign mails had been successfully transported for a number of years, with gratifying results to the United States. The steamship companies, however, were not satisfied, and desired to be subsidized. Consequently "An act to remove certain burdens on the American merchant marine and encouraging the American foreign carrying trade, and for other purposes," passed Congress and was approved June 26, 1884. This act, among other things, provided as follows:

That sections 3976 and 4203 of the Revised Statutes of the United States, and all other compulsory laws and parts of laws that oblige American vessels to carry the mails to and from the United States arbitrarily, or that prevent the clearance of vessels until they have taken mail matter on board, be, and the same are hereby, repealed, but such repeal shall not take effect until the 1st day of April, 1885. (United States Statutes at Large, volume 23, chapter 121, section 23.)

The provisions of this last act relieved American vessels of the restrictions of former acts, giving them clearance without the compulsory provisions of carrying mails, &c.

To enable the Department to meet the new order of things the Forty-eighth Congress in an act making appropriations for the postal service provided as follows:

For transportation of foreign mails, including railway transit across the Isthmus of Panama, $800,000. And the Postmaster-General is hereby authorized to enter into contracts for the transportation of any part of said foreign mails, after legal advertisement, with the lowest responsible bidder, at a rate not exceeding 50 cents a nautical mile on the trip each way actually traveled between the terminal points, provided that the mails so contracted shall be carried on American steamships, and that the aggregate of such contracts shall not exceed one-half of the sum hereby appropriated.

The Postmaster-General very candidly states in his report that after a protracted and painstaking consideration of the subject it was deemed inexpedient and improper to exert the authority of the act empowering him to contract for ocean service upon the mileage plan of computation, and gives the following reasons, which are apparent and plausible and should be satisfactory to any one except a partisan who is hunting an excuse to pitch into some one and provoke a political discussion over a purely business proposition. It does seem to me, sir, his reasons for the governing of his conduct are sound, practical, and logical, and the propriety and good sense of a different course are not apparent to a wayfaring man, though he be a political opponent.

But, Mr. Chairman, let me read from the report of the Postmaster-General, beginning on page 35 and continuing, which is a complete answer to the unjust and inexcusable assault upon this question. He says:

A statement compiled in the office of the foreign mails shows the total miles sailed last year, and to have been expected to be sailed this year by all American companies, to be over 2,060,000; and the total compensation at the maximum rate would exceed $1,025,000, or over two and one-half times the utmost authorized expenditure. The act requires a letting to the lowest responsible bidder after legal advertisement to invite competition; and except to contractors, so brought into service, no money could be paid on mileage contracts. Only two routes are navigated by more than one American company: one between New York and Havana, the other between San Francisco and Japan and China. To have solicited competition by advertisement would have been idle, except upon these; no competition to bring the bids below the maximum rate was possible.

The consequence seems undeniable that the Department must either have made choice of certain routes whose total mileage would have demanded no more than the limited sum, and, by ostentatiously calling through advertisement for a competition which could not come, have distributed the whole bounty to the chosen, entirely excluding the others, or else have so planned its advertisements to meet the circumstances of the only possible bidders that, by concerted understanding with all American companies or such as the Department chose to give the money to, contracts might have been made for such sums to each that the whole appropriation would be divided between them.

The first method of expending the money would have been partial and unjust. There are no circumstances, it may be safely affirmed, which give any American line the right to be so greatly preferred that it should be paid the full bounty while others should receive none. And to have so administered the authority would have defeated the objects of the appropriation, since, it may well be supposed, the disfavored lines would promptly and justifiably have refused their further service as mail carriers to the Government.

* * * * * * *

But the act unmistakably contemplated, by its terms, that the Government should secure the gain of competition, wherever possible, among bidders. The two routes already mentioned afforded the opportunity. Yet if the law were pursued and a contract were awarded to either of the companies on the trans-Pacific route, and another to either of those plying between New York and Havana, both public injury and private injustice would have been wrought, because the public would have lost the service of one company on each route when it ought to enjoy the greater frequency of both, and one company on each would have been denied a share of the bounty to which it was as well entitled as the other. This constituted in itself so grave an objection to any employment of the authority of the act as to render it of doubtful expediency, a proof of which lies in the usages of the transatlantic carriage, where the best service is gained by employing at will the swiftest ship among those ready to sail at any time when mail is to be dispatched, no special contracts being made.

Explanatory of the reason why the Postmaster-General declined to exercise the authority conferred under the subsidy clause, I desire to read and call attention to the views of the President, expressed in his first annual message, as follows:

It was decided with my approbation after a sufficient examination to be inexpedient for the Post-Office Department to contract for carrying our foreign mails under the additional authority given by the last Congress. The amount limited was inadequate to pay all within the purview of the law the full rate of 50 cents

per mile, and it would have been unjust and unwise to have given it to some and denied it to others. Nor could contracts have been let under the law to all at a rate to have brought the aggregate within the appropriation without such practical prearrangement of terms as would have violated it.

The rate of sea and inland postage which was proffered under another statute clearly appears to be a fair compensation for the desired service, being three times the price necessary to secure transportation by other vessels upon any route, and much beyond the charges made to private persons for service not less burdensome.

* * * * * * *

Whatever may be thought of the policy of subsidizing any line of public conveyance or travel, I am satisfied that it should not be done under cover of an expenditure incident to the administration of a Department; nor should there be any uncertainty as to the recipients of the subsidy or any discretion left to an executive officer as to its distribution. If such gifts of the public money are to be made for the purpose of aiding any enterprise in the supposed interest of the public, I can not but think that the amount to be paid and the beneficiary might better be determined by Congress than any other way.

The Postmaster-General also says:

Upon a review of all these facts and reasons it seemed a plain duty, the only admissible course, for the Government to decline to make contracts upon the mileage plan, and await the meeting of Congress, to which the subject might be referred for consideration and direction. It involved but a few months of delay, and in the mean time the American vessels could be paid a compensation more than three times as great as most of them have received for similar service during the past seven years.

But it is insisted that the statute was plain and easy of comprehension and execution. True it may be, Mr. Chairman, and it was easy for the executive officer to have pursued a different course, if he had disregarded the rights of the tax-payers and contracted on these lines beyond the limit contemplated. It was impracticable and his course is to be commended.

The history of this legislation, which remitted to the Postmaster-General quasi instructions to expend $400,000 needlessly for the transportation of mails to foreign ports in American vessels, shows that two bills were introduced in the Forty-eighth Congress, one in the House and one in the Senate, to remove these alleged burdens from the merchant marine. Without tedious detail, suffice it there existed differences, and the result was a conference between the two Houses, and the law by which the Government could compel the carrying of its mails wiped out and what is called the subsidy adopted, giving the discretion to which I have alluded. As an American citizen and Democrat, I am exceedingly gratified that notwithstanding the enormous pressure and the voluminous correspondence from all sources, the Department has stood firmly by the principles of honest and business methods in its administration and kept the unclean hands of the subsidy-grabbers out of the Treasury of the United States. The mails have been carried, business principles observed, and the Treasury protected from the rapacious greed of those who would willingly impose burdens upon the whole people to build up their individual interest.

But my friend from Michigan, in his minority report upon another bill and in his recent utterances in the House, insists that the Postmaster-General would impose upon American vessels the duty of carrying the mails of the United States as freight, such as beef, hides, &c. The law discriminates in favor of American vessels, giving them sea and inland postage, allowing sea postage only to foreign ships; and the following from the report demonstrates legislative judgment that sea postage is sufficiently remunerative to command good and efficient service:

To the Pacific Mail Steamship Company, on its New York and Colon line, $19,275.82, as against $7,501.78 at sea postage, and $7,679.49 at its parcels-dispatch rates, and $411.40 at its freight rates for nearly 55 tons of total mail; an average of $507.26 per trip for 288 pounds of matter, which it would have carried for $10.82 at freight rates and $202.09 at parcels-dispatch rates.

On its San Francisco and Panama line, $3,496.18 for about 7 tons, against $1,238.44 at sea postage, $71.69 at freight, and $1,002.55 at parcels-dispatch rates.

On its San Francisco and Yokohama line, $10,125.80 for less than 19 tons, against $3,506.64 at sea postage, $226.34 at freight rates, and $3,758.40 at parcels-dispatch rates.

On its Australian line, $41,018.65 for about 48 tons, against $13,565.29 at the special rates paid heretofore, $762.93 at freight rates, and $9,537.40 at parcels-dispatch rates; an average per trip of $3,155.28 for 7,336 pounds, nearly fifty-four times its freight rates, over four times its parcels-dispatch prices, and a better average price per trip than the average paid across the Atlantic by $2,505.92.

To the Venezuelan Red "D" line, $3,942.86 for about 8 tons of mail, against $1,392.95 at sea postage, $58.34 at its freight rates, and $1,155.01 at its parcels-dispatch rates.

To the New York and Cuba line, $5,203.48 for about 12 tons, against $2,271.94 at sea postage, $61.63 at freight rates, and $1,458.17 at its parcels-dispatch rates.

To the New York, Havana and Mexican line, $11,932.11 for about 25 tons, against $4,134.13 at sea postage, $129.17 at freight rates, and $3,229.33 at parcels-dispatch rates.

These statements are convincing that the total sea and inland postage, when compared to charges for transportation of other valuable articles, is adequate. The mails may be considered sacred, and, perhaps, in business transactions should not be mentioned in connection with other matters and packages for transportation. Both by land and sea the moment the key is turned the mails become freight pure and simple, and on sea they do not require or receive any special attention. They do not demand light, heat, or ventilation, berth, food, or attendance. Bills of exchange, lading, drafts, post-office money-orders, can all be duplicated. There is no special liability for loss. These vessels have their own time of departure and arrival, and are not compelled to deviate from their usual line of travel on the high seas, touching only at such ports as their interest suggest and their business carries them. The compensation of sea and inland postage is from two to thirty times as much as they demand or receive for any other kind of freight transported by them.

This bill, Mr. Chairman, is to provide for meeting the demands of the postal service, and does not present the question as to the employment of American postal appropriations to the development of our commerce and opening up trade, but it is a question as to whether the Government has a right as a sovereignty by act of Congress to provide certain contingencies upon which vessels shall have clearance and carry our mails. A number of routes by steamship, railroad, and star-routes have been referred to in order to make it appear that the pay to steamships is inadequate. A tabulated statement prepared by the Superintendent of Foreign Mails refutes the statement made by the minority, wherein they place the compensation of railroads per mile at 10.95 cents, that of star-routes at 6.52, and of domestic steamers at 15.9 cents, and that of ships carrying foreign mail at 2.74 cents per mile.

The statement furnished and published by my friend on the committee, Governor WAKEFIELD, from Minnesota, shows that the total number of miles traveled on outward trips by eight principal lines was 810,829, the amount paid them was $43,492.48, or an average per mile of 5.3 cents. Had these lines been paid both sea and inland postage they would have received 14.4 cents for each mile they carried the mails. This exceeds the pay of star-route or railroad compensation. The following table discloses the amount paid per mile during the fiscal year ending June 30, 1885, for transportation of United States mails by railway, star routes, steamboat, and coastwise service, American steamships to foreign ports, and average amount paid to eight principal American lines, and the amount that would have been paid if said ships had received sea and inland postage:

Service.	Number of miles traveled.	Total compensation.	Rate per mile.
			Cents.
Railways	151,912,140	$16,627,983 00	.10-95
Star routes	83,027,321	5,414,804 00	.06-52
Steamboat and coastwise service	3,540,607	563,002 00	.15-9
American steamships to foreign ports (outward), sea postage	1,024,126	46,223 69	.04-5
If paid sea and inland postage			.11-9
American steamships, eight principal lines (outward), sea postage	810,829	43,492 48	.05-3
If paid sea and inland postage			.14-4

American vessels sailing from our ports to foreign ports are but common carriers governed by the universal law of reasonable compensation for services performed, and as such the United States has the right to impose qualifications as to official clearance papers giving them national protection as a condition to carrying the United States mails. Such vessels, as I have just stated, are not required to deviate from their voyage or to change their time of departure and arrival, but they pursue their usual course and deliver the mails at such points as they touch in the pursuit of their usual business. They are only required to exercise ordinary diligence as they would in freights. In fact they carry the mail by weight as they do other matter. They are common carriers for individuals and are governed by the law of reasonable compensation, and if compelled to perform service for individuals in the way of passenger rates and freight and express charges, why not for the Government that extends to them such protection on the high seas and enables them to enter the ports of other countries?

It is an absolute advantage to these vessels to transport the mails, for in doing so they carry intelligence and letters relating to the cargo, and therefore benefit the ship-owners. Why, then, do they complain and under the statute enacted by the last Congress refuse to carry the mails? There is but one answer to this question. It is an effort to coerce the Government into the payment of unreasonable compensation in the way of a subsidy. The law prior to the last Congress had stood for twenty years. There was no complaint at the law as to its constitutionality, but as to the amount allowed.

It does seem the compensation under all the circumstances is ample for the services rendered. It is simply a refusal to perform for the Government a service that they had been rendering for twenty years, and a breach of their duty as common carriers, when they refused to allow the agent of the Government to take mail-bags with him as baggage, he proposing to pay his regular fare and charges for extra weight.

Combinations or agreements were effected by which embarrassment to the service was occasioned. The object, as stated, was to coerce the United States into the payment of large sums in the way of subsidy for the expedition of her foreign-bound mails.

It was suggested, and the thought entertained, to further complicate matters by a refusal to deliver the mails on arrival in American ports, but section 3983 being unrepealed and in full force, the necessity of a compliance was apparent. The section is as follows:

No vessel arriving in any port or collection district of the United States shall be allowed to make entry or break bulk until all letters on board are delivered at the nearest post-office, and the master thereof has signed and sworn to the following declaration before the collector or other customs officer.

And then follows the oath.

This provision settled that question in favor of the Government.

Again, it appears that for the carriage of mails from San Francisco a greater price was offered for each trip than for the maximum price for the most profitable trip across the Atlantic. The Pacific Mail Company did not accept the offer at $41,000 for thirteen outward trips, while they would have probably carried express packages for one-fourth the amount. If I mistake not, all lines of American ships carry mail except four: two to Cuba, and one to Venezuela, and one to China.

Notwithstanding temporary embarrassment, the United States mails are still carried to their destination, and in some instances the results are more satisfactory. The Government did not yield, as demanded by these lines, to exorbitant and unreasonable exactions so far exceeding prices charged individuals for special or express packages.

But the minority attempt to show that the highest rate in the discretion of the Postmaster-General is inadequate, and insist that American shipping interests should be encouraged by donations or subsidies under the garb of compensation for transporting the United States mail. This, Mr. Chairman, I controvert. Fair and reasonable compensation is all these American line of steamers should demand, and is all we should be willing to give. The duty of the Postmaster-General is plain. He is an officer of the Government and should protect his Department from the attempted raids of all corporations. There should certainly be a limitation. It is not a question as to whether this or that line should receive more or less, but the correct rule is to administer equal justice to all. Foreign vessels we are advised are anxious for the privilege of carrying our mails, and for sea postage only, being only one-third of sea and inland postage; and they seek the opportunity of transporting our mails to Europe. For a more perfect understanding of sea and inland postage, I read from the stenographer's notes of the interview between Mr. Bell, the Superintendent of Foreign Mails, with our committee:

Q. Define sea and inland postage.
A. It is the gross revenue collected on the mails destined to foreign countries.
Q. On what basis is it calculated?
A. Five cents per each one-half ounce, or $1.60 per pound, on letters and post-cards, and 1 cent per 2 ounces, or 8 cents per pound, on other articles.
Q. What is the legal weight of a foreign letter?
A. One-half ounce or less.
Q. What is the average weight of a letter?
A. On a count made by the Third Assistant Postmaster-General on domestic letters on the first seven days of May and September last, respectively, as per pages 746 and 750 of the Postmaster-General's report for the fiscal year ended June 30, 1885, it will be observed that the average weight of letters is three to an ounce. I have no information as to the average actual weight of letters addressed to foreign countries.
Q. Please define sea postage?
A. It is an indefinite term. Under the Berne treaty, which went into effect July 1, 1875, the rate of extraordinary sea transit of the mails was fixed at 25 francs, per kilogram, or $4.82 for 2 pounds 3 ounces for letters and post-cards, and 1 franc (19 cents) per kilogram (2 pounds 3 ounces) on other articles, and the ordinary rate of sea transit of the mails was fixed at 6 francs 50 centimes, or about 60 cents per pound, on letters and post-cards, and 50 centimes on other articles. The Paris convention of June, 1878, by paragraph 2, article 4, page 5, reduced the international sea-transit rates of the mails as follows: Where the extraordinary rates of sea transit had been hitherto fixed at 25 francs it was reduced to 15 francs, and where the ordinary sea-transit rate had been fixed at 6 francs 50 centimes per kilogram, it was reduced to 5 francs, or 44 cents per pound. As the United States Government was a party to, and is bound by, this conventional treaty this Department has accepted and taken these rates to be sea postage on the mails conveyed by the various steamship companies. There is no statutory law defining sea or inland postage, and this Department has been governed solely by the universal postal union treaty.

* * * * * *

Q. Did the foreign vessels offer to carry mails at the 5-franc rate (or 44 cents per pound)?
A. Yes, sir; and apparently glad to get them. Foreign steamships have been tendered in one or two instances to the Department for the conveyance of mails to the West Indies and Central America for nothing, provided that the Department would furnish them the usual certificate authorizing them to ply to these countries as mail steamers for the advantage they would obtain as to tonnage-tax and port and light-house dues in the ports of those countries.
30 grams are equivalent to 1 ounce. 1 kilogram is equivalent to 2 pounds 3 ounces. 1 franc is equivalent to 19 cents.

To illustrate the absurdity of the idea that it is seriously supposed that foreign mail facilities can create commerce or contribute materially to the placing the carrying trade in the hands of American vessels, it might be proper to trace the history of the foreign mail service.

The late Postmaster-General Howe says (Senate Document No. 65, Forty-seventh Congress):

Previous to the mail-steamship contracts authorized by acts of March 3, 1845, and March 3, 1847, the ocean mails were transported by sailing vessels, as their voyages might occur, for a small gratuity payable on each letter at the port of delivery, and consequently no payments were made prior to the fiscal year 1848 for the transportation of the mails of the United States to foreign countries.

On the 3d day of March, 1845, in obedience doubtless to suggestions connected with the contest in regard to Texas with Mexico, Congress passed the first law providing for the transportation of foreign mails, and in that act (Statutes at Large, volume 5, page 750) authorizing the Postmaster-General, under restrictions and provisions of existing laws, to contract for carrying mails to foreign ports, with this provision:

And the said contractor stipulating to deliver said ship or ships to the United States, or their proper officer upon demand made, for the purpose of being converted into a vessel or vessels of war.

Just two years subsequently contracts were made with E. K. Collins and his associates to transport the mails from New York to Liverpool, and with A. G. Sloo, of Cincinnati, for similar services from New York to New Orleans, Savannah, and Havana, and from Havana to Chagres, &c. The vessels to be used were to be constructed under the supervision of a naval constructor, with a proviso: "And that each of said steamers shall receive on board four passed midshipmen of the United States Navy, who shall serve as watch officers, and be suitably accommodated without charge to the Government;" also, one agent, appointed by the Government to take charge of the mails, was to be accommodated without charge.

Reference has been made in this discussion to the "olden time," and here we see the restrictions thrown around vessels that transported our mails.

I have said, Mr. Chairman, more than I intended, and shall not be betrayed into following the discussion into irrelevant matters as to civil-service reform. I have my views, and hope to have an opportunity of expressing them before the adjournment. I would like to see necessary reforms instituted and vigorously pursued, such as would result in surrounding the administration by its political friends only, and not embarrassed with those unfriendly to Democracy.

Political organizations are necessary in a Government like ours, with marked and definite lines of differences. I would like to see manifested that "tumultuous and somewhat indecent haste to get out of office" exhibited partially in some other localities besides the solitary State recently mentioned in the far West. The tenure-of-office act has afforded welcome shelter to many whose reluctance prevented them embarrassing the administration by resigning. Such has been the case in the beloved State that I have the distinguished honor, in part, to represent. Republicans have waited to be removed, or a request to resign. Comparisons have been resorted to, and an estimate of the number of postmasters appointed within the last twelve months; yet our friends on the other side neglect to state that upon the incoming of a Democratic administration a Democratic office-holder was even sporadic, in fact one could hardly be found where a Republican could be induced to accept the appointment.

It ill becomes, therefore, our political opponents to find fault because a small per cent. of their friends have been afforded an opportunity of relinquishing office, for the Departments are yet swarming with Republicans sheltering under the tenure-of-office act and the protection of civil-service reform. They have not resigned and will not resign, but prefer, for the emoluments of office, to embarrass an administration for which they entertain no sympathy, and the existence of which they endeavored to defeat. I would prefer, sir, instead of a few hundred removals and recommendations being sent to the Senate, that the business should begin in earnest and be vigorously pursued.

We must not flounder in the ruts and mud of Mugwumpism, but plant ourselves on the solid highway of Democracy that the principles of our party may be successfully administered. The friends of Democracy should be stationed in every position possible. Irrespective of party the people of the United States expected nothing less than that Democrats alone would administer the affairs of the Government. I would rejoice with the Democratic voters of the Union in the full fruition of our victory achieved at the ballot-box in November, 1884, and a realization of their anticipations when it was announced that a Democrat was elected President of the United States.

Labor Arbitration.

SPEECH

OF

HON. JOHN V. L. FINDLAY,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Territorial transportation of property or passengers and their employés.

Mr. FINDLAY said:

Mr. CHAIRMAN: I have said nothing upon this bill during the progress of the debate for the reason that I felt I could show my appreciation of its merits by my vote quite as well as by any speech I could make, but under the leave of the House I am not willing to let the opportunity pass without putting on record the reasons for my vote. I voted for the bill, not as some gentlemen here said because it was harmless, but because I believed it contained the germ at least of positive good and that that germ would finally develop in a generous fruition for struggling labor, not only in this exigency but in trials to come. It is more than a mere legislative declaration that a submission of the differences between capital and labor to voluntary arbitration is a wise method of determining those differences.

A joint resolution or a separate resolution embodying this declaration would have accomplished as much, but might well be denominated

as no better than sounding brass or tinkling cymbal. But this bill not only contains such a declaration, but it goes further and says that arbitration, in the opinion of Congress, is not only wise, but as an inducement to bring the parties together the United States will pay the expense of the procedure. It devises the machinery of arbitration and provides for the cost of running it. An item of small moment to one of the parties, perhaps, but of incalculable significance to the other. But it does not stop here. It provides, instead of a bond to perform the award or other coercive measures, the only means of enforcement which the nature of the case admits, and that is a certification of the decision made by the arbitrators to one of the organized bureaus of the Government, there to remain on record as the solemn judgment of the United States against the offending party until discharged. Now, who shall say that will be a mere idle decree?

Suppose this bill had been a law when the trouble in the West, which has been the immediate occasion of it, occurred. On one side you would have had the corporation, on the other its employés, behind them the masses of the people whose commerce and business were impeded by the strike, and on the statute-books of the United States a law which afforded an easy mode of escape out of the difficulty. Will any man say that the whole force of public opinion would not have been brought to bear in favor of settling this difficulty by arbitration as provided by that law? Can it be reasonably concluded that either of the parties to the controversy would have been willing to protract it in the face of this public opinion? I think not; and therefore believe that the very existence of the law will of itself promote voluntary arbitration by creating a public opinion in favor of it which it will be difficult if not impossible to resist. The strongest argument made against the bill has gone to the point that as far as such mission was concerned the bill conferred no rights which did not already exist at common law.

But that argument does not strike me as sound. To point out to litigants a common-law method of settling differences by arbitrament and consent is one thing. To show the suffering public that a statute has made it easy to have these differences settled in this way, without cost to either party, is, in my judgment, quite a different thing. It puts an argument in every man's mouth simple to make and difficult to answer—an argument which says in effect to both corporations and employés, We, the public, have some rights; you are not the only sufferers by this disagreement; we outnumber you ten to one; our business, our livelihood, our very existence, depends upon a prompt and reasonable settlement of the difficulty; the law has provided the means for such a settlement, and we demand that you adopt these means and permit the wheels of commerce to again revolve on their accustomed racks.

But in the absence of such a law, what would the argument be? Simply that it was a duty to arbitrate, without answering the objections as to expense and the difficulty of enforcing attendance of witnesses, obtaining testimony and executing the award. In the other case I have put it is a duty made easy, and a duty besides that has the sanction of positive enactment by the National Legislature. I think, then, that the bill will promote arbitration. Will it effectuate it? Great stress has been laid upon this part of the argument against the bill. It has been insisted that the mere suggestion of a decree without compulsory provision for its enforcement is an idle form of words without force or virtue. It has been denounced as a sham and a trick, an innocent poultice, a harmless application on the outside for what is a deep-seated internal malady, and much other denunciation more or less pointed.

I have listened to these arguments with all the respect due to their authors, but I can not bring my mind to the conclusion that the same public opinion which has hushed this clamor and reduced the enemies of the bill into a pitiful minority of 29 as against 199 in its favor will not be potent enough to give effect to the bill after it becomes a law. I do not believe there is a railroad corporation in the country that would dare to resist for twenty-four hours the solemn judgment of our authorized board of arbitration, in which it appears voluntarily by its chosen representatives, holding its sessions, performing its work, and certifying its conclusion under the sanction of the law-making power of the United States. Such corporations, beside being exposed to the criticism of the press, are amenable to public opinion not only as the source of legislation in the States, but of those efficient although indirect disciplinary methods of which juries, quite aside from the merits of the particular case, are sometimes made the beneficent agents.

It is not necessary to point out the processes by which public opinion can make itself felt upon a stiff-necked and hard-hearted corporation, but, believing as I do that no law can long be enforced without the sanction of public opinion, at least in this country, it would be a very curious contradiction to hold that that subtle and all-pervading influence, so omnipotent in everything else, should suddenly be smitten with imbecility in the effort to enforce a formal decree against an offending railroad company. The sheriff who executes processes does it after all by the force of public opinion. Withdraw that and you may bring in the bayonet to help the law, but in the end the bayonet will disappear too before this resistless power. A warrant in the marshal's hands to enforce the fugitive-slave law was not worth much. I believe, then, that this bill will not only promote but will also effectuate arbitration, and for this reason I have voted for it.

But suppose it should do neither. Suppose, in practical results, it should prove as abortive and harmless as its enemies have predicted. Suppose it should bear neither the fruit of arbitration nor award terminating in satisfaction. It would still be worth something. Shorn of all substantial benefit to those whose injuries it was intended to redress, the measure would still stand upon the statute-books of the country as a responsive and sympathetic recognition on the part of Congress, not only of its right, but its duty to attempt at least some legislation in the interest of that great class of our people without whom there would be neither Congress nor country. For this reason, if for no other, the bill, in my opinion, will not only not prove harmless, but will be productive of good.

Labor Arbitration.

SPEECH

OF

HON. ANDREW J. CALDWELL,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Terrritorial transportation of property or passengers and their employés.

Mr. CALDWELL said:

Mr. SPEAKER: Imperfect as any law may be that seeks to deal with the questions now agitating the industrial world, and as little disposed as I was upon first looking at the committee's bill to support it, I believe if it is put upon the statute-book no man in America will hereafter have the temerity to brave public opinion by refusing to arbitrate his differences with his employés. The passage of this bill will be the highest authoritative expression of that public sentiment to which it appeals as the final arbiter. As to the expense to be incurred, I imagine that the peace of the country and the prosperity of trade will be amply worth the price we may be called upon to pay for them under this bill.

It makes very little difference so far as the solution of the social problem now upon the American people is concerned whether this bill or any other is passed by Congress. The issue is upon us. The capital of this country can not control it. The labor of the country can not stop it. It is one of those questions that arise in the history of the world and in the progress of civilization which must work out itself. As of old, there is an absolute and an irresistible power that is a working leaven in society which will "leaven the whole lump."

We are on the threshold of the last great conflict for the disenthrallment of men.

The sword, the cowl, the crown no longer menace the rights of the many in our land. The threatening force is the power of the purse. It is the most momentous question ever propounded for solution. For what benefit are the victories of the ages if at last man by the power of money may be forced to work like a slave all his days and still go naked and hungry? What benefit is liberty if under its glittering wheels the multitude writhes in the abject slavery of starvation, ignorance, and vice? Are the many ever to be in some form the slaves of the few? Must the weak ever be the prey of the strong? Must the race struggle up from barbarism to civilization, from the hut to the palace, from illiteracy to letters, from slavery to freedom, only to wear new yokes and more galling chains? Has man overthrown the rule of force only to submit to the domination of avarice? Is slavery the coming doom of man?

The very triumph of our republicanism, our prosperity under free government, has developed a new enemy to the rights of the many. The aggregation of capital in corporate bodies and accumulation of money in private hands is unprecedented in the history of the world, and menaces the perpetuity of our institutions. The incorporation of capital is a device to concentrate its power in a single hand. Beneficently exerted this power works for good. It is only its abuse that is a power for evil.

There was no wiser provision of the founders of our system than the abolition of the laws of entail and primogeniture. The perpetuation of great estates in the hands of a few was known to be inimical to freedom. Under the operation of our laws of descent and distribution this was prevented.

One generation, by thrift and industry, rises to comfort; the next to riches and affluence; the next, untrained to economy, lavishes the accumulation of two lives; the fourth generation pulls off its coat and commences life at the bottom of the ladder. From shirt-sleeves to shirt-sleeves is only three generations. This continual relegation of men to self-reliance and effort is a perpetual incentive to merit, a necessary discipline for the development of those virtues which keep men free, and one safeguard of democratic government. Entail of wealth

being impossible under our system, the same end was sought through corporate succession.

All the evils of absentee landlordism are brought home to employés in every department of labor. In the one case the landlord turns over the estate to his steward, who, having no interest but to please his absent superior, grinds the tenantry with every species of exaction that will increase the income. In the other the ownership of capital becomes impersonal and the stockholder is further removed from the employé than if he were beyond the seas, and knows nothing of the tyrannies practiced to make dividends. Thus the bond of human sympathy is cut, or rather there is no cord between the corporate entity and the dependent laborer. At the behest of self-interest, his wages are reduced to declare a dividend, and he is forced to strike; or he is locked out to prevent overproduction and reduction of prices, and he is forced to starve. Thus, under the tyranny of capital, the workman has fled to the domination of the labor organizations. His retreat is primarily for self-protection and the defense of his means of livelihood. He is not an enemy to society. He sees capital take too much from labor. That capital which furnishes him employment is not content with reasonable returns, but seeks to increase them even if it sinks him to pauperism. He combines with others of his trade to raise wages in that special trade. Other trades form unions, and finally all trades consolidate into one universal union controlled by an absolute central authority, with power to cut up, if need be, the plant of capital by the roots, whether invested in manufactures, traffic, or transportation, and the power to deny to any workman, whether he belongs to the order or not, the right to accept employment or to make a living.

Now, has he simply exchanged masters, swapped one form of tyranny for another? With him the question is, "Under which King Bezonian? Speak or die!" The one great difference is that he has a voice in selecting his master workman, who is subject in his exercise of his power to the criticism and rebuke of the common voice of the order if he makes a mistake or commits a wrong. With power comes responsibility, and woe is he who does not worthily discharge it. Public opinion is king in democracies, and the opinion of the order itself is a part of the opinion of the public.

Prophets of ill omen, not in love with our Government, have predicted that as our population became dense, the area of public lands filled up, the struggle of life more intense, the conflict, so called, between labor and capital would, with universal suffrage, render property insecure, revolutionize society, and overthrow our democracy. If our institutions can not stand this final test they are a failure.

Let us look back and see if we can get any comfort from the experience of the race in history. The merchant guilds and craft guilds of the old English towns stand at the bar of historic precedent as compurgators for the modern trades unions and labor associations against any criminal charge. Now, as then, the "frank pledge," the free engagement of neighbor with neighbor, is the basis of social order.

Gentlemen have read history in vain if they have thought English or American liberty was the work alone of barons, kings, protectors, lords or commoners, generals or statesmen. The barons, it is true, wrenched Magna Charta from John at Runnymede. But Green, the philosophic historian of the English people, says that the "burghers secured to the English towns local self-government, self-taxation, charters, and liberties, which gave life to smaller organizations." Frith guilds, merchant guilds, craft guilds "substituted the oath of fraternity and fidelity for the tie of blood, the trial by oath for the trial by battle," regulated the quality and value of work, fixed the hours of toil "from daybreak to curfew," and made "strict provision against competition in labor. * * * A common fund was raised by contributions among members, which not only provided for the trade objects of the guild, but sufficed to found chantries and masses and erect painted windows in the church of their patron saint. Even at the present day the arms of the craft guild may often be seen blazoned in cathedrals side by side with those of prelates and kings."

Here then is the type of the labor unions of to-day. Here is the root of the genealogical tree from which sprung the "noble order of the Knights of Labor." The guilds decided between master and man. The thriftless barons, who were the oppressors of the commons and the despoilers of labor then, were traded out of charter rights, cajoled into releases of feudal rights, and bullied into the grants of liberties by the tradesmen and mechanics of the towns.

Whenever the Anglo-Saxon achieved a right he put it in a charter, and never surrendered the parchment on which the glorious words were written. He achieved liberty for himself. It was not the boon given him by a superior race, nor the largess of a feudal lord; it was conceived in his brain and nurtured by his blood. Yet further testimony does the historian of the English people give. He says:

> In silent growth and elevation of the English people the boroughs led the way; unnoticed and despised by prelate and noble, they alone preserved the full tradition of Teutonic liberty. The rights of self-government, of free speech in free meeting, of equal justice by one's equals, were brought safely across the ages of Norman tyranny by the trades and shopkeepers of the towns. In the quiet quaintly-named streets, in the town mead and market place, in the lord's mill beside the stream, in the bell that swung out its summons to the crowded borough-mote, in the jealousies of craftsmen and guilds lay the real life of Englishmen, the life of their home and their trade, their ceaseless sober struggle with oppression, their steady, unwearied battle for self-government.

The sure, gradual, and orderly victory of burghers over king and feudal lord, of craftsmen of the guilds over rich burghers, wringing power and privilege from their grasp and exacting justice to the humble and honest laborer in all trades and businesses, will be repeated in the triumph of our trades-unions and co-operative labor associations over monopolists, money-kings, and bosses. Some future historian of the American people will lead the student by the hand not only over our battlefields or through these halls, but also among the wage-workers, who now as of old are working out the emancipation of labor and the amelioration of the condition of those who live by the sweat of the face.

The deliverance will be self-wrought and will not come as a boon from any man or party. Occupying a field that is not reached by the lawmaking power, these co-operative associations of labor are working out as of old the salvation of the working classes, the safety of capital, the preservation of social order, and the perpetuity of the state.

The result will, of course, be delayed by mistakes. Men learn wisdom from mistakes. Unbroken success often blinds the eyesight and leads to ultimate failure. Every mistake made by the Knights of Labor will send to the rear the rash counselors and imprudent leaders responsible for it, and bring to the front the cool-headed, sedate, conservative element and put it in the lead.

The result will be to establish a partnership between labor and capital; declare a truce to the war between them and pool their assets; money on the one hand, skill and labor on the other; so that out of the product the partner, labor, shall have every dollar it earns after allowing the partner capital current interest upon its actual investment, fair salaries for management, and just allowance for necessary expenses. This will render their interest and their effort reciprocal. This will satisfy labor, which shares intelligently in the prosperity or evil fortune of the investment; and capital can ask no more than the fair worth of its money and the security of its investment. The leaders of organized labor will meet capitalists and arbitrate their differences with or without Congressional enactments. Strike, mob, riot, and revolution will have no producing cause when the just rights of all parties are conserved by decrees enforced alike upon the striker and the boss.

Nothing is so timid as capital, yet nothing is so tyrannical when it has the power. When it finds the safety of its investments alone to be secured by its friendly relations with and justice to the great army of the employed it will be content. Labor will learn that its interest is to preserve and not destroy that which gives it employment, and continually furnishes more employment by expending its savings in increasing the plant. Self-interest will help both to be fair and honest. Thus the conflict between labor and capital will be ended.

But capital must be real, not fictitious; no watered stock. Dividends paid on values that never had an actual existence are simply stolen from the labor of the world. The great alliance between solid wealth and honest labor will solve the social problem. The only tramp will be the idler too lazy to work; the only sufferer, the criminal incorrigible to the rule of honesty and justice.

Let no man doubt that our system will fail to work this problem, vital as it is to human freedom.

It was the hope and desire of some of our early statesmen that the better classes, so called, should emigrate to this country. But it is not the contented and privileged who forsake the old home for the new. It is from the *tiers état* not from the *noblesse*, from the commons not the lords, that we have drawn the manhood that has built up and developed this country so rapidly. The steerage is better than the cabin; the peasant than the prince; the laborer than the capitalist. He goes to work; becomes a tax-payer in peace, a soldier in war. The capitalist puts a barbed-wire fence around thousands of acres of the public domain, or pools his millions in speculation, and takes away his gains to sustain him in aristocratic sloth at home. The *colluvies omnium gentium* are disciplined here into a great civic army, the guardians of order and the creators of wealth.

From this dispersion throughout Europe, the different nations of the Aryan stock are being united again in our Government. The interchange of ideas, the attrition of national differences, the intermingling of blood will break down prejudices and produce, as Herbert Spencer says, "the eventual mixture of the allied varieties of the Aryan race and result in a more powerful type of man than has hitherto existed, a type of man more plastic, more adaptable, more capable of undergoing the modifications needful for complete social life."

He further says:

> The American may look forward to a time when they will have produced a civilization grander than any the world has known.

The doctrines of anarchy in the Old World are repressed by weighting down the safety-valve with standing armies. With us, the weird sisters of freedom, free speech, free press, free school, and free conscience; stir them in an open cauldron, and socialism, nihilism, and anarchism bubble and babble, harmless to the open sky. The orator of the sand-lots speaks no more, and the screech of the night-hawks of the commune excites ridicule among laborers and scares only hysterical women and millionaires. The red flag of the commune and the black standard of the anarchist fail to catch the calm eye of the American mechanic. He knows that nihilism is the destruction of wealth and the suicide of labor. Jack Cade can not reign here by proclaiming that, "There

shall be seven half-penny loaves sold for a penny; the three-hooped pot shall have ten hoops; and it shall be felony to drink small beer." "If any will not work neither shall he eat" will be the maxim of the future order of things.

That future will not reveal great ruins and a degenerate race.

No mongrel Copt will scowl on the traveler from a mud hut under the shadow of a pyramid, the monument of his father's slavery; no lazzarone will hide his rags under the moonlit arch of a coliseum, the monument of his country's brutality; the memorial of self-government will not be a moldering but glorious torso, dug up by the antiquary from the ruins of free states, but its monuments will be in free institutions and free men.

Post-Office Appropriation Bill.

SPEECH

OF

HON. STEPHEN C. MILLARD,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 25, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 5887) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1887—

Mr. MILLARD said:

Mr. CHAIRMAN. I thank the gentleman from Kansas [Mr. PETERS] for yielding me a portion of his time, and in what I have to say I desire to address myself more particularly to gentlemen upon the other side of the House. You have a majority of at least forty upon this floor; and if this bill passes in its present form I insist the responsibility shall rest where it belongs.

My first objection to the bill is that it does not appropriate a sufficient sum for the payment of the salaries of the railway postal clerks. While every other Government employé from the Postmaster-General down to the Department messenger is provided for by the bill only a partial provision is made for the payment of the salaries of the railway postal clerks, the most faithful and the hardest worked class of all our Government employés. There are to-day in the railway mail service forty-five hundred and twelve postal clerks. Under the act of 1882 they were divided into five classes. The first class the Postmaster-General is authorized to pay a salary of $800; the second class a salary of $900; the third class a salary of $1,000; the fourth class a salary of $1,200, and the fifth class a salary of $1,400.

To enable the Postmaster-General to pay them the compensation authorized by existing law the Post-Office appropriation bill should appropriate the sum of $4,890,200. It appropriates only $4,800,000, a sum less by $77,060 than is recommended by the General Superintendent of the Railway Mail Service in his annual report for the next fiscal year.

These salaries were paid until July 1, 1876, at which time it was found that the sum appropriated was insufficient to pay the number of clerks thus employed. It was accordingly decided that the clerks receiving $1,400 per annum should be reduced to $1,300, and those receiving $1,200 should be reduced to $1,150; but this reduction was intended only for that year, and, as I have stated, owing entirely to the insufficiency of the appropriation. By referring to the report of Mr. Vail, the Superintendent of the Railway Mail Service, for the next succeeding year you will find that his estimates were made upon the basis and with the view of restoring the salaries of clerks of classes 4 and 5 to $1,200 and $1,400 respectively. Whether or not the recommendation of the superintendent was heeded I am unable to state, but this I do know, that the salaries of these classes of Government employés were not then and never have been restored.

The attention of the Forty-eighth Congress was specially called to this unjust discrimination by W. H. Thompson, late Superintendent of the Railway Mail Service; and that there might be no mistake made either in the Committee on Appropriations or in the House, in his annual report for the fiscal year ending June 30, 1884, he stated the sum that would be required to restore the salaries of classes 4 and 5—that the additional appropriation necessary for that purpose would be $81,300.

In pursuance of his recommendation, the last session of the Forty-eighth Congress, through the efforts of Mr. Horr, a distinguished member from Michigan, one of the Committee on Appropriations, the amount recommended by the superintendent was put into the Post-Office appropriation bill, and passed both branches of Congress, and in due time was approved by the President. But notwithstanding all this, notwithstanding the particular recommendation of the Superintendent of the Railway Mail Service and the action of Congress thereon, it appears that the salaries of these employés have not as yet been restored; that this $81,300 voted by the last Congress, for this purpose and for no other, is withheld from them, and withheld under the direction of the Postmaster-General.

That this sum of $81,300 was appropriated for the express purpose of paying the railway postal clerks the full amount authorized by the act of 1882 and restoring the salaries of classes 4 and 5 to $1,200 and $1,400 respectively, I call the attention of the House to the report of Mr. Jameson, the present Superintendent of the Railway Mail Service, for the fiscal year ending June 30, 1885. That portion of the report to which I refer may be found on page 9 of his report, and is as follows:

> The annual appropriation for the pay of railway post-office clerks for the current fiscal year is $4,682,300. Of this amount $81,300 was presumably appropriated for the special purpose of increasing the salaries of clerks of the fourth and fifth classes to the rates of compensation paid prior to the 1st of July, 1876; but, inasmuch as the appropriation bill as approved does not state specifically that such was the intention of Congress, the Postmaster-General is of the opinion that this fund can not be drawn upon for that purpose.

Mr. Chairman, I have no patience with this sort of special pleading. A specific sum was appropriated, and in pursuance of a specific recommendation of the superintendent, and for a particular purpose. The appropriation is susceptible of no other construction. The decision of the Postmaster-General is another verification of the truth of the old maxim "that there are none so blind as those who will not see."

Now, Mr. Chairman, I am in favor of paying these Government employés the full amount authorized by law, and when I became satisfied that there was to be a contest, not only in the committee, but in the House, I asked the Superintendent of the Railway Mail Service to furnish me the number of clerks in each of the classes 4 and 5, and the additional appropriation necessary. He replied at once that there were five hundred and sixty-four clerks in class 5, and six hundred and seventy-six in class 4, and that an additional sum of $90,200 was necessary for the restoration of their salaries.

I submit there is no good reason why this sum should not be voted them. They are the hardest worked class of employés in the service of the Government and the poorest paid. They are men in middle life who entered the service in its infancy and by hard work, diligent study, devotion and fidelity to duty, have become the most efficient and responsible branch of our governmental service. Our postal service is the best in the world. The postal clerk is oftentimes required to work at all hours of the day and night. His life is full of hardship and peril and not unfrequently has he been called upon to meet accident or death in the performance of his duty.

Mr. Chairman, in behalf of the railway postal clerks I demand this additional appropriation. He is the only Government employé whose salary under existing law is subject to the will or caprice of any one man. The railway postal clerk is the only employé in the service of this great Government who is not paid the full compensation authorized by law. In the various Departments of the Government here at Washington are employed more than ten thousand men and women. They are capable, honest, and efficient; but they are required to labor only six or seven hours per day, and there is not one who is not permitted to receive the full compensation allowed by existing law. What justice, what propriety or decency, I submit, is there in paying the Government clerks in the Departments at Washington who are compelled to labor but six or seven hours a day full compensation, and withhold it from the railway postal clerk, who not unfrequently is compelled to labor twenty out of the twenty-four hours of the day? Mr. Chairman, there is no justice in such a discrimination, and I protest against it.

My next objection to this bill is the compensation which it proposes to allow for the transportation of our foreign mails. For this service the bill recommends an appropriation of $375,000. Upon what basis the recommendation is made I confess I am unable to state, for it is neither sea nor inland postage. For this service section 4009 of the Revised Statutes provides as follows:

> For transporting the mail between the United States and any foreign port, or between the ports of the United States, touching at a foreign port, the Postmaster-General may allow as compensation if by United States steamship any sum not exceeding the sea and United States inland postage, and if by a foreign steamship or sailing vessel any sum not exceeding the sea postage on the mails so transported.

The sum recommended by this bill, if it is intended that sea and inland postage shall be paid American vessels, is less than the appropriation recommended by Mr. Bell, the present Superintendent of Foreign Mails, in his report for the fiscal year ending June 30, 1885. I call the attention of the House to the recommendation of Mr. Bell, which may be found on pages 29 and 30 of his report. If it is the will of Congress that sea and inland postage shall be given to vessels of the United States register for the conveyance of mails transported by them, he states that the sum of $425,000 and not $375,000, as provided by this bill, should be appropriated.

In determining the question whether full sea and inland postage should be paid to American vessels for the transportation of our foreign mails, we should bear in mind that sea and inland postage is not what it was when the act to which I have referred was passed. Formerly our vessels received 40 cents a letter to more than one-half the ports to which our mail was carried. To Australia we paid 30 cents a letter; to China, 25 cents a letter.

In June, 1878, a convention of the leading nations of the world was held at Paris for the purpose of revising and re-establishing the rate of sea postage. The result of that conference was a reduction in the in-

ternational sea-transit rates. The rate as established by that conference, and which bound every nation that took part in its proceedings, instead of being 25, 30, and 40 cents a letter, was reduced to 2 and 3 cents. But the rate of international sea and inland postage as fixed by that convention was not in any manner intended to indicate or determine the compensation to be paid by any nation to its own citizens for the service.

Immediately upon the adjournment of the conference, every government but the United States entered into contracts agreeing to pay its vessels adequate compensation for the conveyance of its foreign mails without regard to the rate established by the international conference.

Mr. Chairman, all I ask is that we shall place at the disposal of the Postmaster-General a sufficient sum to enable him to pay American steamships full sea and inland postage. My distinguished friend from Georgia [Mr. BLOUNT], chairman of the committee, will concede that the sum recommended by the bill will not permit him to do it; that $50,000 should be added to the bill to enable the Postmaster-General to pay American vessels full sea and inland postage.

The United States is the only Government on the face of the earth that compels its steamships to carry the foreign mails for the sea and inland postage. Contrast the amount paid annually by the United States with that of Great Britain. Great Britain pays annually for the transportation of its foreign mails $3,000,000, France $3,500,000, Germany $1,600,000, Austria $1,600,000, Italy $1,000,000, Holland $300,000, the United States the magnificent sum of $331,903.24, and of this sum $278,117.41 was paid to foreign vessels sailing under a foreign flag.

But to show how absolutely unjust and ungenerous we are as a nation toward our own people, let me contrast the compensation paid by Great Britain with that of the United States for similar service. Great Britain paid the last fiscal year for her Brazil line upward of $60,000; the United States the enormous sum of $4,210.24. Great Britain paid for carrying her mails to the West Indies more than $400,000; the United States paid the New York and Cuban line $4,134.13. Great Britain paid her China and East Indies lines upward of $1,500,000; the United States paid the Pacific Steamship Company for transporting the mail to China $3,506.64.

The report of the Superintendent of Foreign Mails for the last fiscal year shows that the United States paid the New Orleans, Honduras, and Guatemala line that made five trips and traveled 21,075 miles the enormous sum of $38.91. This was upon the basis of sea postage. Had the line received sea and inland postage it would have been paid $108.74. The Red D line to Venezuela, that made thirteen trips during the last fiscal year and traveled 208,488 miles, was paid, all told, $1,392.94. The officers of that company who appeared before the Committee on the Post-Office and Post-Roads stated that the amount received was not sufficient to pay the actual expenses of carting the mail to and from the vessels.

The Morgan line (Cuba), that made forty-one trips and traveled 30,500 miles, received for transporting the United States mail for the past fiscal year $212.48. The California and Mexican Steamship Company, Mexico, that made twelve trips, received $208.82.

That this matter may be put in a still clearer light, contrast the compensation paid for the transportation of our foreign mail with that paid our coastwise service: Galveston to Brasher, Tex., total distance traveled, 58,500 miles; amount paid the last fiscal year, $50,000; rate per mile, 35½ cents. San Francisco to Portland, Oreg., total distance, 69,660 miles; amount paid, $25,000; rate per mile, 36 cents. Portland to Sitka, total distance traveled, 16,020 miles; amount paid, $34,800; rate per mile, $2.17. Portland to Astoria, Oreg., total distance, 54,880 miles; amount paid, $14,960; rate per mile, 27¼ cents. Total distance of coastwise service, 247,589 miles; average rate per mile 57.6 per mile. The United States and Brazil Mail Steamship Company traveled, beginning July and ending September, 1885, 21,892 miles; amount tendered by the Postmaster-General this company, but refused as inadequate, $1,720.73, or 7.86 cents per mile. It absolutely cost this company $8,606.20. It cost the company 31.44 cents more per mile to handle the mails thus carried than was actually tendered it by the Postmaster-General.

This company traveled for the quarter ending December, 1885, 16,419 miles. The amount tendered the company by the Postmaster-General, but refused as inadquate, $1,500.29, or 9.14 cents per mile. It cost the company $6,454.65, or 30.16 per mile more than was tendered.

In view of these facts, I submit whether the sum of $375,000, the amount recommended by the bill, ought not to be increased to $425,000; whether in any event we ought not to place in the hands of the Postmaster-General a sum sufficient to enable him to pay the full sea and inland postage.

If you will give full sea and inland postage you will then not in some instances furnish an adequate compensation for this service.

The Forty-eighth Congress sought through the efforts of the gentleman from Maine [Mr. DINGLEY], a man who has done more to improve the condition of our ocean and marine service than any man living, to remedy this unfortunate condition of affairs. At the first session the statutes which required American vessels as a condition of clearance to carry the United States mails, whether sufficiently compensated or not, were repealed. And at the last session of the Forty-eighth Congress the following provision was inserted in the Post-Office appropriation bill:

Office of Superintendent of Foreign Mails:

For transportation of foreign mails, including transit across the Isthmus of Panama, $800,000; and the Postmaster-General is hereby authorized to enter into contracts for the transportation of any part of said foreign mails, after legal advertisement, with the lowest responsible bidder at a rate not exceeding 50 cents a nautical mile on the trip each way actually traveled between the terminal points: *Provided*, That the mails so contracted shall be carried on American steamships, and that the aggregate of such contracts shall not exceed one-half of the sum hereby appropriated.

The object of this legislation was not only that adequate compensation might be paid for this service, but that our mails to foreign ports might be transported in American vessels, and that our steamship lines with the South American ports be re-established. I regret to say that the Postmaster-General failed to appreciate this legislation. He refused to enter into contracts as provided by the act. He declined to use the appropriation for the good of the service which was placed at his disposal. He set the deliberate act of Congress at defiance. The result of his conduct was the refusal of American ships to carry our mails, and foreign vessels were permitted to take their places. Had he been the Postmaster-General of Great Britain he could not have pursued a policy more hurtful to the best interests of this country.

The CHAIRMAN. The gentleman's time has expired.

Mr. RIGGS. I will yield a portion of my time to the gentleman from New York in order that he may finish his remarks.

Mr. MILLARD. Mr. Chairman, this is not a political question and should not be regarded in that light. It is a question that affects the welfare of the people of the whole country. The legislation of the Forty-eighth Congress, to which I have referred, was due quite as much to certain liberal-minded gentlemen upon the other side of this House as the side to which I belong. I refer more particularly to the efforts and remarks of my friends FINDLAY, of Maryland, and TILLMAN, of South Carolina.

Sir, the policy inaugurated by the Postmaster-General can not be defended upon the theory that the payment of additional compensation would increase the burdens of the people. The foreign-mail service is more than self-sustaining. The postage received for mail matter transported to foreign countries during the last fiscal year was nearly a million dollars—in exact figures it was $985,731.19—while the amount paid out by the Government, as I have already stated, was only $331,903.24. Not a dollar of revenue obtained by ordinary taxation is to be employed in increasing our postal and commercial relations with foreign countries.

There has not been a year for the last ten years that England has not paid to her own steamships for the transportation of her foreign mails more than a million dollars in excess of the gross amount received for foreign postage.

In 1840 American vessels carried 82.9 per cent. of all our exports and imports; in 1850, 72.5; in 1860, 66.5; in 1870, 35.5; in 1880, 17.4; and in 1882, 15.5.

Mr. ADAMS, of New York. How do you account for the decline to which you have referred?

Mr. MILLARD. By the refusal of Congress to appropriate sufficient money.

Mr. ADAMS, of New York. I understand the gentleman to say that it has continued to decrease.

Mr. MILLARD. Yes; from the termination of the war to the present time.

Mr. DINGLEY. The decline commenced in 1865 and has been steadily going on ever since. It declined more rapidly from 1865 to 1871.

Mr. MILLARD. In 1850 more than one-half of the commerce of South America was done in American vessels and under the flag of the United States. Now our share is less than one-fifth.

In 1850 England had less than 300,000 tons in steamships. She has to-day more than 5,000,000 tons. Her flag is upon every sea and her ships are in every port.

What is the cause of the decline? To-day our merchant marine is a thing of the past. It has barely an existence. European merchants have undisputed sway. For more than twenty years year by year the commerce of the United States has been upon the decline. Year by year our steamships and sailing vessels are being driven from the ocean and the markets of the world. To-day as never before the great question that confronts us is not how we shall reduce the tariff but how shall we revive our foreign commerce, how restore our former relations with the West Indies and the South American countries. There is but one answer to these questions, re-establish our steamship lines, re-establish our commercial relations with foreign countries.

Mr. Chairman, I have no patience with the policy of the Postmaster-General as shown in his treatment of American vessels in the transportation of our foreign mail. The continuance of such a policy means the extermination of all that is left of our American marine. Rather than permit foreign steamships to carry the mails and commerce of the United States I would build the ships at Government expense, man them with American seamen, and, having loaded them with the mails and products of this country, follow the flag of Great Britain into every South American port. And I would pursue this policy until our steamship lines and our commercial relations with the countries that furnish

a market for our surplus products had been fully and permanently re-established.

Mr. Chairman, let us place at the disposal of the Postmaster-General a sum that will enable him to pay full sea and inland postage for this service. Let us do this, and if he fails to avail himself of the appropriation the responsibility will be with him and not with us. [Applause.]

Classification and Compensation of Public Officers.

SPEECH
OF
HON. WILLIAM R. COX,
OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 30, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 6855) to secure an equitable classification and compensation of certain officers of the United States—

Mr. COX said:

Mr. CHAIRMAN: The influence that goes out from this House affects for good or evil every citizen of this Republic. Its prosperity or its misfortunes will depend upon the fidelity and ability with which we discharge our responsible duties. The Treasury, properly denominated the "heart of the nation," is committed to our care, and as the finances of a country are its life-blood its prosperity depends upon their judicious management. Its principal officers must possess cool heads and the highest integrity. Every expression and every act is watched with the closest scrutiny, as they deal with the difficult financial problems continually submitted to them. The regulation and direction of the working forces must be relegated to their subordinates, for there are now twenty-five hundred clerks in this Department.

The Interior Department alone has an army of thirty-six hundred employés. So we have the Departments of Justice and State daily dealing with intricate questions of municipal, constitutional, and international law. Then comes the Army and Navy Departments, the Agricultural Bureau, all employing a grand army of one hundred and twenty thousand officers, exceeding one to every five hundred persons, the controlling influence of whom radiate from this great political center. To expect the President to appoint and the heads of Departments to personally superintend the management of these Departments is literally a vain hope, in view of its magnitude. This bill proposes to aid these officers in their duties, or at least make an inevstigation which will lead to a purification of these Departments. And to do this we present a business proposition to the House.

Mr. Chairman, the bill does not in any respect interfere with the duties or invade the prerogatives of the Civil Service Commissioners provided for by the act to regulate and improve the civil service, approved January 16, 1883, but is independent of and wholly different from that act. Indeed its antecedents go back to an early period in our history when our population was but small and the number of employés in the service of the Government comparatively few.

In 1818 the first law was enacted to classify and improve our civil service. It was incomplete and the work of classification imperfectly done. Still this was the classification upon which the Departments were administered up to 1853, when a new one was made, the only change in the meantime being some minor amendments in 1837 which increased the compensation of the employés. In 1854 the act of 1853 was amended, and since that time no general classification has been made. Amendments to the law, however, have been made, but the classification of 1854 is the one in operation to-day.

The proposition for the classification of 1854 originated in the Senate and met with such favor that after a brief discussion it passed that body without the nay vote being recorded. It was likewise carried through the House with but little opposition.

I now beg to call the attention of the committee to the remarks of Mr. Hunter, of Virginia, chairman of the Committee on Finance, and who as such had charge of the bill, made at the time the measure was under consideration in the Senate. He said:

> I believe we shall lay the foundation of what is essential to the safe administration of this Government. I mean a civil-service corps which shall have the experience, the efficiency, and ability to enable the heads of the Departments to administer their respective Departments safely and efficiently, without which I believe that no matter who is President, no matter who is at the head of the Departments, we can not expect that the affairs of the Government will be administered safely and efficiently, because after all it depends upon the honesty, skill, and the efficiency of the men who do the work of the Departments to administer them properly.

What was so well said by this distinguished financier and statesman of that day may be applied with great propriety at the present time.

While we have no data now before us from which to ascertain the number of employés in the Executive Departments at Washington in 1818, at the time of the original classification, we find that in 1837, when the act was slightly amended, the following were the numbers of clerks in the respective Departments, namely:

State Department	22
Treasury Department	221
War Department	73
Navy Department	16
Total	332

Or about one officer to every 39,400 inhabitants.

And in 1854, when the present classification was made, we find that there were employed in the—

Treasury Department	332
War Department	62
Navy Department	32
Interior Department	204
Post-Office Department	79
Total	719

About one to every 35,000 inhabitants.

It will be seen that the Departments of State and of Justice are not embraced in this classification; the number of clerks in them was of minor importance. By the accomplished clerk of the Committee on Appropriations I have been furnished with the following statement of the employés of the Executive Departments at Washington, provided for in the legislative, executive, and judicial law for the fiscal year 1886:

State Department	77
Treasury Department	2,430
War Department	1,513
State, War, and Navy Department building	157
Navy Department	165
Interior Department	2,906
Post-Office Department	596
Department of Justice	97
Total	7,941

One office to every 7,000 inhabitants.

This estimate does not embrace the officials in the Agricultural Department, numbering ninety, provided for in the agricultural appropriation law, which added to the above makes a grand total of eight thousand and thirty-one clerical employés in Washington. So that during the administration of Mr. Van Buren, succeeding that of President Jackson, the civil-service appointments need have given the Executive little care, as in the general service the employés were insignificant in number. Even so late as Mr. Fillmore's administration the whole civil-list in the Executive Departments in Washington was about seven hundred and nineteen, or less than one-fifth of the whole number now in the Interior Department alone, which at this day are said to number over thirty-six hundred—an army of itself. We can therefore readily appreciate the magnitude and ceaseless labors not only of the Executive, but the Secretaries of the respective Departments in their labors to secure an efficient and faithful civil-service corps.

When steps preparatory to the classification of 1853 were taken the views of the respective Secretaries were sought relative to the expediency of establishing boards for the examination of candidates for original appointments, so that the alleged abridgment of the liberties of the people to hold office without the test of qualifications is not of recent origin, as might be inferred. Among other things, Mr. Webster, then Secretary of State, expressed the following sentiments:

> The heads of Departments must necessarily be chosen according to political occurrences, but the knowledge and experience of those who perform subordinate duties is quite essential to the prompt and safe administration of the public affairs. Their acquaintance with precedents and knowledge of those duties which can only be gained by long service and careful industry is of the greatest use and importance. No one coming into any one of the various branches of this Department can learn in short time the actual state of things in the bureau to which he may be assigned. While the Department has been under my care, no removal has been made without proof of notorious incapacity or inattention to duty.

The other members of the Cabinet, among whom was Hon. William A. Graham of North Carolina, A. H. H. Stuart of Virginia, and others, used the following language:

> Leaving to the wisdom of the Legislature to determine how far this power is by the Constitution subject to restraints or conditions, they suggest as the most appropriate means which they have been able to devise for bringing into practical effect the reformations proposed, that in case of a vacancy in any office of clerk, except that of chief clerk, a board shall be constituted by the head of the Department in which the vacancy shall have occurred to examine any candidates to fill the same who may be sent before it by the head of the Department, as well as to their condition of physical health and energy as to their education, skill, or other qualifications for the duties of the place in question; and that no person shall be considered eligible to such an appointment who shall not produce to the head of the Department, to be filed in its archives, a certificate of approval from such board of examination.

It may be urged that the members of the Cabinet who gave expression to such sentiments were old Whigs, who did not properly appreciate the inherent right of all freemen to hold office. But, in apology, I will say there are many now in this body, on both sides of the Chamber, who were old Whigs, honorable and sagacious statesmen, who will repudiate such imputations. And, furthermore, the classifications with these restrictions in regard to examinations originated in a Democratic Senate, and were passed without serious opposition; and the father of Democracy, Mr. Jefferson, prescribed the test of honesty and capacity. It is not my purpose at present to do more than put on record these opinions. For this is an eminently practical business matter, addressed to the reason

and patriotism of this House, and not to its political passions. Otherwise, I would despair of success. It is simply a proposition to classify the service, to regulate the number and compensation of the employés, and to correct abuses which have corrupted the service, and render more equitable the compensation of those in the employment of the Government. It contemplates the appointment by the President of a commission of three persons, not in the public service of the United States, and two additional persons who shall be detailed from the service, not more than three of whom shall be of the same political party.

This commission will be required to prepare and submit to the President a report, or, in case of a difference of opinion among them, one or more reports, for transmission by the President to Congress on or before the first day of its next regular session. It shall recommend the proper classification, compensation, and number of officials to be employed in each Department, showing the number employed at the date of the report, and their salaries and compensation respectively, and the separate offices and commissions in the executive civil service at Washington. The report shall contain one or more arrangements of the officials into appropriate classes, stating the salary or compensation of those proposed for each class, and give their reasons for the recommendations for such classification, salaries, and compensation.

The bill provides that the compensation of those employed in the Departments, as far as practicable, shall be uniform for persons doing the same kind of work. The classification shall not extend to officers confirmed by the Senate, nor to laborers employed in the Departments. The commission shall report the practice as to substitutes, furloughs, and leaves of absence in the service, and in what respect, if any, such practice may be improved, and whether with advantage, and upon what conditions a clerical force may be provided the members of which shall serve from time to time in the different Departments or offices as the exigencies of the public service may require. The compensation of the members of the commission taken from civil life is to be fixed by the President, and the sum proposed to be appropriated for this service is $8,000. It is believed that less than this amount will secure the services of first-class men for this work, as it is not expected they will be engaged in their labors exceeding six months. The surplus, if any, of course, will be covered into the Treasury.

The selection of a mixed commission is believed to be most judicious. Those taken from private life will represent the great non-official, bread-winning classes of the country, while the two detailed from the Departments will bring to the consideration of the subject the practical, ripened experience obtained through their familiarity with the departmental work.

From the President's evident desire to see this Government conducted on business principles, from his oft-expressed wish to see the civil service elevated and purified, it is believed that the greatest wisdom would be exercised in the selection of able and competent men for the duties they are expected to perform, and that they would shed an amount of light upon the subject committed to their care which would be most beneficial to the country, and stimulate Congress to institute such changes in the administration of the Executive Departments as would be not only more just to its faithful, honest, and industrious employés but save annually hundreds of thousands of dollars to the tax-payers. For the working bees would be separated from the drones, who would be expelled from the hive.

The proper classification and arrangement of the employés in the Departments would be of incalculable advantage to the members of the House in making appropriations. It is well known that with the exception of the Committees on Appropriations their reports are sealed books to the members of the House. The amounts annually appropriated are so large and so complex to the average Congressman as to preclude an understanding of their details, except by the better informed who have had the advantage of hearing the discussions preparatory to presenting the bills for consideration. And the overworked Appropriations Committees find it almost impossible to master the details.

By the proposed classification, the appropriations would be made for classes 1, 2, 3, &c., so that any member could understand how many clerks were provided for in classes 1, 2, &c., and approximately know the character of the duties they would be required to perform. Furthermore, it would take away from the heads of the Departments a generous discretion, which in some instances would be abused, and remove the temptation to extravagance and favoritism by pointing directly to the specific object of the appropriation. If it has been found necessary to classify the service on two occasions when the civil list was comparatively small, most assuredly the reasons are tenfold stronger now, when our population has so increased, our expenses been so greatly augmented, and the public employés are so numerous as at present. At all events, this is simply a proposition for investigation and report. What legislation may follow, if any, is a matter for future determination. Let us at least manifest a disposition to act as any prudent man would in the management of his private affairs. Let us occasionally take stock, examine the debit and credit side, and see how matters have been conducted, especially when the business has changed hands and charges of favoritism, nepotism, and baneful social influences have been preferred.

In 1853 our population was but little over one-third of what it is at the present time, and the whole expenses of the Government, including interest, $47,773,988; while our expenditures, including interest, in the year 1885 were $260,226,935, and for the present year will be still greater. In addition, I will add, numerous offices have been created, until the employés in several of the Departments in Washington now far exceed the entire civil list at the time of the last general classification. The classification provided for by the act of 1853 was as follows: Class 1, $900; class 2, $1,000; class 3, $1,500; class 4, $1,800; and this was amended by the act of 1854 as follows: Class 1, $1,200; class 2, $1,400; class 3, $1,600; and class 4, $1,800, the present classification. It is true, amendments have been made from time to time, but they were predicated on this one which was the last general classification. It is confidently believed that the efficiency of the service might be promoted by making additional classes under the lowest grade now established, and which might be filled by women and boys, who have recently shown a much greater disposition to enter the public service than they did prior to the war. In the Post-Office Department youths would be especially adapted to the service, owing to their quickness and readiness to obey commands, and they would be found less expensive than mature men; and as messengers they would prove invaluable in every Department.

The question may be asked, Why can not these changes be made by the chiefs of the Departments? A sufficient reply might be to answer the question by asking another, Why have they not heretofore been made? It is is sufficient to know that it has not been done, and that the service has grown so cumbrous and the abuses been of such long standing that, however disposed the chief of a Department may be to make proper changes, it would be nearly impossible for him to do so alone and unaided. He would naturally be resisted by those around him, his daily associates, who oppose any changes calculated to increase their burdens and responsibilities. He would be carped at as an innovator by the more slothful, and, however good his intentions, he would be discouraged and rendered unhappy by the opposition he would encounter. Further, in many of the larger bureaus the chiefs but seldom see all their employés, and only know them by the names on their books.

I will now invite attention to abuses which I am reliably informed will be found to exist in consequence of the growth of the Government's business, the expansion of the civil service, and the consequent change of its clerical requirements, all of which has been continually ignored by Congress, as it has annually voted so many clerks here and so many there without regard to grade or pay.

That they have been employed without any regard for their grade or pay Congress has never stopped to inquire. Except in the Patent Office, and more recently in the Pension Office, no attempt is made at grading the work by the pay, and pay by the work and responsibility, and under the present system it is impossible for Congress to give its time and attention to correcting these abuses.

We are reminded of the perversions which may exist in the executive department without correction by what occurs in this and the other end of the Capitol, in the gradual increasing of the number of employés and incidental expenses, and can readily perceive how difficult it is to amend them. Within the last ten years the employés of this House have increased over one hundred, and at the other end of the Capitol in a greater proportion, while our expenses continue to augment with no unequal stride.

Returning to the necessity for the commission provided for in the bill now before the committee, I find that in the Departments in Washington men are to-day drawing salaries without regard to the class of work or the quality and amount performed; and incompetency and favoritism have dampened the ardor of those who are compelled to perform the duties of those above them. This can be but an abuse of the service, for it is unjust and an improper discrimination against the working bees of the hive. Who can deny the necessity for an investigation where all of us have heard so many causes of complaint, even if we can not remedy them? That there are abuses, very gross abuses, now existing, no one can deny. Men are drawing seven hundred and twenty and eight hundred and forty dollars who are doing the same work as men who get from twelve hundred to sixteen hundred dollars a year. They are on the rolls as laborers.

In many offices there are men and women drawing the highest grades of pay who are simply copyists and laborers, while men and women are everywhere employed on the same "job" at every grade of pay, without regard to the amount or quality of service rendered. When you step into any room of the Departments and see five or six persons at work, you can form no idea of the pay any one of them gets (except perhaps the chief of the room, who is usually of the higher grade), as there are no assignments of labor with reference to pay. And while exception may prevail in the Patent Office, where the system of examiners, assistant, second, third, fourth assistant examiners is in vogue, even here complaints exist, which should be investigated. These facts are sufficient to put this House on inquiry and to justify the small expenditure which would place most valuable information in our possession.

That great abuse exists in regard to the furlough and absentee system there can be no denial. An eighteen-hundred-dollar clerk, a sworn officer of the law, is allowed to select a substitute in his absence, and

for alleged sickness he may absent himself for months and attend to other business, while the Government may pay for principal and substitute. This substitute is unsworn; is really not an officer; may be a seven-hundred-dollar laborer; and I have heard of instances of the clerks drawing the highest salaries while paying the substitute the lowest wages, thereby reversing the maxim, "The laborer is worthy of his hire." Is this the proper manner to conduct the public business? What would you think of the business principle of a contractor who would hire a gang of men at $4, $3, $2, and $1 per day and put them to work indiscriminately on a house, one man carrying a hod and others mixing mortar and others doing chores at from the highest to the lowest wages without regard to pay or qualifications? This, it appears, is precisely what the Government does. Says an intelligent and reliable citizen, formerly in the employment of the Government:

When I was a clerk in the Treasury Department there were from three hundred to three hundred and fifty clerks in the bureau where I worked. In my division, auditing accounts, there were about one hundred men, paid from $1,200 to $1,800 per year. In my room were three grades of clerks, all doing the same work; in some instances the lowest grades doing more and better work than those of the highest grades. Clerks at $1,600 and $1,800 had charge of file-rooms, where nothing but a laborer's work was performed, and could have been handled by any laborer at $600 a year. Men were on intricate accounts at the lowest grade, and on examining and book-keepers' branches, at all sorts of pay. No attention whatever was paid to the assimilation of work and pay beyond chiefs of divisions and other special places. Nor has this disregard of the plainest business principles changed in any manner with time.

This is a part of the inheritance acquired from neglect and inattention and which demands early attention and correction.

I have thus briefly outlined the main features of the bill now before the House, and I have shown the necessity for its adoption and the good it can be the means of accomplishing. I will add further that the Civil Service Commission has been in operation for about two years and a half. Its employés are the hardest worked and the poorest paid, taking into consideration the character and responsibility of their work, of any of the employés of the Government. Whether their work has been successful in producing the results anticipated; whether their method of procedure was the best calculated to elevate and promote the efficiency of the civil service, is still a mooted question among some members of Congress. The facts to be brought forth by the commission provided for in this bill will be the means best calculated to enlighten the public mind on the subject and solve the disputed problem. I am confident the Civil Service Commissioners will not be reluctant to have the matter tested by an impartial tribunal, but court an investigation and comparison which would redound to their credit.

Where officers have been faithful and Departments well administered due credit will be given, while the slothful alone would suffer. Where classifications in different Departments are unequal and unjust they will as far as practicable be made uniform, and even-handed justice meted out to all. Who should object to this except those who have relatives or friends pensioned on the Government? Such, indeed, should be the effect of a thorough, honest, and complete investigation and classification of the Executive Departments at Washington. But the work will require the best efforts of able, fearless, and well-informed commissioners, who would not be swayed by official frowns or seduced by the blandishments of social or political influences. And such a commission we might reasonably expect at the hands of the able and fearless Executive who now presides with such distinguished ability and acceptability over the destinies of this nation.

Silver Coinage.

SPEECH

OF

HON. DAVID B. CULBERSON,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES.

Saturday, March 27, 1886.

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes—

Mr. CULBERSON said:

Mr. SPEAKER: I do not intend to discuss the silver question at any great length, but I propose to enter a plea in behalf of fair play for silver and fair dealing with the people.

I am a friend of silver and in favor of placing it on the same plane with gold in respect to coinage and full unqualified debt-paying power.

Under existing law the coinage of gold is free and unrestricted. The owner of gold bullion may deposit it at the mints and have it coined on his own account, or may exchange it for coined gold.

The owner of silver bullion is not permitted to have it coined on his own account or exchange it for coined silver dollars. But the Government is authorized and required to purchase silver bullion in the open market and cause to be coined not less than two nor more than four millions of standard silver dollars per month.

In order to secure the remonetization of silver in 1878 and restore it to its ancient use as money, the friends of silver were compelled to submit to the limitation upon its coinage and to assent to the unwise provision which vested in the Secretary of the Treasury discretionary power over the amount, within the limits, to be coined.

Such badges of servility and inferiority to gold placed on silver in the interests of bondholders and banks ought to be removed at once.

By the provisions of the act of February 28, 1878, silver dollars of 412½ grains were made a legal tender at their nominal value for all debts and dues, public and private, except where otherwise expressly stipulated in the contract.

The repudiation of silver dollars as a legal tender in the payment of any of the debts not within the exception, due by the Government, by the Secretary of the Treasury, is a violation of both the letter and spirit of the law, and is a wrong to the people who are required by taxation to furnish the money to pay the debts of the Government.

If the existing law authorizing the coinage of silver dollars is to remain in force, or if it is to be substituted, as is proposed, by an act providing for the free and unlimited coinage of standard silver dollars, the practice established at the Treasury Department during the reign of the Republican party, and still followed with remarkable fidelity by the officers of that Department, of discriminating against silver and in favor of gold, and of repudiating it wholly as a legal tender in the payment of the public debt, interest and principal, ought to be forbidden by law.

It seems to me, Mr. Speaker, that there could be no greater legislative folly than to require the Government to purchase bullion and cause not less than two nor more than four millions of silver dollars to be coined each month if the Treasury Department shall be permitted, in the exercise of a discretion confided to it by law, to store them away in the vaults of the Treasury and refuse to pay them out upon the matured obligations of the Government.

There are outstanding $194,000,000 of bonds, long past due, and held mainly by national banks, upon which the people are required to pay over $5,000,000 interest annually. Over $30,000,000 in gold have been paid in interest upon these bonds since their maturity.

The last report from the Treasury Department showing the condition of the Treasury on the 20th day of March, 1886, reveals the fact that there were in the Treasury over eighty-five millions of silver dollars belonging to the Government, held and hoarded for no lawful or reasonable purpose, but upon the shallow pretext that they can not be made to circulate in companionship with gold. This report presents nothing new. For years millions of money have been allowed to remain in the Treasury unemployed, while the people have been forced to pay interest upon bonds which ought to have been paid years ago.

In view of this condition of our financial affairs Congress and the country are confronted with the recommendation of the President to suspend the coinage of silver dollars and allow the stock of coined silver dollars, amounting to two hundred and twenty millions, to be absorbed, if possible, in the daily transactions of the people.

We are confronted also with the recommendation of the Secretary of the Treasury to destroy our entire volume of legal-tender greenbacks, and with his answer to the resolutions of inquiry submitted by the Committee on Coinage, Weights, and Measures, that in the future, as in the past, the practice of repudiating silver dollars as a legal tender in the payment of the public debt, interest and principal, will be adhered to.

It is therefore apparent, Mr. Speaker, that the Executive Department of the Government is not only in favor of suspending the coinage of silver, thereby cutting off all further increase of our volume of metal money from that source, but approves the policy of repudiating silver as a legal tender in the payment of the public debt, and of dumping out among the toiling millions of this country the present stock of silver dollars branded with fiatism and dishonor and as unfit to be paid to the holders of Government securities.

If these recommendations should be adopted gold will be the only debt-paying money and national-bank notes the only paper currency. The financial policy of the Democratic party—gold, silver, and paper convertible into coin on demand—will have been repudiated, and the policy of the Republican party, broken and overthrown by the Democracy in 1878, restored.

Are Democrats prepared to accept such results?

Mr. Speaker, it is said that the long administration of the Treasury Department in the interest of gold and in hostility to silver is in open and defiant violation of law, and that no further legislation is needed to compel that Department to use silver dollars in the payment of interest upon the public debt, in the purchase or redemption of bonds with which to provide a sinking fund each fiscal year, or in reducing the public debt from time to time by the application of surplus funds to the payment of the matured obligations of the Government. If that be so it is only necessary to secure fair play for silver and fair dealing with the people to exact and enforce obedience to the laws.

But I apprehend, Mr. Speaker, that upon a brief review of some of the laws which regulate and control the collection of revenues and the custody and disposition of the public funds, it will be found necessary to provide further legislation in order to break up the practice in the Treasury Department of repudiating silver dollars as a legal tender and

coercing their application to the payment of the public debt, interest and principal. The laws to which I refer confide large discretion to the head of the Treasury Department as to the manner in which they may be executed.

I am not here to approve or excuse the action of the Secretary of the Treasury, who avails himself of such discretion to defeat the will of the people by adhering to a policy of administration which has been disapproved by law and repudiated by the people at the ballot-box. But I propose to show the state of the laws upon this subject, and to suggest, with deference to the judgment of others, such additional legislation as will in my opinion make it impossible in the future for the Treasury Department to administer the financial affairs of the Government in opposition to the will of the people.

Those who claim that the provisions of the act of 1869 have been violated by the Secretary of the Treasury by the failure to use silver in the payment of the interest upon the public debt, or in providing for the sinking fund each year, or in the payment of interest on the bonds which belong to the sinking fund, refer to section 3694 of that act, which reads as follows:

> The coin paid for duties on imported goods shall be set apart as a special fund, and shall be applied as follows:
> First. To the payment of interest in coin on the bonds and notes of the United States.
> Second. To the purchase or payment of 1 per cent. of the entire indebtedness of the United States to be made within each fiscal year, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt as the Secretary shall from time to time direct.

The ostensible object of this act was to strengthen the public credit, and the duty imposed upon the Secretary of the Treasury is to carve out of the coin received for duties on imported goods each fiscal year a sufficient amount to pay the interest upon the public debt and to provide the sinking fund required by the law. The balance of the coin, should there be any, is required to be placed in the general funds of the Treasury. It is made his duty also to apply the interest upon the bonds belonging to the sinking fund to the reduction of the public debt.

It will be observed that there is no direction as to what coin, gold or silver, should be set apart. The object of the law is accomplished and its terms literally complied with whenever a sufficient amount of coin—either gold or silver, or both—is used to construct the special fund required by the statute.

Mr. Speaker, without reference to transactions occurring before, it may be affirmed that since the remonetization of silver in 1878 the special fund required to be set apart each year under the act of 1869 has been constructed of gold only. And the interest on the sinking-fund bonds has been paid in gold only and that applied to the redemption of the public debt. No silver has been used for any purpose contemplated by the act. Not because silver had not been received in payment of duties upon imported goods, for many millions have been so received every year, but for the reason, as alleged, that there was no necessity to use it, a sufficient amount of gold having been received each fiscal year with which to meet all the requirements of the statute.

To make this point entirely clear, take the fiscal year which ended 30th June, 1885. The interest upon the public debt for that year amounted to $51,386,256.27, and the amount of bonds required to be purchased or paid for the sinking fund that year was $45,588,150. The total amount, therefore, required by law to be paid out of the coin paid on duties on imported goods was $96,974,406.47.

The whole amount received for duties on imported goods during that year was $181,471,939.34.

Over one hundred millions of that amount were paid in gold, gold certificates, and legal-tender greenbacks, the latter being classed and counted as gold receipts. It will therefore be perceived that an enemy of silver could discard it in constructing the special fund required by the law and yet not violate any of the provisions of the act.

The gold advocates concede that the law contemplated the employment of both gold and silver. Indeed, when that law was enacted the bondholders were proud of their achievements. By its provisions $1,500,000,000 of currency bonds had been converted by legislative fiat into coin bonds and the value of the bonds enormously augmented. But soon after its passage it was discovered that not only had their bonds been converted into coin bonds, but by skillful handling of the special fund means had been provided by a generous Congress, unwittingly, no doubt, by which the interest upon the bonds, as well as the sinking fund, could be paid in gold.

Because Congress failed to declare that no discrimination should be made between gold and silver and that both should be used in proportion to the amount of each paid upon duties on imported goods it is lawful for the Secretary of the Treasury to use gold only, a sufficient amount having been received each fiscal year for all the purposes of the law.

If by accident or chance a friend of silver had been appointed Secretary of the Treasury no such discriminations against silver would have been made. On the contrary, it is not improbable that in view of the long-continued ill-treatment of silver by his predecessors in that Department discriminations in favor of silver and against gold would have been indulged in.

And so it appears, Mr. Speaker, that under existing law the use of silver dollars in the payment of interest upon the public debt, amounting now annually to over $50,000,000 per annum, and in the payment or purchase of bonds for the sinking fund, requiring over $45,000,000 per annum, depends solely on the politics of the head of the Treasury Department. If he should by chance—and that appears remote—be a silver Democrat, silver would be used; if a gold Democrat or Republican, gold only will be used. The will of the people seems powerless to enforce respect for the money of the people.

When the people declared, as they did from 1869 to 1885, that the financial policy of the Republican party should be enforced by the Treasury Department their mandate was respected and obeyed. But when the people revolted against the oppressions and extortions of that policy and declared that the more liberal policy of the Democracy should be administered and enforced by the Executive Departments of the Government, their mandate and their will are to be ignored and all the fruits of their grand achievement in this behalf are to be sacrificed upon the altar of gold.

Again, Mr. Speaker, two millions of gold are expended each month, or in that proportion, in the purchase of silver bullion from which to coin two millions of silver dollars per month.

It would seem to be a fitting thing to invest dishonest silver dollars in depreciated silver bullion; but that is never done. Is it because an opportunity would be afforded for two millions of silver dollars to escape the watchful custody of the Treasury Department and enter into the channels of circulation every month, either actually or in the form of certificates; or is it because the enemies of silver would lose an opportunity to display a want of equivalency in value between coined gold and uncoined silver, a mere commodity?

Whatever may be the cause of this strange practice, the vice to which I desire to invite attention, is: the discretion which the law allows the Department in the use of money for that purpose. The law authorizes the Secretary of the Treasury to use in the purchase of silver bullion any money in the Treasury not otherwise appropriated. Though millions of silver dollars lie hoarded in the Treasury from year to year, and though the banks, with an abnegation of selfish purposes, truly refreshing, thrust their contributions of gold upon the Treasury Department in order that the stock of the precious coin may not fall too low to maintain the war on silver, still no silver dollars are used to buy silver bullion.

Mr. Speaker, if there is anything certain in politics it may be safely affirmed that three-fourths of all the people in the United States oppose the policy of hoarding money in the Treasury. There can not be, in my estimation, a greater wrong inflicted upon the people, a people staggering under the burden of debt which they have borne long and patriotically, than to extort from their earnings year by year, by a system of taxation which feeds the rich and starves the poor, money to be banked up in the Treasury while the matured obligations of the Government go unpaid and gather millions of interest annually. Why should such conditions exist? Why should the people be taxed to pile up reserves in the Treasury to tempt the cupidity of audacious schemes of legislative appropriations unwarranted by the Constitution and unsanctioned by wisdom?

During the year which ended November 1, 1883, $105,634,150, and during the year that ended on 1st day of November, 1884, $105,976,150 were paid upon the public debt, and yet no bonds were called or paid for the year which ended November 1, 1885.

What does that mean? The Republican party is in favor of perpetuating a part if not all the public debt, in order to perpetuate the banking system, but yielding to the demands of the people, it paid off during the last two years of its administration over two hundred millions of the public debt.

The Democratic party is in favor of paying off the public debt in order to relieve the people of the enormous burden of interest and destroy forever the basis for that system of banking which usurps the powers of Government over the currency. Yet from March 4, 1885, to March 4, 1886, only $10,000,000 were paid on the public debt. Since then, however, additional calls, amounting in the aggregate to twenty millions of bonds, have been made. Such are the facts, notwithstanding the existence of nearly two hundred millions of matured bonds.

Unfortunately for the people, Mr. Speaker, there is no law that requires the Secretary of the Treasury to apply the surplus funds to the payment of the public debt. The act of 1881 authorizes the Secretary of the Treasury to apply so much of the surplus from time to time to the reduction of the public debt "as he may consider proper." Of what avail is the will of the people? The discretion of the head of the Treasury Department becomes the law of the land.

I submit that such high considerations of the public welfare ought not to be made dependent upon the discretion of the head of any Department of the Government. And since experience has shown that such discretion may be exercised and employed in such manner as to defeat the will of the people upon policies affecting their rights—to dwarf the volume of money and plunge the business of the country into financial distress—it ought to be withdrawn at once and the stern command of law substituted in its stead.

How is it, Mr. Speaker, that legal-tender greenbacks are employed

at the Treasury Department to debase and discredit silver? That they have been so used since 1879 can not be denied. They have been received in payment of duties upon imported goods since that time upon the order of the Treasury Department, notwithstanding the fact that the law authorizing their issue expressly forbids it.

Under the provisions of the resumption act legal-tenders became redeemable in coin. When they are received for import duties under the orders of the Treasury Department they are redeemed in gold at the Treasury, and the gold placed to the credit of duties received on imported goods. Every year since 1879 silver has been cheated by this operation, and the stock of gold with which to construct the special fund for the payment of interest upon the public debt, to provide the bonds for the sinking fund, and to pay interest upon the bonds belonging to the sinking fund, largely increased from that source.

Up to 1882 that practice rested for authority solely upon the discretion of the Secretary of the Treasury, but since the act of 1882 providing for the extension of the corporate existence of national banks there has been just enough color of lawful authority for it to justify the continued injustice to silver.

In preparing for specie resumption in 1879 the Secretary of the Treasury constructed a reserve of one hundred millions of gold with which to redeem such legal-tenders as might be presented for redemption.

The gold was obtained by selling 3 per cent. bonds payable in coin at the pleasure of the Government, and that amount of gold has been held in the Treasury since then to redeem greenbacks, which are more desirable for circulation than gold. Why was it necessary to hold such a vast sum of money for that purpose away from the volume of circulation? The law required that when redeemed at the Treasury the greenbacks should be reissued. Did any one suppose that there ever would be a time when it would be necessary to have such an amount in the Treasury to meet the demand for the redemption of legal-tenders?

Surely not. There has been no necessity at any time for such a magnificent display of gold coin to give confidence in the ability of the Government to redeem the legal-tenders. On the contrary, it was a scheme to debase silver and oblige the bondholders and the banks. It enabled the Secretary of the Treasury to have on hand gold with which to redeem the legal-tenders paid into the Treasury for duties on imports, and thus secure for the bondholders gold for interest on their bonds and gold for the redemption or purchase of the bonds necessary for the sinking fund. The proviso to the twelfth section of the act of 1882 simply recognized the existence of that reserve and provided that, when the amount should fall below one hundred millions the issue of gold certificates should be discontinued. There is no law that requires legal-tenders to be redeemed in gold, and no law that requires a reserve of one hundred millions of gold to be held for their redemption.

Such being the state of the laws to which I have referred, and the manner in which they have been executed, it seems evident to my mind that silver is in danger of being entirely dishonored and debased by official discretion.

What remedy ought to be applied? Free and unlimited coinage of silver would go far toward furnishing a complete corrective of the evils to which I have alluded, and would to a great extent present a shield against the dangers which beset it. If the coinage of silver is made free, as gold is, it will find its way into circulation through friendly agencies, and will consequently escape the obstacles now interposed by the agencies of Government to keep it out of circulation as the equal of gold. To that extent free coinage would promote the value and augment the circulation of silver; but when the silver dollars found their way into the Treasury in payment of debts due the Government what would become of them? Would they not go into captivity the moment they entered the Treasury? Have we any assurance that they would not then as now be repudiated as a legal tender in the payment of the public debt?

With due deference to the opinion of others, I submit that free coinage is not all we need to give silver fair play for silver and enforce fair dealing with the people, but a law as well that shall require the Secretary of the Treasury to pay out the surplus money in the Treasury, less reasonable and proper reserves to be fixed by law, upon the matured obligations of the Government.

Appreciating the absolute necessity of withdrawing the discretion heretofore confided to the Treasury Department over the reserves and the custody and disposition of the public funds, I introduced two bills in the early days of the session, one of which requires the application of the surplus funds in the Treasury to the payment of the public debt, less proper reserves to be fixed by law, and by the other it is proposed to repeal the proviso to the twelfth section of the act of 1882 to which I have called attention.

If these two measures should become laws, and proper reserves be established by law, the Treasury Department will be forced to release from duress and imprisonment not only the silver dollars but all other money unnecessarily hoarded in the Treasury. The results which would follow would be most wholesome and beneficent. Bondholders and bankers would cease to slander and dishonor silver, as they would be interested in maintaining its value. The people would be relieved of millions of interest now unnecessarily exacted. The volume of money, stinted and starved by the arbitrary restraint of millions in the Treasury, would be augmented; enterprise and industry would be stimulated and aroused; labor would look up and feel encouraged, and an era of pure Democratic prosperity would dawn upon the country.

All this, Mr. Speaker, the people expected to realize by a change of administration, and would have been in due time secured to them by the execution of the laws in accordance with the Democratic theory of finance.

Mr. Speaker, I have heard it said in this debate that the highest aim of the Treasury Department since 1879 has been to be at all times able to pay every creditor of the Government such money as he preferred to receive. Such high consideration and respect for the wishes of the creditors of the Government are to be commended. Official politeness is a rare virtue, and should be cherished and nurtured. But, Mr. Speaker, considerations of this character are commendable only when they can be justified by fair dealing with the tax-payers. When the interests and rights of the people must be sacrificed to accomplish such an achievement it ceases to be praiseworthy and becomes a wrong.

The repudiation of silver dollars as a legal tender in the payment of the public debt by the Treasury Department because the holders of the bonds prefer gold is a very great favor to that class of Government creditors. Not for the reason that silver dollars are less valuable than gold dollars, for that is not true. The purchasing power of a silver dollar is equal to that of a gold dollar, and by law its debt-paying capacity is the equal to that of gold, notwithstanding the practice at the counters of the Treasury. But it enables the bondholder to continue his investment, and if a bank holds the bond it enables it to draw interest upon it and maintain a basis for banking as well. It reduces the volume of money applicable to the payment of the interest and principal of the bonds, and thereby appreciates the value of the bonds.

On the other hand, the repudiation of silver as a legal tender in the payment of the bonds and hoarding it in the Treasury inflicts upon the tax-payers the unnecessary burden of furnishing other money to pay interest upon the matured obligations of the Government. It locks up from circulation vast sums of money and breeds those terrible evils to business that follow contraction. It taints with depreciation and discredit the silver dollars already placed in circulation by the Government by the payment of ordinary creditors. And, finally, it commits the Government to the unjust and indefensible policy of declining to enforce the law against the supposed interest of a favored class, while it compels, by its courts, the people to obey and abide the law.

What right, Mr. Speaker, has a bondholder to decline to receive silver dollars in payment of bonds? They are payable in coin, and the contract expressly provides that they are payable in coin of the present standard of value. The refusal to accept silver is a bald repudiation of the contract. When did it become the policy of this Government to legalize repudiation and compel the people to yield obedience to the mercenary exactions of repudiators?

The option to pay the public debt, interest and principal, in either gold or silver or both is a valuable right for which the people paid most dearly. About one-half the public debt was originally payable in currency of greatly depreciated value. Without consideration to tax-payers, Congress annulled that contract and provided for the issue and sale of the bulk of the present bonds payable in coin in order to obtain coin to pay off such of the currency bonds as were not exchanged for the present issue, dollar for dollar. In that transaction the tax-payers were literally despoiled of over $500,000,000, which bondholders pocketed as profits. In view of these facts, any law of Congress that strikes down this option of the tax-payers, or any practice of a department of the Government which shall destroy it will inflict upon the people an unforgivable outrage.

It is said by the gold advocates that a silver dollar is worth only 80 cents in gold. If that be so, and for the purposes of this argument I concede that gold advocates make no mistakes in money matters, it follows, that if silver is repudiated as a legal tender in the payment of the public debt either the tax-payers must lose $300,000,000 by being compelled to furnish gold to pay the public debt without reference to interest, or the bondholders must lose that amount by being required to abide their contract and accept silver.

There is no escape from one or the other of these results. The public debt in round numbers amounts to $1,500,000,000; if that is to be paid in gold only, and gold is worth 20 cents more in the dollar than silver, then the tax-payers must furnish three hundred millions more money to pay the debt than if paid in silver.

I am not contending that the public debt should be paid in silver only, but in behalf of fair dealing with the people I insist that their option to pay the public debt in either gold or silver shall not be abridged or impaired, either by the legislation proposed or by the despotism of official discretion. The people have never demanded that the public debt should be paid in silver only, but they do demand that the volume of metal money shall not be reduced by the destruction or debasement of silver, and that their right to use either or both of these coins in the payment of the public debt shall not be again taken away from them.

If, as is alleged by the advocates of gold, either the bondholders or the tax-payers must lose three hundred millions of money, which class should lose? If there is any sanctity in contract, if a decent respect is

to be paid to the great principles of equity and justice and fair dealing, the answer to the inquiry is plain.

Mr. Speaker, whenever the rapacious triumvirate of bondholders, banks, and syndicates of wealth contemplate a raid upon the volume of money for the purpose of exalting the value of gold and increasing the value of all coin obligations, the air becomes suddenly filled with protestations of friendship and sympathy for the poor from the organs and advocates of the unhallowed schemes.

The efforts of the real friends of the people to shield them from the rapacity of the organized and disciplined combinations of wealth are met with denunciations of communism and demagogy or scoffing merriment. Listening to the wonderful expressions of human sympathy which come on every breeze and from every quarter where public sentiment is molded, one would naturally believe that the toiling millions have no friends but bondholders and banks. So is the lion the friend of the lamb, and the spider the friend of the fly, until the unsuspecting victim is powerless.

These sycophantic exhibitions of friendship for the poor are displayed here in the advocacy of a measure the legal operation of which must dump two hundred and twenty millions of silver dollars, alleged to be worth only 80 cents on the dollar as compared with gold, among the people to be used by them in their daily transactions so that bondholders may be paid in gold only. Repudiated and dishonored by bondholders and banks as an unfit money to be received by them, they are to be cast out like old clothes among the needy poor.

The war waged upon silver is not because it is of less real value than gold. The apparent depreciation of silver bullion, a mere commodity, when compared with coin gold, and which is the basis of all the hue and cry of dishonesty of the silver dollar, has been produced by the deliberate and concerted effort of those who seek increased wealth by its debasement, aided by the strange and unnatural hatred of the Treasury Department to its use as a full legal tender. The irrepressible conflict between the financial policy of the Republican party and that of the Democratic party is opened afresh, and a brief comparison of these policies is challenged and invited.

The Republican party, inspired by the support and applause of bondholders, banks, and corporate influences, struggled from 1866 to 1875 to destroy all other money except gold, and all currency except national-bank notes. To accomplish that object and fix that policy upon the financial system of the Government, the legislative authority of Congress was perverted, and measures which excelled in greed and avarice all other schemes to plunder the people known among civilized nations were enacted into laws.

During the three years between 1866 and 1869 the volume of currency was reduced over nine hundred and fifty millions, and the currency withdrawn from circulation was covered into the coffers of wealth—merged into long-time interest-bearing bonds. By that brilliant stroke of financial legislation the people were despoiled of over $450,000,000 without consideration.

The people, Mr. Speaker, can never forget the unparalleled outrage inflicted upon them by the acts of 1869–'70–'71. It required the legislative force of all those acts to alter a plain contract and place the proceeds of the larceny beyond the reach of subsequent legislation and make it impossible for the tax-payers to exercise the right, which they had reserved, to pay an issue of bonds amounting to $1,500,000,000 in currency.

The demonetization of silver in 1873 was another link in the chain by which the brain and muscle of the people were held in slavish servitude to the kingly power of gold. Who can estimate the profits made by the holders of $2,500,000,000 of coin bonds by their sudden conversion into gold bonds? It was a golden harvest. The sanctity of contract was powerless to stay the hand of legislative spoliation.

In 1875 the crowning infamy, to enthrone gold as the sole debt-paying money and make national-bank notes, the obsequious attendants of gold, the only paper currency, was consummated.

In the expiring days of the Forty-third Congress legal-tender greenbacks were doomed to destruction by a provision in the resumption act. That volume of currency was the last and only barrier against the absolute dominion of the banks over the currency. Its removal was provided for, and an open field for the circulation of bank notes graciously made in which the banks might exercise their powers of contraction as their greed might dictate.

Unshamed by the rebuke of the people, and unmoved by the widespread distress which its legislation had brought upon the country, the Republican party—defeated and routed at the polls—as it left this Hall cast this Parthian arrow from a quiver of greed at the best money of the people.

The evils which followed these great financial wrongs overwhelmed the people with gloom and despair. Who even now, Mr. Speaker, can contemplate the condition of the people during the period from 1869 to 1879, a decade of spoliation and wrong, without indignation and shame?

The fires in our great furnaces burned to ashes; enterprise faltered, withered, and died; immigration halted at the threshold of our country; no new fields gladdened the eye. Thousands of happy homes, where thrift and comfort once abounded, became the dwelling places of hunger and despair; labor looked down upon its rags and begged for bread; values perished in the fearful financial blight and property shifted into the hands of the fortunate possessors of gold and gold mortgages at gold prices.

Such, sir, was the condition of the country when the Democratic party appeared here in a majority for the first time in a quarter of a century.

The reign of the Republican party had been broken and overthrown because that party had destroyed the volume of money and filled the land with panic and bankruptcy. It had covered into the strong boxes of wealth nearly a billion of dollars wrung from tax-payers without consideration. It had struck down silver to enrich bondholders and swell the profits of banking. It had legislated in the interest of bank monopoly and against the right of the people for an adequate volume of currency. It had fastened the fangs of an infamous system of taxation in the vitals of the earnings of the people to provide coin to pay bonds which the people had reserved the right to pay in currency. It had severed empires from the public domain, God's gift to the homeless, and donated them to corporations already fattened upon the spoils of financial legislation. It had made prosperity for the rich and despair for the poor by legislation.

The Democratic party came here with a majority pledged to the people to wipe out, so far as possible, the cruel and unjust legislation which had covered the land with the ruins of fortunes and heaped intolerable burdens upon the people. It had opposed with all its power, feeble as it was at times, the consummation and enforcement of the financial policy of the Republican party and maintained the rights of the people against the mercenary encroachments of legalized robbery.

True Democracy could not have done otherwise. It would have been treason to the great principles of the party to have joined in schemes of legislation which destroyed private contracts, altered contracts of Government in the interest of bondholders, struck down silver, starved and stinted the volume of money, enslaved industry, and constructed in a free republic an aristocracy of wealth. Throughout that long decade of wrong the representatives of Democracy pleaded for equal laws and a liberal volume of money—gold, silver, and paper convertible into coin on demand and a volume adequate to meet the wants of business, freed from all taint of fiatism and depreciation and divorced wholly from the dominion of banks and the thralldom of official discretion. It was of course impossible, Mr. Speaker, to restore to the tax-payers the millions of dollars of which they had been despoiled by the conversion of depreciated notes into bonds and by the alteration of contracts, or reclaim for the poor and homeless all the vast territory which had been filched from the public domain under the forms of law.

Over these gigantic outrages the seal of contracts had been impressed, and they had passed from the province of legislation. Intrenched and fortified in the Senate, the tariff still gathers coin for bondholders, and its annual tribute of $500,000,000, soiled with the dust of labor and toil, to swell the riches of favored classes. But there have been many reforms achieved, and chief among them was the overthrow in part of the financial policy of the Republican party.

In 1878, after a long and bitter contest for years, that great crime against the people, the demonetization of silver, was rebuked, and silver restored to its ancient and lawful use as money. One hundred millions of legal-tenders had been burned to ashes in the furnaces of the Treasury under the law providing for their destruction. The execution of the law was arrested and that provision of the resumption act was repealed. Three hundred and forty-six million of legal-tenders thus rescued from the fires of the Treasury were converted into a perpetual revolving volume of money between the Treasury and the people. The passage of these two acts overthrew the financial policy of the Republican party and broke the chain which held the earnings of the people subservient to the rapacity of gold. Everywhere, save in the gilded palaces of wealth and the counting-rooms of scheming monopolies, their passage was hailed with delight.

What results followed? Labor was encouraged, business and industrial enterprises revived, and marked improvement in the condition of the people was evident. Our volume of money has grown from nine hundred and fifty millions, the average amount for the period between 1873 and 1879, to one billion and seven hundred millions, and is increasing every year from fifty to sixty millions by the coinage of silver and gold. As our population and business increase the volume of money increases. Great and beneficent as the results of breaking down the financial policy of the Republican party and overturning the despotism of gold have been, they would have been immeasurably greater and far more beneficent but for the autocratic power of the Treasury Department over the finances of the Government which has been wielded since 1879 to repress and hinder the free and full operation of the law remonetizing silver and authorizing the issue of silver certificates to facilitate its circulation.

Mr. Speaker, the proposition now made to abandon the fruits of those magnificent triumphs of Democracy over the combined powers of monopolies and to repeat the folly of the Republican party by destroying our growing volume of money, either by the suspension of the coinage of silver or the redemption and cancellation of greenbacks, falls on the ears of the people like the sound of fire-bells at night. Are there no

loftier aims or nobler purposes to inspire the heart of Democracy than blindly following in the paths of outrage and wrong made by the Republican party over the rights of the people?

Sir, if the Democratic party would remain in power it must keep its pledges to the people. Infidelity to that great and fundamental principle on which the party rests, which declares that all men are equal before the law, and that whatever blessings the Government shall bestow shall fall like the dews of heaven on all alike—the poor as well as the rich—will wound its honor and insure the speedy death of its reign.

The love of the great popular heart can only be maintained and cherished by fair treatment and equal laws. [Prolonged applause.]

Labor Arbitration.

SPEECH

OF

HON. HENRY B. LOVERING,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1886.

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Territorial transportation of property or passengers and their employés—

Mr. LOVERING said:

Mr. CHAIRMAN: The bill under consideration, reported from the Committee on Labor as a substitute for such measures relating to the formation of boards of arbitration as had been referred to it, is the best measure upon which the committee could practically unite after an exhaustive consideration in committee of the question in all its scope and bearing. Every bill submitted contained compulsory features, which the committee practically considered if not unconstitutional at least repugnant to the spirit and teachings of the Republic and of our free and enlightened institutions; hence all these conditions enforcing arbitration are eliminated from the substitute bill now under consideration. For it was claimed, and rightly, if the compulsory feature was incorporated as a provision it was not arbitration, but in its stead the creation of a court with all the powers of a court to enforce its decrees against whichever of the parties in interest the decree may lie upon their refusal to abide by the finding. Who shall say that the business of a railroad or of an individual shall be run at a loss? Who shall charge disloyalty when an award goes against these parties if they close their road, or sell their horses and vehicles of transportation and go out of business? And, on the other hand, who shall say a workman shall continue work unless he shall choose, when he chafes under a sense of wrong in the operation of what he considers an unjust decree?

The bill introduced by the gentleman from Missouri [Mr. GLOVER] is practically the English act, commonly known as the "Mundella law," as arbitrary an act as ever was drawn for the compulsory settlement of labor disputes. That act, from the very force of its imperial and arbitrary nature, has never yet, although passed as recent as 1872, been evoked in the settlement of a single dispute.

As Mr. Robert Kettle, to whom the cause of industrial arbitration in England owes a heavy debt, says: "It is agreed that according to the spirit of our laws and the freedom of our people, any procedure to be popular must be accepted voluntarily by both contending parties." This act, which never has accomplished anything in the direction sought, is now almost bodily lifted into this House, and we are asked to encumber our statute-books with it. Had the gentleman studied the history of industrial effort in Great Britain he would have found that although there are three acts at present compulsory in their nature on the statute-books—the first, passed in 1824, and generally referred to as 5 George IV, cap. 96; the St. Leonard's act of 1867, and the act which he has brought to our notice—they have seldom if ever been used; he would also have found that the differences that have been settled in England by arbitration in the past twenty-two years have all been voluntary in their submission and in the enforcement of the award, and that moral coercion in case of any attempt to repudiate the awards, or, as Mr. Kettle so happily terms it, "that aggregate honor of individuals," which our French neighbors call *esprit du corps*, have generally been sufficient to secure the enforcement of awards."

So much, Mr. Chairman, for the endeavors to enforce arbitration in England; it has proven a complete failure under all its acts; and I do not believe we desire to ingraft upon our system a code which has not been accepted in a nation where conditions were better for its successful enforcement than exists in free and enlightened America. Why, sir, the practical operation of this bill if applied to the present controversy on the great Southwestern system, if the workmen felt that the provisions of the enforced award was unjust, that Jay Gould had manipulated the composition of the board in his favor, and consequently they declined to accept the award, they may be fined, and in default of payment of fine, thrown into prison to rot until it was paid. Why, sir, I fancy the States would have immediately to go into the prison-building business in order to accommodate the 8,000 men engaged in the controversy.

The substitute bill of the committee is drawn in the light of such history as I have cited; it recognizes the power of that greatest of all tribunals, public opinion, from which there is no appeal.

Gentlemen have been pleased to say the bill is a fraud and will be spurned by the workmen of the nation; that it makes a promise to their ear only to break it to their hope, simply because the committee have not chosen to take the parties by the throat and tell them they shall submit to enforced arbitration the decree of which they might not feel bound to respect. As one of the committee, I accept the consequence predicted in this direction, without fear or trembling, satisfied that I at least have tried to do my duty as I saw it.

The bill does not, as has been stated, change existing conditions one iota as regards the inherent right of parties to arbitrate if they choose. This voluntary right the committee respect, and they provide, and I quote the language of the first section of the bill, that "upon the written proposition of either party to the controversy to submit their differences to arbitration, the other party shall accept the proposition, then and in such event, &c., they may go on and select their board."

Now, suppose under this act one party with a desire to settle impending controversies serves notice as provided of such desire upon the other party to the controversy, and the party on which such notice is served flatly declines, what happens? Why, immediately public opinion is wrought upon to an extent commensurate with the magnitude of the interests involved, and will invariably sympathize with the party who has in good faith first proffered the olive branch, for the justice and fairness of the proposition to submit for arbitration is apparent, and ninety-nine times in the hundred the moral sentiment evoked will force the stubborn party to terms. So long as the workmen remain peaceable and commit no overt acts the sympathy of the public is with them. Now, then, when reason has resumed her sway and pride and passion has subsided and a willingness finally shown to desire a settlement of pending controversies, they agree to arbitrate. If they can not agree among themselves as to the composition of the full board from the ranks of parties in interest, they may proceed under this bill to select one each from the ranks of persons entirely disinterested in the controversy, who shall in turn select the third, who are then clothed with a legal status and given for the time being the powers and privileges now possessed by United States commissioners. They shall go on and investigate all facts in the case in an impartial manner, and on its conclusion shall announce publicly its award, with the findings of fact upon which it is based, which shall be reduced to writing and signed by the arbitrators concurring therein.

I claim in the light of history an award brought about in this way, if fair, and the presumption is that it will be fair, will be respected by all the parties in interest, from the very force and power of the moral sentiment breathed into life and surrounding the transaction. Thus far I am willing to go.

Some law is demanded, which demand has found utterance in the introduction of bills precipitated no doubt by the serious aspect of the pending labor troubles in the great Southwest. In response to this demand the committee have given you the result of its best effort in the substitute before you. We do not claim it is infallible, but it is the best we can present with any degree of unanimity for your consideration. It gives the sanction and approval of Congress to the principle of arbitration, and provides the machinery by which it may be set in motion and a decision reached of acceptance or non-acceptance of the award. The results it leaves for approval or condemnation, as the case may be, by an enlightened public opinion, that great reservoir of moral force which, with unerring judgment, never fails to distinguish right from wrong and render its decisions in accordance. Its effect is more binding upon the subject than all the laws in Christendom. It is a bold man who dares to snap his finger in the face of the public. Even Vanderbilt, with all his millions and personal independence, denied he ever said "The public be damned."

There is another feature of the bill which commends itself to my judgment. The third section of the bill provides that after the arbitrators have announced their award they shall file with the Commissioner of Labor of the United States the findings of fact and the testimony taken. So that at all times, when advantage is taken of the proposition submitted in this bill, the Commissioner is advised of every step taken in the matter, and all the material facts become matters of statistical reference in his office, from which his findings may be deduced for the benefit of the country in the consideration of the great underlying motives which govern the movements of labor and capital.

In closing, I desire to submit some facts taken from a report on "industrial conciliation and arbitration," published by the commissioner of labor of Massachusetts in 1881, who is also the present head of the Labor Bureau of the United States, as bearing upon the question under discussion, and therefore pertinent at this time:

INDUSTRIAL CONCILIATION AND ARBITRATION IN ENGLAND.

In transmitting to his government the report on this subject, which we now

reproduce, the author makes special acknowledgments for aid given him in its preparation to Mr. Rupert Kettle, judge of the county courts of Worcestershire; Mr. A. J. Mundella, M. P.; Mr. B. Samuelson, M. P.; Mr. Thomas Burt, M. P., representative of the colliers; Mr. Ed. Trow, secretary of the National Amalgamated Iron Workers' Association; Mr. George Howell, formerly secretary of the parliamentary committee of the trades-union congress; Mr. George Broadhurst, present secretary of the same; Mr. Alsager Hay Hill, editor of The Labour News; Mr. W. H. S. Aubery, editor of Capital and Labour; and especially to Mr. Charles Wheeler, of Wolverhampton.

He also says:

"I found, at the beginning of my inquiries, that though there were at least three laws on the statute-books of England on this subject, they were virtually dead letters, and therefore I directed my attention to the workings of the voluntary boards of arbitration and conciliation that exist in a number of the trades of that country; and have given, in this report, some account of their operations, with copies of the rules of the most important. These rules will be found in appendices to the report, together with the latest act of Parliament on the subject of arbitration.

"The condition of the laboring class, and the strength and extent of the labor organizations, were subjects to which I was forced to devote considerable attention in order to correctly understand and appreciate the workings of arbitration; but I have touched upon these subjects incidentally, and only so far as was necessary to an understanding of the difficulties to be overcome."

The report then continues, as follows:

"Preliminary—Conseils des Prud'hommes—Arbitration in England prior to 1860.

"Industrial arbitration and conciliation had their origin in France early in the present century. The system established was the outgrowth of the trade guilds which had existed in that country and regulated trade matters in some cases from the middle ages. These were abolished during the last days of the monarchy of Louis XVI, a time when the constitution of industrial as well as political society was being overturned. After a few years of imperfect legislation, in 1806, at the request of the workingmen of Lyons and by command of the First Napoleon, courts of arbitration and conciliation were established by law. These, with some slight modification, have continued until the present under the title of 'Conseils des Prud'hommes.' These councils are judicial tribunals, constituted under authority of the minister of commerce, through the chambers of commerce, which are established at important trade centers of that country. They are composed of an equal number of employés and workingmen members, each class electing its own representatives, with a president and vice-president named by the government. The authority of these councils extends to every conceivable question that can arise in the workshop, not only between the workman and his employer, but between the workman and his apprentice or his foreman. There is but one question they can not settle—future rates of wages; but even this can be done by mutual agreement. Arbitration is compulsory upon the application of either, and the decisions of the court can be enforced the same as those of any other court of law.

"The workings of these courts have been beneficial to French industry, especially in conciliation, by which more than 90 per cent. of all cases brought before the tribunals are settled. In 1847, the sixty-nine councils then in existence had before them 19,271 cases, of which 17,951 were settled by conciliation in the private bureau, 519 more by open conciliation, and in only 329 cases was it necessary to have formal judgment. In 1850, of 28,000 cases, 26,800 were settled by conciliation. There were, at the close of 1874, one hundred and twelve councils in France. This is a most satisfactory showing; but it falls far short of expressing the great benefit these councils have been to French industry, especially in removing causes of differences or in preventing them from growing into disputes. Their success is sufficient justification of the praise so lavishly bestowed upon them by M. Chevalier, "*Une des plus nobles créations dont notre siècle l'honore.*"

Tribunals similar to the conseils des prud'hommes of France are in existence in Belgium. Their success, however, has not been as marked as in France, owing in part, no doubt, to the fact that they have in some cases criminal jurisdiction.

In Great Britain, though a law somewhat similar in its character to that of France, and evidently framed from it, has been on the statute-books since the fifth year of the reign of George IV (1824), so little use has been made of its provisions that its existence was practically forgotten. England did not possess the organizations necessary to its successful workings, and the compulsory features seem especially obnoxious to both employer and employed. As Mr. Rupert Kettle, to whom the cause of industrial arbitration owes such a heavy debt, says, "It is agreed that, according to the spirit of our laws and the freedom of our people, any procedure to be popular must be accepted voluntarily by both contending parties." (Strikes and Arbitrations, page 26, London, 1866.) The history of arbitration and conciliation in Great Britain fully justifies this remark.

Previous to 1860, a year which marks an epoch in the history of industrial arbitration in England, it had frequently been applied to the settlement of industrial disputes. Legal sanctions, however, were never sought for the awards. They were loyally accepted without any constraint except a man's sense of honor and a certain *esprit de corps*, both among employers and employed. These arbitrations were not only frequent, but in some trades were systematically used in every dispute which arose. The pottery trade furnishes a very good example of continuous and successful arbitration. In this industry, one of the most difficult in which to harmonize the conflicting views of capital and labor, by reason of the large number of trades into which labor is divided and the peculiar customs that have come to be regarded as rights—in this trade there has not been a general strike since 1836; and the reason given is that disputes have been invariably settled by arbitration. The yearly "contracts for hiring" contained the following clause: "If any dispute arise between the parties as to the prices or wages to be paid, by virtue of such an agreement, the dispute shall be referred to an arbitration board of six persons, to consist of three manufacturers, chosen by the masters, and three working potters, elected by the workingmen." This clause does not provide for a board to settle future rates of wages; but both sides have formed what may be called the habit of arbitrating, and they have appealed to this principle in trouble. As a result, for over thirty years this clause has prevented strikes in this trade.

It is not necessary to extend this report by giving other examples, showing the history and success of arbitration prior to 1860. It was often appealed to in many trades, though in none does it appear to have worked as well, or to have been tried so continuously, as in the pottery trade. There had, as the result of these trials, grown up, especially among the work-people, a decided feeling in favor of industrial arbitration and a willingness to give it a trial, which doubtless rendered the attempts to establish it as a principle much surer of success.

THE ESTABLISHMENT OF VOLUNTARY PERMANENT BOARDS OF ARBITRATION AND CONCILIATION IN ENGLAND—DIFFERENCE BETWEEN ARBITRATION AND CONCILIATION.

As already stated, the year 1860 marked an epoch in the history of arbitration and conciliation in Great Britain, and gave it a new character, one more in accordance with the tone of modern thought and the changed relations of capital and labor.

Late in that year, mainly through the efforts of Mr. A. J. Mundella, the first permanent or continuous board of arbitration and conciliation in England was established in the hosiery and glove trade at Nottingham. Mr. Henry Crompton, in his admirable little work on "Industrial Conciliation," in speaking of the establishment of this board, says (page 33): "Mr. Mundella must be regarded as the inventor of systematic industrial conciliation." In view of the fact stated in the previous section that the large majority of cases brought before the conseils des prud'hommes were settled by conciliation in the private bureau, this claim can hardly be made for Mr. Mundella. The distinguishing feature of the board organized by his efforts, and at the same time the marked characteristic of arbitration since 1860, is that it is systematic conciliation or arbitration organized on a purely voluntary basis, without an appeal to legal processes, even to enforce its decisions. That is, its novelty is not that it is systematic—the French conseils were that—but that it is both systematic and voluntary, and these the French prototypes were not.

The voluntary feature of these boards is one to which I desire to call particular attention. Both Mr. Mundella and Mr. Kettle, to whom the cause of arbitration and conciliation in England owes much that it is, and who represent somewhat diverse views on the subject, agree that these boards should be voluntary, and not compulsory. Though there are acts of Parliament which provide compulsory legal powers, by which either side can compel the other to arbitrate on any dispute, these powers have never, in a single instance, so far as I could learn, been used; but the large number of differences that have been settled by arbitration in Great Britain in the last eighteen years have all been voluntary in their submission, and in the enforcement of the award. Mr. Kettle would provide, that the awards should become part of the contract between the employer and the employed, to be enforced at law as any other contract; but, as these contracts can be terminated by a short time-notice, it does not take away from the voluntary nature of the arbitrations under what is known as the Wolverhampton system. How this voluntary feature has worked in practice will be evident in the course of this report.

In discussing this subject it is very important at the outset to distinguish between arbitration and conciliation. Though the former is a generic word and the one more commonly used in referring to the system, there is an essential and important difference between arbitration and conciliation. Unless this is clearly impressed on the mind, and the scope and working of each clearly understood, it will be impossible to learn the secret of the success that has attended these boards, and the reason of their continued existence. Arbitration deals with the larger questions of trade, conciliation with the smaller; arbitration with the whole trade, conciliation oftener with the individuals. Conciliation is not formal; it does not attempt to sit in judgment and decide in a given case what is right and what is wrong; but its efforts are, in a friendly spirit, to adjust differences by inducing the parties to agree themselves. It removes causes of dissensions and prevents differences from becoming disputes by establishing a cordial feeling between those who may be parties to the same. Conciliation, in a word, may be defined as informal arbitration. Arbitration, on the other hand, is formal. It sits in judgment. It implies that matters in dispute by mutual consent or by previous contract have been submitted to arbiters and an umpire, whose decision is final and binding on both parties. Mr. Crompton, in his work on Industrial Conciliation, says (page 17), when contrasting arbitration and and conciliation, "conciliation aims at something higher—at doing before the fact that which arbitration accomplishes after. It seeks to prevent and remove the causes of dispute before they arise, to adjust differences and claims before they become disputes. A board of conciliation deals with matters that could not be arbitrated upon, promoting the growth of beneficial customs, interfering in the smaller details of industrial life, modifying or removing some of the worst evils incidental to modern industry, such, for example, as the truck system, or the wrongs which workmen suffer at the hands of middlemen and overseers."

It is this preventive feature that gives conciliation a value beyond estimation. It is a most admirable and praiseworthy object to provide means for settling disputes when they have arisen. It is much more desirable to prevent them from arising; and the tendency of conciliation is to do this, by removing the old feelings of bitterness, by inspiring respect for each other, and fostering at the same time a spirit of independence, and compelling a recognition of the dignity and worth of labor and the necessity and beneficence of capital.

And yet, after all that may be said in praise of conciliation, it is conceded even by its warmest advocates that back of all conciliation there must be arbitration. The time may come, and in the settlement of certain questions, generally will come, when no friendly offices are sufficient to enable capital and labor to see alike. Self-interest renders it impossible for either to decide fairly, and something more than a master of ceremonies or a conciliator is needed. There must be power to determine as well as hear. That is, arbitration must intervene, and its decisions accomplish what conciliation is powerless to bring about.

To show the workings of arbitration and conciliation, I have given in the following pages a detailed account of the organization and operation of several of the most prominent boards. The records are mainly those of arbitration, not of conciliation, as in war it is the battles that are recorded, not the skirmishes and movements for position.

THE NOTTINGHAM SYSTEM OF ARBITRATION AND CONCILIATION.

The so-called Nottingham system of arbitration or conciliation owes its establishment to Mr. A. J. Mundella, at present one of the members for Sheffield of the House of Commons. Mr. Mundella has been most earnest and untiring in his efforts to make arbitration the prevailing and recognized method of settling all disputes that may arise between labor and capital; and it is not too much to say, that to his intelligent efforts much of the success that has attended conciliation is due.

The hosiery and glove trade, with which Mr. Mundella is connected, is one of the most localized in Great Britain, being carried on only in the immediate vicinity of Nottingham, in Nottinghamshire, Derbyshire, and Leicestershire. I need not point out that such a concentration of one class of skilled labor led to union, and a consequent power not always judiciously used. According to all accounts, the relations between employers and employed in these trades, prior to 1860, were as ugly as could well be imagined. From 1710 to 1820, there is a frightful list of murders, riots, arsons, and machine-breaking recorded, all arising out of industrial differences. An act was passed by Parliament, early in the century, punishing machine-breaking with death; and in 1816 six persons suffered this penalty. In the remaining forty years of the century and a half from 1710, while the worst features of this industrial strife nearly or quite disappeared, the relations were in no wise improved, though the strife assumed a different form. Suspicion, distrust, hatred, were the sentiments cherished toward the manufacturers by the workmen; and arrogance, oppression, and an equally strong hatred were returned. War, or at least an ill-kept armistice, was the condition of the hostile camps. Strikes and lockouts were constantly occurring, and no judicious, honest effort was made to end them. In 1860, there were three strikes in one of the three branches into which the hosiery trade is divided, one lasting eleven weeks. It was during this strike that the board of arbitration and conciliation was formed. Though the strike was confined to one branch, it was soon discovered that it was supported by the workingmen in the other branches, and, in what they considered self-defense, it was proposed by the manufacturers to lockout the entire body of workingmen in all branches. Some of the manufacturers, Mr. Murdella among them, shrank from the misery and suffering, and perhaps crime, that would be the result. "Some of us thought," says Mr. Mundella (Trades Union's Commission, 1867, tenth report, page 74), "that we might devise some better means of settling the thing. I had heard of the conseils des

prud'hommes in France; and with one or two others I built up a scheme in my imagination of what I thought might be done to get a good understanding with our men, and regulate wages."

At a meeting of the manufacturers, a committee of three was appointed to invite the workmen to a conference, which they accepted. "We three," to quote Mr. Mundella again, "met perhaps a dozen leaders of the trades union; and we consulted with these men, told them that the present plan was a bad one, that it seemed to us that they took every advantage of us when we had a demand, and we took every advantage of them when trade was bad, and it was a system mutually predatory. And there is no doubt that it was so: we pressed down the price as low as we could, and they pressed up the price as high as they could. This often caused a strike in pressing it down, and a strike in getting it up; and these strikes were most ruinous and injurious to all parties, because, when we might have been supplying our customers, our machinery was idle, and we suggested whether we could not try some better scheme. Well, the men were very suspicious at first; indeed, it is impossible to describe to you how suspiciously we looked at each other.

Some of the manufacturers also deprecated our proceedings, and said that we were degrading them and humiliating them, and so on. However, we had some ideas of our own, and we went on with them; and we sketched out what we called a board of arbitration and conciliation."

The result of this action was the formation of "The Board of Arbitration and Conciliation in the Glove and Hosiery Trade," the first permanent board established. The rules adopted were very simple, and have worked so well in most particulars that they have hardly been amended since the day they were made. The object of the board is declared to be to arbitrate on any question of wages that may be referred to it, and to endeavor, by conciliatory means, to put an end to any disputes that may arise. The board consists of twenty-two members, half operatives and half manufacturers, elected for one year, each class electing its own representatives. The delegates have full powers, and the decisions of the board are considered binding upon all. There is provision for a committee of inquiry, to whom all differences must be referred before the board will act upon them. This committee has no power to make an award, acting only as conciliators. A month's notice is to be given to the secretaries before any change in the rate of wages will be considered. Regular meetings are held quarterly. The chairman, in the original constitution of the board, had a vote, and a casting vote as well in case of a tie. This was one of the weak points in the organization, and, as the chairman was an employer, trouble resulted. Mr. Mundella, who was the first chairman of the board, speaking of this, says: "I have a casting vote, and twice that casting vote has got us into trouble. And for the last four years it has been resolved that we would not vote at all. Even when a workingman was convinced, or a master convinced, he did not like acting against his own order, and in some instances we had secessions in consequence of that; so we said, 'Do not let us vote again, let us try if we can agree,' and we did agree."

In the Wolverhampton system this error was avoided. An independent umpire or referee was elected by the board, whose decision was final and binding in case of an equal vote by the board. The Nottingham board has also changed its rule, and the chairman no longer gives a casting vote, a referee appointed for the occasion being called in, in case of a failure to agree. I can not but regard the Wolverhampton system of a referee elected previous to a "dead-lock" as much the better plan. This is the course adopted in the lace trade of Nottingham.

The proceedings under these rules are very simple. When any difference arises between employers and employed, the secretaries endeavor to arrange it. In the event of their failure, it is brought before the committee of inquiry, who try to settle it; and, it being unable, it is then brought before the board. One of the invariable conditions of any arbitration is that work shall be continued pending the trial of the case; that is, that there shall be neither strike or lock-out. The proceedings before the board are very informal. The members sit around a table, workingmen and employers interspersed. The discussion is without ceremony, and the difference is settled by endeavoring to arrive at the best arrangement possible under the circumstances.

The most serious questions brought before this board are those of wages, which, considering the nature of the trade, are very difficult of adjustment. On this point, and of the success that has attended its efforts to adjust wages, Mr. Mundella said in a speech at Bradford: "The articles manufactured in the hosiery trade are exceedingly numerous and varied in character. All work is paid for by the piece, at the rate of so much per dozen. From time immemorial these rates have been fixed by printed statements, and the battles formerly fought were as to whether masters or workmen should make these statements. Since the foundation of the board, all variations in prices, up or down, have been referred to it, and no statement is considered legitimate without the signatures of its members.

"It is very rarely that the price originally proposed by either masters or workmen is the price ultimately agreed to. Some alterations or concessions are generally made on both sides, and the price, once fixed, is considered mutually binding. In times of depression, when foreign competition has interfered with any branch, a fair reduction has been generally submitted to; and in times of prosperity when advances could fairly be given, they have been invariably conceded; but in order that the trade may not be taken by surprise, that manufacturers may finish their contracts in times of advance, and that no hasty decisions may be made against either party, we have a resolution on our minute-book, that a month's notice shall be given before any change of prices can be discussed. Owing to the variable character of the trade, small differences and disputes are constantly arising. Some extra work may be required in an article for which the workman may think a shilling would be proper compensation, while the manufacturer may think sixpence is sufficient.

"If the workmen of any branch conceive that they have grievances to complain of, in addition to the ordinary representatives of that branch, a delegation may attend the board, and lay the case fully before it. The first business at our meetings is invariably to receive delegations. They retire after having made their statements, and the board proceeds to deliberate. We have never met without settling at least half a dozen questions, some important and some trivial, which, if allowed to remain open, would produce irritation."

The benefits this board has conferred on the hosiery and glove trades are incalculable. A most friendly feeling has taken the place of hostility, and confidence and mutual respect exist where formerly all was suspicion and hatred. This was not the result of a day, nor was it accomplished without occasional lapses to the old state of things. The strifes of a century and a half are not so soon forgotten; but troubles in the board have been so infrequent and unimportant, that I am justified in saying that it is a complete success. Strikes and lockouts are unknown; contact has developed respect. The changed relations of employer and employed have been recognized: they have met about the same table as equals; and out of this has grown a condition of affairs that will make it impossible for the old conditions to return.

A large part of the credit of the success of this board, and of this change in the relations of the two classes, is due to the provision for regular meetings of the board. I do not hesitate to say that this is the most valuable feature of these boards. The great curse of industry, and the fruitful cause of difficulty, is a foolish obstinacy and a false pride. This arises in many cases from a want of knowledge and a lack of common courtesy in matters concerning both capital and labor, and in which both have an equal interest. This quarterly coming face to face, this meeting as equals—and in all questions that can come before these boards they are equals, and it is foolish to ignore this fact—and this discussing subjects of common interest as sensible men, seeking for the facts, and inclined to moderation and concession, if need be, have had a marvelous effect in removing this pride and obstinacy, and bringing about that respect and courtesy that must be at the basis of all friendly negotiations between capital and labor. These meetings have also given the men a knowledge of the conditions of trade and its necessities, which they could not get in any other way, and, from this knowledge, they have been led to moderation in demands or willingness to concede reductions that otherwise they would not have possessed. If the arbitration features were wholly removed from these boards, and they only retained this feature of quarterly meetings of recognized representatives of trades unions and of manufacturers' associations, their adoption generally in this country would be productive of incalculable benefit.

Labor Arbitration.

SPEECH

OF

HON. WILLIAM H. COLE,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 2, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Territorial transportation of property or passengers and their employés.

Mr. COLE said:

Mr. CHAIRMAN: The debate upon this simple yet valuable bill has taken a wide scope. I can not say I am surprised at this, for I am sure that no problem could be introduced here in the line of lifting some of the burden of labor that all these questions would not arise, especially that of its constitutionality. If it is a bill to charter or enlarge the power of a national bank, a power distinctly denied to Congress by the Federal convention that framed the Constitution, it would be granted without a word; if it was to enrich some already wealthy corporation, even at the expense of the public lands, the property of the people, or some larger monopoly by the conferring of some vast privilege, less would be said about it than about this bill, introduced for the purpose of pouring oil upon the disturbed labor elements in the great West.

We have been told again and again that the question is five hundred years old; that there will always be the privileged and the suffering classes of the community, and that legislation is no cure for the evils under which the laboring man toils for his living and his bread. To be thus informed does him no good. He is quite aware that there is but little in political economy new since the days of Adam Smith. He knows his burdens remain; he knows that, toil as he may, labor as he can, in the cold of winter or the heat of summer, he can no longer provide proper food and nourishment for his family. In his despair he organizes, and humbly and manfully he endeavors by every honest measure to improve his condition. Those belonging to the labor organizations thrive comparatively well, while the condition of those not thus protected grows worse and worse; all are bad enough. The condition of the working classes is as sad as it can be. Shall it remain so? In the name of a common humanity and by the sacred duty we owe the people of this free land, I appeal, Mr. Chairman, to this great parliament—shall it remain so?

Legislation has been mainly the cause of the depression existing throughout this country. For twenty-five years the principal legislation of Congress has been in favor of banks, railroads, and other corporations, all of which, as they have grown wealthy under the bounty of Congress, have become harder and harder in their dealing with their employés, until it really seems as if they were in a united conspiracy to reduce the wages of the workingman down to the very lowest cent compatible with his finding corn-meal and water enough to keep his body and soul together. Besides, all articles in his daily use have been highly taxed; and Congress one session, considering this question, after months of discussion, reduced—what?—it is astounding but a fact—reduced the tax on national banks to the amount of $60,000 per annum, and the ill-paid workman has gone on to this day bearing the unequal proportion of the Government's expenditures on his overburdened shoulders. Your legislation, besides, has driven from the seas the flag of our Republic, and as a consequence American seamen have disappeared with that flag. Other acts of Congress have added to the public distress until now—worst calamity that can befall a nation—the land is thronged with laborers crying for work which they can not get, and their families suffer for food and raiment. God help them all!

If many of the evils come from your legislation, is it not worth the effort for you to try and correct some of the great wrongs done in the past twenty-five years by the National Parliament in the interest of capital? Let us for once listen to the cry of labor; let us listen to the wail of the distressed. Would it not be a task worthy of us if we could brighten up our unhappy homes, restore life and light, plenty, happiness, and joy to the home of some industrious, worthy man now a prey to want and penury? Is it not a task worthy of your consid-

eration to endeavor to put an end to strikes, which fall so heavily on the innocent and the helpless and are the cause of so much of sorrow, violence, and bloodshed? One gifted gentleman has told you, you have your remedy in the governor, the militia, and then in the Army of the United States. This is his remedy for strikes. How deplorable! It is bad enough to unleash the hounds of war upon a common enemy, and war, refine it as you may, at the best is but cruelty. But, oh horror, to unloose these evils upon our own countrymen; to shoot them down as if they were wild beasts; to slay them—the men whose labor and industry have helped build up the wealth of your great country; the heads of families with wife and children depending upon them, what a fearful recourse, what a terrible remedy. I can not contemplate it, though it be constitutional, with anything except the utmost abhorrence. Let us avoid this. I find in the bill before us an act that will prevent the occurrence of such scenes, and therefore I support it eagerly and warmly—not alone in the interest of labor but in the name of humanity.

Let us be just to all, to capital as well as to labor; but let us first be humane. I would not interfere with the rights of capital in the slightest degree. I understand its importance in the world's economy, and I feel as much as any one the sacredness of property. Of the same opinion do I find the American workingman. Education is too well diffused here for any of the most dangerous forms of communistic errors being rife among our people. They are safe, reliable, and conservative. They know that the laws must be preserved, and that violence is no argument and is always to be lamented. All they ask for is a fair day's pay for a fair day's work. If capital has her rights, has not labor also this right? And is it not a blot on the boasted civilization of the nineteenth century that here and in Baltimore it has recently transpired that capital drove labor in harness seventeen hours every day? Is this just? Is it right? Does not every humane sentiment revolt against it? Is this a right of capital that any one is bound to respect? Is this not a case for legislation? Yes, Mr. Chairman, I have no hesitancy in answering yes for penal legislation.

While owing to your legislation the rich men have been growing richer the poor man has been growing poorer, and occasionally when his hard work will not buy sufficient bread, he asks for more; he is refused; he strikes, but even then the contest is unequal. Unable to save a penny, behindhand in rent and doctor's bills, every day brings more trouble to his poverty-laden home. One by one household goods and clothing disappear and the cupboard looks bare, and the wife in vain with her family brood seeks warmth at the hearth, the warmth from which has long departed. He holds out manfully; it is his only choice. He looks confidently to Heaven in his dire need for help, but it does not come; he struggles until despair seizes his brain or misery his heart, until at last his course is concluded perhaps at the cost of his own and the life of some one dearer than his own, and this in this land of liberty and of plenty, of corporations and millionaires, the home of Washington, the land of Vanderbilt and Gould, if I may be pardoned for using such names in juxtaposition in order to illustrate how far we have fallen from the days when the mechanic received good pay and his home was a happy and a prosperous one.

Still the time comes when the patient man will strike. What then? I have alluded to the one hideous remedy suggested during this debate—the bayonet and the ball. This must be repugnant to you all, and to none more so than the genial, generous nature that mentioned it. I have called your attention to one side of the evils of strikes, saying nothing of the interruption to travel or business, and the immense loss to capital regarding them, or the lesser evils to the sufferings entailed upon the striker and his family. Let us try another remedy for this—the bill now under discussion—which provides for a system of arbitration. It is contended that the bill is of no power. Every orator against it made use of the expression, "the laborer asked you for bread and in this bill you give him a stone." Whether this be so or not it is worthy of the trial. I am inclined to believe in arbitration. That grand and majestic organization whose peaceful banners can be seen gleaming on every hilltop in the country, upon the folds of which are inscribed the words "equal and exact justice to all men;" the Knights of Labor, who may be considered good judges on the question, have declared in favor of this principle; and its grand master, Powderly, has only this week proven himself a grand master indeed. I learn that in foreign countries, where arbitration has the force of legislative enactment, it is a great success in putting a stop to strikes. Even in bloody England, that England whose unjust government of Ireland has at last excited the combined execration and denunciation of the world, it is said, a law like this has been most effective. Some of the best writers on labor troubles advocate arbitration, and I earnestly hope that this Congress will pass this bill and throw the weight of its influence in the scales, so that they may again be evenly balanced between capital and labor hereafter, and so that each party to a dispute may not have to look for a remedy in a strike or lockout, two evils which I hope under the influence of this bill will disappear forever. Should this act not be found sufficient, a subsequent Congress can amend it so as to make it effective until at last we shall have a complete and perfect law upon the statute-books. Then there will be no need of your soldiers, every one of whom should at this instant be on the frontier, guarding the home of the settler from invasion and his family from the knife and torch of the savage.

As to the constitutionality of this law I would say, that if this was a question of chartering a bank or giving a few million of acres of the public domain to some bloated corporation not a word as to its legality would be raised. I have seen this House, with disgust, already pass two such bills. It has been always so from the first day of the Government until now. The Federal convention forbade Congress chartering national banks; but by the doctrine of implication the limits of the Constitution were so fixed that banks and corporations were organized in great numbers, whose influence, as at present, commanded legislation until every liberty was trampled on and there was a reign of terror in this country. In vain did the Democratic party protest against this state of affairs. The contest continued throughout three administrations before victory perched upon the banners of the people. It was during this terrible struggle that Benjamin Franklin, hearing the war spoken of as the war of independence, answered, No! the war of the revolution! Think of these huge corporations; the war of independence is yet to begin.

William Pitt, the worst enemy of America, exclaimed: See these huge corporations in America, their boasted liberties will soon be at an end. Lafayette, after his visit to this land, when he was received with gratitude by an entire people, remarked that he saw with great regret the growth of powerful corporations in America, which threatened the perpetuity if not the existence of the United States. Would they not repeat their language now? What would they think if they could view this scene and find a bill like this fought by the representatives of a free people through every step of its progress on the ground of its constitutionality, &c. Sir, if there is such a limit to the Constitution that it can be stretched one way to protect and encourage capital, but has no elasticity whatever whenever the rights of the people are involved, it is time for us to know it so that by an amendment it can be corrected and made to conform with what our brave fathers designed and what in this age justice and humanity demand.

This law, sir, is not unconstitutional. Understand me, I am a Democrat of the strictest sect of the constructionists, and I can not find anything opposed in letter or in spirit to that august instrument. It provides for voluntary arbitration, so that no law is possibly involved. If it was compulsory there might be some legal questions worth noticing arising. Those urged thus far against the bill seem to me to be mere pretext, nothing more, however honestly or eloquently they have been urged. As the bill contains the principle of arbitration, which I regard to be good and worthy of every trial, I shall vote for the measure before us in the hope that it may, if imperfect, lead to better and higher legislation. Some step should be taken in this direction. The national footsteps have too long followed in the train of capital; let them be trained into the paths the people tread, for is not this a government of the people?

I know how poor and feeble are my words and as I approach the conclusion I find myself longing that my lips may be touched by inspired fire in order that I might speak of things as they are to-day in this unhappy Republic. God has blessed us with all His bounties. We have bright skies, fertile fields and valleys, great rivers rolling onward to the sea bearing the commerce of a mighty nation on their breasts—everything indeed to make us prosperous and happy. Your legislation has scattered these bounties ungratefully, and from one end of the country to the other arises the cry of distress, the cry for work, for shelter for wife and child, for home and kin, and utter desolation marks the spot where only a short while ago stood a happy dwelling-place. Labor has been driven to the wall.

Was it not a great Republican orator who said that the workingman should live like his brother in Europe on corn-meal? Was it not another who exclaimed that the American workingmen indulged in luxuries that his European brother never dreamed of, and he should be educated down to the necessaries of life? Still he has been reduced past all this; he has work, but poorly paid, or he is without work or food. In the first case when he has work he finds his pay utterly insufficient for his work, and his life, though industrious, is one long scene of suffering and distress. He does not rush in his distress to the torch or to steel, but he turns his hopeful face to you. He stretches out his hand to you. The party that has been restored to power here he recognizes as the lifelong friend and ally of labor, and confidently he appeals to you to turn your stream of legislation his way for awhile, stop the work of aggrandizing corporations, and yield the hard-paid child of labor some relief. He is true and grateful. If you were in trouble to-morrow whose arms would carry the star-spangled banner of our country to victory except those of your laboring men? He is your support in peace and your protection and defense in war. He is at once the pride and ornament of the nation. He is worthy of your attention, and I sincerely hope you will recognize these facts not by any unjust exaction against capital, nor unfair concessions to labor, but that the laws that you enact in this free land of America shall evidence equal and exact justice to all men. That is all the laboring man desires. This is the only request he makes of this or any other Congress.

Col. Henry J. Hunt.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 26, 1886.

The House being in committee of the Whole on the Private Calendar, and having under consideration the bill (H. R. 37) to change the rank of an officer on the retired-list of the Army—

Mr. WHEELER said:

Mr. CHAIRMAN: The committee of which I have the honor to be a member fully agrees and concurs with all the gentlemen say who oppose this bill with regard to legislation of this character. Not only does this committee agree, but it has taken the lead of all the Military Committees of the last twenty years to carry out practically these views. The records of this House show that ninety bills which have for their object the restoration of officers or which seek to restore soldiers to a position in which they may draw money from the Government have been reported adversely by the Military Committee of the present Congress, and of the sweeping avalanche of bills which provide for the restoration of officers to the Army, and which have been referred to this committee, but two have been favorably considered.

A reference to the records of the Committee on Military Affairs of the House of Representatives during a period of ten years reveals the fact that at single sessions of each Congress from forty to ninety bills seeking to restore officers to the Army have been favorably reported.

The Military Committee of the last Congress made a favorable report on a single bill which, it is estimated, placed fifty thousand soldiers or officers in a position that enabled them to draw money from the Government, which they could not have drawn had not this bill been favorably reported and become a law. Already, under the provisions of that bill, nearly five thousand cases have been acted on by the War Department.

I make these statements to emphasize the contrast between the present committee and its predecessors in their ideas of economy, and to call attention to the aversion which the committee entertains to this class of legislation.

When the committee came to consider this bill it had before it the printed reports of other Congresses showing favorable action upon from forty to ninety cases in each Congress, and probably a hundred such cases were then pending, all being urged with the usual pertinacity. Each case was carefully examined, and, as I have already stated, but two of them were favorably considered.

The committee found that the case of General Hunt possessed special and peculiar merits which distinguished it from any similar bill ever brought before Congress.

The committee found that a bill identical in all respects with this had passed the Forty-eighth Congress on the 23d of May, 1884, by a vote of 127 for the bill and 58 votes against it. They also found that the same bill passed the Senate by a unanimous vote.

The committee had before it a letter signed by ten general officers, which I will read:

WASHINGTON, D. C., *January* 11, 1884.

The undersigned desire to express their gratification that a bill has been introduced into the House of Representatives placing Bvt. Maj. Gen. Henry J. Hunt on the retired-list with the rank of major-general. General Hunt was distinguished in the Mexican war; and in the late war his reputation as a gallant, efficient, and thorough soldier rose with his services, which were distinguished in the highest degree in almost every battle fought east of the Alleghanies. Forty-four years of such service richly and justly deserve recognition by Congress.

The undersigned heartily concur in this proposed action by Congress, and strongly recommend that this bill become a law.

S. V. BENÉT,
Brigadier-General, Chief of Ordnance.
D. B. SACKET,
Brigadier and Inspector General, U. S. A.
WM. B. ROCHESTER,
Paymaster-General, U. S. A.
R. MACFEELY,
Commissary-General of Subsistence, U. S. A.
S. B. HOLABIRD,
Quartermaster-General, U. S. A.
R. MURRAY,
Surgeon-General, U. S. A.
H. G. WRIGHT,
Chief of Engineers, Brigadier and Brevet Major-General.
W. B. HAZEN,
Chief Signal Officer.
D. G. SWAIM,
Judge-Advocate-General.
R. C. DRUM,
Adjutant-General.

The committee also had before it a statement of General Hunt's military service, which I will read:

He was graduated at the United States Military Academy and appointed second lieutenant Second Artillery July 1, 1839; promoted first lieutenant June 18, 1846; captain, September 28, 1852; major Fifth Artillery, May 14, 1861; lieutenant-colonel Third Artillery, August 1, 1863; colonel Fifth Artillery, April 4, 1869; colonel and additional aid-de-camp, September 28, 1861; and brigadier-general of volunteers, September 15, 1862, "for meritorious services."

He received the brevets of captain United States Army August 20, 1847, "for gallant and meritorious conduct in the battles of Contreras and Churubusco;" major United States Army, September 13, 1847, "for gallant and meritorious conduct in the battle of Chapultepec;" colonel United States Army, July 3, 1863, "for gallant and meritorious services in the battle of Gettysburg, Pa.;" brigadier-general United States Army, March 13, 1865, "for gallant and meritorious services during the siege of Petersburg, Va., and in the campaign terminating with the surrender of the insurgent army under General R. E. Lee;" major-general United States Army, March 13, 1865, "for gallant and meritorious services in the field during the war;" and major-general of volunteers, July 6, 1864, "for gallant and distinguished conduct in the battle of Gettysburg, and for faithful and highly meritorious services in the campaign from the Rapidan to Petersburg, Va." He served with his company at Detroit Mich., from August 30, 1839, to October 15, 1839; at Buffalo, N. Y., to September 21, 1840; at Madison Barracks, N. Y., to August 13, 1841; at Fort Adams, R. I., to August 29, 1843; at Fort Hamilton, N. Y., to October 3, 1844, and at Fort Columbus, N. Y., to August 15, 1845; conducting recruits to October 19, 1845; with company at Fort Adams, R. I., to June 1, 1846; with Light Battery *en route* to and in Texas, and in the war with Mexico (commanding battery from November 18, 1847, to June 24, 1849), to July 14, 1848; *en route* to and at Fort Columbus, N. Y., to October 11, 1848; and at Fort McHenry, Md., to July 1, 1849; on leave to December 15, 1849; with company at Fort Monroe, Va., to December 5, 1852, and at Fort Moultrie, S. C., to June 15, 1853; commanding Light Battery at Fort Smith, Ark., to August 16, 1853, and at Fort Washita, Ark., to November 24, 1853; on leave to March 30, 1854; commanding battery at Fort Washita, Ask., to November 14, 1856; member of board revising the system of light artillery tactics to September 30, 1857; commanding battery at Fort Leavenworth, Kans., to May 28, 1858; in the field on the expedition to Salt Lake, Utah, for the relief of Col. A. Sidney Johnston, to August 3, 1858, and at Fort Leavenworth, Kans., to August 31, 1858; member of board revising the system of light artillery tactics to March 22, 1860; commanding battery *en route* to, and at, Fort Brown, Tex., to December 13, 1860; on leave to January 2, 1861; commanding troops at Harper's Ferry, Va., to April 2, 1861; commanding battery at Fort Hamilton, N. Y., to April 6, 1861; *en route* to, and at, Fort Pickens, Fla., to June 27, 1861; *en route* to Washington, D. C., and in the field, Virginia, to July 26, 1861; chief of artillery, defenses of Washington south of the Potomac, to September 16, 1861; commanding artillery reserve, Army of the Potomac, at Washington, D. C., to March 10, 1862, and in the field, Virginia (Peninsula campaign), to August 21, 1862, being also employed as member of a board to fix number and caliber of guns at permanent fortifications and field batteries from November 26, 1861, to some time in March, 1862, and president of the board to report upon the various kinds of rifled cannon and ammunition therefor, and to examine projectiles to replace those in use in the Army of the Potomac from November 1, 1861, to some time in January, 1862; forwarding batteries from Aoquia Creek to General Pope's army in Virginia from August 22, 1862, to some time in September, 1862; chief of artillery, Army of the Potomac, from September 5, 1862, to June 27, 1865 (assigned and on duty according to his brevet rank of major-general from December 29, 1864, to April 30, 1866); commanding artillery division, Department of Washington, to some time in August, 1865, and the district of the frontier at Fort Smith, Ark., from September 13, 1865, to March 24, 1866.

He was honorably mustered out as brigadier-general of volunteers April 30, 1866.

He was appointed president of the permanent artillery board, in reference to the interest and efficiency of the artillery arm, in session from April 2, 1866, to August 29, 1866; on permission to delay to January 18, 1867; member of board to determine the caliber and proportion of rifled guns for the armament of fortifications to February 27, 1867; commanding Fort Independence, Massachusetts, to April 29, 1867; Fort Sullivan, Maine, to February 5, 1869; Fort Jefferson, Florida, to April 5, 1869; regiment and post of Fort Adams, Rhode Island, from May 20, 1869, to July 28, 1870, being also in command of the Canadian frontier from Lake Ontario to Lake Champlain, with headquarters at Malone, N. Y., during the Fenian disturbances April and May, 1870; commanding the district of North Carolina, July 28 to September 13, 1870, and Fort Adams, Rhode Island, to July 4, 1871; member of board preparing a system of general regulations for the administration of the affairs of the Army to May 23, 1872; commanding post of Fort Adams, Rhode Island, to March 2, 1873; on leave to April 23, 1873; commanding Fort Adams, Rhode Island, to August 24, 1874; on court-martial duty at Fort Sanders, Wyoming, to September 26, 1874; commanding Fort Adams, Rhode Island, to November 30, 1875, and at Charleston S. C., to November 12, 1876; under orders of the Secretary of War to February 21, 1877; commanding post of Charleston, S. C., to April 12, 1877; on leave to June 20, 1877; commanding post of Charleston, S. C., to April 21, 1879, and Atlanta, Ga., to September 19, 1879; on court-martial duty in Kansas to December 3, 1879; commanding post of Atlanta, Ga., to December 21, 1880; on duty in Washington, D. C., to January 6, 1881, and commanding the Department of the South at Newport Barracks, Kentucky, according to his brevet rank of brigadier-general, to March 3, 1883, and as colonel to September 14, 1883, when he was retired from active service by operation of law under the provisions of section 1 of the act of Congress approved June 30, 1882.

In the war with Mexico he was attached to Duncan's battery, and was engaged in the siege of Vera Cruz, the battles of Cerro Gordo, Churubusco, Molino del Rey, storming of Chapultepec, assault on the Garita San Cosmé, and capture of the city of Mexico. In this campaign he was twice wounded. He commanded his battery at the battle of Bull Run, Virginia, July 21, 1861; commanded the artillery reserve in the Peninsula campaign of 1862. At the siege of Yorktown, the battles of Gaines's Mill, Garnett's farm, White Oak Swamp, Glendale, Turkey Bend, and Malvern Hill. As chief of artillery he commanded the artillery of the Army of the Potomac in the subsequent campaigns of that army, being engaged in the battles of South Mountain, Antietam, and Fredericksburg, in 1862; Chancellorsville, Gettysburg, Rappahannock Station, in 1863; Wilderness, Spottsylvania Court House, North Anna, Totopotomoy, Cold Harbor, assaults of Petersburg, June 15–18, 1864; siege of that place and its capture, and was present at the capitulation of the Army of Northern Virginia, at Appomattox, April 9, 1865. All the siege operations at Petersburg were placed under his general direction by the following orders:

It is a fact worthy of the attention of the House that General Hunt is still performing duty, and this record shows him to be three years older than the oldest officer now on duty. It is obvious, therefore, that if this bill should pass the few extra dollars which it awards him would not be paid him for a very long period.

As General McClellan has recently died I will ask the Clerk to read a letter which he wrote to Colonel Lyman, a member of the last Congress, after the passage of the bill in 1884.

The Clerk read as follows:

32 WASHINGTON SQUARE, *New York, May* 27, 1884.

MY DEAR COLONEL LYMAN: I have just read the debate upon the bill to place Col. H. J. Hunt on the retired-list as a major-general. I assigned Colonel (then

Major) Hunt to the command of the artillery reserve of the Army of the Potomac soon after its organization. He held that command until the arrival of the army on the James River, at the close of "the Seven Days," when, upon General Barry being relieved from duty, I appointed Hunt to the position of chief of artillery. Hunt was more than once applied for by other generals to be assigned to them as commander of a brigade of infantry, but my appreciation of the value of his services in the artillery was such that I steadfastly resisted all such applications.

His experience with field artillery in Mexico, his intimate knowledge of the theory and practice of artillery, his successful labors in improving the tactics of that arm, his remarkable administrative ability, his extraordinary power of handling masses of artillery in battle; in brief, his peculiar and entire fitness for the position of chief of artillery of a large army in the field rendered it my duty to call upon him to sacrifice his chances of promotion and his individual interests for the good of the country and the efficiency of the army under my command. Most cheerfully and without a murmur Hunt acceded to my demand.

I did my best, but in vain, to obtain for him rank and promotion in his own arm, and never permitted myself to doubt that in the end he would receive the just reward of his services and sacrifices. In the armies of the great military powers his command would have been regarded as the equivalent of an army corps, and he would have received the corresponding rank and reward. If Hunt had been permitted to take command of a brigade of infantry he would long before the close of the war have been in command of an army corps at least.

In view of the fact that he sacrified his chance of promotion to his sense of duty to his own arm of the service, and in deference to the urgent wishes of at least one of the commanders of the Army of the Potomac, I think the bill in question should be regarded as a simple act of justice and not as a special favor to him. I admit such bills should be closely scrutinized and passed only in extraordinary cases; but this is an extraordinary and exceptional case—in fact I know of none other just like it, and the more carefully it is examined the more clear will it be that it is a proper case for extraordinary action on the part of Congress.

Let me say one thing more. The position of chief of artillery was not a grade, nor was it a definite position or rank in that arm, it was simply a matter of detail or assignment, carrying with it vastly increased responsibilities and duties without any corresponding pay or privileges.

With the earnest hope that this measure of justice may be meted out to one who served his country so long, so gallantly, and so ably, and that this debt of gratitude so long due may be paid,

I am, sincerely, your friend,

GEO. B. McCLELLAN.

Col. THEODORE LYMAN,
United States House of Representatives,
Washington, D. C.

Mr. WHEELER. Mr. Chairman, in reply to the gentleman from Wisconsin [Mr. PRICE] I wish to say that no one would go farther than myself in advocating any character of legislation which would be a benefit to the laboring classes of our country. No one has shown a disposition to go farther in that line of legislation in this House than myself. But the gentleman seems to intimate that it might be better if all our Army, both officers and men, should be brought down to the same basis of absolute equality, and that all should be awarded the same compensation. That seems to be the argument of the gentleman from Wisconsin. He says he wants no distinctions. He wants no special honors bestowed upon those men, who, by their education and skill and gallantry, achieved high rank and great eminence.

While I would gladly concur with the gentleman from Wisconsin [Mr. PRICE] in his advocacy of equality among men, so far as that equality can be attained by elevating the soldier in the Army or the citizen in civil life, I must dissent from any theory of equality which is to be attained only by degrading some men so as to bring all down to the same level. I shall always assist my friend from Wisconsin in any effort to level up, but I shall always oppose with all the vigor I can command any effort to level down.

Twenty years ago laws were enacted to reorganize the Army, by which meritorious officers were given increased rank and emoluments, but as is always the case in general legislation it did not extend so far as to embrace all who had a just claim to its benefits. And for the last ten years efforts have been made by private bills to regulate and even up inequalities and injustices caused by general legislation.

Of all the numerous bills brought before the Committee on Military Affairs for the purpose of increasing the rank of meritorious officers during the war, this is the only one which has received the approbation of that committee. The evidence before the committee showed that General Hunt would have had the rank which this bill gives him had he not for commendable reasons declined promotion, because his commanding general insisted that he was more valuable and necessary in the position which he would have had to resign than he would be in other positions which would have given him higher rank. For this and other reasons the Committee on Military Affairs and many of the highest officers of the Army who have filed with it their recommendations, believed that this bill had merit which no other bill of similar character that has come before Congress has developed.

The gentlemen who profess to base their opposition to this bill upon the ground that it would cost the Government a few hundred dollars, voted, with practical unanimity, a few days since to increase the pensions of widows so as to give them at least $6,000,000 a year more than they would have received under the old law. This bill was so framed that, under its provisions, a woman who was not born until five years after the war closed might receive from the Government $12 a month, while a gallant Union soldier, who fought in every battle from Fort Sumter to Appomattox, and who may have been repeatedly wounded, would be receiving only $8 per month. The gentlemen, Mr. Chairman, who displayed so much ability and activity on that occasion in lecturing those of us who opposed this large increase of the pensions of one hundred thousand persons who never fought, and now oppose this bill to slightly increase the pension of a soldier who has served his country for fifty years, and whose military fame is part of our history, may be sincere in their zeal for economy, but I submit they appear to be slightly inconsistent.

As another proof of the disposition of the Military Committee of this House to carry out the economical views of those who oppose the bill now under consideration, I would respectfully call their attention to the bill reported by this committee, and now on the Calendar, which makes appropriations for the support of the Army. The committee considered and examined every item of expenditure with unusual care. Expenditures which could be avoided were omitted, but the committee believes that ample provision was made for everything necessary to maintain the unimpaired efficiency of the service.

The Military Academy bill is also on the Calendar, reported by this committee, which provides for all the needful expenditures of that excellent institution. And each of these bills is less than any bill of like character reported to this House by any Military Committee from 1865 down to the present time.

I believe that no other gentleman desires to discuss the bill, and shall therefore move that the committee rise and report it to the House.

Mr. REED, of Maine. Will the gentleman from Alabama permit me to interrupt him?

Mr. WHEELER. I will yield to the gentleman.

Mr. REED, of Maine. The object of this bill is to promote General Hunt for meritorious service, is it? Now what right has the legislative department of the Government to promote a man?

Mr. WHEELER. This bill is to authorize the President to select one of the distinguished colonels who during the war served as colonel and promote him to a certain rank in the Army without mentioning any man's name in it.

Mr. REED, of Maine. Then you abandon the Fitz-John Porter bill, do you?

Mr. WHEELER. This bill was not introduced by me, and I knew nothing about it until I was ordered by the committee to submit the report to the House.

Mr. REED, of Maine. Who did draw the bill? I want to know who it was.

Mr. WHEELER. I never inquired of anybody as to who drew the bill. I simply did my duty in compliance with the order of the committee to present the report to the House.

Mr. REED, of Maine. Do you know?

Mr. WHEELER. I do not.

Mr. REED, of Maine. I am sorry.

Mr. STEELE. Mr. FORNEY, of Alabama, drew it.

Mr. CUTCHEON. Will the gentleman from Alabama yield to me for a few moments?

Mr. WHEELER. How much time?

Mr. CUTCHEON. Ten or fifteen minutes.

Mr. WHEELER. I yield to the gentleman from Michigan.

Labor Arbitration.

SPEECH
OF
HON. WILLIAM J STONE,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Territorial transportation of property or passengers, and their employés.

Mr. STONE, of Missouri, said:

Mr. CHAIRMAN: In the few moments I control I have not time to criticise the bill under consideration, though I regard it as rather a peculiar and original piece of legislation. If it is not obnoxious to constitutional objection, perhaps the only harm it can do is to subject the Government to some additional expense, and I indulge the hope, if it becomes a law, it may result in some good, though in what way I confess myself at this time unable to determine. If I vote for it at all I shall do so because it is a well-meaning effort, however futile—a step, however feeble, in the direction I wish to go.

I have been taught, and I believe, that all good government derives its just powers from the consent of the governed, and that those powers should be so administered as to promote, as far as possible, the welfare, the prosperity, and happiness of the whole people. The condition of the industrial and producing classes of this country is anything but satisfactory. Whatever may be the cause of this condition, or whatever may be the remedy for it, there can be no doubt of the fact that that unsatisfactory condition exists. The magnitude of the present revolt in the Southwest, its disastrous effect upon business, its menace

to the public peace, the widespread demoralization and disorder it is producing, compel a universal public attention to this event. But this outbreak, though on a larger scale than usual, is not exceptional or novel. It is but typical of similar disturbances, more or less extensive, constantly occurring in all sections of the country. To-day the "strikers" are the employés of a railroad corporation, yesterday they were the employés of a mining corporation; to-morrow they may be the employés of a manufacturing corporation. But however or wherever employed the fact remains that the relations existing between the great business corporations and their employés, who comprise a very large per cent. of the wage-workers of the country, are such as to be most heartily deplored, and to be the cause of grave concern to every man who has the welfare of his countrymen near to his heart. We can not, if we were so disposed, close our eyes to the portentous fact that there is positive, aggressive, and organized warfare between employers and employés, between labor and capital—the power of numbers upon one side and the power of wealth upon the other.

The workingmen are not prosperous; they are not contented; they are dissatisfied. As a rule, they are a thrifty, industrious, and frugal people, but they find the struggle they are engaged in to be a hard one for simple existence. They go on in this way toiling from day to day, while they see their employers amassing great fortunes out of the fruits of their industry. The profits of the joint enterprise of labor upon the one hand and capital upon the other are so divided as to give the laborer a scant existence and the capitalist a magnificent fortune with all its attendant advantages. This inequality and injustice very naturally provoke an inevitable and dangerous conflict between these two great factors in our commerce and civilization.

Capital is organized. Every corporation is organized capital. The Missouri Pacific, the Texas Pacific, and all the great railway systems are vast organizations of capital—compact, aggressive, exacting, arrogant, selfish organizations, easily managed and easily combined whenever and wherever combination will promote a common interest. On the other hand, the industrial and producing classes, inspired by the primal law of self-preservation, have made repeated efforts to combine and organize—efforts which have hitherto proved abortive. But now, at last, it seems that the wage-workers of the land have attained some measure of success in perfecting a tolerably well-equipped and fairly effective organization, known as the Knights of Labor. This organization, though it gives great hope and promise of success, is still a crude experiment. The very magnitude of the movement, the extent and scope of its purpose, makes it cumbersome and difficult of intelligent and systematic management and control. But it is going on strengthening its organization, eliminating its defects, and perfecting its discipline; and if it proves to be wise, conservative, patriotic, and just, avoiding excesses and abuses, it will become a power for the accomplishment of great good to the people of this country. I do not hesitate to say that every movement made by the producing and laboring classes of this country by which they seek, through legitimate and proper means, to protect and advance their interests has my hearty sympathy, and will receive my unqualified support. I have not time to say more than that, and that, perhaps, is enough to say.

I want to go a little farther. The very fact that this country is one great military camp of opposing forces—of organized capital and organized labor; the very fact of these oft-repeated tumultuous uprisings of the people in warlike protest against corporate greed and rapacity; the very fact that these corporations and their stockholders have grown enormously rich and the working people wretchedly poor, show that there is something radically wrong in our economic systems. Legislation can not be made a panacea for all the evils that afflict us. But if the powers of government can be so administered as to remove in whole or in part the cause or causes producing these unhappy industrial conditions, and thereby promote the prosperity and advance the interests of the great masses of the people—those who sow and reap and delve and dig and toil with brawny hands, in whatever sphere—it is the solemn duty of the Government to direct all its policies and exercise all its powers to the achievement of that end. It is not the hour for inflammatory appeal or incendiary assertion. It is an occasion demanding deliberation, serious thought, calm judgment, and self-sacrificing statesmanship.

Proudhon's communistic aphorism that "property is theft" should find no countenance in this country, and above all no advocate in this House. Mobocracy should find no crown in this country, and the despicable demagogue who rides as its courier should find his sycophant lips locked with the key of silence for want of an opportunity to fawn and flatter. But we should spare no effort to get at the cause of these disturbed and unhealthy conditions, and, as far as possible, apply a remedy.

I listened with great pleasure to the distinguished gentleman from Texas [Mr. REAGAN] on yesterday. I have great respect for him and for his judgment, for though he is a little old-fashioned in his notions, he is generally very close to the line of right. I believe with him that the remedy for these evils does not lie with such measures as the one now under consideration, however fruitful it may be of temporary good results. We must go back to the cause, and apply a more radical and permanent remedy. I believe with him there will be no cure—the evil and the disease will remain—until there is a thorough and radical change in our whole financial, commercial, and economic systems, so far as Congress and the Executive can effect such changes. But I go a step further than he did, or than the gentleman from Iowa [Mr. WEAVER]. The restoration to the people of their plundered public domain, the reform of the tariff, the reduction of taxation consequent upon such reform, and an economic administration of the Government, the emancipation of our financial affairs from the bondage of syndicates and the control of metropolitan banks, are all important and essential. These are reforms that must be exacted and enforced by the people of this country as preliminary to the permanent adjustment and settlement of these great industrial questions. And, as suggested by the able and distinguished gentleman from Maine [Mr. REED] and by others, public sentiment and the strong native common sense of the people must play an important part in the solution of these problems and in compelling and enforcing justice and fair-dealing on both sides in all conflicts between employers and employés. But I desire to go a little further than that. I can not deal with this whole labor question, but with only one phase of it—that phase which has been brought sharply and abruptly to our notice by the present disturbance in the Southwest. I mean that which relates to the great transcontinental lines of railroad—those mighty arteries of interior traffic and commerce.

In the first place, Mr. Chairman, I believe that such great corporations as these ought not to exist. They are a positive curse to our commerce and our people, to the farmers, stockmen, miners, and laborers of this country, and are a constant and defiant menace to good government. About nine-tenths of our producers, in whatever field they labor, are rarely able to save more than enough to pay their taxes and live, while the profits of their industry are extorted from them and absorbed by these railroad corporations and other combinations with which they are allied. Created by law and, in theory, subject to governmental control, they violate all law and defy all government. They have no respect for private right and but little for public authority. They "damn the people" and ignore the Government, both State and Federal, except when they have occasion to invoke its power to protect them from the results of their own iniquities. Unlimited in resources, commanding the best talent of the country, bold in design, and unscrupulous in method, they corrupt Legislatures, manipulate courts of justice, influence the high officials of government, and utilize for their good the very powers the people depend upon to control them. In violation of law they fix arbitrary rates of transportation without regard to distance or any consideration of justice, or without regard to any consideration except that which makes them practically the masters of the profits of labor and commerce. It is an incorporate despotism against which the people are rising from protest to open war. I say they ought to be destroyed, not in the spirit of communism, not by violence or riotous revolution, but by peaceable and lawful means.

It has been truthfully said that "free government establishes libraries, constructs and endows a magnificent school system, maintains sewerage, compels unwilling parents to vaccinate their children, regulates the size and structure of houses; in short, does a hundred things which a mere State police has no right to do, but which a great co-operative industrial organization may fitly and wisely do for itself." And which, it might be added, a free government can do for itself. The Government improves and owns its harbors and water ways. Great canals are constructed and in some measure operated by the States. Why not own, administer, and control these great interstate lines of commerce? Not many years ago we granted vast areas of the public lands to corporations and loaned them millions of bonds to aid them in constructing lines of railroad across the continent. To one corporation we made a magnificent gift of lands and a loan of thirty-three millions of bonds, for which we are still responsible, to induce and enable it to build a railroad from the Missouri to the Pacific Ocean, which cost the company only $50,000,000. In money and bonds we paid for building the Union Pacific Railroad, and yet we have not a dollar of interest in it. The Government should have some interest in that road. It should have actual control of its management.

Some years ago England contracted with certain capitalists to build a road in India, and guaranteed the capitalists 5 per cent. on their money. England is represented in the directory; she receives an income of 7 per cent., pays the capitalists the guaranteed 5 per cent., and the 2 per cent. profit has enabled her to abolish the income tax in India. Why can not we own and control our railroads? Why can not we own our telegraph lines? If we could the Government could realize a profit, justice be done employés, the robbery of the people would cease, and strikes be a thing of history. I have seen it stated on high authority that within four years after the British government had secured the ownership and control of the telegraph lines of Great Britain, the number of business offices had increased 30 per cent., the number of messages 50 per cent., the number of words sent 200 per cent.; the cost of sending had been reduced 40 per cent., and it had actually cost the government nothing, for it borrowed the money for the enterprise at 3 per cent., and the profits of the business were 4.3 per cent. If that can be done in England, it can be done in the United States.

The Government can own these railroads and telegraph lines, or own others just as good. We can be masters of the situation if we would.

I know what objections would be urged against any effort put forward with these ends in view. Aside from antagonizing the mighty influences of these corporations which would gather here, many honest and patriotic gentlemen would fear the involvements of such an experiment, and others would object on constitutional grounds (which I do not believe to exist), and others be frightened away by the vast increase of Federal power and patronage. But I believe all these objections can be overcome. It is a broad question. It requires time, investigation, thought, consultation, and comparison of views to mature it. At all events I am sure the public good requires that these great corporations should be controlled, and, I believe, destroyed. The resolution introduced by the able and experienced statesman from Pennsylvania [Mr. CURTIN] to appoint a commission of wise and conservative men to investigate this whole question, and report the results of their investigations and deliberations, ought to be adopted. I am in favor of it. It is the right way to proceed. These ephemeral, spasmodic attempts at reform and the solution of these great problems amount to nothing. We should proceed in some orderly and systematic way.

Mr. Chairman, what I have said is but a suggestion. But out of a multitude of suggestions propositions are evolved and formulated. If I had the time and opportunity I would like to go further into this question. It is the first question of the age. It is the one most strongly appealing to the philanthropy and statesmanship of the country. I shall hail with delight and welcome with open arms the man who can lead us out of this wilderness of danger and difficulty, whatever may be his politics or the land of his birth.

Silver Coinage.

SPEECH

OF

HON. WILLIAM H. NEECE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 3, 1886.

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes—

Mr. NEECE said:

Mr. SPEAKER: Could a vote have been taken on this bill to provide for the free coinage of silver during the first three weeks of this debate I would have contented myself with voting and should not have said a word, but as this question has undergone so many different phases I feel as though I could not content myself without giving my views.

I can see no reason for the suspension of the coinage of silver as suggested by the enemies of silver. If the argument is true that "silver will not circulate," then there is but one conclusion, and that is to suspend. There is no reason for this Government using $2,000,000 a month of the peoples' money to buy silver bullion and go to the expense of coining it if it will not circulate, if it is to lie idle in the Treasury. If that be true the question is settled in my mind. The suggestion of the Secretary of the Treasury should be adopted at once, for every month you are taking the peoples' money, wrung from them by taxation and invested in a dead commodity; it is simply taking from circulation that amount of money and placing it out of circulation. And I grant you that to the extent that this silver money coined under the Bland act lies idle in the Treasury, where it is not retained by the Government to meet some demand, it is an injury and a wrong to the tax-payer and to the prosperity of the country.

Is it true that silver will not circulate; that the people will not have it; that the people will pay more to return it into the Treasury than the Government can afford to pay to get it out, as has been stated on this floor during th is debate? I say if that be true, suspension should follow at once.

Who is it that will not take this money? Has there been an honest effort to pay this money out on the debts and expenses of the Government? In order to determine this question I do not think it necessary to go back of the first bank that ever existed; and the conditions of the finances of other nations at various periods do not afford much light on the subject unless it is shown that the circumstances then were similar to the circumstances and conditions of things now. I think we will get more light on the subject by noticing more particularly the conditions and circumstances of the present day and of our own country and people. What are they? We are divided into two classes, debtor and creditor, tax-payers and tax-receivers. Our duty is to honestly legislate for both. We should have honest laws and honest government, and also—which is so often repeated by those who favor suspension—honest money. The law should protect each citizen, without favoring the one at the expense of the other.

Honest money is that kind which is created by Congress, the only power that has the right under our Constitution to make or create money. It should be of that character that will circulate as money among the people; it should meet the wants of commerce and trade; it should pay the debts of the Government and of the individual alike. There should not be two kinds of money unless they each fulfilled the same object in the sight of the law. No money should be created unless it is made a full legal tender for all debts, both public and private. When that is done I do not care whether it is made of gold, silver, or paper. I believe that in a Government like ours, with our people of so many different fancies, doing business in so many different ways, and who are so well adapted to doing business with the whole world, and our prosperity so greatly depending upon our trade, commerce, and intercourse with all the nations of the earth, we should foster and keep in circulation gold, silver, and greenbacks, to be made a full legal tender for debts both public and private.

I am in favor of encouraging business and trade with the whole world, and that kind of money that will best serve the ends of trade and commerce at home and abroad we should have in a sufficient quantity to meet the legitimate wants of the people.

I have stated that we should have in view a money that would invite the trade and commerce of the world. Now, let me refer to the money in use by the different nations of the earth. I will here add a table, taken from the United States Silver Commission report of 1877, showing the standard of money and population of the different countries, as follows:

SILVER-STANDARD COUNTRIES.

	Population.		Population.
Russia	76,000,000	Peru	3,400,000
Austria	35,000,000	China	400,000,000
Egypt	4,500,000	British India	237,144,456
Mexico	8,000,000		
Central America	2,600,000	Total	768,944,456
Ecuador	1,300,000		

DOUBLE-STANDARD COUNTRIES.

Greece	1,400,000	France	36,200,000
Roumania	4,000,000	Belgium	5,100,000
Colombia	2,900,000	Switzerland	2,700,000
Venezuela	1,600,000	Italy	26,800,000
Chili	1,900,000	Spain	16,400,000
Uruguay	400,000	United States	50,000,000
Paraguay	1,200,000		
Japan	33,000,000	Total	187,300,000
Holland	3,700,000		

GOLD-STANDARD COUNTRIES.

Great Britain	32,000,000	Germany	42,000,000
Canada, Cape of Good Hope, and Australian colonies	7,000,000	Norway	1,700,000
		Sweden	4,300,000

These estimates show that over 700,000,000 people have adopted silver as the sole standard of money, and over 180,000,000 have the double standard, gold and silver, thus constituting a total of more than 900,000,000 who use silver as a standard money. Only 92,800,000 have the single gold standard.

We are the producers of silver. Nearly one-half the silver of the world is produced in this country. Now, as I think I have shown that a great majority of the people of the world use silver as their money, and as our country produces both silver and gold in large quantities, would it not be unwise for us to adopt gold as the exclusive money of this country and thereby deprive the people of the great advantage of making money out of silver, which is so beneficial in our foreign trade and commerce? That policy simply means a contraction of our commercial relations with foreign countries.

The argument that England, Germany, and France have adopted gold as their money does not hold good with us. They have to purchase a large proportion of their bullion from abroad which they use in manufactures and the arts, as well as what they use in making their money, and therefore it is to their interest to do everything in their power to make that which they have to purchase abroad as cheap as possible, but insomuch as we have large quantities of both gold and silver bullion to sell to foreign countries, why is it not to our interest to keep it up?

Now, as the argument is made by those who favor suspension, "that silver will not circulate," let us examine the facts as to the circulation of silver with foreign countries and to the comparison of its circulation with gold. I hold the report of the Bureau of Statistics, issued by the Treasury Department of the United States, dated March 24, 1886, which report shows the import and export of gold and silver of the United States. It certainly makes a wonderful argument in favor of retaining silver. It shows that we have exported more silver than gold within the last twelve months, ending February 28, 1886, to the amount of $16,872,810.

The report also shows that during the same time we have exported more silver than has been imported to the amount of $15,598,629. Instead of silver accumulating on our hands in the twelve months last past, we have disposed of over $15,000,000 to foreign countries. But it also shows that foreign countries were getting the advantage of us in the money trade, for when you come to compare the exports and imports of both gold and silver during that period we are the loser of over $9,000,000.

How is it with gold during the same time? The same table shows that there was an excess of imports over exports of $5,803,612 in gold. It does not look much like gold was leaving this country. Here are the figures taken from the report for twelve months ending February 28, 1886:

GOLD.	
Imports	$22,374,648
Exports	16,571,035
Net gain	5,803,613

SILVER.	
Exports	33,443,846
Imports	17,845,217
Net gain	15,598,629
Deduct excess of imports of gold	5,803,612
	9,795,017

Which shows an actual loss in our money exchange with foreign countries.

I will incorporate into my remarks that portion of said report that refers to gold and silver, and an examination of the report will show the excess of exports over imports of silver was greater during every month in the year 1884, except the month of October.

Imports and exports of gold and silver.

Since the late war there has been much legislation on the subject of money and the finances of our country. The coin act of 1869, the funding act of 1870, the single-standard gold act of 1873, the resumption act of 1875, and the Bland act of 1878. The people quietly submitted to the act of 1869, so called, to strengthen public credit. The funding act of 1870, which allowed the bondholder to exchange his bond which was payable in the lawful money of the country for one that was by its terms payable in coin. Gold and silver was the coin of this Gov-

ernment at the time, so understood by every intelligent citizen. Next came the act of 1873, demonetizing silver, leaving gold the only coin of the country. The people had been worn threadbare by the several acts which had increased their burdens by the million, but the act demonetizing silver was the straw that broke the camel's back.

A cry of indignation came from the people as soon as they learned what had been done. A people who heretofore had been submissive and had let these bondholders have their own way about matters became indignant. The question was discussed thoroughly by the people, and in obedience to the public demand the Bland act was passed in 1878 which restored to the silver dollar its legal-tender qualities and also provided for the coinage of at least two millions a month of standard silver dollars. This act was not passed without a struggle, for it had to be passed over the veto of the President.

The passage of that act meant more than the mere satisfaction of a public clamor; it was not done with any intent to deceive the people. It was passed to meet the emergency of the Government. First, to give life and to restore the legal-tender qualities of the silver dollar; secondly, to provide for the payment of the national debt according to the letter and the spirit of the contract, and to provide the people with the means to pay, and a circulating medium which could be kept in circulation. The same circumstances then existed as now exist. There was a shrinkage of the money in circulation at the date of the passage of the Bland act; property of all kinds had shrunk in value, and the taxpayer was demanding relief from the burdens which had been unjustly imposed upon him by the first three acts mentioned. Hon. JAMES BECK, in his able speech made in the Senate December 21, 1885, stated the situation so much better than I can, I quote from his speech:

> In short, no set of men should be allowed to exercise privileges prohibited by law, nor have rights given to them in regard to the character and quality of the coin in which their debts shall be paid which are denied to all other equally meritorious creditors; and no set of men should ever have power to regulate or control, as their private interests may be affected, the currency or the business of the people. If that power is yielded or conceded to them, with legal-tender notes and silver certificates withdrawn and gold paid to them, and to them alone, for their interest and bonds, Congress would be powerless to resist any demands our bondholders and bankers might make. I know their power and appreciate the adroitness with which they can have their claims presented. Even the President in his message has been induced to say that up to the present time only about $50,000,000 of the silver dollars we have coined have found their way into circulation. He modified that statement by showing that a large amount of silver certificates were outstanding.
>
> But the press of the country has taken up the first statement, leaving out all the qualifications, and parades it before the country as conclusive evidence that too much silver has been coined, and that all of it is an incumbrance except about $50,000,000. They utterly ignore the fact which the official reports show that at the close of the last fiscal year, June 30, 1885, out of a total coinage of $203,000,000, $140,000,000 in round numbers was in active circulation in the form of silver certificates, in addition to the coin in the hands of the people, of which certificates $44,660,000 was paid to the Government for customs dues during the last fiscal year at the port of New York alone—more than was paid in gold and gold certificates combined. Why is not the coin represented by these certificates as much in active circulation as if it was passed from hand to hand as often as the certificates are? I ask, is it fair to complain of the silver held in the Treasury as being expensive and useless, under such circumstances, and yet not utter one word of complaint in regard to over $137,000,000 of gold coin locked up, at the same time and in the same way, represented by the same sort of certificates, most of them in a far less useful form? If our officials would unlock the Treasury vaults and pay our interest-bearing debt with the money they are complaining of being overwhelmed with they would be doing their duty more satisfactorily than by the course they are now pursuing.
>
> The President says:
>
> "A special effort has been made by the Secretary of the Treasury to increase the amount of our silver coin in circulation."
>
> Let him make one more effort and pay out the $60,000,000 or $75,000,000 he received for customs dues, and which he has no use for, in payment of interest and in the redemption of the bonds now redeemable, and the ordinary expenses of the Government will keep the vaults reasonably clear of all, not represented by certificates or bills, which the people have the right by law to demand on making a deposit of coin. No public creditor other than the bondholder has ever complained when payment is made to him in silver or silver certificates. All other creditors are entitled to the same consideration as the holders of our bonds. We as a tax-paying people are not interested in keeping our bonds 24 per cent. above par when we must soon buy them with our surplus revenues.
>
> I may observe here that silver certificates are now and have always been a popular currency.
>
> The Treasurer in his last report, page 24, says:
>
> "The issue of silver certificates by Treasury officers in the South and West for gold coin deposited with the assistant treasurer at New York, under departmental circular of September 18, 1880, was discontinued in January last. The amount which had been issued in that manner to the date named was $80,730,500."

Silver, since the passage of the Bland act, has been in unfriendly hands. I say this because at the time of the passage of the Bland act it had to be passed over the veto of the President, and its execution had to be intrusted to the hand of the Executive who has used all the power he possessed to defeat the passage of the act, and ever since the execution of that law has been in the hands of those who, from some cause unknown to me, seem to think that silver should not be paid out on the debts of this Government if the bondholder objected to taking it, although by the very terms of the contract it is payable in silver, and silver money being the same in every particular as to legal standing and quantity of pure silver that existed in the silver dollar at the date of the execution of the bond.

Let us pay the national debt as fast as possible in the very kind of money called for by the bond. Let us use every dollar that it is safe to take out of the Treasury and pay at once as far as it will go. Silver should be placed upon an equality with gold; each should pay to the Government the cost of coining, and if coined for the bullion-owner it would be in circulation as soon as coined, for the owner would at least have to remove it from the mint, and then the Secretary of the Treasury would not be bothered in trying to circulate it, and if unfriendly he would have less opportunity to discriminate. We are told by the opponents of silver that it is fiat money; that 80 cents' worth of silver plus 20 cents of fiat will not make a dollar. I have been astonished at hearing this argument, for I undertake to say that it is the *fiat* that makes the dollar, and by the use of fiat you can as well make money out of paper not worth one cent for that which will make a dollar as you can by the use of 80 cents' worth of silver.

What is it that makes money? Is it not the law of Congress that authorizes its creation and declares what its functions shall be? That is derisively called fiat. You have not got a gold dollar but what is made so by the same fiat; otherwise it is nothing but bullion. The people that I have the honor to represent are tax-payers, and largely we are a people that borrow of Eastern capitalists a great deal of the money we use in business. We are a producing people; to pay our taxes and interest we naturally look to the products of the farms and our shops for our income. We look to the East over a stretch of fifteen hundred miles of railroad for a market, and if the silver mines of the Rocky Mountains are not stricken down we may gain some advantage of a market for our products in that direction.

When silver shall have a fair trial, and when we have discharged our obligations in the very same kind of money that we contracted to pay; if, after that, it will not circulate, or if there should be required an increase in the amount of the pure silver that should make a dollar, then it is time to consider that question. Until the people and the bondholders are placed on an equal footing I shall vote to retain the silver dollar as it is and to place it on an equality with gold.

We are told that to provide for the unlimited coinage of silver, we are doing injustice to the bondholder, although by the terms of the bond it is payable in silver. It certainly can not be seriously contended that the Government by the terms of the bond was deprived of the means to procure the commodity the article that it agreed to pay in the future. If the Government had possessed the coin at the time of making the bond there would have been no necessity for borrowing or for extending her bonds. The very fact that the Government promised to pay in the future implied that it would make the money to pay with from any of the honorable sources known to the powers of a government.

The friends of the single-money standard seem to think that the power of the Government to coin money ought not to be exercised only to declare the bullion value of the metal that money is made of, and as the bullion value shall fluctuate in the market, particularly when the value declines, we should increase the amount in each dollar of gold or silver. I am in favor of gold as one of the kinds of money that this Government should maintain and to be recognized as a part of the coin that we should have in circulation, but I do insist that nothing should be done by legislation to make it more or less valuable than any other money made by this Government.

While I recognize gold as valuable to our country and people, yet we can not deny the fact that it is and always has been timid. In times of war or depression of business it always hides until the danger is over; it is the money of the coward. During the late war the Government had to give to its owner two dollars of the Government's money for one dollar in gold it got of its holders, and then to keep from being called dishonest and to strengthen public credit, so called, the Government had to take up the bonds, which were payable in lawful money, purchased with greenbacks, which were purchased with gold two for one and a new bond given payable in coin. The champions of gold forget that it never did a patriotic act, either in war or peace; during this country's darkest days it did not come forth to pay the soldier, and it did not make its appearance on Black Friday for the relief of the people or the Government, a day so well remembered by every man in this country. Gold is simply good in its place; no more, no less; it answers a good purpose as a part of our circulating medium.

Labor Arbitration.

SPEECH

OF

HON. MARTIN A. HAYNES,

OF NEW HAMPSHIRE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 1, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Territorial transportation of property and their employés.

Mr. HAYNES said:

Mr. CHAIRMAN: This bill, for one that has "nothing in it," has certainly had a most singular reception. It could hardly have met with a more determined opposition had it contained every element of danger to our social structure and our free institutions. Decried as a weak-

ling, powerless for good or for evil, still it has had turned upon it the heaviest guns of parliamentary opposition and obstruction. I presume if the Committee on Labor had come in here with a simple resolution that "the laborer is worthy of his hire" we should have had long and able arguments to convince us of the unconstitutionality of the proposition, an unlimited crop of amendments, some designed to kill and some to perfect, and various substitutes embodying the plans and specifications of individual members.

The remark has been made in my presence that this bill was hurried in here without proper consideration by the Committee on Labor. I desire to say, as a member of that committee, that the subject to which it relates was most thoroughly discussed at several sessions, and some of them protracted ones; and with all due respect would suggest that a like industry and zeal in some others might dig important bills from the pigeon-holes where they seem to be sleeping the sleep that knows no waking, and from which it is doubtful if they ever emerge, even to die upon the Calendar of the House.

This bill is in one sense an emergency bill. If there lies in it as reported, or as it may be amended, any healing power or any influence toward settling the difficulties which for weeks have threatened the peace of entire States, delay on our part is criminal. It was this conviction that impelled the Labor Committee to act promptly, and having arrived at a conclusion to waive the snail-like dignity of inaction, which seems to be one of our unwritten laws, and come directly to the House with its report.

It may be that its findings will not meet your approval. It may be that its judgment was faulty. Upon that you can pass your judgment. But if there is any virtue in this proposition, if by any legislative action we can furnish a safety-valve for the immediate dangers of the situation, it is our duty to act, and to act promptly. Nero fiddled while Rome was burning. The Forty-eighth Congress fiddled while Greely and his poor fellows were starving and dying upon the bleak rocks of Cape Sabine. Human lives are too precious to be sacrificed upon the altar of Congressional procrastination, and if the Forty-ninth Congress fiddles away its opportunity to pour oil on the troubled waters of the West, the fault will not lie at the door of the Committee on Labor. They have wasted no time in presenting this bill, the best solution they have been able to formulate.

The general appreciation of the gravity of the situation was indicated by the number of bills introduced here to meet it. This bill of the committee was evolved out of them all by a system of pruning and trimming rather than by building up and padding. No man can claim it as "my bill."

In all the assaults which have been made upon it, no man has accused it of being a vicious bill. On the contrary, the pith of all adverse criticism appears to be that it is like the old woman's bread-pill, which could not do any harm even if it did not do any good. Then what harm in trying it? It would be well if we could throw around all the measures which are brought here a like charm of "innocuous desuetude."

There are but three roads out of such difficulties as have arisen in several States, and we turn instinctively to the one that offers peace and harmony without calling for sacrifice of self-respect by either party. I am frank to acknowledge my conviction that if, in the present troubles, the railroad managers had shown the same disposition and willingness to submit to arbitration that has been displayed by the Knights of Labor, the difficulties might long ago have been adjudicated. Corporations in New York and Boston, in my own State, and elsewhere within the past few weeks have handled strikes much more judiciously than the Gould system has handled this one.

Settlements have been made with credit to both parties and to their mutual satisfaction. The corporations, recognizing the representatives of their employés, sat down with them like men to talk over matters and come to an understanding. It has not proved so difficult a matter to arrange when set about in the right temper. And I like this spirit better than that which demands of one party an "unconditional surrender," which spurns advances toward arbitration or plays with them as the cat plays with the mouse; which doggedly says; "No, I won't talk with you nor treat with you! I will lay down the terms, and you will come to them!"

The culmination of such troubles, if peaceable, must be either a backdown by one party or a settlement by arbitration. Which would we encourage? Not the former, certainly. That is no good settlement which leaves with one party the sting of defeat and self-abasement. The old wrong rankles, and the old wound will break out afresh. But the spirit of the age recognizes arbitration as the very angel of concord. It settles. There can be no wiser statesmanship than that which opens every avenue and offers every facility for the settlement of disputes by arbitration. The Knights of Labor announce this as a cardinal principle in the solution of labor troubles. When American labor comes in this spirit, capital may well make haste to meet it half way. Thus may we secure immunity from strikes and their attendant evils, make capital secure, labor contented, and both prosperous.

This bill looks in that direction. It goes, perhaps, as far as it is possible, or at least practicable, for Congress to go. It carries no power to enforce a submission of differences; it furnishes no authority to enforce the decrees which might be rendered under it. There are difficulties in the way of such enforcement which present themselves upon the most cursory examination.

But what it does do is this: It opens another door for arbitration, and gives the great prestige of the Government's sanction in recognition of this just principle. It provides the machinery and invites both parties to use it. What its practical effects may be time must determine. Upon its possibilities we are justified in passing this bill. It may be that it will never be invoked. I believe it will, however, and that when invoked we can depend upon the mighty power of the public opinion to make it effective.

Its operations must be limited. It can reach only a portion of the cases constantly arising. It may be that it is only a surface remedy at the best. But that consideration should not deter us from applying it. It may be that the foundation of our labor troubles lies deeper than can be fully remedied by mere arbitration of disputes between parties. If so, we should study what national policy and what national legislation will keep us from the old country conditions toward which we seem to be drifting. When that question is solved the labor problem will no longer vex us

---

Labor Arbitration.

SPEECH

OF

HON. J. RANDOLPH TUCKER,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 31, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of differences between common carriers engaged in interstate and Territorial transportation of property or passengers and their employés.

Mr. TUCKER said:

Mr. CHAIRMAN: The bill which has been perfected by the Committee of the Whole is liable to great and serious objections, and as a new departure in the legislation of this Government, and a dangerous infraction of the fundamental principles of the Constitution, it calls for a protest from every one who reverences the ancient policy of the Government guided by a strict adherence to the Constitution.

It is said that the bill is harmless. I confess it does not go far enough, if constitutional; but much too far, if it takes one step beyond the limits fixed by the Constitution. The truth is, that it may be said of this curious piece of proposed legislation that wherein it is not unconstitutional it is useless, and wherein it might possibly be useful it is unconstitutional.

It is unfashionable, I know, to stickle for the Constitution. It is an idea too prevalent that we have outgrown the written Constitution of our fathers, and that the will of the people expressed through the Government is the Constitution of our future. It is sometimes said that the British constitution has grown—why should not ours? The answer is obvious. The constitutional monarchy of England has been evolved by centuries of popular struggle with inherited prerogative; and Liberty has at last emerged from the precedents of its victories through the centuries, and has erected the trophies of its triumphs on every battlefield as at once the monuments and the muniments of its organized power. The freedom of England springs from its institutions, as organized forces in the mechanism of the government itself—and we have but embodied in our written Constitution the institutions of freedom our fathers brought with them to the New World—British liberty is institutional; American liberty is constitutional.

To violate the Constitution by usurping power is more disastrous to the public good than all the possible good the usurpation can promise to the people. When labor or capital, when private or personal interests seek to obtain a benefit through unconstitutional methods, they obtain it at the expense of the surest guaranty that any can have for right and justice by destroying the integrity of the Constitution as the safeguard of all.

Let me then examine this bill and test its validity. It proposes to settle differences or controversies arising between certain parties. The tribunal (as it is called in section 5) is a board of arbitration (as it is called in sections 1 and 2) composed of an arbitrator selected by each party, and a third selected by the two, with the powers of commissioners of the circuit courts of the United States as to subpœnaing and compelling attendance of witnesses, swearing them, preserving order at its sittings, and requiring the production of papers and writings. By referring to the Revised Statutes, we find that these commissioners are appointed by the circuit courts, and are clothed with quasi-judicial functions, with powers of admitting to bail (section 1014), holding to security for the peace (section 727), &c.

I do not mean to say that under the proper construction of this bill these arbitrators would have any power of the commissioners of courts,

except as to the subjects expressly named in the act. I cite these sections only to show the judicial nature of the powers. But this bill does authorize the board to compel the attendance of witnesses, as commissioners may do; and commissioners may subject witnesses to like penalty for refusal to attend, as courts may do. (Revised Statutes, sections 875, 4071–4074.) And, by section 725, the courts have full power to fine and imprison for contempt, disorder, and disobedience of any command.

Does not this bill, then, under the power to compel attendance and preserve order, give to this board the power to punish parties, witnesses, and officers by fine and imprisonment? How can this board require the production of books and papers without power to punish for disobedience? Without such power the bill is useless; with such power it is worse—it is illegal and unconstitutional.

It is true the bill reported by the committee contained the express power to the board of "punishing for contempt," and the Committee of the Whole has stricken out these words. But the bill, as it is, may well be construed to give this extraordinary power. Without it the investigation will be partial and ineffectual; but with such a power the bill is unconstitutional. This is clear for this reason: If these are private arbitrators, then no such power can be conferred on them; if public, then, as I shall show, they must be appointed according to the Constitution, and the powers conferred are unconstitutional.

These preliminary considerations lead me to look to the character of this arbitration and the nature of this board. The arbitration is as to subject-matter—a determination of "controversies or difficulties." Is this a legislative or judicial function? If it is a legislative function, then it belongs to Congress, for the Constitution provides that—

> All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives. (Constitution of the United States, article 1, section 1.)

All the legislative powers vested in Congress are granted by the Constitution; *e converso*, the powers not delegated to the United States by the Constitution are reserved. (Constitution of the United States, tenth amendment.) These two clauses shut Congress out from all legislative power not granted, and shut Congress in to all legislative power granted by the Consttution.

Look to another clause:

> The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish. (Constitution of the United States, article 3, section 1.)

Mark the words. The judicial power—the deciding function as to controversies and cases—is vested in the courts. No judicial power of the United States is vested in Congress, or the President, or anywhere else than in these courts.

This and similar language as to the executive power builds walls of impenetrable partition between the three departments and fix great gulfs, through and over which no man filling either can pass to the other. These stringent provisions realize Montesquieu's maxim that liberty lives in the separation of these functions, and despotism is born of their union.

But it may be asked, has Congress no power to create courts and give them jurisdiction? I reply it has power "to constitute tribunals inferior to the Supreme Court." (Constitution United States, article 1, section 8, clause 9.) And it has power, by implication from the language of the judicial clause just cited, "from time to time to ordain and establish inferior courts." And it has the power to fix the number of judges of Supreme Court, the number of districts and circuits, &c., and to declare what jurisdiction shall be exercised by the inferior courts. This is vested in Congress as a part of its legislative power by the comprehensive clause that Congress shall have power "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or office thereof." (Constitution of the United States, article 1, section 8, chapter 17.)

As it is necessary and proper for some authority to define the portion of jurisdiction which each of these courts shall exercise, the Constitution reposes that as a law power in Congress.

But we must be careful to note that Congress can not create judicial power, for all the judicial power of the United States is created by the Constitution. Nor can Congress grant any, for it has none to give, and can hold none. If asked, What, then, is the process by which jurisdictional power is vested in the courts? I answer, The Constitution fills the reservoir of judicial power. Congress creates legislative conduits from this only source to the inferior courts which Congress constitutes as receptacles for this power, and from which the order and peace and well-being of society are secured by the dispensation of justice under the law of the land. This absolute separation of the legislature from the judiciary is thus assured as essential to liberty and good government, and it is our duty to prevent all attempts to break down the partition wall between them.

Let me now call attention to the character of the functions vested in the board of arbitration by the bill before us. The Congress makes law, which is a rule, fixed and general, to govern the actions of those subject to it. The judiciary declares the law in its application to the individuals of society. The one makes, the other applies the law. The one prescribes the rule, the other adjudges and arbitrates upon the relations of parties according to the rule. The rights of men are determined by the courts under and in pursuance of law when controversies and differences arise between them.

Can Congress determine and decide upon such controversies and differences? Clearly not; for that is judicial power. It seems to me to be of the essence of the judicial power to decide upon a controversy or difference, involving conflicting claims of right, between man and man. To prescribe or define the rights arising from contract or relations between parties belongs to legislation. To decide upon a conflict of claim under this legislation between parties belongs to the judiciary.

Now, as Congress can not decide upon the controversy or difference when it arises, it can not create a legislative tribunal to do so. *Non dat qui non habet.* Hence, I propound the dilemma: this bill, in establishing this board of arbitration, either creates a legislative or a judicial tribunal. As Congress can not create a legislative tribunal to act for it in such cases, because this would be to exercise judicial functions, then it follows that this board, if constitutional, must be constituted as a quasi judicial tribunal—as a substitute for a court. Arbitration of a controversy between parties is a substitute for public judicial trial, and award is a substitute for a public judgment. If Congress can, therefore, constitute this board of arbitration, it can constitute a court for which the board is a substitute, and give it power to pronounce a judgment for which the award of the board is a substitute. If the Constitution gives Congress power to establish a board of voluntary arbitration, it can make it compulsory, or authorize either party to implead the other before an inferior court, established by it under the Constitution.

It seems to me perfectly clear, therefore, that the power proposed in this bill is in its essence a judicial power, and if Congress can pass this bill it could vest in a circuit or district court jurisdiction to decide upon the controversies or differences referred to in the bill.

The contention then comes up in this shape: If the function vested in this board is judicial and can be vested in a court by Congress with equal right, as in the board, then let us answer this inquiry: Are the controversies and differences mentioned in this bill such as, under the judicial power conferred by the Constitution, can be exercised by a court of the United States? Could such a court, under the Constitution, try such controversies or differences?

There is a twofold jurisdiction created for the judiciary by the Constitution:

First. Cases arising out of their subject-matter, no matter who are the parties.

Second. Cases arising out of the character of the parties, no matter what the subject-matter.

Test the controversies and differences named in this bill under these two grounds of jurisdiction:

First. Does the subject-matter of these controversies give constitutional jurisdiction to a Federal court?

The subject-matter which gives jurisdiction to the Federal courts must be either a case arising under the Constitution, a law of Congress, or a treaty; or a case of admiralty or maritime jurisdiction; or a case of parties claiming lands under grants of different States. (Constitution United States, Article III, section 2.)

I need hardly say the controversy named in the bill does not arise under the "general-welfare" clause, for this clause does not grant a new power, but defines the purpose of the revenue power. Indeed, it is not claimed to be a subject-matter relating to any of those just named, except it comes under the power of Congress to regulate commerce among the States. But it must be noted, first, that no law of Congress has regulated commerce in respect to any such controversies. It does not arise, therefore, under any law of Congress.

But does the controversy arise under interstate commerce as granted by the Constitution to Congress? Not at all. The controversy is described as arising between the railroad companies engaged in interstate commerce and their employés, and to be such as may hinder, impede, obstruct, interrupt, or affect such transportation, &c.

The power to regulate commerce involves the power to regulate transportation and intercourse between States. It regulates the act of transportation as an act of commerce, but it can not regulate the subject of commerce; it may regulate the mode of transporting wheat, but can not regulate the production of wheat or the wheat itself. The articles or products which commerce moves is subject to State police power; the transportation is commerce, and is subject to the power of Congress.

The acts of parties in transporting from State to State may be regulated by Congress so as not to hinder commerce; but the contracts of such parties, *inter se*—their relations as employers and employés—are not subject to Congressional power, but to State authority. Because the Baltimore and Ohio Railroad Company carries flour and passengers from Maryland to Missouri, which is interstate commerce, it does not follow that the contract of employment in Baltimore between the company and its ticket agent there is a subject for regulation by Congress, or for the jurisdiction of the Federal courts. The contract and relation between the company and its employé are subjects for State regulation and for the jurisdiction of State courts. The conduct of company

and employés in the act of transportation may be under the power of Congress; but whether the contract is valid—what it means, whether the wages are fair, or the hours of labor are just, or the company or its officers are harsh, cruel, or unjust, or discharge an employé against right—these are questions collateral to the commerce and transportation, and which can not under the power to regulate commerce be controlled by Congress or be adjudicated by Federal courts.

The controversies described in this bill, between parties who are engaged in the business of interstate commerce, are personal and are collateral to the business, and the jurisdiction as to them must therefore be determined by the character of the parties and not by the business done under the contracts and relations of such parties. Any other construction of this clause of the Constitution would make the jurisdiction of the Federal courts unlimited instead of being circumscribed by well-defined grants of authority. The relations between the company and every employé in the depot in Baltimore would, by such an interpretation, be withdrawn from State courts to swell the already too much swollen dockets of the Federal courts.

But if the subject-matter of commerce does not give this jurisdiction, how is it as to parties? The Constitution gives no jurisdiction as to private persons to the Federal courts, except when the case arises between citizens of different States.

This bill makes no such distinction; it applies to all controversies between the company and its employés. The company is a citizen of the State which chartered it. Between it and the employés in that State the Federal courts have no jurisdiction. If they are of different States, the Federal courts are open and this law is unnecessary.

But what is meant by controversies? The debate shows, and the events of our day show, that they are controversies which do not take the form of suits or cases in law or equity, but controversies which concern the general policy of the company, relating not to matters of rights under contracts, but to the contracts themselves. Can Congress or can courts make contracts between parties without or against their mutual consent? If a strike occurs because a company discharge one man, or he violates the order of the company, shall the Federal court arraign the company or the man, and administer lessons of proper conduct, and enforce them? Then will the judicial power become despotic and supreme over laborers and company, and freemen become slaves of the courts and the judges.

I come back to my original proposition. As far as these controversies may be subjects of judicial cognizance the bill is without the sanction of and against the Constitution in giving jurisdiction to the Federal courts. In so far as they are controversies not of judicial cognizance they are outside of the judicial power, nor has Congress any control over them, but only the States. In any and every aspect the bill is extra-constitutional.

But I take another ground. The arbitrators are selected by private will, and yet are, as I have shown, clothed with quasi-judicial functions of commissioners of the courts. These commissioners exercise the powers of public officers because appointed by the courts. These arbitrators are really officers of the law, clothed with its powers, and very dangerous ones, and yet are not appointed as the Constitution prescribes, by the President and Senate, or by the President alone, or by a head of Department, or by a court. To whom are they responsible for their official misuse or abuse of power? They are peripatetic functionaries, paid out of the Treasury, exercising judicial functions, and yet are appointed without legal sanction and may do as they please, without the power of any department of Government to check or control them. It can not be said that this is a private arbitration. It is a public board—an official board.

In the first section, twenty-first and twenty-second and twenty-third lines, this bill declares that these persons "shall be and are hereby created and constituted a board of arbitration, with the duties, powers, and privileges hereinafter set forth." Constituted and created a Government board, with the powers of commissioners of courts, and yet holding office by private appointment and without official responsibility to the Government which created and pays them!

And, after all, what are they to do? Receive their pay, spend $1,000 a case, lord it over the parties before it, and render an opinion without sanction and a judgment without execution? "Oh, most lame and impotent conclusion!" The board shall have a clerk—like those of a court—a stenographer, and may command the services of marshals—all to receive fees for their services, and all these private parties to be litigants at the public expense.

I venture to say whatever may be said of its other characteristics that this bill is entirely original. As it has no precedent, let it be none. Like Melchisedec without parentage, let it die without progeny!

I am willing to concede that arbitration, the peaceful solution of these troubles, is much to be desired, and is a beneficent step in the right direction. I do not oppose the principle, but the means by which it is to be made operative. Let the States take charge of these arbitrations. This Government has now more to do than it does or can do well. To amplify its authority is to paralyze its efficiency. Within its constitutional limits it has ample field for laudable and useful ambition. By reaching out to do more, it fails to do what its duty requires, and loads its calendars with the unfinished business of the people. It seeks to do what it ought not to do, and thus fails to do what it ought to do.

But I deprecate this measure because it is the beginning of an unseen ending. If this usurped power is to furnish a precedent, all the labor troubles of railroads and the fields, on the sea and the land, will be dealt with here—dealt with inefficiently and, therefore, with injustice to the parties.

I believe the courts, State and Federal, are or may be clothed with ample power to settle these strifes. We can prevent them by tinkering less with industries, and currency, and the relations of men, all of which move under the impulse of laws too subtle and inscrutable for human intervention to do any good, or to do anything but harm by its unwisdom.

The body-politic is a much-to-be-pitied patient. The doctors have brought him to a low state, and would kill him but for the inherent and irrepressible vitality of the young giant Republic, which only asks to be free in order to be great and vigorous and powerful. "Throw physic to the dogs." Let the country be rid of your panaceas and your quacks. Let labor get its fair share of profits by being partner in the business which makes them; lessen taxation, and you will enforce economy and lighten burdens; quit your legislation which enables a few men to heap up ill-gotten gains, wrung from the hard earnings of the unsuspecting many; above all, cling to the Constitution as the mariner to the plank in the shipwreck, the *tabula in naufragio*, and, my word for it, the courts and Congress and the President and the governments of the States under our admirably balanced system of government, strictly adhered to, will achieve all of possible good to all men, to all classes, to all sections of our Union, without resort to doubtful expedients and to unauthorized legislation, which impair and will destroy this republic of republics by overthrowing the Constitution, without which it can not survive, but under which its life will be perpetuated as a glory and blessing to mankind.

The Protection of American Labor.

SPEECH

OF

HON. NELSON DINGLEY, JR.,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 2, 1886,

On the bill (H. R. 7479) to provide for the speedy settlement of controversies and differences between common carriers engaged in interstate and Territorial transportation of property or passengers and their employés.

Mr. DINGLEY said:

Mr. CHAIRMAN: This bill is reported by the Committee on Labor for the purpose of promoting friendly conference and arbitration as a means of settling differences between employers and employés. It applies only to interstate railroads over which Congress has jurisdiction. But the committee inform us, however, that their hope is that such an expression by Congress in favor of arbitration will result in similar legislation by States, and especially in directing public attention to friendly methods of settling labor disputes.

This bill provides a statutory method by which a board of arbitrators may be designated—one member by each side, and a third by the first two—who are to investigate the facts, and lay the results of the investigation before the parties concerned and the public, with their conclusions as to what ought to be done.

Neither the appointment of arbitrators nor the acceptance of the award is to be compulsory. The Committee on Labor inform us that they have found it impracticable to devise means to enforce either the submission to arbitration or the acceptance of any award by penalties, because of the fact that it would be so impossible to do this in cases where thousands of workmen are concerned, who could not and ought not to be compelled to do anything which they were not willing to do, and so difficult to do it where employers resisted its enforcement. The committee, therefore, have proceeded on the assumption that all that can be done is to provide a statutory method of creating boards of arbitration, and to leave public sentiment to operate to bring both parties in a dispute to accept this amicable method of solving differences between such railroads as are within the jurisdiction of Congress, where the parties themselves can not adjust them.

Unquestionably the moral effect of such an enactment will be in the right direction. I have great faith in the power of public opinion to bring about a settlement of differences between employers and employés when all the facts are publicly known and the responsibility of each clearly established. Whenever this responsibility is fixed beyond serious dispute, and whenever it is made clear what justice demands in such controversies, public sentiment will usually bring about the right result. This is not mere theory, but has been proved in a multitude of cases. Massachusetts and several other States have for many years authorized their railroad commissioners to investigate and make public report on differences between railroads and shippers of freight, without any power

to enforce their awards. Yet in every instance thus far, an award of the commissioners has been accepted by both railroads and shippers, because public sentiment demanded it.

This bill provides by statute a practicable tribunal for the investigation of disputed facts and the fixing of responsibility. I look with satisfaction upon the tendency to substitute amicable conference and arbitration to bring about the settlement of labor disputes, for strikes and lockouts, too often accompanied with strife and disorder, cause great injury to both capital and labor. When peaceful methods of solving differences are substituted for strikes and lockouts mischievous men who thrive only when there is a state of antagonism between employers and employés, and whose object is to create and keep up bitter feeling between labor and capital, will find their occupation gone.

While I recognize the fact that those moral and educational influences and economic laws which control social and business affairs, must be mainly relied upon to remedy the difficulties in the way of the right solution of the labor problem, yet there are many directions in which wise laws can co-operate with and aid these influences, and ameliorate the condition of that large proportion of our population who depend upon wages for a livelihood. Wherever experience shall show that legislation can aid in promoting the welfare of the wage-worker it should be had. As under our system of government local affairs are under the jurisdiction of State Legislatures, the larger part of such legislation is committed to them. There are, however, some directions in which Congress may legislate so as to create conditions favorable to maintaining liberal wages.

IMPORTANCE OF LIBERAL WAGES.

I take it for granted that all right-minded persons concede that it is the duty of the American Republic to legislate in such a way as to exercise the most favorable influence on the maintenance of liberal wages in this country. This should be done for the reason that the greatest prosperity of all our people is best attained when our wage-workers receive the highest practicable wages. According to the census of 1880, there were at that time 17,392,099 persons engaged in occupations in the United States. Of this number 7,907,605 were engaged in agriculture, 4,074,238 in personal or professional services, 1,810,256 in trade and transportation, and 3,837,112 in manufacturing and mechanical pursuits.

At least three million of the last division, one million of the persons engaged in transportation and trade, three million of those engaged in Federal services, and two million of those engaged in agriculture—in all, nine million of persons—were wage-workers. In other words, at least half of the persons engaged in occupations in this country, making, with their families, twenty-five million of inhabitants, or half the population of the country, were dependent mainly upon their daily wages for the means of support.

It will be seen, Mr. Chairman, that when the amount of wages received by half our population absolutely determines their ability to purchase the products of the farm, the mill, and the workshop, every industry in the country is directly interested in having wages maintained at the highest practicable point. When wages are liberal and the avenues of employment are widening, demand for products from wage-workers is large and increasing, and every interest in the community feels the tide of prosperity. On the other hand, when wages are reduced and the avenues of employment are narrowing, this demand declines, underconsumption ensues, a glut of products and falling prices follow, and hard times are felt in every direction. Hence a general reduction of wages always increases business distress, and, instead of affording relief from so-called overproduction, only intensifies the stagnation by diminishing the purchases and consumption of half the people.

But this is not the highest reason for the maintenance of liberal wages. We have established on this continent a form of government designed to make the most of every citizen—a government in which every man participates through the ballot-box. Now, in order to succeed in these objects, it is essential that wage-workers should receive wages which will enable them to live comfortably, provide their families with all those surroundings that elevate and improve, and especially to educate their children. The low wages which the laborer earns in European countries makes it almost impossible for the wage-workers of those countries to rise to the standard of manhood essential to the maintenance of a government of and by the people.

Therefore, Mr. Chairman, I say to you and to this House that the problem of maintaining liberal wages in this country by every expedient that can be devised is one which lies at the foundation of not only our national well-being, but also of the preservation of our institutions.

CONVICT LABOR.

Mr. Chairman, what I have said brings me to the question of the injurious influence of the competition of convicts and imported contract labor with the honest, sturdy, and industrious wage-workers who compose one-half of our people, a subject with which a bill introduced by myself and favorably reported by the Labor Committee attempts to deal.

I do not wish to be understood as taking the ground that convicts in our prisons and jails should be maintained in idleness at public expense. The intelligent exponents of the wage-workers of the country favor nothing of this kind. They know that the ends of imprisonment and the public interests forbid this. But they ask, and they ask with justice, that convict labor shall be employed in such a way as not to diminish wages and not to interfere with the employment of honest citizens in a greater degree than the labor of the same men would if they were outside of prison walls.

There is no difficulty in doing this by having prison labor employed within prison walls by the State or Government in the making of articles to be sold in open market at the full prices required for similar articles made by free labor outside. But when convict labor is let at low rates to contractors (and the rates must be low when the labor of the convicts is let to outsiders) these contractors are enabled to injuriously compete with other persons employing honest labor outside. One inevitable tendency of such competition is not only to take away from honest labor work which would otherwise go to it, but also and most injuriously to reduce wages.

For the Government, whose very existence depends upon the maintenance of a high standard of citizenship attainable only through liberal wages, to allow contractors employing convict labor at starvation wages to compete for Government work, is grave injustice; nay, more, it is suicide. I am sure that every true citizen felt that a grave wrong had been done the honest, hard-working granite-cutters of the country when they learned a few months ago that contracts for public buildings at Peoria and Buffalo had been given to contractors who proposed to do their stone work with prison convicts costing them but 60 cents a day. Congress can not too soon make a repetition of this wrong impossible by passing the bill forbidding the consideration of a proposal from a contractor employing convict or imported labor, as well as the bill prohibiting such use of convicts under United States laws.

IMPORTED CONTRACT LABOR.

Mr. Chairman, while it has been the policy of the Government from its foundation to the present time to welcome industrious immigrants who come here to improve their condition, to make a home among our people and adapt themselves to American conditions, and demand and receive American wages, a policy already carried further than public safety justifies, yet this policy does not by any means imply that we are to receive the outcasts and paupers of other nations or allow the importation of cheap contract labor. The inevitable effect of such importations, no matter of what nationality, is to introduce into our country men unfit to become citizens, men who do not come here to adapt themselves to our conditions, but mere serfs bound by contracts made in foreign countries at foreign wages and under foreign conditions, and to degrade American labor.

When the bill to prohibit the importation of contract labor was under consideration in the House June 19, 1884, in advocating its passage I said:

While many of the provisions of this bill as it now stands are imperfect, yet the evil against which it is aimed is, to my mind, one which demands legislation. Voluntary immigration of foreigners, who come here to improve their condition and make this country their permanent home, immigration of men who land on our shores as freemen, at liberty to avail themselves of American opportunities and American wages, has always been considered acceptable. Such immigration does not interfere with our protective system, which is designed to discourage the importation of the products of the cheaper labor of Europe and protect American industry and labor, because whenever a voluntary immigrant comes here free to make his own engagements on arrival and to become American in everything, he accepts not European but American wages and becomes identified with American interests.

The evil against which this measure is directed is not voluntary immigration, but the importation of foreign laborers, usually in large companies, on contracts entered into abroad under foreign conditions and at foreign wages. It is the importation of men who come here without freedom of action after they land, to serve under overseers who control their movements for a definite job or time, without an expectation of making a home here, and generally without wife or family.

Such an importation of contract labor is contrary to a sound public policy, contrary to our ideas of freedom, and contrary to the best interests of our country. Into the State which I have the honor to represent in part on this floor there was imported last year several hundred Italian laborers to construct a railroad, at wages far below the American standard. They came not to become citizens, not to live as American laborers live, not to add their earnings to the wealth of the country, but they came as Italians, lived as Italian laborers of the lower sort, disturbed the peace and quiet of our State during their brief stay, and then left to return to Italy or to be contracted elsewhere by their overseer. It makes no difference what the nationality of such servile laborers may be, it is contrary to the best interests of our country to encourage or allow their importation under contracts which render them no longer freemen.

Observation has only strengthened my conviction of the wisdom of the law to prohibit the importation of contract labor, and of the importance of making its provisions and penalties so strong that no one can import into this country such cheap labor to compete with our own wage-workers. Without such legislation, the constant struggle going on between producers and manufacturers in this country to secure a larger market for their products by cheapening the cost of production will lead some to take advantage of the cheap labor which unprincipled contractors are ready to send over here at European wages.

Mr. Chairman, no thoughtful citizen can desire to see the wage-workers of the United States brought to the condition that starvation wages have brought such workers in Europe. I have myself seen in the country districts of France ragged women performing the most menial and laborious work in the fields for from 10 cents to 20 cents per

day. I have seen skilled workmen in French and Belgian mills laboring for 40 cents per day. Even in England I have seen operatives in woolen, cotton, and iron industries working for from half to two-thirds what they obtain in this country. And all this, too, when the cost of living as a whole, provided the same scale of living existed, was only 6 per cent. more in this country than in Europe. I have seen hardy peasants in Ireland laboring in the fields from early morn till dewy eve for 25 cents per day.

How scanty must be the food and clothing of such men! How destitute the hovels in which they live! How narrow their opportunities for improving themselves and educating their children! How unfitted to exercise the duties and take upon themselves the responsibilities of self-government! How inconsiderable the home market created by wage-workers who have so little to spend!

Oh, no! We must not allow such a condition of things to creep into this country; for if it should, then indeed would free government be in grave danger.

A PROTECTIVE TARIFF NECESSARY TO MAINTAIN WAGES.

It must be obvious, however, that no restrictions on pauper immigration, no prohibition of the importation of contract labor, no organization of labor to prevent competition between laborers from forcing down wages, no plan of arbitration, no plan of co-operation or profit-sharing—none nor all of these desirable things can prevent the decline of wages in this country to European starvation wages, if we admit the products of this labor, manufactured on European soil and under European conditions, to the markets of this country free of duty, or at so low rates of duty as to fail to bridge over the difference of cost in the two countries arising mainly from our higher wages.

I need not, Mr. Chairman, dwell on this proposition. Nothing can be clearer than that the possibility of long maintaining much higher wages in this country than in Europe depends upon whether we protect our own industries and labor by imposing a duty upon the imported products of similar European industries. The chief element in the cost of any manufactured article is the labor which has entered into it all along the line from the materials in a state of nature to the completed product. Take iron for example. The ore in the ground is of very little value. It is labor in digging the ore, labor in converting the ore into pig-iron, and labor in converting the pig-iron into bar-iron and steel, which make the cost. Nothing in it is really raw material except the ore before it was taken from the ground. What makes this iron or steel cost more in this country than in England is almost entirely due to the fact that the same quantity of labor applied to digging the ore, making the ore into pig, and the pig into bar iron and steel, costs from 60 to 100 per cent. more in this country than in England.

Is it not obvious that if English iron is admitted to this country free of duty or at a low rate of duty that it must take the place of American iron in our markets, unless American manufacturers can obtain their labor as low as the English manufacturers?

Take any other manufacturing industry, cotton, leather, or wood, and the same result would follow if protective duties should be removed. The manufacturer has no other fund from which to pay wages than the amount for which he can sell his product. If the selling price of his product is reduced 25 per cent. by the admission of similar foreign-made goods at a lower rate of duty, then his fund from which to pay wages is reduced 25 per cent. and he must pay so much the less wages, or else give up his business and let the foreign manufacturer take our market, simply because no one will continue an industry at a loss. So long as there is a profit then there is an opportunity for labor to make use of every legitimate means to secure its fair share of that profit. When the profit vanishes the opportunity for labor to increase its earnings is gone.

No one has more clearly stated the economic truth that a protective tariff is indispensable to maintain wages at a higher standard in the United States than in Europe than did Hon. ABRAM S. HEWITT in his oft-quoted letter of January 27, 1870. In this letter Mr. HEWITT said:

> The only reason why we pay more for American rails is because we pay a higher rate for the labor which is required for their manufacture, but for no greater quantity of labor. Free trade will simply reduce the wages of labor to the foreign standard, which will enable us to sell our rails in competition with foreign rails. But as a matter of course, the ability of the laborer to consume will be reduced, and a serious loss will be inflicted on commerce, general industry, and the business of the railways especially. The only reason why a tariff is necessary is to supply the laborer with such wages as will enable him to travel and consume not merely the necessaries, but some of the luxuries of modern civilization. Besides, if we have free trade, we can not expect to procure our supplies from abroad by increased shipments of grain, for already the European markets take from us all that they require, and no amount of purchase of goods from them will induce them to buy more food than they need, and which they now take as a matter of necessity.
>
> Faithfully, yours,
>
> ABRAM S. HEWITT.

Although Mr. Hewitt has changed his attitude on this question, yet he has never successfully answered the arguments presented in this letter.

In a newspaper report of recent arguments made by a delegation of laborers, mainly Knights of Labor, who appeared before the Ways and Means Committee of this House to protest against the bill to place manufactured lumber, potatoes, hay, &c., on the free-list, and to reduce duties on manufactured articles, I find the case clearly stated as follows:

Roger Evans, a sturdy iron-worker of Ohio, was the first speaker. He said that even with the present duties iron of the value of $33,610,093 was imported last year. If this iron had been made in this country there would have been work for fifty thousand more laborers. Reduce that duty as proposed by Mr. MORRISON and iron of the value of more than $100,000,000 would be imported, and this would take away employment from more than fifty thousand iron-workers now having employment, and would reduce the wages of all engaged in iron industries. What is wanted, he said, is a higher rather than a lower tariff, for as duties are reduced a larger quantity of iron made by the cheaper labor of Europe is enabled to find a market here, displace domestic iron, deprive our own laborers of work, and reduce their wages.

If, added Mr. Evans, it were not desirable to maintain higher wages here than the starvation rates which prevail in Europe, then we could admit foreign-made goods free. But the American laborer should live better and have means to improve himself and educate his children. If there were no duties imposed on foreign-made goods, then they would command our markets and prevent the making of such goods here, unless our wages should be cut down to the foreign standard. The tariff question, said Mr. Evans, is emphatically a labor question, and intelligent workingmen understand it and will snow under Congressmen who vote to reduce duties and thereby benefit foreign producers. Men may here and there favor a reduction of duties or free trade and claim at the same time to be friends of labor, but the great body of the workingmen can not be deceived.

A free-trade member of the committee interrupted Mr. Evans, saying: "We are striving to pass a tariff law that will make it unnecessary for your employers to import pauper labor."

"Yes," replied Mr. Evans, "I understand that you are trying to frame a law that will flood our markets with the products of the pauper labor of Europe, and thus make paupers of us. Foreign-made goods can be imported in any quantity at any time, at little cost, except so far as the duties imposed on them here prevent. Take off or reduce these duties, and we laborers are entirely at the mercy of pauper labor in Europe working under European conditions. Inevitably we must come down to their standard of wages and living if their products are to come in here free of duty or at low duties to compete with the goods made by us. The most essential thing to do is to impose high duties on these foreign-made goods when they come here to take the bread from our labor. Then, in addition, and as a supplement to this, we ask for laws prohibiting the importation of foreign contract labor. The last Congress passed such a law, and we propose to ask this Congress to make the law more efficient.

Mr. Jones, a Chicago workingman, then addressed the committee, saying that the workingmen are coming to understand that high duties on articles produced abroad which come into competition with articles made here are necessary to secure liberal wages in this country. He added: "The politician who tells us that a tariff has nothing to do with wages in this country either deceives himself or attempts to deceive others. Workingmen know from experience that free trade or low duties on any articles simply cause more of those articles to be imported to take the place of similar articles made here and thus turning workingmen out of employment and tend to reduce the wages of the labor employed in making such articles in this country. It is nonsense for any politician to pretend that a considerable reduction of the duty on iron, woolen, cotton, or leather goods, for example, will not bring such foreign-made goods into our markets in larger quantities to take the place of our own goods. In the struggle of our manufacturers to compete with goods made abroad by cheaper labor it is inevitable that wages will be reduced or the business given up."

John Jarrett, of Pittsburgh, president of the great amalgamated labor organizations, made the closing address in behalf of the workingmen of the country, and was listened to with much interest. He said that he desired to emphasize the fact that the high duties on imported goods are indispensable to maintain liberal wages in this country. Any man claiming to be the friend of labor who pretends otherwise occupies a false position, and is not what he claims to be. It is well known that wages in the United States are from 38 to 100 per cent. higher than in England—varying in different industries according to the skill required. The average is shown to be 70 per cent. higher here than in England. This is true to-day, even with the great depression of industries and reduction of wages here, as well as abroad.

It needs no argument, said Mr. Jarrett, to make it clear that if we had no tariff duties on the manufactured products of England's cheaper labor when imported in this country, then we could not make such articles here in competition with those made in England and imported into this country, unless the wages of our labor should be brought down to the English standard. This is so plain that any man can see it.

But it is said that it is not proposed to place foreign-made goods on the free-list, but simply to reduce duties.

Yes, replied Mr. Jarrett; but it is proposed to place on the free-list imported manufactured lumber, potato starch, iron ore, hay, potatoes, oats, and many other articles into which labor enters. So far this is free trade as to the laborers who make or produce those articles, and subjects them to direct Canadian competition.

But it is also proposed to reduce the duties on almost all other manufactured goods, and just to the extent that duties are reduced the importation of foreign-made goods is increased, our own manufactures curtailed, and the wages and opportunities of labor reduced in this country. There can be no doubt of this. If with the present duties foreign manufacturers were last year able to send to and sell in this country iron goods to the value of thirty-four millions, leather and leather manufactures to the value of ten millions, glass manufactures to the value of six millions, hats, &c., to the value of four and a half millions, cotton manufactures to the value of twenty-seven millions, woolen manufactures to the value of thirty-five millions, and manufactures of wood to the value of nine millions, it is evident that the duties on these goods are already dangerously low, and ought to be higher instead of lower; and that any considerable reduction of them, as proposed, will double the importations and displace American labor and reduce our wages.

If, said Mr. Jarrett, we had made in this country the manufactured goods imported from abroad last year, five hundred thousand of our laborers who were out of employment would have had remunerative work.

To further reduce wages, as proposed by the bill proposed, would add another corps to the army of unemployed and further reduce wages.

Senator FRYE, of Maine, recently received a letter from a friend who was appointed a consul in a European city a few months ago, and who went abroad tinctured with the idea prevalent with his political associates that our tariff duties should be abolished or largely reduced, and that wages abroad, estimated by purchasing power, are nearly as large as in this country. This gentleman, after investigating the actual situation abroad, frankly writes to Senator FRYE:

> Since coming here I have examined and studied the tariff question carefully, and have come to the conclusion all honest men must come to who will come here with eyes open willing to see and learn, and that is, we should have a higher instead of a lower tariff. Labor here [where the consul is located] is fearfully degraded, and the people work for nothing and board themselves. You can

hire men for 24 cents a day to do what would cost $1 per day in the States. We keep house, hire a good cook for $4.80 a month, a nurse who takes care of the children night and day, makes beds, sweeps, &c., for 24 cents a day and boards herself, a very smart man, who speaks German and English well, works hard from early morning till late at night for 48 cents per day and boards himself.

In Italy and Austria labor is still less. In a manufacturing business with which I am familiar, and into which labor largely enters, as you know, the cost here is from 60 to 75 per cent. less than in the United States. There is a concern near me employing two thousand people in the manufacture of corsets, all of which are exported to the United States, who pay their help almost nothing, not nearly one-half as much as we pay in the United States. The policy in our country with many seems to be to reduce the tariff, while here and in Austria it is sought to increase it. England is suffering terribly from the low price of German goods, and will have to make tariff laws soon to protect her labor. I know many of my party friends favor free trade, or an approach of it. I can never agree with them, and when I go home shall sound the alarm as best I can. Free trade, or close to it, will ruin the industries the reduction strikes.

The majority of the Shipping Committee have reported to the House a bill to allow the importation and American registry of completed foreign-built vessels free of duty. The majority report admits that the object of this is to have our vessels built in British yards because they can be built cheaper there; and the only reason that they can be built cheaper there is that the labor which digs the ore, makes the iron, and transforms it into a ship commands lower wages in England than here.

If such a bill should become a law the thousands of mechanics who have found employment in our ship-yards would have no work to do unless they were prepared to labor at the diminished wages obtained in the ship-yards of Great Britain. Can there be any doubt in this case that the protection now given to American ship-building furnishes employment to thousands of skilled workmen at much higher wages than are paid in England? Of what use would any plans of co-operation, profit-sharing, or labor organization be to skilled workmen in ship-yards if the bill to admit foreign-built ships free of duty should pass?

The majority of the Ways and Means Committee has agreed to report a bill allowing the importation of all kinds of Canadian fish free of duty. Is there any person interested in fishing vessels, is there any fisherman who does not see that the passage of that bill would be a serious injury to the hardy men who brave the dangers of the deep?

The same committee has agreed to report a bill to admit foreign-grown wool and Canadian manufactured lumber free of duty. Is there any farmer or any farm laborer or any employé in lumber-mills who can not see that the abrogation of the present duties on imported wool and Canadian manufactured lumber will affect them injuriously?

The same committee has reported a bill to reduce the duties on cotton and woolen goods. Can any one fail to see that such reductions of duty will give an opportunity for increased importations of foreign-made goods to take the place of goods made in this country by our own laborers, and thus diminish the avenues of employment here and tend to reduce wages?

Can any laboring man fail to see that a protective tariff is essential if we would maintain wages in this country at a higher standard than in Europe?

It must be borne in mind that notwithstanding some occupations, like carpenters, masons, &c., are protected against direct European competition by the fact that foreign-built houses can not be imported, and some other occupations are protected by other natural conditions, yet the tariff protection of such occupations as would be subjected to direct competition from imported goods if a sufficient duty were not imposed upon such articles, is as necessary to maintain wages in the former employments as in the latter. Wages in any community will equalize themselves in all pursuits with reference to the skill required in each employment, for the reason that workmen easily pass from one occupation to another. When manufacturing industries are not carried on to a considerable extent in any country, workingmen crowd into agriculture, building trades, and other occupations, and force down wages in these pursuits. Wherever manufacturing industries thrive the farmer finds the best market and highest prices, and the mechanic the widest employment and most liberal wages.

Investigation will develop the fact that the wages of not only mechanics, but also of farm laborers, are lowest in those States in which there are few manufacturing industries; and that wages rise as such industries are established and developed.

Mr. Dodge, the Statistician of the Department of Agriculture, shows in a recent report that in those States of the Union in which manufacturing industries have been most extended the wages of farm laborers average $25 per month, including board; in the States where these industries are much less extended the wages of farm laborers average $19.50 per month; and in the six States which are destitute of manufacturing industries the wages of farm laborers average only $13.20 per month. And it is noticeable also that in these three classes of States the wages of mechanics and all other wage-workers show substantially the same relative differences.

These facts show that the wages of mechanics and even of farm laborers are increased by the establishment, or kept down by the absence, of manufacturing industries, and therefore that the protective policy which encourages such industries tends to improve wages in all occupations.

Mr. Chairman, regarding, as I do, the maintenance of the highest practicable wages essential to the prosperity of all interests in this country and indispensable to the preservation of our free institutions, I earnestly favor the maintenance of such a protective tariff as will hold American markets for the products of our own industries and prevent the reduction of wages which must follow the free admission of the products of the cheaper labor of Europe. To this should be added the prohibition of imported contract labor by such penalties as may be necessary to accomplish the purpose. Then every acre of the public land should be reserved for settlement under the homestead law by *bona fide* settlers who desire to make homes for themselves and their families. Whatever other measures may tend to maintain liberal wages should also be enacted, for the highest prosperity of the nation can be secured only as the best interests of the wage-workers of the country are justly protected.

Silver Coinage.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 20, 1886,

On the bill (H. R. 5690) for the free coinage of silver, and for other purposes.

Mr. OATES said:

Mr. SPEAKER: The discussion of silver coinage and its incidents has been so extensive and has taken such a wide range that there is but little if anything of interest to be added. I shall not, sir, attempt to enter the domain of speculation or prophecy or the equally fertile and uncertain field of statistics, in either of which our casuistical statesmen find full authority for diametrically opposite conclusions on this or almost any other complicated question.

My purpose is merely to give expression to the result of my study and reflection upon a subject about which so much has been said. I believe that the existing silver coinage act, known as the Bland law, is a most unscientific and illogical measure, and never could have been intended to be permanent, but a temporary expedient only. It was necessary and a good measure when passed; it has and is now subserving a good purpose, though it is clear to my mind that at no very distant day other legislation will be substituted for it. I am a bimetallist, Mr. Speaker, and would regard it as a cruel injustice, if not a crime, against the debtor class of the people of the United States to demonetize silver, and I am glad, sir, to believe that very few, if any, of the members of this House would sanction it.

I believe that legislation is necessary to give silver a fair chance and maintain it as good, honest money. I will not, however, vote to repeal or suspend the Bland law until such legislation as meets my approval is secured. We have gold coin, silver coin, gold certificates, silver certificates, greenbacks, and national-bank notes—six different kinds of money. All should be maintained at an equal standard of value. All should have an equal purchasing power.

A difference in the purchasing power—the debt-paying capacity—ought not to exist, and while it does not exist at present, notwithstanding the difference in bullion value of a gold dollar and a silver dollar, how long will this enforced equality continue? How long can this continue with the existing difference in the bullion value of a gold dollar and a silver dollar? The statutes of the most powerful nations can suspend only for a limited time the laws of trade. They will, like the suppressed forces of nature, soon resume their sway.

The free coinage of metal is *per se* right, but the bill under consideration continues the standard at 412½ grains of silver to the dollar and gives the present large profits of the Government or seigniorage to the bullion-owner, while there is no security against an influx of foreign silver bullion. Looking also to the attitude of the Latin Union upon silver, I do not think that we can take the risk of free coinage at present, and I shall therefore vote against it.

But why should we have any trouble about our coinage? There is no necessity for a continuance of the coinage of standard silver dollars. Provide for the issuance of bullion certificates based on both gold and silver bullion at their actual value, not in New York alone, but in London, in Paris, in the markets of the world, to be ascertained from the average market value during a given period within each year, and let the issue run from one dollar upward. Why would not such a currency, redeemable in either gold or silver at the option of the Government, be the best in the world? None could be more honest, more convenient, or on a firmer basis.

The distinction between gold and silver money so far as the people are concerned would be stricken down. It would be not only good money this year and the next, but twenty years hence it would largely take the place of our national-bank circulation, which can not subsist longer than the date of redemption of the 4 per cent. bonds, which mature in 1907.

I believe, sir, that by wise legislation and faithful administration we

can by that date pay all of the national debt, the national banking system can be dispensed with, and an ample amount of currency be secured based upon deposited bullion, the coined money we now have, with such additions as the necessities of the Government may require of subsidiary coin, without producing any stringency on the one hand or plethora on the other, or in any wise disturbing the business interests of the country. I would not disturb the present legal-tender quality of silver dollars already coined, but would declare the trade-dollar, which contains 7½ cents more of pure silver but is at a discount, to be a legal tender. The last section in such a bill should repeal or suspend the existing silver-dollar coinage law. But, sir, I will not vote for such repeal or suspension unless it is preceded or accompanied by some such legislation as I have indicated.

I am not an inflationist. I do not believe in fiat money. I have no respect for the absurd dogma of the Supreme Court that Congress has power to make anything a legal tender because not prohibited by the Constitution from so doing. I believe in gold and silver, the money of the Constitution, and paper convertible on demand of the holder. I desire to see the volume of money increased to meet the annually increasing population and commerce of the country, but no irredeemable issues. I want nothing but good, honest money. Paper money I want in great abundance, but convertible into coin, or its equivalent in bullion, on demand of the holder. If any loss should be sustained on the bullion in consequence of the fluctuation in price, the Government can stand it better than the poor laboring people of the country.

For the Silver Dollar and its Free Coinage.

SPEECH

OF

HON. JOHN W. DANIEL,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 7, 1886.

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes—

Mr. DANIEL said:

Mr. SPEAKER: Before me is a silver legal-tender dollar of the United States. It contains 371¼ grains of pure silver, or 412½ grains of standard silver. On one side is the head of the Goddess of Liberty, the national motto, "*E pluribus unum*," and the thirteen stars. On the other side is the spread Eagle of America with the legend at its head, "In God We Trust," and at its feet the words "one dollar."

This coin bears the image and superscription of the United States, and it is by law a legal tender for taxes and for all public and private debts.

To the eye of the beholder it has an honest face, and upon that face is engraven the national faith and honor in pledge of the fact that it is just what it claims to be "one dollar;" while in the statute law behind it are the fully expressed pledges of our national faith and honor that our Government shall receive it for taxes; that our creditors shall receive it for payments; that our pensioners shall receive it for bounties; that our public servants shall receive it for wages; and that, as between man and man, whosoever becomes its possessor may with it absolve himself to another whom he owes to the extent of one dollar of his debt.

A DOLLAR OF THE CONSTITUTION.

This silver dollar is one of the bimetallic coins of a bimetallic constitution, which provides that Congress shall have power to "coin money, regulate the value thereof, and of foreign coins," and that no State shall "make anything but gold and silver coin a tender in payment of debts."

THE OLDEST DOLLAR.

It is the oldest of all our dollar pieces, emanating from the Mint in 1794, under the act of 1792, whereas the gold dollar piece was never coined, or authorized to be coined, until 1849, although larger gold pieces were provided for in 1792 at the ratio of value to the silver pieces of 1 pound of gold to 15 of silver.

THE UNVARYING DOLLAR.

The silver dollar, as originally created, contained 371¼ grains of pure metal. It contains exactly that amount of pure silver now. But the gold dollar has changed. In 1834, when Europe had drained our gold and silver had become nearly if not quite our sole metallic circulation, Congress fixed a new ratio between the two metallic moneys of 1 pound of gold to 16 of silver by reducing the gold dollar from 24¾ to 23⅕ grains of pure gold.

CO-UNIT OF VALUE WITH THE GOLD DOLLAR.

This dollar is co-unit with the gold dollar as denominator or standard of value. All estimates and appropriations, all assessments and appraisements, whether of the Federal Congress, the State Legislatures, or of business men, are made with reference to the whole volume of money to be dealt with, and (save in rare cases) not with reference to any particular kind of money. In this manner "the dollar" simply, regardless of its material, is used throughout America as unit of value. True it is that when silver coinage was discontinued in 1873 gold was declared to be the unit of value; but when silver was rehabilitated as legal tender and coinage of it was provided for in 1878 the silver dollar was fully restored as co-unit of value, for it is absurd to say that you can measure the amount of a debt, or the value of what it buys, by anything else than the wherewithal of payment.

The act of 1873 making the gold dollar sole unit of value was effectually repealed by the act of 1878 restoring silver (albeit in limited supply) to the same uses as gold, not indeed in so many words, but by inevitable implication. Things equal to the same thing are equal to each other; and when the law made the gold and silver dollars equal to each other, it made each equal to the same thing—the unit of value.

ONE OF THE PILLARS OF OUR MONETARY SYSTEM.

This silver dollar is one of the pillars of our monetary system. That system is like an arch of which the national debt is the keystone. One side of the arch is our greenback currency and the other side is the national-bank currency, and the two pillars upholding the arch are the gold and silver dollars. When the debt was contracted, and when the greenback and national-bank notes were emitted, the people of the United States had upon their statute-books the expressed liberty to coin freely as many gold dollars and as many silver dollars as they pleased to redeem those obligations. The bondholders knew this, for there were the open statutes; and when they renewed their bonds in 1870 still were those statutes there. As to the medium of payment of outstanding bonds there can be no question.

Upon every 5 per cent. bond it is engraven, so that every one may read:

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt, approved July 14, 1870, amended by an act approved January 20, 1871," and is redeemable at the pleasure of the United States after the 1st day of May A. D. 1881, *in coin of the standard value of the United States on said July* 14, 1870, with interest *in such coin* from the day of the date hereof, at the rate of 5 per cent. per annum, payable quarterly on the 1st day of February, May, August, and November, in each year. The principal and interest are exempt from the payment of all taxes and duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority.

And upon every 4 per cent. is engraven:

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, amended by an act approved January 20, 1871, and is redeemable at the pleasure of the United States after the 1st day of July, A. D. 1907, *in coin of the standard value of the United States* on said July 14, 1870, with interest in *such coin from the day of the date hereof at the rate* of 4 per cent. per annum, payable quarterly on the 1st day of October, January, April, and July in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority.

And as all of the interest-bearing coin obligations of the Government were issued under the act of July 14, 1870, except the 3 percents issued in 1881, all of them are payable "in coin of the standard value of the United States" as of the 14th July, 1870. No man is so bold as to deny this. If he did refutation is before him. Both Houses of Congress have declared it in the well known Mathews resolutions of 1878, which, after reciting the facts, read as follows:

Resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued, or authorized to be issued, under said acts of Congress hereinbefore recited, are payable, principal and interest, at the option of the Government of the United States, in silver dollars, of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor.

And setting at rest, if doubt there could be, what the coined dollar means, the Supreme Court of the United States long ago told us that—

The coined dollar was a piece of gold or silver of a prescribed degree of purity, weighing a prescribed number of grains. The note dollar was a promise to pay a coined dollar. (Bronson vs. Rodes, 7 Wallace, 251.)

PUBLIC DEBTS PAYABLE IN SILVER COIN.

So that our $346,000,000 of note dollars, our $1,700,000,000 in round numbers of bonded and other debt, in all some twenty thousand millions of national obligations, all rest upon the pieces of silver like this of prescribed purity and quantity, and upon pieces of gold of prescribed purity and quantity, each called, and in each, in fact, a dollar. The national-bank notes amounting to $315,000,000, and State, municipal, corporate, and individual debts of prodigious volume, all rest at last upon these two foundations.

Those who would shake these foundations are engaged in a perilous undertaking. And many are the arts of speech with which they seek to sap and mine them.

Pleas are put in which might have been wisely considered before the vast superstructure of debt arose on these foundations which now are inadmissible to the sense of justice, and to the sense of expediency as well. The casual separation of the two metals, silver and gold, in bullion value was a thing contemplated when the double standard was adopted. It was a danger inherent in the very nature of a double standard. But the double standard was adopted by our Constitution; it has prevailed (with a slight and partial suspension) from 1792 to

1886, and to assail it now, either directly or by side thrusts, is to aim a blow at interests which can only be expressed in dollars by the thousand million; is to increase the burden of debt, and to abbreviate the means of payment.

We must meet the skirmish line of monometallism as it comes, in whatsoever guise of fallacy or sophism it adopts. When it has been repelled, then let us advance for the full restoration of the people's money.

THE SILVER DOLLAR IS REAL MONEY.

But the silver dollar is not real money, we are told by the able gentleman from South Carolina [Mr. HEMPHILL], who says:

That alone is real money which does not depend for its value on law but on the precious metal that is in it, so that its real value is equal to its legal value, and whether minted into money or melted into bullion it is worth the same thing.

If the gentleman is right the Constitution is wrong; and Congress has been wrong from 1792 to 1886. When the Constitution gave power to Congress to "coin money" it ought to have stopped there, the gentleman would have us believe; for if bullion value alone was to regulate the value of the coin, the constitutional prerogative "to regulate the value thereof" would have been worse than surplusage. The Constitution was wiser than some of our learned colleagues. It knew, for the experience and practice of mankind had taught its makers, that the law and the law alone can regulate the value of money, at least in so far as money is a medium for payment of debts. Enforced payment can only exist by law, and law alone can regulate the medium of payment.

THE SILVER DOLLAR NO MORE "FIAT" THAN IS THE GOLD DOLLAR OR THE NATIONAL DEBT.

Neither is the silver dollar any more a fiat dollar than is the gold dollar, nor than is the national debt a fiat debt. Indeed there can not be either dollar or debt without fiat. If it be meant that nothing but fiat is in this dollar, it is obvious error. If it be meant that 80 per cent. or present bullion value is real money and the residue of 20 per cent. is fiat, I can understand the idea though to my mind it does not import the intended argument. Many of the national bonds were originally given at the rate of $100 of promise for $60 of money. Their obligation has 60 per cent. of substantial consideration and 40 per cent. of mere "fiat" promise.

But does not moral and legal obligation alike permeate the whole hundred per cent. of promise? Undoubtedly. And in like manner, as I conceive, whether this dollar in its utility is 20 per cent., or 40 per cent. of fiat, the Government has no more right to repudiate any part of the people's means of payment than it has to repudiate their obligation of payment. Its fiat of obligation to pay, and its fiat of obligation to provide the silver dollar as it is, as one of the means of payment, were correlatives of each other.

WHO IS RESPONSIBLE FOR SEPARATION OF LEGAL-TENDER AND BULLION VALUE?

And if indeed the legal-tender and bullion value of this silver dollar have parted, at whose instance was the act done that parted them? Was it not the bondholding class that obtained the demonetization of silver? It was done clandestinely. The people did not ask it, and did not know it. Did not the money-power policy bring about the very evil for whose cure it is sought to make the people pay?

CONTINUOUS PRESERVATION OF BULLION AND LEGAL-TENDER VALUES IMPOSSIBLE.

And if my honorable friend from South Carolina be right in claiming that nothing is money unless its intrinsic and legal value be equivalents, is it not plain that he must seek some other than this mundane sphere for the material thereof—for some unfound substance not subject to "the skyey influences" of change; or otherwise abolish the world's system of finance of which the basis is a fixity of legal-tender valuation?

Bullion value and legal-tender value have ever varied, and must ever vary, largely in proportion as metal is most in demand for money or for other uses. Metal money goes to the smelting-pot when money is overplentiful, and turns itself to other uses. Bullion, even in polished and artistic forms, rushes to the mint when money is rare and dear. And as the market most needs money, or the raw material, so must ever fluctuate the relations between bullion and legal-tender values. Alexander Baring stated to a parliamentary committee in England, where gold was sole legal tender, that during the crisis of 1847 it was impossible to borrow a guinea of gold on £60,000 sterling of silver. And on the other hand it is authentically related that in Calcutta, where silver was sole legal tender, the owner of £20,000 sterling of gold was obliged in the crisis of 1884 to declare himself a bankrupt because he could not borrow a single rupee upon it.

This shows that intrinsic and legal-tender valuations must often separate, however delicately adjusted. It shows, too, that the fixed debt-paying attribute of money imparts not only one of its highest, but oftentimes its very highest and most important function. And it illustrates the correctness of Cernuschi's definition of real money, which is very different from that given by the school of which the gentleman from South Carolina is the spokesman.

Says the clear-headed Frenchman:

"Money is a value created by law to be a scale of valuation and a valid tender for debts."

This, as I conceive, is a perfect definition. It fences in everything that is money, and fences out everything that is not money. And its author very lucidly explains it.

Certainly—

He continues—

Certainly every one understands that as regards paper money the value is created by law, but it is perhaps not easy for every one to admit that with regard to metallic money also the value is created by law. It is, however, the fact. If you suppose that gold is not money, is not legal tender, if you suppose that silver is not money, is not legal tender, the value of gold, the value of silver, is lost. * * * If England, France, Germany, and the United States renounced the use of gold money, if everywhere only silver money is adopted and gold money abandoned, all the gold will remain without value; all the shareholders of the gold mines will be ruined, because the value of their shares depends upon the legal fact that the metal extracted is legal tender. I do not say that some of the mines will not remain open. I would illustrate my meaning by citing the probable consequence to follow with reference to the opium of India.

If China should make a law forbidding the use of opium, or if the great temperance societies whose object was to restrain the use of opium should become popular in China, what then would become of the poppy cultivated in India? The culture would be abandoned. Yet opium, nevertheless, would not disappear entirely. The opium of Smyrna, on the Mediterranean, would still be cultivated as a medicine. The same process of reasoning applies with reference to gold and silver. This fact that money is a value created by law is one of great importance, and I can cite you the hightest authorities in proof that what I say is true.

How plain it is, if we would but pause to notice it, that it is use that makes value. What would be the value of cotton if you could not make cloth of it? What the value of cloth if the law forbade the making of clothes with it? What the value of cotton clothes if the law said we should not wear them? Gold, if denied money use, would be just like cotton denied these uses. The living fruit-bearing reproductive tree, and dead dry lumber are not more different than are the metal made into legal-tender money and the metal to which that money function is denied. And if silver has lost 20 per cent. of its bullion value, its disfranchisement as money tells the reason why.

THE SILVER DOLLAR IS A HUNDRED-CENT DOLLAR.

The "fiat-money" argument renews itself in another form; "the silver dollar" is but an "80-cent dollar," cry its enemies. This is simply saying that gold makes the only dollar, for the "cent" is a mathematical expression, and signifies no more and no less than the hundredth part of anything that is a dollar. It is a denial of dollarhood to that "piece of silver of a prescribed degree of purity weighing a prescribed number of grains," which the Supreme Court has defined to be a coined dollar, and which all our statutes, all our people, and all of our administrations since 1878 have fixed to be, and used, treated, and circulated as a coined dollar. If a bushel of wheat were worth a dollar, and a bushel of corn 80 cents, he would be looked upon as "gone clean daft" who declared that the bushel of corn was but eight-tenths of a bushel, and the degree of his derangement could only be surpassed by that of another who declared that the bushel of corn was but eight-tenths of a bushel, at a time when the corn and the wheat when so certified by official measurement were each worth, and would be paid for under Government contract, at the rate of a dollar. The obliquity or obscurity of vision on the part of the latter patient would be just that of the silverphobist who calls the silver coin an 80-cent dollar; for it has ever maintained, and to-day maintains, its parity with the gold dollar under a raking fire of disparagement from the trained batteries of imperial money-greed in two continents.

THE SILVER DOLLAR MAINTAINS ITS PARITY WITH THE GOLD DOLLAR.

Dismissed from free coinage, and almost any manner of coinage, by England in 1816 even silver bullion maintained parity with gold bullion in England for half a century afterward, as well authenticated tables attest. And is it not probable that if in that long tract of time England had treated it according to its natural relations it would have gotten ahead of gold? At any rate the bullion silver held its own until King William and Bismarck defeated France, founded the German Empire, and sought to build a golden throne with the thousand millions of gold with which the French bought peace. Away went silver—demonetized by wholesale. Think of what a downward plunge was given it when in 1876 3,200 tons of disused German silver coins were flung into the market stripped of every monetary function.

Think of the depression given when America closed her Mint in 1873, and when later even silver-loving France had to follow her example. But with all this the over two thousand millions of silver money in Europe keeps its parity with gold money, and here in America the silver dollar, even though it fights for dear life, like Winkelried, with its breast to the spears, it holds up its head at par, and in this grand transcontinental "bimetallic Union," as it has been happily termed, of thirty-eight States and eight Territories, it keeps even step with its golden brother in nothing defective to fulfill its mission as money. What vitality is there that can live in such a storm!

THE SILVER DOLLAR MAINTAINS ITS RELATIVE VALUE TO GOLD BULLION.

Value is not a substance; it is a mere market relation between two things. As to all things, and even as to gold bullion, the silver dollar maintains as high a relation as the gold. Red tape and official statement carry conviction to some who refuse conviction from their own senses. This statement, which I obtained from the Bureau of the Mint, concludes the question:

One hundred dollars in silver dollars will now purchase in the United States as legal-tender money as much gold bullion as $100 in gold coin will, namely,

4.837 pure ounces; but in foreign markets $100 in United States silver dollars will now purchase 3.860 ounces of pure gold.—*Letter of E. O. Leech*, computer of bullion, of March 19, 1885.

Yes, gentlemen, the people know, for they daily test it, that whether there is wanted a silk dress or a loaf of bread, a horse-shoe or a marriage license, a diamond necklace or a carpenter's plane, a tax-receipt or a marble palace, a postage-stamp or a herd of cattle, a negotiable note or a circus ticket, the silver dollar will go just as far in getting it or paying for it as a gold dollar; and that whether it be the President or the school-boy, the millionaire or the tramp that passes it or receives it, he touches it unconscious of any infirmity in it, and finds

The pleasure is as great
Of being cheated as to cheat.

THE SILVER DOLLAR WILL READILY CIRCULATE.

"But it will not circulate," shouts the monometallist. Will not circulate! As well tell me that water will not run down hill, or that the sparks will not fly upward in the gale. Will not circulate! Sixty millions of people—minus the allied banks—have their hands up and open to receive it; and they—the banks—want it just as bad as the rest of American humanity, provided only they can not compel the two-wheeled cart of the double standard to tilt over by pulling off one wheel and pour its contents into their wide-spread laps. Their object plainly was to increase the value of gold and compel payment of their securities in gold. Who ever refused a silver dollar save the gold-gorged bank combination that acted with such selfish purpose that the slow-moving law at last reminded them that they were nominally at least its creatures? Silver will circulate; and it is only by a tightly-fastened ligature, whose coils have sunk for lo! these many years into the flesh, that free circulation through every artery and vein of the body-politic has been prevented.

It is piled up in Treasury vaults and will not get out, we are told. Softly! Softly!

A LARGER PROPORTION OF SILVER THAN GOLD IN GENERAL CIRCULATION.

On January 15, 1886, there were forty millions less of hoarded silver in the Treasury than there were of gold. Of our total sum of five hundred and fifty-three millions of gold coins there were then but two hundred and ninety millions in other hands than those of the Treasury, the national banks, and the State banks—a fraction over a half in general circulation; whereas of our total two hundred and ninety-three millions of silver coins (which includes the subsidiary coins), there were one hundred and eighty-three millions in general circulation—either in coin form or as represented by silver tax-paying certificates (see appended table A). Will not circulate! Behold the fact that two-thirds of our silver does move in general circulation, and but half of our gold. Will not circulate! Our expenditures for the fiscal year 1885 were three hundred and five millions—of which fifty-one millions were for interest, fifty-six millions for pensions, forty-two for the military establishment, fifty-four for miscellanies, forty-five for the sinking fund, sixteen for the navy, and twenty-three for civil expenses. Where was the trouble in getting the silver out on any of these accounts?

And if all of our silver, instead of only about a third of it, were in the Treasury to-day there would be no more legal or practical difficulty about getting it out than there is in taking a pen and drawing a check on any other deposit.

THE BULKINESS OF SILVER AN OBSOLETE OBJECTION.

"Ah! but it is so bulky," still cries the anti-silverite. This is the gasp of the Bourbon, and an obsolete objection. The anti-fat medicine has effected a perfect cure of the corpulency of silver. For any sum of ten dollars or upward you can get a silver certificate, and while the bulky coin abides safely in the Treasury vaults the certificate moves nimbly on its mission. Convenience and safety are alike subserved. Lightness is substituted for weight. Cost of transportation is saved. Abrasion and clipping are prevented. And gold itself, bowing in homage to the winged silver, taps at the Treasury door to the extent of eighty millions, and doffing its yellow robe prays to be arrayed in the silvery certificate vestment. Will not circulate! Gold itself has denied the imputation made by its own blind worshipers!

THE SILVER DOLLAR AS THE PRODUCT OF THE GREATEST SILVER AND GOLD PRODUCING NATION.

This silver dollar is for the most part the product of our own country, and we produce more silver and more gold than any other nation. Our mines turn out about 42 per cent. of the silver of the world, and about 33 per cent of the gold. Of the one hundred and fifteen millions of silver mined in 1884 the United States produced forty-eight millions, and of the ninety-eight millions of gold it produced thirty-two. Australia and Russia, producing in 1884 twenty-one millions and twenty-eight millions of gold, respectively, are our only gold rivals; and Mexico, producing twenty-seven millions of silver, just a little over half of our output, is the only country that can be thought of as our rival in silver. England produces neither silver nor gold, and France but little silver and no gold. The German gold product is insignificant, and its silver product is only about 20 per cent. of our own. But read the appended table and ponder it. It shows that we are van leaders in producing both silver and gold. (See Table B.)

FREE-TRADERS AND PROTECTIONISTS SHOULD ALIKE SUPPORT SILVER.

What fatuity is it that would induce us to deny the gifts which the gods have so liberally provided? "America, do you need money? Then knock at the door of the mine, and it shall be opened unto you;" such seems to me to be the voice of Providence to man.

Ah! But the cry comes, "You want to protect silver." Not so; we only want to give it the fair show that the fathers gave it. We only want to let it have the fair play that it had ere the man "of blood and iron" struck it down, and ere his American copyists followed his example, at a time when this dollar was at a premium of 3 per cent. over its golden rival. We only want to let our nation help itself to the riches which a bountiful Heaven has showered upon us. Free-traders, how can you vote against this bill? Free-money coinage is the very bed-rock principle of your creed; free-money is the life-blood of free trade. Protectionist of American industry, of American labor, how can you vote against it? Your protection passes with your adverse vote to the money of monarchs, to the crowns of kings, to the greed of avarice; it passes away from the American laborer, from the American debtor, from the American mine, to fill the tills of the creditor nations of Europe.

THE SILVER DOLLAR THE ONLY BARRIER BETWEEN THE MONOPOLISTS, THE CONTRACTIONISTS, AND THE PEOPLE.

This silver dollar stands to-day as the only barrier between the people and monopoly and contraction.

Our greenback currency is at a fixed volume of $346,681,016.

Our national-bank currency, which was $362,727,747 in 1882, is now only $315,847,168, and it is rapidly withdrawing.

It decreased $8,284,017 in 1883, $24,170,676 in 1884, and $15,545,461 in 1885—nearly fifty millions in three years.

And where is our gold? Does the laborer ever see its color? Not so. Is it moving among the people? Not so. Here is where it is:

OWNERSHIP IN UNITED STATES OF GOLD COIN AND BULLION.

Treasury	$148,358,100
National banks	156,353,592
State banks, trust companies, and savings-banks	31,255,789
Other banks and private hands	290,766,388
Total	626,733,869

The national banks have a fourth of it. The Treasury has a fourth of it. State banks and trust companies have 5 per cent. of it.

The lesser half remains in "other banks and private hands," but the number of "private hands" is not stated. Fifty-five millions of it is represented by gold certificates in sums of $10,000 cash—what chance is there for these big lumps to circulate among the people?

Yes, the banks control their own circulation and are contracting it.

The Government controls the greenbacks, and successive Secretaries of the Treasury have urged their retirement.

The banks and the Government together control the bulk of the gold and are alike hoarding it.

The world's production of gold is diminishing. In 1850 it was one hundred and fifty-one millions; in 1881 it was one hundred and three millions, while it is now about ninety-five millions. Our domestic production of gold is also diminishing, having fallen from fifty-one millions in 1878 to thirty-two millions in 1882, and to thirty millions in 1883 and 1884.

Silver, and silver alone, remains as the hope of the people, and only by its coinage can they hold their hands upon their metallic circulation and regulate its volume.

CALHOUN'S EXPLANATION OF THE RELATIONS BETWEEN THE VOLUME OF MONEY AND THE VALUES OF PROPERTY.

And here let me quote John C. Calhoun, of South Carolina. He originally opposed the United States Bank, but when its continuance was opposed his love for popular interests overrode all other considerations, and he insisted on its prolongation. I commend his words to the statesmen of his own State as well as to other colleagues. Says Calhoun:

> If we turn our attention to the laws which govern the circulation, we shall find one of the most important to be, that as the circulation is increased or diminished, the rest of the property will be decreased or increased in value exactly in the same proportion. To illustrate: If a community should have an aggregate amount of property of $30,000,000, of which one million constitutes its currency, and that one million should be reduced one-tenth part, the value of the rest will be reduced in like manner one-tenth part. And here a very important fact discloses itself, which explains why the currency should be touched with such delicacy, and why stability and uniformity are such essential qualities; I mean that a small absolute reduction of the currency makes a great absolute reduction of the value of the entire property of the community, as we see in the case supposed where a reduction of $100,000 in the currency reduces the aggregate value of the property $3,000,000—a sum thirty times greater than the value of the property. From this results an important consideration.
>
> If we suppose the entire currency to be in the hands of one portion of the community, and the property in the hands of the other portion, the former, by having the currency under their exclusive control, might control the value of all the property in the community, and possess themselves of it at their pleasure.

(See volume 2, Calhoun's Works.)

John Locke enunciated the same general principle, Cernuschi lays it down as a fundamental truth, and political economists recognize it.

The danger which Calhoun prefigured is now before us, and, seeing that the banded owners of gold are seeking to force the evil realization, well might Judge Hughes, in the American Dollar, compare them to a set of ill-mannered guests who, coming to the table and finding game

and bacon and greens upon it, quietly ate the game, and then considering that bacon and greens were not wholesome threw them to the dogs, leaving the rest of the company dinnerless. They have got the gold themselves, and now they insist that the people must not use their own silver.

A PLENTY OF MONEY IN THE BANKS.

In this situation we are told that we do not need more money, and that "there is a plenty of money in the banks." I answer, first, that if this be so free-money coinage will not give us more money, for if there be no demand there will be no stimulus to supply. The illogical status of compulsory coinage lies in the fact that it makes money whether it be wanted or not. But how is it shown that we do not need more money? One representative tells us that the abundance of money in the country is "practically demonstrated by the fact that millions are lying idle to-day with no prospect of early employment." And another says:

At times during the past year there has been a surplus of $64,000,000 over legal reserve in the national banks in New York alone, and frequently call loans were made as low as 2½ per cent., and that money can be had on good collateral from 1 to 3 per cent. interest.

The facts are truly stated, but I read very differently their demonstration. Idle money, greedy for investment in this fresh young Republic, and finding no temptation; idle miners yearning for the pick and spade; idle workshops; idle manufactories; idle acres sunning themselves under the smiling heavens; idle bread and meat stored up without market suffering with so-called overproduction; idle workmen or half-paid workmen eager to toil or toiling with little recompense, and frenzied into almost revolutionary outbursts. Yes, capital idle, and labor idle. But, "All's well," cries the sentinel; "there's a plenty of money in the banks!" The doctor who finds his patient with cold, motionless limbs, and a bursting, apoplectic brain, might as well say, "All's well; there's a plenty of blood in the head." The farmer, looking on parched fields, might as well be comforted by the assurance, "There's a plenty of water in the ocean."

Yes, there is a plenty of idle dollars in the banks, and a plenty of fish in the sea, but how to get them out—that is the question. "Give us good security and you can get it—surely you do not want it for nothing," says the banker. Yes, truly, well said; and I do not blame the banker for saying it. But here is the rub; by that contraction of the currency which followed war, by that contraction of the currency which occurred through European and American demonetization of silver, the prices of agricultural produce and of manufactured merchandise are greatly reduced, the price of labor is held down, the price of property is held down, every thing is pressed downwards but debt. We are upon a reduced and falling market. The paradox is before us of a hungry world in the presence of so-called overproduction. Capital will not invest because it expects to buy cheaper after a while, and timidly shrinking from its own venture prefers to ride on somebody else's venture at almost any rate of interest.

FALL IN PRICES AND VALUES IN THE UNITED STATES.

Mulhall, writing in London in 1885, says:

It may be said that £4 now will buy as much as £6 in 1866, the fall of prices being about 30 per cent., but as regards the United States in particular we find a fall of 46 per cent., namely: from 170 to 91, which is greater than has occurred in any other country. (Mulhall on Prices, page 6.)

Let free money stimulate prices, and rising prices stimulate enterprise and investment, and money will no longer hide in bank vaults. It is not rain in the clouds that refreshes the earth but the rain descending in fertilizing showers. It is not money in the banks that will renew industry but money flowing freely into the channels of commerce and agriculture.

THE SILVER DOLLAR WILL NOT CHEAT THE LABORER BUT GIVE HIM WORK TO DO.

"You will cheat the laborer by paying him a cheap silver dollar," says the gold advocate. Ah! how the monopolists labor to drag in the laborer to plead their cause. Verily, if Dives were among them now we might expect to hear him proclaim that he had always been the best friend of Lazarus. Silver has never hurt the laborer. When the prices of produce are high the labor that produces it is high. Cheap produce, cheap labor, is a proverb. When money is scarce produce is low. When money is plentiful produce is high. Therefore, to increase the price of produce plentiful money is essential; and with plentiful money comes increased price of labor and the employment of more labor.

When did ever a laborer see the color of gold? It is the money of the rich, and it has free coinage. Silver is now the money of the poor; why not stop its coinage? The laborer gets the silver dollar now. What he wants is a chance to get more silver dollars, and he can not get them unless we allow them to be made.

SILVER IN FELLOWSHIP WITH GOLD MAKES A MORE STABLE CURRENCY THAN EITHER METAL ALONE.

"We want a stable currency, and gold alone is the most stable," is another sophism. The silver dollar in conjunction with the gold dollar makes a more stable currency than either metal alone. They are like coterminous foundations, each giving lateral support to the other. They are like two wheels of a cart keeping the body level, and monometallism is like the bicycle, easily losing balance. In commodities we see the same principle illustrated as in the two moneys. If the crop of tea is small and that of coffee abundant people use coffee and keep down the exorbitant price of tea. If wheat is scarce and corn abundant people make bread of corn and reduce extravagant demands for wheat. If silver is scarce and gold abundant, where both may become legal-tender money, the latter prevents stringency in the money market. And *vice versa* now, with gold diminishing in production, and going more largely into the arts than silver, silver is ready to replace it and to keep down its value.

Take away silver as legal tender, and up goes the value of gold. Take away legal-tender capacity from gold, and down goes gold value and up goes silver value. Give the same legal-tender quality to both, and both are attracted to the equatorial line of the legal-tender function.

Of the two metals, Cernuschi thinks silver less fluctuating than gold in value. Jevons says that between 1809 and 1849 gold rose in intrinsic value 145 per cent. Then came the discoveries of gold in California and Australia; gold value fell, and Germany and Belgium demonetized gold. Then again, in later years apprehension of vast silver products in America caused war upon silver, and it was demonetized and declined in value. So it is that each metal is subject to fluctuation, and the greater stability is found in the balancing powers of the two together. This was the view of Rothschild and Baring; this the view of Hamilton and Jefferson; this the principle of our Constitution, and this is the fundamental idea of bimetallism.

THE SILVER DOLLAR THE MOST HONEST OF ALL THE DOLLAR FAMILY.

And now I undertake to say that the silver legal-tender dollar is not only an honest dollar, but, tried by the creeds wrongfully applied to condemn it, has been the only invariably honest dollar, and is now the most honest dollar of all the dollar family. The greenback note is a fiat dollar, pure and simple—the original American rag-baby. The national-bank note is the grandchild of the rag-baby, for it is a paper promise to pay a paper dollar, secured by a paper bond, which bond was originally payable in paper, and is now payable in either silver or gold. The trade-dollar is an impecunious tramp—a Japhet in search of a father; and the father is puzzled when thinking of his disinherited offspring to tell why it is that the interesting youth containing 378 grains of pure metal in his constitution is ever cut out by his legal-tender brother of feebler build in a society that teaches that bullion value is the thing, not legal-tender. And the gold dollar is after all a clipped dollar, shorn of its original proportions in 1834, and yet looking down derisively on the silver dollar and calling it "dishonest."

Startled when the love-mad Moor muttered his foul suspicion that she was not "honest," the gentle Desdemona turned toward him her innocent face, amazed, and said: "Honest, my lord! What's honest?" I pray you, gentlemen, what is honest if this be not an honest dollar?

Conceived in the Constitution, brought forth by the fathers of the Republic, older by nearly three-score years and ten than its golden twin, and older still than the national-bank note or the greenback, counit of our valuations and copillar of our monetary system, nominated in our bonds and the legal redeemer of our paper circulation, real good, hard, shining money fashioned of a metal that has been money ever since dawning civilization learned the mechanism of exchange, and which beat gold in the race of value by 3 per cent. until it was denied its birthright, the same unvarying dollar to-day that it was at its creation, suggested by Jefferson, recommended by Hamilton, approved by Washington, and now, even now, holding up its head at par with gold and circulating as the money of the people—where in this wicked world can honesty be found if not within this circle of 371¼ grains of pure silver stamped with the emblems of our national faith and bearing pledge to all the millions that thirst for its possession that it is in absolute verity one dollar.

WHY NOT HAVE FREE COINAGE OF THE SILVER DOLLAR.

The case is *prima facie* in favor of the free coinage of silver. Why not allow it? What reasons are there against it?

(1) That it will put gold to a premium; (2) that it will contract the currency; (3) that it will drive gold out of the country; (4) that it will subject us to a silver deluge; (5) that it will put us to the use of silver alone as currency; (6) and that it will arrest the movement for an international agreement for coinage at a common ratio—these are the chief reasons assigned. Are they points well taken?

(1) WILL FREE SILVER COINAGE DRIVE GOLD TO A PREMIUM?

First. Will free silver coinage drive gold to a premium? When the right of free coinage is given to silver bullion the value of the bullion will quickly rise to, or approximately to, the value of the dollar into which it can be freely turned. Why? Because a new free use worth a dollar will be made for silver, and with the new use arises the new value which that use imparts.

The Supreme Court of the United States well understood this principle when it declared in the legal-tender cases, 12 Wallace, 543, that "it needed no argument to show that the value of things is in proportion to the uses to which they may be applied." And this is conceded in the strong anti-silver speech of the gentleman from Illinois [Mr. ADAMS], who acknowledges that—

The law of unlimited coinage would, by the creation of a new and highly profitable use for silver bullion, raise its gold price in this country and in Europe.

When what is now 80 cents in silver bullion can freely turn to a dol-

lar at the Mint the bullion will be worth the dollar minus the cost of traffic and transportation. As silver bullion tends upward toward the value of gold bullion the latter will tend downward, because the two metals will share equally in that privilege of free coinage which now being enjoyed by gold alone has given it the value which always follows monopoly and makes monopoly desired. The immediate tendency of free silver coinage is therefore to bring the two metals in closer relations, to abbreviate the 20 per cent. gap between them; and as gold can nowhere in Europe become money at a cheaper rate than it can in America, it is not likely it would be driven to premium, unless indeed spasmodically and briefly.

(2) WILL FREE SILVER COINAGE CONTRACT THE CURRENCY?

In the changed condition of free silver coinage contraction of our currency is not one of the results to be seriously apprehended; and queer it is that the advocates of gold should claim in the same breath that we would lessen our volume of currency by contraction, and at the same time produce a cheap 80-cent dollar. This is a contradiction, for the very evil to be apprehended from contraction is the evil of the dear dollar, low prices, and cheap labor.

The gentleman from South Carolina [Mr. HEMPHILL] is alarmed lest we displace our six hundred millions of gold and have nothing but our less than three hundred millions of silver to go upon.

In such an event—

Says he—

In such an event what is to become of the great debtor class of the country? Has any plan been suggested by which they can make one dollar do the work of four? Gentlemen should pause and reflect on this unless they intend to grind the face of the poor and crush these people to the dust of the earth.

Within these lines is a confession. If the silver dollar will be a cheaper dollar than the gold, will the gentleman from South Carolina explain how it will be harder for the poor debtor class to get it? Does he really think that it will be harder to get a cheap thing than a dear one? Does he really think it will be harder to get eighty cents than a hundred? No, indeed. He abandons his cheap dollar, fiat dollar, and 80-cent dollar argument. He abandons all the outcry that silver will not circulate. And, answering the first half of his own speech by the other half, he changes front to rear and assails free-silver coinage from the standpoint that the silver dollar will be so dear that it will crush the debtor to get it!

Here is the patent fallacy of the arguments against silver. It is forgotten that if gold should in any event pass from circulation it will be just in proportion as silver comes in, and on account of its coming in. It is forgotten that the increasing silver volume is the very thing that will drive away gold, if it be driven away. It is forgotten that if gold goes abroad and the price of silver bullion remains at 80 cents every eight gold dollars that go will bring back the material of ten silver dollars. It is forgotten that if silver bullion and gold bullion go to par the gold dollars loses temptation to depart, and that if it goes every gold dollar will be replaced by a silver dollar. And that if any discrepancy remains in the value of the two metals, it will be a discrepancy that will in any event replace every retiring gold dollar with more than one incoming dollar of silver. It is forgotten that in no event can contraction of the currency ensue, unless spasmodically and briefly at worst; and while the gentleman from South Carolina is apprehending a drought, he forgets that the chief staple of the argument of his associates is that great silvery waves of "teapots, spoons, and tankards" will break upon our shores and produce a freshet. And it is equally remarkable that while South Carolina is proving one day that the decrease of the money volume and the increase of the purchasing power of money will ruin the poor, Massachusetts the next day proves with equal clearness that such a thing is their salvation; and that both want to put down silver—the one because it will in his opinion contract the currency, and the other because he thinks it would indefinitely expand it.

The fact is, the gold men are not a happy family. They answer each other's speeches, and often answer their own before they get through with them. The gentleman from Illinois [Mr. ADAMS], on April 3, proved that high prices would ruin the laborer; while the gentleman from South Carolina [Mr. HEMPHILL] had a little while before proved that it was gold alone that would keep up or create high prices for wheat and cotton—for the things the laborer eats and wears.

(3) WILL SILVER COINAGE DRIVE GOLD OUT OF THE COUNTRY?

Third. It is urged that free silver coinage will drive gold out of the country. We must take this prophecy with some grains of distrust. It is an old customer—a second edition of the old story that limited coinage would drive out gold. In 1878, when the Bland act was proposed for coining at least two millions' worth of silver per month, the wise men of the counting-room and the forum were in hysterics. The business men, whom the able gentleman from New York [Mr. JAMES] considers the best guides, wrung their hands in trepidation. Bankers raised the danger-signal and cried "ruin ahead." Senator Howe related that a Western town was black-listed and refused a loan because its people held silver meetings. A colleague [Mr. BYNUM, of Indiana] reminds me that Senator Wadleigh declared that the cheap silver would drive away dear gold "to other and more enlightened nations and leave us the debased and bulky metal which every progressive nation in Europe has ceased to coin, and which supplies the few and degraded wants of the poor, ignorant millions of Russia, China, India, and Mexico," and that Senator Matthews said "it would keep out of circulation gold coinage as effectually as if gold were prohibited by law."

Such were the prophecies. While yet fresh on the prophets' lips they were refuted in many forms.

THE RESULT OF THE BLAND ACT REFUTING THE PROPHECIES AND THE LESSON OF EXPERIENCE.

The Bland act passed in February, 1878—behold the result!

1. We have coined since then $406,821,813.50 of gold right alongside with $222,885,261 of silver—nearly twice as much of gold as of silver.

2. We have imported since then $183,508,431 of gold in excess of our exports.

3. We have exported since then $68,230,256 of silver in excess of our imports, it being silver that has left us, not gold—the good money driving away what it pleases some to call bad money.

4. Gold to the extent of eighty millions has gladly swapped itself for silver certificates, and was anxious to continue the swap until the Treasury Department stopped the process.

5. The silver dollar has kept at par with the gold dollar even in the purchase of gold bullion.

6. Our present situation contrasted with that of 1878 shows this result in the volume of our metallic currency:

	Gold.	Silver.	Total.
January 1, 1886	$553,810,148	$293,293,872	$847,104,020
January 1, 1878	247,429,570	80,352,328	327,781,898
	306,380,578	212,941,544	519,322,122

Showing a net gain of $306,380,578 gold, $212,941,544 of silver, and a total of $519,322,122 in metallic circulation, whereas during the six years preceding the Bland act (in five of which silver was ostracised) our country had lost by exportation $123,754,210 of gold and $109,010,360 of silver. (Tables C and D, appended.)

Secretary Sherman in the fall of 1878 urged that soon as our silver coinage should reach $50,000,000 it should be stopped. (Report of 1878, page 17.) But we did not stop. On flowed the silver from the Mint; in flowed the gold from abroad; and now, with $553,810,148 of gold, and $212,941,328 of silver, and a considerable subsidiary coinage, we have the President candidly conceding that—

There is certainly not enough silver now in circulation to cause uneasiness; and the whole amount coined and now on hand might, after a time, be absorbed by the people without apprehension; but it is a ceaseless stream that threatens to overflow the land which causes fear and uncertainty.

THE OVERTHROW OF THE PROFESSIONAL ECONOMISTS AND THE PROPHETS.

These results, so utterly contradicting the theories of professional political economists, of our official guides, of financial experts and teachers, and of political leaders who represented a large school of thinkers, at least warns us that the learned and great who strive for monopoly of gold have not yet gotten a patent right to monopoly of wisdom. Many of them, I doubt not, were sincere and honest in their predictions; but whatever their animus there must be some great currents of influence at work that escaped their detection, some laws that they did not recognize, some facts not embraced in the scope of their vision. Be this as it may, we can not look for guidance to the prolific parents of so many and of such prodigious errors. Of necessity we must think out and act out our own salvation, for the sign-boards are all down, the divining rods are broken, and we must blaze our own paths in this wilderness of contention, remembering that—

> Knowledge and wisdom, far from being one,
> Have oftimes no connection. Knowledge dwells
> In minds replete with thoughts of other men,
> Wisdom in minds attentive to their own.

WHAT IF BALANCE OF TRADE AGAINST US TAKE GOLD AWAY FROM US?

The gentleman from Maryland [Mr. FINDLAY] is alarmed lest if we coin silver freely gold should flow away from us "on the ebb tide of failing exchange." Undoubtedly gold will leave us if we lose the favorable balance of trade with gold-standard nations; but this must inevitably happen whether we coin silver or not. It is an independent fact which suspension of silver coinage could not prevent, and which free silver coinage can not produce. The balance of trade with China is $10,000,000 per annum against us, and, China being a silver nation, silver can pay that balance. But if our balances with England and Germany, which are gold-using nations, should be in their favor nothing could keep our gold from going away to pay them.

ADVERSE BALANCE OF TRADE TOOK GOLD FROM US FROM 1820 TO 1834.

And here let me call attention to the fact that it was an adverse trade balance with England, which had just adopted the single gold standard, that took gold away from us from 1820 to 1834; not the Gresham law, as the gold monometallists have argued. I can find no recognition of this fact by even so able an author as Laughlin; and the failure to remark it shows how political economists overlook sometimes the true causes of events. I have obtained from the Bureau of Statistics a table

which demonstrates my assertion, and I commend it to the perusal of our opponents.

Statement showing the exports from and the imports into the United States to and from Great Britain and Ireland during the years ending September 30, 1821 to 1834, inclusive.

MERCHANDISE.

Year ending September 30—	Exports.			Imports.	Excess of—	
	Domestic.	Foreign.	Total.		Exports.	Imports.
1821	$18,634,134	$209,488	$18,843,622	$24,438,896	.....	$5,595,274
1822	23,458,136	242,993	23,702,129	34,698,398	.....	10,996,269

WHAT WILL FILL THE GAP IF ADVERSE TRADE BALANCE TAKES GOLD FROM US?

More important is it to inquire now what will fill the gap if "the ebb tide of failing exchange" takes gold from us?

With the greenbacks at a fixed volume, and with the national-bank currency already on the ebb tide of retirement, what would follow if there be nothing to fill it? A tight money market, a contracted currency, a wreck of industry, the protest of debts, panic, bankruptcy, ruin.

In such event of balances of trade against us there would arise the very contingency in which the double standard gives stability to currency. In such event silver, and silver alone, could come to the rescue and save the land from scenes of destitution; perhaps from scenes the like of which were not long since witnessed in Pittsburgh, and are now threatening in Kansas, Arkansas, Texas, and Missouri.

THE GRESHAM LAW AND SOME OTHER LAWS—CENTRIFUGAL AND CENTRIPETAL FORCES OPERATING ON MONEY.

Suppose, however, that the balance of foreign trade continues in our favor, what then will take gold away from us? Certainly it will not go gratuitously. Perhaps it may be hoarded. To some extent it is already hoarded. But hoarded money is not lost money. It is like a reserve corps on a field of battle, ever ready to come into action if necessity arises. The hoarded money of the French peasant saved France from the German grip.

But the Gresham law, so called, will carry it off, it is said. What is the Gresham law? Nothing but the tendency, explained by Sir Thomas Gresham, founder of the royal exchange, of bad money to drive out good money; of the inferior to expel the superior currency. Gentlemen speak of it here as if it were the one inexorable and inflexible law in which finance lives, moves, and has its being. But it is a mere tendency, subject to the counteracting influences of other tendencies, subject to be repelled by countervailing forces. It was a saying of Jean Jacques Rousseau that "we seldom observe once things which happen many times daily."

Many times daily he that hath eyes to see can see that the Gresham law is now in our own country countervailed and intercepted from operation upon four different species of currency. Gold is our best money, that I concede, and here is gold to the extent of over five hundred millions in circulation at par, while the inferior moneys—(1) silver of 371¼ grains to the extent of over two hundred millions, (2) greenbacks of no grains to the extent of three hundred and forty-six millions, (3) national-bank notes of no grains to the extent of three hundred and fifteen millions, and (4) subsidiary coinage of 359.6 grains to the extent of seventy-five millions, in all nearly one thousand millions of inferior money—are not driving the superior gold away but attracting it in a continuous stream to our shores. Where is your Gresham law? Evidently its force is negative and counteracted by some superior force. Evidently the centripetal tendency of the superior money to seek retirement or a foreign market under the Gresham law has some centripetal and stronger power overwhelming it. Evidently there are other laws than those promulgated by Gresham. What are they? Are there not laws of money—

1. That it tends to the place which offers safest investment at highest profit.

2. That legal-tender equality of moneys tends to keep the different kinds at par.

3. That as long as the volume of taxation by which the inferior species may be used as effectually as the superior, and the volume of debt which the inferior may pay, are sufficient to keep money in high demand for tax and debt payment, the difference in intrinsic values is submerged in tax and debt paying equality.

These are laws of money, and they have buried the Gresham law out of sight in the United States, and in France also.

FORCES THAT TEND TO KEEP ALL OUR MONEY AT HOME AND AT PAR.

We have a powerful centripetal force in this country so far overlooked or little noticed in this debate, a home-keeping money force that holds on to money as the loadstone to the metallic particles that touch it, and a par-making money force that lifts even the worthless paper, valueless in itself as "the sere and yellow leaf" of autumn, up to the value-level of the yellow gold. Gentlemen in this debate have regarded money in its two functions as (1) standard of valuations and (2) medium of exchange as if this brief analysis exhausted its functions. It has a third function—legal-tender capacity to pay debts and taxes.

LEGAL-TENDER CAPACITY THE ONLY ABSOLUTE VALUE OF MONEY.

This third function gives to money its only absolute value. Without it money has only relative value. That is to say, without it what can you do with a dollar? You can not eat it or drink it or wear it, nor can you get anything for it unless somebody else consents to part with their property or labor for it. As standard of value it can not help you by your will alone. As medium of exchange it can not help you by your will alone, for even as to gold it takes two to make a bargain. But there is one thing that you can do with it by your will alone—you can pay a dollar of debt with a dollar, you can extinguish a dollar of taxes with it, and this is money's sole absolute value.

There follows this principle that the whole volume of debt and taxes in any country constitutes a redemption agency for every dollar, and every tax-gatherer and every creditor is a redemption agent.

We pay annually to the Federal Government in taxes some $300,000,000, and over that amount to the States and their municipal subdivisions. In 1880 the aggregate tax of every man, woman, and child in the United States was $12.59, and in 1885 it was $11.45 per capita. The following table tells its own story:

Statement showing the amount of taxation, State and Federal, in the United States in the year ended June, 1880; also the average tax per head of the population in that year.

Sources.	Amount of receipts or taxation.	Per capita.	Population.	Per centage to the whole.
Federal:				
Customs receipts	$186,522,064	$3 72	50,155,783	.....
Internal revenue	124,009,374	2 48		
Other sources	8,162,871	6		
Total	318,694,309	6 36	.....	50.52

Total	.....	11 45	.....	100.00

*Estimated.

PROFESSOR LAUGHLIN'S THEORY AND ITS PROPER SCOPE.

And I shall refer to a distinguished authority to explain the significance this table possesses. Professor Laughlin, of Harvard University, has written a very able work on bimetallism. It is recognized as such, and its author is not an advocate of free silver coinage. But he gives his views clearly and strongly, and here is what he says as to the Bland act:

Another fact which maintains the silver dollar at par with gold, and which is of considerable importance, arises from the provision of the act which authorizes the issue of silver certificates. Any person having not less than ten of the Bland dollars may deposit them with any assistant treasurer and receive therefor a certificate which, in size and appearance, closely resembles a United States note. The important consideration, however (and, to my mind, one of the most important provisions of the act), is that these certificates, in the words of the statute, "shall be receivable for customs, taxes, and all public dues."

This is a species of daily redemption of the silver dollar; for as gold has hitherto been required (as it was during and since the war) in payment of customs now that silver dollars are receivable equally with gold for that purpose they must remain at par with gold until there is forced upon the circulation more

than is necessary for such uses. If silver dollars alone had been made receivable for customs and taxes their weight and inconvenience in large payments would have restricted their use, but the silver certificates remove all objections based merely on their weight.

So long, therefore—

Significantly he adds:

So long, therefore, as the silver dollars which get out of the United State Treasury are in quantity sufficient to satisfy only the needs caused by the absence of small notes, and the sums demanded to pay customs and taxes, there is no reason why they should depreciate in value any more than the silver subsidiary coins should depreciate.—*Bimetallism, by Laughlin*, page 206.

The Professor is not quite broad enough in his view. He should have added that private debt-paying is just as efficient a redemption of the dollar to its holder as public debt-paying, for therein the holder gets its par value.

And it follows on his own principle that as long as the silver dollars are in quantity sufficient to satisfy only the needs caused by the absence of small notes, and the sums demanded to pay customs, Federal taxes, State taxes, municipal taxes, and public and private debts outstanding, there is no reason why they should depreciate in value.

THE LESSON TAUGHT BY FRANCE.

France realizes this to-day with her nine hundred millions of gold, and her six hundred millions of silver at 15½ ratio, all at par—the gold kept at home and the silver kept at par by the vast French debts. And here is America, with a greater population and greater resources, and eighteen times more territory, shivering with solicitude with not half as much 16-ratio silver in circulation, and with not two-thirds the amount of gold. France has taught us another lesson. Germany stripped her of one thousand millions of gold and went to a gold standard. France had little but silver to stick to, and stuck to it. With what result? Germany has now but $342,000 of gold to the nine hundred millions of France, and but $214,000,000 of silver to France's $600,000,000. So it will be seen that the French silver has drained Germany even of her gold. And Gresham is as much out in the cold in France as he is here.

4. ARE WE IN DANGER OF A SILVER DELUGE? AND DID EVER A COUNTRY PERISH OR PINE FROM INUNDATION OF EITHER OF THE PRECIOUS METALS?

Fourth. Some gentlemen apprehend a silver deluge if we coin silver freely.

In the long list of nations bankrupted, revolutionized, or ruined, I search history in vain for the name of one that was drowned in an inundation of either of the precious metals. Has anybody here ever heard of such a nation? The Roman Empire, as Alison thinks, went down for the want of them, but where was the land, empire, or republic that was ruined by either a gold or a silver deluge? I heard one gentleman deriding the poor old confederate note the other day and comparing it to the silver dollar. It made me prick my ears, for my reminiscences had led me to believe that it was the remoteness of that note from the hope of ever getting in sight of a solid dollar that remitted it to the "tomb of the Capulets," and not its similitude thereto. And it was also my impression that a certain "fiat" dollar, commonly called greenback, had something to do with it. But let it rest. There was not enough silver in the confederacy to tinge its edges—

NO INUNDATING FOUNTAIN OF SILVER LIKELY TO SPRING FROM THE MINES.

But where, let me ask, is the silver deluge to come from? Silver does not grow on trees or fall upon the earth from cloudland. It descends not mysteriously, like manna, nor have we anywhere a Moses to smite, or a Horeb's rock to be smitten, for its gushing fountains. Brain and brawn must delve for it; in the sweat of man's brow and in the toil of his hands it comes forth from earth's recesses.

The world's output of silver in 1884 was $115,147,878, of which $90,039,443 was coined. Of gold there was produced $95,292,369, and $99,459,240 of gold was coined.

It is estimated at the Mint that thirty-five millions of silver and ninety-five millions of gold are annually consumed in the arts. So that out of the annual product there is no gold left to sustain the world's coinage of one hundred millions; and but eighty millions of silver left to sustain a coinage of ninety millions.

THE WORLD OUTSIDE OF AMERICA NOW DRAWING ON ITS SILVER RESERVES.

There can then be no fountains of silver in the earth yet found which are likely to inundate us; and obviously too the world outside of America is even now drawing on its silver reserves in whatever form they exist. Our danger does not threaten in the form of a silver freshet, but in the form of a gold drought. While we sent abroad last year to meet the demands of foreign markets seventeen millions of silver in excess of imports, our neighbor, Mexico, produced twenty-nine millions, coined twenty millions, and exported thirty-one millions (see report of the Director of the Mint, page 46), while she imported practically no silver, showing the tendency of the silver stream eastward. Nor was this an exceptional tendency. During a period of twenty-three years India and China absorbed three hundred and eighty millions of silver, or sixteen and a half millions per annum, say 42,000 tons in twenty-three years. In the same interval the world produced 44,000 tons, from which, deducting 3,000 for wear and tear, the net product was 41,000 tons. Thus it appears (as calculated by Mulhall) that India and China alone have taken since 1860 more than the total product of the mines. And the absorption still continues.

NO INUNDATION OF SILVER LIKELY TO COME FROM THE COINED SILVER OF OTHER NATIONS.

It is not at all likely that silver will flow to us from the coined silver of other nations for the simple reason that it would have to pay a premium to convert itself into our dollars. It requires more silver to make money in the United States than in any country of Europe, and those who call our coin "light weight" forget that it is heavier weight than the silver legal-tender gold-par coin of any European or Eastern nation. British India has $1,125,000 of legal-tender silver, and European nations have $954,880,000 of legal-tender silver; and Great Britain has nearly a hundred million of subsidiary silver coin. This vast bulk of over two thousand millions of silver is coined at a ratio to gold less than that of our own silver dollar. The total silver money of the world in 1883 was $2,754,611,080, as reported by the Director of the Mint, and since then over $200,000,000 has been coined, Mexico alone coins it at a higher ratio to gold than the United States.

The Latin Union has in legal-tender silver coin: France, $520,567,800; Belgium, $51,378,200; Italy, $36,837,200; Switzerland, $9,694,000, and Greece (estimated), $2,000,000—over six hundred millions—all coined at the ratio of 15½ to 1 of gold. Germany coined in marks the equivalent of $114,319,000, in 1884, at lower rates than ours—1 to 13. Great Britain had in circulation in 1885 $96,731,420, coined at the ratio of 1 to 14. (As to ratios of coinage see appended Table E.)

The $954,000,000 of European silver coin could not convert itself into our silver dollar without a loss of about 3 per cent. in monetary value, or of about $29,000,000. The silver deluge is not likely then to come upon us from this quarter.

WHERE MAY THE SILVER DELUGE COME FROM?

Where, then, let us ask, is the silver deluge to come from? The German "dump" is ended, the demonetized silver has been scattered, the depressing power is well-nigh done. It must come from the world's old stock of silver, if at all—from the "old teapots, spoons, and tankards" which figured in the evil forebodings of the gentleman from Massachusetts [Governor LONG] as if they were "gorgons, hydras, and chimeras dire." In 1850 the world's stock of silver was thirty times the weight of its stock of gold, whereas it is now but nineteen times. And while no one can say that the terrible "teapots, spoons, and tankards" will not invade us, is it not reasonable to calculate that while the world outside of America is now and has long been using up the old silver stock there is not such a vast basin or reservoir anywhere on tap as to break forth upon us in fatal and uncontrollable waves.

Undoubtedly there would be a great tendency of foreign silver to America if silver bullion in London remained at 80 per cent. discount. But with the price raised in America it would rise everywhere; and with the rising price there would be a changed condition, tending to check rather than to stimulate the stream in this direction. Certainly, however, we would be with free-silver coinage open to the vast increase of our silver money. We might coin fifty millions, perhaps more, per annum. Gold might, and probably would, in considerable amounts go abroad to purchase silver; our American mines would be stimulated, flush silver times would come, we might in a few years have one thousand millions of silver dollars, and in anticipation we must squarely face the problem. What then?

(5) WILL WE BE THROWN UPON A SILVER SCHEDULE? IF SO, WHAT THEN?

With a flush stream of silver money these are the natural results to be anticipated:

1. Rising prices of commodities, and of all products of agriculture and manufacture.

2. The utility of silver as one of the resources for the redemption of our prodigious sum of public and private debts being established, its value would be permanently lifted to the par of the dollar.

3. Gold would not command a premium if operated upon only by domestic influences. We produce but thirty millions of gold per annum and a third more of silver, and part of the gold would probably continue to go into coinage side by side with silver as it does now.

4. There would probably be a foreign demand for gold to purchase silver bullion, and some gold would go away on that mission; but with stimulated enterprise and industry in America and rising prices much would stay to buy silver bullion here and for investments, and to meet gold obligations of individuals and corporations to their creditors.

5. Gold would not be likely to go abroad for coinage purposes in any considerable amounts, because gold can be made money in America at a cheaper rate than at any European mint. But as no European mint is freely open to silver, and many mints are freely open to gold, silver has not the free competition with gold abroad as it would have here. Hence some gold might go abroad for coinage purposes.

6. If the United States conclude to pay its creditors in silver coin, as we have unquestionable right to do, there is not a bond that would not get a better medium in payment than the original contract called for, nor one that could by any reasonable possibility fall below par value. Therefore public credit could not suffer either in name or substance. I have no sympathy with that pseudo and pharisaical morality that in the

name of public credit would pay more than is due to the powerful, and deny what is their due to the masses. It is unmanly and unrepublican.

7. If the "United States preferred to continue to pay its bondholders in gold we could better afford to do it, even paying a premium for the gold, than to deny to this silver-producing and debt-ridden people the right to coin silver for their general uses. The disadvantage of refusal to let silver become money is greater than that of paying the few millions that would at the worst be needful to pay the bonds in gold.

These seem to me to be reasonable speculations. But the fate of the financial prophets of this generation warns me against dogmatism. Prophecy is not one of the exact sciences. It is the unexpected that happens in financial politics as well as in all other phases of political projection. And as we must forecast the worst, the worst anticipation of the enemies of silver is that the United States would become the user of but one metal as money, and that metal would be silver. Hence it is said that we who uphold free silver coinage are at heart silver monometallists.

WHAT IF WE BECOME THE USER OF SILVER AS OUR SOLE METAL MONEY?—NO DANGER OF MONOMETALLISM.

Confronting the possibility of being thrown to the use of silver as our sole metal money, we ask what then? First it may be replied that were this to happen it would not make the United States a monometallic nation, nor those of us who are for free silver monometallists. Bimetallism consists in the freedom of coinage of both metals and the free use of either or both as money, as circumstances dictate. The transient use of one only does not eliminate bimetallism nor destroy its benefits; nor is it by any means the frightful evil which some would have us believe.

With free coinage laws the United States was on the sole-silver schedule from 1820 to 1834; and thereafter for a while on the sole gold schedule.

During neither period did we retrograde as a nation. By far the largest portion of the world's inhabitants are to-day operating on the silver basis—no less than some eight hundred millions of people. And let no one suppose that if we were to run temporarily on silver alone we would suffer the stringency and instability of monometallism. Our mint would be open to free coinage of gold; our mines to free digging for gold; our ports to free entry of gold. The first touch of stringency would start mine, mint, and incoming ship to give us gold. The gold reserves would rush to the re-enforcement of silver. With free bimetallic laws upon our statute-books, we would remain within the pale of bimetallic forces and bimetallic beneficence.

THE SILVER DELUGE A BUGBEAR.

The upshot of it is, that if we prospered with gold and silver in easy relations gold would stay with us, and if, at the worst, gold went away silver would more than replace it, in an appreciated form, and gold would return if there were need for it. The silver-deluge delusion then should have no terrors for us. Would indeed that such a deluge could come, and would come quickly; that the fountains of the silver deep would break upon us, and that the windows of the silver heavens would open! How the parched debt-ridden earth would drink the refreshing showers! How nature would clap her hands with joy! Find us the land that was ever submerged in such a deluge, and methinks you will find the graves of men who were choked to death with butter. It is a bugbear—this silver deluge—"to fright the souls of fearful adversaries;" no more.

THE COINAGE OF SILVER NECESSARY TO MEASURE RELATIVE VALUES OF GOLD AND SILVER.

At the least it may be claimed indisputably that the free coinage of silver by the United States will disclose the true relations of the two metals. And if it be true that there is a gap between their bullion values at the present ratio of 16 to 1, free coinage will show how broad that gap is. It is folly now to talk of bringing gold and silver bullion in perfect parity by putting more silver in the dollar, because you measure the gold bullion as appreciated by the free coinage of leading nations, and measure silver while denied a status on the same plane. A dwarf on the shoulders of a giant may be higher than the giant himself. The two metals must stand as nearly as we can make them stand on the same level before their relative measurement can be made. And the first step to the restoration of bimetallism is to admit silver to free coinage and then deal with the discrepancies in bullion values, if such discrepancies still appear.

(6) WILL FREE SILVER COINAGE IN THE UNITED STATES RETARD AN INTERNATIONAL AGREEMENT FOR COINAGE AT A COMMON RATIO WITH GOLD?

The great objective point of sincere bimetallists is to secure the free coinage of silver by leading nations at a common ratio with gold, thus restoring silver to its place in the money kingdon. Some of them argue that if the United States continues to coin compulsorily under the Bland act it will retard progress to the end in view, and that if free coinage is authorized it will be fatal to the hoped-for international agreement. Such men as Cernuschi, in France, and S. Dana Horton, in the United States, thus argue; and the theory of this view was recently presented to us with conspicuous ability by the gentleman from New York [Mr. JAMES]. His speech, I am frank to say, contains a powerful argument against this bill; but I do not think the reasons set forth are by any means unanswerable.

The gist of it is that sentiment in Europe is crystallizing for the restoration of silver; that the agriculturists of Germany are moving for it; that statesmen and thinkers in England, France, and other countries, as well as the industrial classes, are doing likewise; and that if we continue to coin at 16 to 1 while the European ratio is 15½ to 1 we will retard international agreement in two ways: First, by giving Europe a market for surplus silver, and, second, by increasing the body of metal money which is on a different scale from that fixed in France and other countries. If, it is contended, we will stop coining and wait for a "hands all round" silver movement, a European glut of silver bullion will be created; it will find no outlet, and a money drought will ere long force Europe to terms. All this is plausible, I may say cogent, but I think it is outweighed by many momentous considerations.

(1) SUSPENSION OF COINAGE WILL FURTHER DEPRECIATE SILVER.

If we stop silver coinage silver will be further depreciated. So Mulhall thinks, and so think the best minds that have dealt with this subject. So, also, experience teaches. Defeat silver here, and while the practical effect will be to lower its price the moral effect will be to discourage bimetallism and give a victory to the gold monometallists the world over. Whatever appreciates silver tends to its remonetization. Is it not more likely that if we appreciate it by free coinage other nations will follow our example than if we follow their example in demonetizing and kicking it out? The gold monometallists see this and they are all for suspension of silver coinage.

(2) INTERNATIONAL AGREEMENT TOO VAGUE AND INDEFINITE.

The hope of international agreement is too vague, indefinite, and distant. Great bodies move slowly. To move groups of nations without affinities requires tremendous leverage, and must be the work of years. Their jealousies and rivalries impede all efforts at unanimity.

(3) INTERNATIONAL CONFERENCES HAVE TWICE FAILED.

We had an international conference in Paris in 1878 to promote an international agreement—a conference recommended by the Bland bill—and were ably represented by Reuben E. Fenton of New York, William S. Groesbeck of Ohio, Francis A. Walker of Massachusetts, and S. Dana Horton of Ohio. It accumulated much learning on the subject; it debated like the House of Representatives in Committee of the Whole on the state of the Union, and it ended in discussion.

There was another international conference in Paris for the same purpose in 1881, and we were there represented by William M. Evarts, Allen G. Thurman, Timothy O. Howe, and S. Dana Horton; and the second conference was, in effect, the duplicate of the first.

Eight years have rolled by, and now we are told to wait and have another conference. What other nations are asking for it? Who is working for it here? When will it come about? What guarantee is there of its success? Meanwhile our interests are suffering. And while it is true that sentiment is increasing in favor of silver it is also true that popular sentiment never was against it, and that the money monarchs of Europe and America are adepts in repressing sentiment and postponing its results.

(4) THE DIFFICULTY NOT LESSENED BY DELAY.

But, it is answered, the European ratio is generally 15½ to 1, while ours is 16 to 1; and if we keep making dollars at our ratio we will find it so much more difficult to get to a common ratio. It can not become any more difficult than it is now. We have tried it twice without free coinage, why not try it once with free coinage? If we come to an international agreement it is generally argued that we must adopt the prevailing European ratio of 15½ to 1.

This being so, let me ask is it likely that when our adversaries in the United States are insisting on putting more silver in the dollar they will come to us when we propose in conjunction with others to put less and turn our dollar of 371.25 grains into a light-weight dollar of 359.91 grains? Were that proposition made, we might anticipate a cry from the gold men that would rival the voice of Bedlam. Nor would it be without an element of justice. We would have to cheapen the silver dollar and give our creditors less than that piece of silver of a prescribed quantity and quality that we contracted to pay them. Nothing but necessity could justify such an act. Furthermore, if we are waiting to get down to the European silver ratio, we are waiting for an event that will be more likely to precipitate silver to us than will coinage at our present ratio. European coins could then turn into American coins without loss, and without cost save that of transportation, whereas now they must pay that cost and pad themselves with 3 per cent. more of silver.

(5) NO SUCH THING AS INTERNATIONAL MONEY; WE CAN NOT AFFORD TO WAIT FOR IT OR ITS APPROXIMATE.

We can not afford to wait until "to-morrow, and to-morrow, and to-morrow, creeps in its petty pace from day to day," from year to year, from decade to decade, from generation to generation, for that new departure which involves many complexities, disturbs local customs, and is confronted with many difficulties. Civilization has as yet evolved no international money, and the coins of one nation circulate but little in another; and international agreement has no existence save among small groups of nations. English gold coin is 916 fine; Egyptian, 875; Austrian, 986; French, German, and American, 900. When international agreement comes it will be far-reaching, and in the fullness of time I

doubt not it will come. And I believe that the universal coin will become the first link in the formation of that universal nation that has been dreamed of by the dreamers of great dreams. But we can not wait for it or its germ, and I fear that to do so would imitate somewhat the example of the swain who sat by the side of the stream waiting for it to flow by.

NOW IS THE OPPORTUNITY OF THE UNITED STATES.

Here and now is the opportunity of the United States. While Europe is wrestling over gold, suffering from the banishment of silver, and far more seriously threatened than we are by labor dissensions, strikes, anarchism, and revolution; while standing armies are as ever eating at her vitals, and the spirit of money caste is, as it supposes, fortifying itself behind gold monometallism, ours is the opportunity to seize upon the artificially depreciated silver, and by commanding it in such free and unlimited quantities as we desire to restore its value and appropriate to ourselves the greater part of that value so restored. Leading European nations rejecting silver when it was at a premium above gold made "a corner" in gold. We, reversing their example, may make "a corner" in silver and at the same time protect ourselves from the reactionary evils of monometallism which they suffered by preserving in full force our bimetallic laws for the free coinage of gold as well as silver.

Let us not be deterred by the appeal to vain pride that we will rank ourselves with "India and the heathen Chinee." This movement can not be belittled by such rhetoric. The heathen Chinee, nearly four hundred million strong, is at least able with his sole silver basis to draw an annual tribute of $10,000,000 from our boasted so-called "gold unit" enlightenment. The balance of trade is to that extent in his favor; and "the heathen Chinee" is quietly putting our money in his purse while we are boasting of our superior enlightenment, and of our superior knowledge of the game "he does not understand." India, with her silver rupees, is building railroads, opening new cotton and wheat fields, and the men of the South and of the great grain-growing West behold her gigantic shadow already looming up over their Eastern markets.

We should copy England's independence, not her special acts fitted to her own condition. Nor let us fancy that we would be doing a great thing in imitating, as some would have us do, such foremost nations as England with their finances based on gold. England is acting according to her situation and the genius of her institutions. Let us consider ours. England founds her prosperity on money caste and conquest, on monopoly and the bayonet. We seek to establish ours on liberty, equality, and fraternity—lifting up, not repressing, the popular interests and aspirations. England is a creditor nation, drawing into her coffers annually $500,000,000 from her carrying trade and from foreign investments.

Ours is a debtor nation in the reverse attitude. England does not produce silver, while we produce more each year than all the nations of Europe put together. Think you if England were situated as we are she would listen to such pleas as we have made to us; that she would spurn the money metal stored in her own mines and pay tribute to other nations in copying their schemes of self-aggrandizement? No; she would rather make herself a silver monometallist nation and bring other nations to her silver footstool. The independence of her statesmanship, its bold, self-reliant, self-assertive, far-reaching spirit—this has made her great. And this is what I would have the United States to imitate; not the shapes of policy which subserve English interests, but which would be futile if not fatal if pursued as to our own. And as England is commended to us by some of our friends on the other side of the House, I am tempted to ask, What England do they refer to? When I studied geography there was but one England, but in this debate at least two Englands have come in view. To which do they refer; the England whose people are withering, and whose pauper labor, as they paint it, is starving, dying, rotting and rioting under "the curses of free trade," or the merry England happy and prosperous as in "the spacious days of Queen Elizabeth" enrobed in yellow gold? Imitate England? Indeed! Behold a new song is in the mouth of New England, which would have us protect everything she manufactures against free-trade Old England, but would have us also imitate that same Old England in sticking close to gold albeit we do not thereby "protect," but throw to the dogs those bounteous provisions of silver which Providence has stored up for us.

AN AMERICAN POLICY AND FREE SILVER MONEY NEEDED.

England boldly launched forth in 1816, alone among the great nations, upon the single gold standard. She did not say "wait," but acted. We may with greater safety and conservatism preserve our free-gold coinage, and launch forth, without waiting for others, upon free-silver coinage.

Nothing but the combined greed and timidity of capital restrains the experiment. But if Columbus had been a great capitalist he would never have discovered America; and if we listen solely to the voices of great capitalists we will never save it from monopoly and money rule.

England has an English policy. What we need is an American policy equally independent. Macaulay has said in a fine essay that the way for governments to treat peoples struggling for liberty is to give them more liberty. It is with the moneys of peoples in some respects as with themselves.

Restrictions create false conditions, which defy analysis, refute prophecy, and confound the wisdom of the wise. Restrictions upon silver coinage are now by almost universal acknowledgment the most potent causes of financial perturbations in Europe and America alike. To give free play to natural laws, to give greater liberty to money, is the first step of the renovating and remolding process. I am, therefore, for the free coinage of silver, and for the application of the philosophical principle which Jevons enunciates in the conclusion of his able work on the Mechanism of Exchange, by saying:

> The only method of regulating the amount of the currency is to leave it at perfect freedom to regulate itself. Money must find its own level like water, and flow in and out of a country according to fluctuations of commerce, which no government can foresee or prevent.

That we will encounter difficulties in carrying out this great movement I do not question. When great wrongs have been done and great errors committed there is always difficulty in righting them. But with free coinage of silver established we will know how to measure the difficulty and how to deal with it. When we were but three millions of feeble folk, with little store of iron, lead, silver, or gold, we did not hesitate to grapple with British power, with a result of which the world has taken notice. Now that we are nearly sixty millions of the strongest and richest and most hopeful and high-spirited of all the peoples of the earth, I for one do not feel that we should shrink from the contest with England and her allies for the restoration and ascendancy of that metal with which our interests are identified. I would welcome the encounter, not evade it, and I have confidence that the resources, the genius, and the courage of America are equal to its successful issue.

APPENDIX.

TABLE B.—*Showing the world's annual product of silver and gold.*

Countries.	1882.		1883.		1884.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
United States	$32,500,000	$46,800,000	$30,000,000	$46,200,000	$30,800,000	$48,800,000
Russia	23,867,935	323,427	23,867,935	323,427	21,818,304	388,000
Australia	28,943,217	102,878	26,500,000	89,418	28,551,101	115,960
Mexico	936,223	29,237,793	955,639	29,568,576	1,183,137	27,257,885
Germany	249,890	8,934,652	303,722	9,589,300	388,853	10,311,659
Austria-Hungary	1,050,068	1,958,224	1,088,615	2,024,645	1,101,707	2,054,070
Sweden	11,298	62,350	24,590	65,800	12,627	75,472

The "Latin Monetary Union" mentioned in the foregoing table was a convention ratified at Paris, December 23, 1865, between the governments named. Greece was added in 1867.

Silver not a Local Issue.

SPEECH

OF

HON. DARWIN R. JAMES,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 2, 1886,

On the bill (H. R. 5000) for the free coinage of silver, and for other purposes.

Mr. JAMES said:

Mr. SPEAKER: I desire to add the following extracts to my remarks of March 20, 1886.

The following lines are a part of the platform of the Republican convention of the State of New York, adopted at Saratoga, September 23, 1885:

The restoration of silver to its former position through equality with gold before the law in a majority of commercial nations must remain, until accomplished, the chief aim of our monetary policy.

The platform adopted by the Democratic convention at Saratoga, September 25, contains recognition of the same idea:

But we will welcome any practical measure of agreement with other nations by which the ratio of value between gold and silver may be made less fluctuating.

[From annual report of the Secretary of the Treasury (Mr. Sherman) on the state of the finances for the year 1879.]

The Secretary can not too strongly urge the importance of adjusting the coinage ratio of the two metals by treaties with commercial nations, and, until this can be done, of limiting the coinage of the silver dollar to such a sum as, in the opinion of Congress, would enable the Department to readily maintain the standard dollars of gold and silver at par with each other.

[From annual report of the Secretary of the Treasury (Mr. Sherman) on the state of the finances for the year 1880.]

It may be better for Congress at the present time to confine its action to the suspension of the coinage of the silver dollar, and to await negotiations with foreign powers for the adoption of an international ratio.

[From annual report of the Secretary of the Treasury (Mr. Folger) on the state of the finances for the year 1881.]

The most potential means of bringing about any concert of action among different nations would appear to be for the United States to suspend, for the present, the further coinage of silver dollars. This is the decided opinion, in both France and America, of the highest authorities on bimetallism, and of those who wish to bring silver into general use and raise its value; and it is believed that a cessation of coinage would, at a very early day, bring about a satisfactory consideration of the whole subject among the chief commercial nations.

The recommendations of the Secretary were repeated by reference in his reports for 1882 and for 1883.

[From annual report of the Secretary of the Treasury (Mr. McCulloch) on the state of the finances for the year 1884.]

The United States is one of the most powerful nations—its credit is high, resources limitless; but it can not prevent a depreciation of silver unless its efforts are aided by leading nations in Europe. If the coinage of silver is continued in despite of the action of Germany in demonetizing it and the limita-

tion of its coinage by what are known as the Latin nations, there can be but one result: silver will practically become the standard of value. * * *

The European nations which hold large amounts of silver must sooner or later come to its rescue, and the suspension of coinage in the United States would do much to bring about, on their part, action in its favor.

[From annual report of the Secretary of the Treasury (Mr. Manning) on the state of the finances for the year 1885.]

The choice before Congress is not between silver monometallism and gold monometallism. Both are inadmissible. The choice before Congress is not between bimetallism and either gold or silver monometallism. The latter are not admissible, and bimetallism is only possible with the co-operation of other nations, which is not now to be had. For, although France holds the same friendly attitude, and would be followed by some of her associates of the Latin Union, England now, as in 1878 and 1881, is willing to depart from her mintage of gold alone into coins of unlimited legal tender, and Germany now, as in 1881, regards the concurrence of England in an international bimetallic union as a *sine qua non*.

* * * * * * *

The only choice before Congress, therefore, is the choice between one-metallism and two-metallism. The silver dollar can not be kept in equivalence with the gold dollar if the coinage of silver continues. The gold dollar can not be kept in full domestic circulation if the silver dollar is suffered to fall. Coining more necessitates its fall. Doubtless some may hope that more silver dollars can be coined, and yet their equivalence with the monetary unit not be lost. It is respectfully submitted that there is no compensation for that risk, and that a judgment so accordant of the great business classes who carry on the exchanges of the country must be accepted as a final estimate of that risk.

Nor should it be forgotten that every silver dollar coined hereafter at our present ratio would be, as the coining of every silver dollar since 1878 has been, a direct hindrance to the international bimetallic union then avowed as the object of our legislative policy.

[Extract from House Executive Document No. 100, Forty-ninth Congress, first session. Letter from the Secretary of the Treasury to the Speaker of the House of Representatives in response to a resolution of the House, &c., March 2, 1886.]

It is now become plain, to all who take comprehensive and practical views of public policy, that the United States can do no better than return at the earliest possible date to a bimetallic unit of value. By this I mean—

1. The monetary unit embodied in coins, both of silver and of gold.

2. The monetary unit of value embodied in the silver coin to be made and kept in that successive and simultaneous equivalence with the present and prior unit of value which has been our honorable distinction ever since the Constitution was framed.

3. Open mints for the free coinage of gold and silver at a fixed ratio to every citizen of the United States bringing either metal, and the right to have his coins received in every sale and payment as full legal-tender dollars.

Nothing less than this is bimetallism. It is not bimetallism that we are having now. All our silver coinage is but excessive subsidiary coinage of Treasury purchases of silver for a fictitious Treasury profit. We lack an indispensable part of bimetallism. We lack the free coinage of everybody's silver, to an amount unlimited by Government, into coins of full legal tender. We only maintain a free coinage for everybody's gold, to an amount unlimited by Government, into coins of full legal tender.

It is the facts of our present situation, I would respectfully reassert, that constrain us toward bimetallism as our goal.

Our $550,000,000 coined gold, our $220,000,000 coined silver, now make any policy save ultimate bimetallism for the United States practically and politically a Utopian policy.

Stopping the coinage of Treasury purchases of silver is not a policy in which we can rest and be thankful. It is merely the first and indispensable step to ultimate bimetallism. It is also the only step to ultimate bimetallism. No intelligent expert on either side of the Atlantic has proposed or attempted to defend any other step to ultimate bimetallism.

It is a wise step in the interest of industries jeoparded by doubt, to end the increasing risk of expelling our gold. But it is a step necessary in the interest of silver-owners, because continued silver-dollar coinage, after long trial, neither betters the price of silver nor narrows its fluctuations, and tends to prevent rather than promote that international concert which, by restoring open mints for silver in three or more great commercial nations, can alone restore its price. No mint in the world which gives free coinage to gold now gives free coinage to silver. Except our own, no mint in the world which gives free coinage to gold now coins full legal-tender silver. We alone heap up the load.

The sure outcome is silver monometallism for us. Meanwhile what good has eight years of it done the silver-owners? Not a dollar of their coin or bullion crosses the sea and there brings its former price. But silver monometallism in the United States will not restore silver to its old price any more than the silver monometallism of India, China, and Mexico do. It will not even tend to restore silver to its old price, and so is condemned as an incapable, unprofitable monetary policy. In that respect it is worse than our present limited coinage of Treasury purchases prior to the day of their outcome in silver monometallism. It is even worse for the ultimate price of silver than if we stopped such coinage and held on so indefinitely. The reason is plain. Silver monometallism in the United States, in due time, and finally, will release to Europe the bulk of our $550,000,000 gold, and assist every once bimetallic nation there to follow Great Britain and the Scandinavian states in becoming and remaining a gold monometallic nation, with but token silver for small change.

Silver monometallism in the United States, in due time and finally, will release the depreciated full legal-tender silver of European bimetallic nations to compete with the product of our own mines for a passage through our mints. Assume that we could exclude it by stringent laws—though it is a strange assumption—foreign silver would distance ours in the race for the Orient, with which we trade mostly through Europe now, and with which we have so little trade, but Europe so much.

The transfer and exchange of a part of Europe's silver stock for the bulk of the United States gold stock might be indirect in part, but it would be unavoidable. The open mint for silver in France was all that Germany used or needed to effect the substitution of her silver for the gold of France. That is what silver monometallism in the United States would at last come to, undeniably—the exchange of European silver against American gold; and that could not raise the ratio of silver to its old level, but would fasten it down finally.

Even were this indirect but ultimate exchange of our gold for European silver hindered by any present tendency of coin balances to continue in our favor, it is still but an affair of time. There are other arguments, too complex to be met incidentally; but whatever their force, the disuse of gold by the United States would be compensated by its increased use in Europe, and thus prevent its loss of purchasing power. So our increased use of silver, tending to enhance its purchasing power, would be countervailed, without benefit to the United States, by its diminished use in European nations, thus preventing its gain of purchasing power, whether their legal-tender silver stocks were drained off to the West or East. The bimetallic theory of an ever-balancing approximation of the two metals to a fixed ratio, whatever the variations in the natural increase from mines of either metal, has no application to the case of substitution here supposed, any more than it had to the substitution which Germany effected at the expense of France. The emigration of our gold to Europe would not restore the price of silver.

There is one way, and only one, by which silver can be restored to its old ratio and value, namely, an international concert upon a common ratio with open mints to both metals at that ratio.

A concert of European powers without the concurrence of the United States is impossible, for this reason: The ratio of gold at which most of the European silver stocks have coined is 15.5 to 1. Our ratio is 16 to 1. A merely European concert of nations would make profitable the export of all our silver, and we should be drained of the metal as we were, by the same difference of ratios, from 1834 onward, when our loss induced in 1853 our first subsidiary coinage of fractional silver.

A concert of the European powers together with the United States, until we stop coining silver, is impossible for the same and another reason. It is impossible while ratios differ, and while we persist in that which is not only different, but which would both drain us of all except fractional silver, and inundate them with our coined $220,000,000 and whole future annual product. But, moreover, the step is one which no European nation now loaded with a depreciated but full-tender silver coinage will consent to take while the direct or indirect substitution of European silver for the United States gold seems a possibility, even a remote one. It is perceived to be a near possibility under the continuing operation of our present laws by those who control with firm hand the monetary policy of foreign powers.

So long as we do not stop, and stop unconditionally, our coinage of full legal-tender silver, we can not destroy foreign hopes of enlarging their stock of gold at our expense. But I am equally well assured, that when we do stop, and stop unconditionally, and destroy such hopes, such an international concert as I have described will then become possible. The situation of bimetallic European nations will then be no better than ours, and, for the first time since the fall in value of their full legal-tender silver, will offer no other remedy or outcome than an agreement, with suitable precautions, upon open mints at a fixed and common ratio, to which the assent of the United States would be indispensable.

Silver Coinage.

The American policy should be to enhance the value of silver and to uphold the manhood and defend the rights of the working people of this country.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 7, 1886.

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes—

Mr. WHEELER said:

Mr. SPEAKER: There have always been creditors and debtors; but prior to 1861, owing to the beneficence of our laws and the prosperity and happiness of our people, there was not in this free country such a marked distinction as to attract attention.

During the last twenty-five years, however, they have gradually grown into two widely separated classes with distinct, if not antagonistic, interests: the debtor class struggling by labor and economy to relieve itself of its burdens, while the efforts of the creditor class have been to

secure legislation which would add to its wealth, and of necessity increase the load which the debtor class must bear.

When the Government bonds were issued, a quarter of a century ago, they contained the provision that the interest was to be paid in coin, but there was no such provision or exclusiveness regarding the principal, and the bonds were accepted by the purchaser with the full understanding that they were to be paid at maturity in the lawful money of the United States.

As these bonds were payable in greenbacks and this money was terribly depreciated the creditors of the Government were enabled to purchase them as low as 40 cents on the dollar, but before their maturity the holders of these bonds induced a party whose power was almost always exerted to advance the interests of capital, and whose legislation was nearly always oppressive to labor, to change the contract so as to make both principal and interest payable in coin. This was a violation of the Constitution, as it impaired the obligations of a contract; and this violation of the contract was in the interest of those who least needed and least deserved it, and against those who should have been most carefully shielded from any injustice or any legislation which increased their burdens. Many of the

VICTIMS OF THIS INJUSTICE

were men who had fought as private soldiers during four years of war receiving for their services $13 a month in the very currency which the party in power declared was not good enough for the bondholder.

The original law of 1862, under which the bonds were issued, provided that they should be a debt due by the Government, with no provisions that they should be paid otherwise than all other indebtedness. They stood on precisely the same basis as all other debts. There was nothing in the law, there was nothing on the face of the bond, indicating that they were to be paid in anything but Government notes.

Mr. Thaddeus Stevens was, more than any one else, instrumental in preparing, maturing, and reporting the bill, and he knew more of its scope and meaning than any other man, in or out of Congress. Yet this gentleman, extreme Republican as he was, made a speech in Congress—one of the last he ever made—in which he denounced the proposition to pay these bonds in coin.

Mr. Stevens said:

I would vote for no such swindle on the tax-payers of the country. If I knew there was such a platform and such a determination on the part of my own party, I would, with Frank Blair and all, vote with the other party.

Mr. JOHN SHERMAN expressed the same emphatic views in his celebrated Mann letter, dated March 29, 1868, in speaking of the effort to have these bonds paid in coin, and said:

My construction of the law is the result of careful examination, and I feel quite sure an impartial court would confirm it if the case could be tried before court. I send you my views as fully stated in a speech. Your idea is that we propose to repudiate or violate a promise when we offer to redeem the principal in legal-tenders. I think the bondholder violates his promise when he refuses to take the same kind of money he paid for the bonds. If the case is to be tested by the law, I am right; if it is to be tested by Jay Cooke's advertisements, I am wrong. I hate repudiation or anything like it; but we ought not to be deterred from doing what is right by fear of undeserved epithets.

Despite these and numerous other admissions of prominent Republican leaders that under the law these bonds were payable in legal-tender Treasury notes, on March 18, 1869, a Republican Congress enacted a law that obligations of the Government should be paid in coin which under the contract should have been paid in legal-tender notes. The law was in these words:

An act to strengthen the public credit.

Be it enacted, &c., That in order to remove any doubt as to the purpose of the Government to discharge all just obligations to the public creditors, and to settle conflicting questions and interpretations of the laws by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemly pledged to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes, and of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money or other currency than gold and silver.

As to the effect of this enactment Mr. Morrill, afterward Secretary of the Treasury, said:

The 5-20 6 per cent. bonds, then selling at 88 cents on the dollar, soon rose to par in gold coin, and have since borne the average premium of 5 per cent. at home and abroad.

This law wrested from the laboring people nearly $1,000,000,000, which was presented as a gift to the rich man who did not labor. It was this legislation and kindred laws which disgrace the statute-books of that corrupt period, that planted the germ from which has sprung the present baleful crop of dissension and antagonism between labor and capital.

For years prior to 1870 silver was relatively

MORE VALUABLE THAN GOLD,

and therefore the public creditors were more than willing to receive it in payment of the Government obligations in their hands. The table which I will read shows that for a period of forty years the silver dollar of 412½ grains was more valuable than its gold equivalent, at our ratio of 1 to 16; and it further shows that after the demonetization of silver in 1873 its relative value became less.

Table showing fifty years' prices of silver, measured by gold.

[From tables prepared at the Mint of the United States.]

	Price of pure silver per ounce in London.*			Average price of pure silver, per ounce, in gold.	Value of standard silver dollar, 412½ grains, in gold.	Relative value of gold to silver.

*In pence.

Hundreds of years ago, before the discovery of the silver of Mexico and South America, and when

Afric's sunny fountains rolled down their golden sand,

the ratio of gold and silver had been fixed as low as 1 to 10.

As it is a matter of interest I will read a table which shows the relative value of silver and gold from the discovery of America to the present time:

Period.	Years.	No. of years.	Ratio.
108 years (1 : 11.5)	1493–1520	28	11.3 : 1
	1521–1544	24	11.2 : 1
	1545–1560	16	11.3 : 1
	1561–1580	20	11.7 : 1
	1581–1600	20	11.9 : 1
	1601–1620	20	13.0 : 1
100 years (1 : 14.0)	1621–1640	20	13.4 : 1
	1641–1660	20	13.8 : 1
	1661–1680	20	14.7 : 1
	1681–1700	20	15.0 : 1
100 years (1 : 15.0)	1701–1720	20	15.2 : 1
	1721–1740	20	15.1 : 1
	1741–1760	20	14.8 : 1
	1761–1780	20	14.8 : 1
	1781–1800	20	15.1 : 1
50 years (1 : 15.7)	1801–1810	10	15.6 : 1
	1811–1820	10	15.5 : 1
	1821–1830	10	15.8 : 1
	1831–1840	10	15.7 : 1
	1841–1850	10	15.8 : 1
29 years (1 : 15.85)	1851–1855	5	15.4 : 1
	1856–1860	5	15.3 : 1
	1861–1865	5	15.4 : 1
	1866–1870	5	15.6 : 1
10 years (1 : 18.2)	1871–1875	5	16.0 : 1
	1876–1880	5	17.9 : 1
	1881–1885	5	18.5 : 1

By the procurement of the bondholder the law of 1870–'71 was enacted, which provided for the refunding of the national debt.

This law again repudiated our paper currency as one of the kinds of money with which the debt could be paid to the bondholder, and provided that coin, *i. e.*, gold and silver only (the latter being at that time relatively the most valuable), should satisfy these obligations.

The language of the amended contract, is found upon the face of the bonds issued in pursuance of this law. On the face of the United States 4 per cent. bond it is:

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, amended by an act approved January 20, 1871, and is redeemable at the pleasure of the United States after the 1st day of July, A. D. 1907, in coin of the standard value of the United States on said July 14, 1870, with interest in such coin from the day of the date hereof at the rate of 4 per cent. per annum, payable quarterly on the 1st day of October, January, April, and July in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority.

The contract on the 5 per cent. bond is in these words:

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, amended by an act approved January 20, 1871; and is redeemable at the pleasure of the United States after the 1st day of May, A. D., 1881, in coin of the standard value of the United States on said July 14, 1870, with interest in such coin from the day of the date hereof, at the rate of 5 per cent. per annum, payable quarterly on the 1st day of February, May, August, and November in each year. The principal and interest are exempt from the payment of all taxes and duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority.

In 1873, the creditor class, finding that because of its growing scarcity gold had appreciated, surreptitiously procured the demonetization of silver.

By this means they attained two objects:

First. They

INCREASED THEIR WEALTH,

because the law provided that their bonds should be paid in a single coin which became the more valuable of the two coins mentioned in their contract. It would be the same thing, in effect, as if a landlord had rented a piece of land to a tenant upon the agreement that the tenant should pay 1,000 pounds of cotton and 1,000 pounds of corn, and after the tenant had worked for a year under this contract the law-making power should, in obedience to the demands of the landlord, deprive the tenant of the right to pay any corn and require him to pay 2,000 pounds of cotton.

Second. The law demonetizing silver increased the purchasing power of the coin, which thus became the measure of all values, whether of labor or the products of labor. It changed the measure of values to the detriment of the laborer, and was in keeping with the new demand of the bondholder that if we pay him silver we must add one-fourth more silver to each dollar than was required by the law when the contract with the bondholder was made.

To illustrate: It was the same thing in effect as though an employer had entered into a contract with his laborers to give them in part payment of their year's service so many pounds of meat of 16 ounces per pound and so many yards of cloth of 3 feet to the yard, and then the law-making power should intervene to change the weight and measure and declare that the employer fulfilled his contract by the delivery of the stipulated number of pounds of meat of only 10 ounces each and the stipulated number of yards of cloth of only 2 feet.

Take another illustration: This law changing the measure of values was no more iniquitous than it would be to make an arbitrary alteration of the number of ounces in a pound of cotton, under the operation of which a landlord who had leased a piece of ground to a tenant for 3 bales of cotton of 500 pounds each, each pound to contain 16 ounces, by a subsequent change in the law should be empowered to exact from his tenant 3 bales of cotton of 500 pounds each, but each pound to contain 32 ounces, thus doubling the consideration which the tenant had agreed to give for the use of the land. Wicked, outrageous, and unconstitutional as such a law would be, it would not be nearly so bad as the laws which I have referred to, namely, the law of March 18, 1869, the practical operation of which compelled the people to pay the bondholder nearly $1,000,000,000 more than they owed him, and the act of February 12, 1873, which sought to again rob the people by another change in the contract, which still further

ENRICHED THE BONDHOLDER

at the expense of the tax-payer and laborer.

The trying financial ordeal through which our country passed from 1873 to 1878 necessitated the passage of the law remonetizing silver and providing for its coinage. To-day the bondholder seeks to repeat the iniquity of 1873 by destroying the monetary function of silver, because gold is relatively more valuable than silver, and now he comes knocking at the door of Congress asking that the contract be changed again, and that once more he shall be empowered to demand the most valuable of these coins in payment of the interest on his bond, and at its maturity the principal. If gold had depreciated and silver become relatively worth more than gold his demand would have been for silver, and he would have told us that unless we enacted a law which would give him the more valuable metal a terrible catastrophe would certainly befall our country. He would say, "Unless you do this, silver will leave our country, and this fair land will become the 'dumping ground' for the gold of the world."

The real purpose of the creditor class is this: If they could induce Congress to stop silver coinage it would leave just so much less money in the United States, and therefore just to that extent the burdens of the wage-worker and tax-payer would be increased, and the bounty given to the bondholder would be augmented.

The creditor class insists that silver has decreased in value. This is not true. Silver is more valuable to-day than it has been in years. The annual silver product, like most other products in the United States, has been gradually increasing, as is shown by the statistics relating to the production of silver and other staples for the years 1866, 1870, and 1880, which I will read:

	1866.	1870.	1880.
Silver	$10,000,000	$16,000,000	$38,450,000
Cotton, bales	2,193,987	3,154,946	5,757,397
Sugar, hogsheads	41,000	144,881	218,314
Corn		760,944,449	1,754,861,535
Wheat		287,745,626	459,479,505
Oats		282,107,157	407,858,999
Barley		29,761,305	44,113,495

Our production of pig-iron was 2,093,236 tons in 1876, and in 1880 it was 4,295,414 tons. The fair way to estimate the value of silver is to measure it by those articles the production of which, like silver, has kept step with the growth in population and the accompanying increase of energy of our people. And measured in that way we find that a silver dollar will now buy more of each of these articles than at any previous period.

I might carry this further, and by a careful investigation of the market price of between one hundred and two hundred of the leading commodities, the production of which has increased and which enter into daily consumption, we would find that, as compared with these commodities, the value of silver has not declined since 1874, but on the contrary its purchasing power has increased.

The enemies of silver, in their efforts to depreciate it, pass by all these commodities and seek for some article the production of which has decreased, and taking that as the standard of value they place a false argument before the country.

These gentlemen find that the production of gold was, in—

1853	$65,000,000
1860	46,000,000
1870	50,000,000
1880	36,000,000
1883	30,000,000

We, therefore, see that when our population was but 25,000,000 we produced gold to the amount of $65,000,000, and that with a population of 55,000,000 we only produced $30,000,000 of gold. In other words, in 1853 the United States produced gold to the amount of $2.60 to each inhabitant, and in 1885 the gold product of this country was but 50 cents to each inhabitant.

With this continually increasing demand and steadily diminishing supply the value of gold has been and will inevitably continue to be enhanced, and the

MODEST CREDITORS

of the people and the Government come and demand that we shall enact laws the effect of which will be to require that they be paid in the scarcest and dearest money. Not only do they demand this, but they threaten that unless we comply with this unjust requirement they will precipitate a financial catastrophe.

They also threaten to inaugurate measures which will prevent the employment of labor.

What is this substance called gold, and how much is there of it, which these enemies of silver and enemies of the people seek to make the measure of all values? It has been estimated and asserted by scientists that all the gold in the world could be compressed into a square block 29 feet long, 29 feet wide, and 29 feet high, about the size of a large room.

This small amount of metal is owned, controlled, and manipulated by a few, and they demand that by this alone shall we measure the value of the wage-earner's daily labor, and the product of the husbandman's yearly toil. To grant them this power would be to place in their hands a lever wherewith to crush the honest toiler in the dust while elevating the money-king to a practical sovereignty.

A great deal has been said to lead our people to believe that the rest of the world has adopted the gold standard, and that therefore it is necessary for us to follow their example. The error in these statements is quite as great as the fallacies of the gold advocates upon other points.

According to the report of the silver commission the countries which

still adhere to gold and silver as their currency, and are therefore designated double-standard countries, have populations as follows:

Greece	1,400,000	France	38,200,000
Roumania	4,000,000	Belgium	5,100,000
Colombia	2,900,000	Switzerland	2,700,000
Venezuela	1,600,000	Italy	26,800,000
Chili	1,900,000	Spain	16,400,000
Uruguay	400,000	United States	50,000,000
Paraguay	1,200,000		
Japan	33,000,000	Total	187,300,000
Holland	3,700,000		

The population of those countries which still adhere to the silver standard are:

Russia	76,000,000	Peru	3,400,000
Austria	36,000,000	China	400,000,000
Egypt	4,500,000	British India	237,144,456
Mexico	8,000,000		
Central America	2,600,000	Total	768,944,456
Ecuador	1,300,000		

And the following are the only gold-standard countries:

Great Britain	32,000,000	Norway	1,700,000
Canada, Cape of Good Hope, and Australian Colonies	7,000,000	Sweden	4,300,000
Germany	42,000,000	Total	87,000,000

The demand for the suspension of our silver coinage professes to rest upon the fear that its continuance must result in the gradual withdrawal of all gold from circulation as one of the coins of our monetary system. Those who make this demand claim that possibly the two metals may circulate side by side if the existing volume of the two metals be left where it is now. At least they would prohibit any increase in the volume of silver, holding that the natural laws of trade may safely be relied upon to prevent any evil result from the possible relative increase in the volume of gold. This profession is not merely disingenuous, it is a willful, deliberate deception—a snare.

It is only the initial step in the conspiracy to make gold—or paper redeemable in gold—the only money of the country.

Should they succeed in their present efforts, and I, for one, am confident they will not be allowed to succeed, after they have constrained Congress to suspend the coinage of the silver dollar the next step will be to repeat the iniquity of 1873.

The silver dollar will be deprived of its legal-tender function. The silver dollars, which, by the retirement of small Treasury notes and bills, have been made the only money of the people, will still be left in the hands of the people, but the destruction of their quality as money will be compassed in some way. They will be left us, but left to us not as money, but merchandise, the value of which is to be measured by the gold standard. They would reduce to practice their pet theory that the dollar of the people is in fact only 80 cents. They would then

ROB THE HOLDERS

of the $150,000,000 in silver dollars and silver certificates of $30,000,000, which would be added to the already vast and inordinate gains of the creditor class, who seek to substitute a plutocracy for the democracy, which is, theoretically at least, our present form of government. If this change in our actual government can be effected under the forms of law, I submit it will not be long before we shall be deprived of the name as well as of the thing represented by the name. It will not do to say that my prediction as to the ultimate intentions of the monometallists is not warranted by any known facts—that it is a conjecture, a presumption, and nothing more. The demonetization of the silver dollar, that is, the destruction of its legal-tender function, is the legitimate and logical result of the present effort to suspend its coinage. And these adversaries of the people are always logical in the pursuit of their selfish aims and interests.

Their argument now is that the continued coinage of these dollars, which they say are worth only 80 cents, produces financial distrust, disturbs values, and unsettles all commercial transactions, and therefore no more of them must be coined. Will those who yield to this argument now tell me how and on what grounds they propose to meet and resist the next step in the argument that the circulation of one hundred and fifty millions of these silver dollars constitutes a perpetual source of distrust, disturbance, and uncertainty in financial, commercial, and industrial affairs, and that the only way to restore confidence and stability is to convert them into commodities instead of dollars.

The acceptance of the last proposition follows the admission of the first, by logical and unavoidable consequence. Once admit the proposition that the silver dollar represents only 80 cents of actual value, and act upon the theory that so dishonest a coin is an element of financial and commercial disturbance, and you can not logically tolerate the continued circulation of one hundred and fifty millions of such dollars any more than you can honestly authorize their continued coinage. If it be a commercial evil to make them it must be an evil to have them. If they be an an evil, to stop making them will not remedy but only mitigate the evil; to uproot it entirely you must stop having them.

But, say the monometallists—and I use the term here to indicate those who advocate the single gold standard—the continuance of the silver coinage will inevitably destroy any chance of making this a bimetallic country; it will make us monometallists and our single coin will be silver. This is apparently one of their most formidable strongholds, at least one would judge so from the persistency with which the idea is advanced, upheld, defended, iterated and reiterated, in every imaginable form. They start out with

GRESHAM'S LAW

as the foundation, and upon this they rear a superstructure of misrepresentation, misstatement and false deduction designed to bewilder the minds of those who are honestly seeking to learn the truth and to understand the facts relative to the issue in controversy.

Concisely stated, the much quoted Gresham's law is this: two metals of unequal value can not circulate side by side, for the more valuable will be hoarded or carried elsewhere by the operation of that inexorable law which draws every commodity to the market in which it has the greatest purchasing power. Under the operation of this inexorable law, say the enemies of the silver dollar, the effect of the effort to maintain bimetallism without the concurrence of the great commercial peoples of Europe will be to drive gold out of the country, and attract silver to it until we shall have no gold at all, and silver will be comparatively worthless.

The ablest advocates of the single gold standard have laid special stress upon this point.

In opposing the remonetization of silver in 1878, Senator Wadleigh said:

> The cheaper metal will drive away the dearer. The success of this measure (the monetization of silver) will drive it (gold) to other enlightened and commercial nations, and leave to us the debased and bulky money which nearly every progressive nation in Europe has ceased to coin, and which supplies the few and degraded wants of the poor and ignorant millions of Russia, China, India, and Mexico.

Senator Sargent maintained that the remonetization of silver would "banish gold from the country." He said:

> A piece of gold coin will not be seen in use in any part of the country, even in the Pacific States, unless it is held by our specific contract act.

During the discussion Senator Matthews said:

> It will * * * expel from circulation and permanantly keep out of circulation all gold coinage as effectually as if gold were expressly prohibited by law.

That these distinguished Senators were in error in their gloomy forebodings has been clearly demonstrated by the actual occurrences since the passage of the measure they so vigorously opposed. In the warmth of their zealous antipathy to silver they were betrayed into the mistake of assuming that the "Gresham law" was universal in its application and invariable in its operation. In fact it is applicable to and operative in only those countries which suffer from a plethora of money. Where there is no more money than is needed for the purpose of trade it is wholly inoperative. It never commences to act, and therefore does not exist, until the volume of the circulating medium becomes excessive.

As an illustration we might refer to the condition of trade from 1865 to 1869. We had just emerged from a stupendous struggle in which thousands of millions of dollars' worth of property were absolutely destroyed—not consumed, but extinguished, leaving nothing whatever to indicate that it had ever existed. We were burdened with a colossal debt which the most sanguine friends of this country doubted could ever be paid. We had

NO COIN IN CIRCULATION.

Yet we were the most productive country in the world. Our lawful money was depreciated to about two-thirds the value of gold, and the purchasing power of that coin was, to that extent, greater than our standard currency.

At this very time, Germany and France held not less than $700,000,000 in silver coinage, which, although only 15½ to 1, circulated at par with gold. They needed and they took millions upon millions of our products, but they did not pay for them in either gold or silver. They gave us instead their own merchandise, and it required millions of American gold and silver to settle the balances against us.

To fully illustrate what has occurred regarding the movement of gold and silver to and from our country, I beg to call attention to the following instructive table. [For table see opposite page.]

It will be observed that when our own currency fell to its worst condition our exports of the precious metals were the greatest.

It has been and is now maintained by those opposed to our silver coinage that by the operation of the act of 1878, adding a minimum of $2,000,000 of silver to our supply of money each month, there is great danger that our currency will become redundant, and that as a result of this process of "inflation" there must be a corresponding advance in prices.

Well, Mr. Speaker, I for one believe that prices should advance. It will require something more effective and more tangible than the most ingenious array of figures ever compiled, or the most eloquent argument ever advanced, to convince me that any policy which promises to enable a laborer to earn two dollars instead of one, that is likely to give the farmer $1.50 a bushel for wheat instead of $1, or 15 cents a pound for cotton instead of 10 cents, is not a desirable policy for us to pursue.

While I may and do dissent from many of the theories advanced by the monometallists, I heartily and cordially agree with the proposition that abundant money means high prices, and I am most emphatically in favor of high prices. I want to see the American workingman earn-

Value of gold and silver coin and bullion imported into and exported from the United States from 1861 to 1885, inclusive.

* Including gold. † Included in silver. ‡ No transactions.

ing high wages that he may be able to pay the farmer a fair profit on what he produces. It is from these two elements of the body-politic that all the real wealth of a country comes. If they be prosperous and happy, the country will be prosperous. If they live amidst plenty, they will live peacefully and contentedly, and there will be no "strikes," no eager and exasperating struggle for supremacy between thousands of employés banded together for mutual protection against the oppressive exactions of dozens of employers united for the purpose of enforcing compliance with unjust requirements. In this commercial and practical age

MONEY IS THE GREAT LEVER

for which Archimedes longed as the instrument by which the world might be moved. A dearth, or even a scarcity, of money means silent factories, cold furnaces, unrevolving spindles, deserted mines, empty cars, and an idle and therefore suffering people. Abundant money means just the reverse of this, and therefore it is our duty to adopt those measures which seem best calculated to secure the blessing of an abundant currency for our people. I say an abundant currency, and I mean just what I say—not a redundant currency. I would not, if I had the power this minute, put into circulation one dollar more than is absolutely necessary to start and keep moving, without retarding friction, the mighty machine which is composed of the industrial, commercial, and financial interests of this great people. But I would and I will do whatever lays in my power to secure for the people a currency which shall be adequate to the requirements of their welfare. The volume of the currency I would like to secure is exactly that designated by John Adams in his letter to the Count de Vergennes in 1780, an extract from which was read by my friend from New Jersey [Mr. BUCHANAN] in his speech on this question last Saturday, a portion of which I will read:

A certain sum of money is necessary to circulate among the society in order to carry on their business. You may emit paper or any other currency within this rule, and it will not depreciate.

Is the volume of our currency at present equal to the requirements of the industrial and commercial interests of the country? If it is not, it should be made so. If it is in excess of such requirements, it should be curtailed. To determine this important question of the adequacy of the volume of our money in circulation, let us compare our condition financially with that of other countries. To do this, I will read the following table, certified to be correct by the Director of the Mint:

[For table see next page.]

In this table I have assumed that the population of the United States at this time is at least 60,000,000, and have computed the per capita of our circulation upon this basis, for the reason that if there has been any change in the volume of the circulation that change has been in the direction of contraction consequent upon the retirement of national-bank notes.

This table puts the total paper currency of the United States at $873,426,755. This has decreased because the reports show that at this time there are but $346,000,000 of United States notes and $318,000,000 of national-bank notes. Silver, however, has increased according to the latest reports about $21,000,000. The varying dates at which reports are made accounts for the small differences. I believe the theory and the facts upon which I have proceeded in making this computation to be perfectly justifiable and in strict consonance with the present condition of the country.

Taking the results thus ascertained from the table, we find that France readily absorbs and uses a per capita circulation of $52.85, while the circulation in the United States amounts to but $29.09 per capita. France to-day is recognized as possessing the soundest financial system of any country in the world. Compared with her neighbors in Europe, her people are more prosperous and more contented than any of them. No industry is crippled and no enterprise is strangled by lack of means for their successful prosecution, while in Germany, which has but $18.24 per capita of circulation, the condition is just the reverse; to use the language of a distinguished financier, "Frenchmen are all busy, Germans are all idle."

I wish it to be distinctly understood that I do not advocate the expansion of our currency until it equals the per capita of France; but to show how far we are behind that country I will state that with 60,000,000 of population at $52.85 per capita, the total circulation of the country would be $3,171,000,000, and to secure this would require an addition to the present volume of our currency of $1,425,073,245, or an increase of 81.6 per cent. of the circulating medium which we now have.

One argument against silver is the oft repeated assertion that it remains locked up in the Treasury and will not circulate. The reason why there is not more silver in circulation is because since 1879, during the administrations of Hayes, Garfield, and Arthur, the Treasury Department has been conducted in a manner to prevent its circulation.

I have already quoted from the law of March 18, 1869. It is now section 3693 and 3694 of the Revised Statutes. The first two lines of section 3693, read as follows:

The faith of the United States is solemnly pledged to the payment in coin or its equivalent of all the obligations of the United States.

This was specially for the benefit of the bondholder, and the law has been rigidly enforced. Section 3694 reads:

The coin paid for duties on imported goods shall be set apart as a special fund, and shall be applied as follows:

First. To the payment of interest in coin on the bonds and notes of the United States.

Second. To the purchase or payment of 1 per cent. of the entire indebtedness of the United States to be made within each fiscal year, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the public debt as the Secretary shall from time to time direct.

Third. The residue to be paid into the Treasury.

This provision has not been complied with in the spirit intended. The law makes no discrimination against silver. For sixteen years it has been the duty of the Secretary of the Treasury to indiscriminately pay out silver and gold under the provisions of this act, but in violation of the plain intent of the law no silver has been used for any of the objects or purposes contemplated by the law.

Millions of silver have been received in payment for duties on imported goods, but until recently none of the silver so received has been used by the Government to pay the obligations recited in the law I have read.

To illustrate, take the figures of the last year of Republican administration. For that year the interest on the public debt was $51,386,256.27, and the bonds to be purchased for the sinking fund required

Table showing the total circulating medium, gold, silver, and paper, of the several countries.

Countries.	Population. Year.	Population. Latest.	Date for which circulation is stated.	Paper.	Specie. Gold.	Specie. Silver, full legal tender.	Specie. Silver, limited tender.	Specie. Total.	Total paper currency and specie.	Per capita. Paper.	Per capita. Specie.

a London Bankers' Magazine for September, 1884. *b* Estimate of last year, with net imports added, deducting consumption. *c* New York Chronicle, August 2, 1884. *d* Estimate in last report. *e* Estimate of last year, adding coinage and deducting consumption. *f* London Economist, September 20, 1884. *g* London Economist, August 30, 1884. *h* "Wahrung's Politik," 1884, by Ottomar Haupt. *i* London Economist, September 13, 1884. *j* Bank reserve only. *k* London Economist, September 15, 1883. *l* New coinage, $6,000,000; foreign gold, estimated, $4,000,000. *m* Estimated from total specie circulation reported by United States minister.

the additional outlay of $45,588,150, making an aggregate compulsory expenditure by the Treasury Department of $96,974,406.27.

The total receipts of the Government for customs duties during that year were $181,471,939.34, a large proportion of which, the report of the Secretary of the Treasury informs us, was paid in silver, but none of this silver was paid out for interest on the debt, or for the bonds redeemed. Is it any wonder silver does not circulate?

The devices of the adversaries of the wage-worker and tax-payer are numerous.

They employ the highest talent to argue, support, and enforce their specious views, and theories, and so plausible have they been that many of the best and purest officials have doubted the feasibility of any course other than to yield to their demands.

But all their various and ingeniously contrived assaults upon the

MONEY OF THE PEOPLE

have but one single purpose, and that purpose is to augment the wealth of the holders of money and to increase the weight of the burdens now resting upon the creators of wealth—the laborer, the mechanic, the artisan, and the farmer.

One of the most favored of these various devices to accomplish this purpose is the demand that as the present silver dollar is actually worth but 80 cents in gold, we should—if we insist upon having two kinds of coin as money, and propose to be honest in our coinage—add enough silver to the dollar to make the metal in the dollar absolutely worth 100 cents in gold. That is, instead of coining dollars containing only 412½ grains of silver, nine-tenths fine, we must coin dollars containing 515.62½ grains of silver of the present standard of fineness. They would have us add one-fourth more silver, but limit the new coin to the same monetary value it now possesses.

To say nothing of the manifest injustice of this proposal, which I shall discuss presently, let us see what would be the effect of this change upon us as a people in relation to our creditors, the bondholders. Nearly every bond now outstanding, whether of the Government, a State, a municipality, a railroad, a telegraph, or any incorporated association of capital, every mortgage, every individual promissory note—in short, every contract to pay money, whether public or private—is a contract subject to the laws in force in 1870–'71. It is a contract to pay money under the laws as they now stand. Suppose we should yield to this demand, and enact a law requiring that silver dollars shall contain 515½ grains of silver nine-tenths fine, and that such dollars, when coined, shall be full legal tender for the payment of all debts, public and private.

Suppose we should do this, I say, what is to prevent the creditor, public or private, from refusing to receive these dollars and still demanding gold? He would maintain that he had a right to so refuse under the law. He would contend that he could rightfully and lawfully urge that the law at the time the contract was entered into provided that the dollars should contain only 412½ grains of silver nine-tenths fine, and that he could not be forced to accept a different coin. It would be vain to urge that he was tendered the 412½ grains and 103½ additional. He would reply he did not care what the change was, there had been a change in the coin since the contract was entered into, and he could not be compelled to accept any coin but the one provided by law at the time of the contract. If he could maintain this position, and it would be as tenable as many of the arguments of the monometallists, we would have conceded the demand for additional bullion in the dollar without any advantage to our silver coinage. The relative advantage of gold would have been maintained, and so maintaining it must of necessity again raise its comparative value. By indirect means the goldmongers would have gained their object—we would be a monometallic country, and gold would practically be the only coin available for the payment of debts.

But now let us consider the wrong, the

FLAGRANT WRONG

which such a course must be to the people who did not own gold. As the law stood in 1870–'71, as it stands now, every debtor could and can discharge his obligations with dollars containing 412½ grains of silver of the standard fineness. To accede to this demand of the gold worshipers would be to add one-fourth to every debt owing in the country, whether it be public or private, and this addition to the debts of the country would be a present, a bounty, to the comparatively few men who own the accumulated wealth of the country.

Let me illustrate the hardship of which a debtor would be the victim if we yielded to this demand to increase the quantity of silver in the standard dollar.

Under the old law any citizen could carry gold or silver bullion to the Mint and have it coined into money, and practically the same condition of things exists to-day. Suppose the accumulated wealth of a man in the far-off Territories is $100,000 of silver bullion. Delays in transportation and delays at the Mint prevent its speedy coinage. He borrows $100,000, which, under the law, can be paid with the hundred thousand silver dollars he will eventually get at the Mint. Before his silver can be coined Congress intervenes and provides that a silver dollar must contain 515⅝ grains of silver—nine-tenths fine—to make the metal in the dollar equal in value to the gold dollar, and he finds that his silver, instead of being sufficient to coin $100,000, is equal under the new law to only $80,000. "But," he would plead, "I am in debt $100,000, and this silver is all the money I have with which to pay my debt. Besides, when I contracted the debt the law provided that my silver should be converted into $100,000."

"But your silver was not money until it was coined," would be the reply, "and the law now says your silver can not make more than $80,000. It is a very hard case, undoubtedly, but the law has been changed through the influence of your creditor and his associates, and the law must be obeyed," and the unfortunate debtor would be compelled to submit to a clear loss of $20,000, and for this $20,000 he would have received no consideration whatever. It would be simply a loss imposed by the operation of a law the enactment of which had been procured by his creditor.

But the evil of such a change in the law, oppressive and burdensome as it would be in the hypothetical case I have used as an illustration, is comparatively insignificant when we come to consider the effects of such a change upon the whole country.

From Mr. Spofford's American Almanac we learn that the General Government, State, county, municipal, and railroad debt of the United States is as follows:

United States, 1885	$1,438,542,995 00
Aggregate State, funded and unfunded, 1885	262,175,245 00
Territorial, 1880	179,178 00
County, 1880	123,877,668 00
Municipal	698,270,199 00
Railroad, funded, 1884	3,669,115,772 00
Total	6,192,161,057 00
To this should be added the individual mortgages, which the minority estimate at	6,000,000,000 00
Giving a total indebtedness of	12,192,161,057 00

Every dollar of this enormous aggregate can be paid under the present law with silver dollars or silver certificates, each dollar containing 412½ grains of silver nine-tenths fine. But if the demand to increase the amount of bullion in the dollar to make it equal to gold, according to the gold measure of values, be conceded, we must add to this total one-fourth of its sum; for if the present silver dollar of 412½ grains be actually worth only 80 cents in gold it will take 515⅝ grains—one-fourth more than 412½ grains—to be worth 100 cents in gold. The result then will be this:

Aggregate indebtedness	$12,192,161,057 00
Add 25 per cent	3,048,040,264 25
Swelling the aggregate indebtedness to	15,240,201,321 25

Assuming the population of the United States to be 60,000,000 souls at the present time, the moderate request of these modest gentlemen is that Congress, by the mere exercise of the "power to coin money and regulate the value thereof," shall add a fraction over $50 to the indebtedness of every man, woman, and child in the United States; and mark you, for this oppressive addition to the

INDEBTEDNESS OF EACH INDIVIDUAL

in the country, there will have been given no equivalent or consideration of any kind whatsoever.

According to the last census there were in the United States 9,945,916 families; making about five persons to each family. Adopting the same ratio and assuming our population at this time to be 60,000,000, we now have 12,000,000 families, and by consenting to the demand to increase the amount of bullion in the silver dollar, Congress would impose an additional indebtedness of $254 upon the head of each of these families; would arbitrarily and wantonly add $254 to the burden now borne by the bread-winner of the family, who must provide for four others besides himself.

Why, sir, if Congress should lend itself to the perpetration of this enormity it would impose upon the labor of the United States a penalty three times as great as that imposed by victorious Germany upon conquered France.

If it be so important to have the value of the metal in the gold and silver dollars exactly equal, the honest way to attain this would be to reduce the amount of metal in the gold dollar, as I have shown that the difference in the value of the two metals has been caused by the enhancement in the value of gold, and not by any depreciation in the value of silver.

It may be, Mr. Speaker, that this bill is destined to defeat; that in this instance the dictation of London money-changers and the demands of our own few possessors of the accumulated wealth of the country shall be more potent than the appeals of our overburdened tax-payers, than the cry for relief of our unemployed laborers, mechanics, and artisans, and of our impoverished farmers.

But while its defeat may be one of the possibilities of the present, its ultimate passage is one of the certainties of the future. It may not be now, but it is to come, and it requires no more of the gift of prophecy to foresee its adoption than is called for in predicting the precession of the equinoxes.

The free coinage of silver is essential to our protection, to the preservation of our ability to continue the profitable production of the two great staples, wheat and cotton; and as self-preservation is the first law of nature some bill providing for the free coinage of silver must eventually become a law. How long it may be deferred and how great must be the sufferings of the people before they obtain at once justice and relief I shall not pretend to say. I am satisfied to know that while this much-needed measure of relief may be postponed, that postponement must have a limit of time in the not very distant future. Relief must come in this or some other form. If other adequate measures be devised or changed circumstances improve our condition this particular measure may not be necessary.

The low price of silver bullion in London has so affected the price of sterling exchange with India as to enable English importers of

INDIA WHEAT

to place that staple product in the markets of Europe at prices so low as to measurably exclude the American producer as a competitor. The exportation of wheat from India was only 94,000 bushels in 1873, when we demonetized silver, and since that time it has increased so rapidly that it reached the enormous amount of 45,500,000 bushels in 1885. The official publications of British India, furnished me by the Bureau of Statistics, show that five-sixths of this wheat was sent to Great Britain, France, Italy, and Belgium, and every bushel of this Indian wheat marketed under these circumstances may be regarded as having displaced a bushel of American wheat, which might have been sold had not England been able to dictate our financial policy, whereby she purchased the silver product of this and other countries at a depreciation of 20 per cent. as compared with gold. Silver is the only legal tender in India, and so long as England shall be empowered by us, or at least with our sanction, to use 80 cents for a dollar in the production of India wheat, and the value of our wheat is measured by a gold dollar of 100 cents, just so long will she undersell us in the markets of the world.

The exports of wheat from British India during the ten years ending March 31, 1885, are as follows:

Year.	Quantities.	Value.
1876 cwts	2,510,768	$4,410,660
1877 do	5,586,604	9,526,855
1878 do	6,373,168	13,985,177
1879 do	1,056,720	2,531,252
1880 do	2,201,515	5,471,245
1881 do	7,444,375	15,962,105
1882 do	19,863,520	41,871,765
1883 do	14,144,407	29,534,467
1884 do	20,956,495	43,202,651

To England cheap silver means cheap wheat and cheap cotton, and it is in this fact that we find the true explanation of her resolute hostility to any international encouragement of bimetallism. If we should yield to the demand for demonetization, or even for suspension of the limited-coinage act of 1878, the price of silver bullion would fall still lower and she would doubtless be able in a very short time to buy it at 60 cents, where she now pays 80 cents. But even at the present price of silver measured by the gold standard of value she possesses an incontestable advantage over us or any other country in the production of wheat and cotton. She can now buy silver at a discount of 20 per cent. and ship it to India, with its 253,000,000 population using only silver money, coin it into rupees and sycee, with which to pay the ryots who work for 8 cents a day, and buy her whole supply of wheat—formerly furnished by America—and lay it down in London and Liverpool at prices which must drive the American farmer absolutely from the market.

The extent of the supply of India wheat is simply a question of irrigating canals to water her arid soil and railroads to carry the product of those fields to the ports. England's possessions in India embrace an area equal to the United States from the Rocky Mountains to the eastern point of Maine and from the lakes to the Gulf, with a population nearly five times as great as ours, steeped in poverty and ignorance. To provide the irrigating canals and railroads there have been already appropriated this year some $30,000,000, and her leaders announce their intention to continue these works till all the wheat and cotton fields have been brought under cultivation.

Continue to supply England with cheap silver wherewith to pay her ryots in India their 8 cents a day to cultivate wheat and cotton, and it will not be many years before she will be selling India wheat in New York at from 60 to 70 cents a bushel. The wheat-grower of the Northwest would

LOSE HIS BEST MARKET,

steamers on the lakes and the great railroads would lose much of their freight and of necessity many employés would be discharged.

Besides this, India will use her 8-cents-a-day laborers to supply England with all the short-staple cotton she can use, and all our low-grade

cotton will be left on our hands, while all other grades will be reduced below the point of profitable production.

Worse than that. We now manufacture coarse cotton cloths as low as two-thirds of the cost of such goods in England, but India mills, with cheap labor and cheap silver, are becoming dangerous competitors, and the large increase in India of this class of manufactures is a matter we should seriously consider.

It was only a few years ago that England began developing the manufacture of cotton cloth in India. I have not the details of this manufacture prior to 1879, but the table which I will read shows the progress since that date.

COTTON MILLS OF BRITISH INDIA.

Statement showing the cotton mills worked by steam which existed in the lower provinces of Bengal, the presidencies of Madras and Bombay, the northwestern provinces, the Hyderabad assigned districts, and Central India, on the 31st of March of each year, 1879 to 1884, inclusive.

[From official publications of British India.]

Year.	No. of mills.	Number of looms.	Number of spindles.
1879	58	12,983	1,436,464
1880	58	13,307	1,470,830
1881	59	13,283	1,471,730
1882	62	14,386	1,550,944
1883	62	15,116	1,654,108
1884	74	16,251	1,895,284

Does any one say these are the gloomy and impossible prognostications of an alarmist?

If there be any who regard the picture I have endeavored to present of the future course of our wheat and cotton trade as an impossible contingency, I beg their earnest and most thoughtful attention to the following views on this very subject of Mr. Henry R. Grenfell, an eminent English financier and a director of the Bank of England, which have been recently published.

"What if the United States," I said, "should go the length of demonetizing silver?"

"That step," replied Mr. Grenfell, "I believe to be quite out of the question. What could you do with your silver? Not only would every silver mine in America be closed, but it would be absolutely impossible for you to sell the $200,000,000 of silver which you have coined. It would be impossible for you to sell this coin—I will not say without a loss, but at all. Where could it go? Who would buy it? For what produce of India could you exchange it? Europe certainly will not buy a dollar of it. Selling presupposes buying. Before you can sell any commodity you must find a buyer for it. *Again if you could demonetize silver in the United States, the price of silver would fall, and as the price of silver fell the trade exports from India to Europe would be stimulated in competition with your exports. On account of the fall in the exchange value of silver, India now has to pay her $85,000,000 of annual debt charge to England not in silver but in wheat or in cotton.*

"Thus it is really the price of silver which decides whether the wheat-farmer in Dakota shall get a remunerative price for his wheat and whether the cotton-planter in Texas shall be undersold in the English markets by the Indian ryot. The less support, therefore, the United States affords silver the keener will be the competition you must meet, and the lower will be the prices at which your staple export of wheat and cotton will be sold, on account of the inevitable concomitant increase in the Oriental exports of these commodities to Europe.

"Does it not follow from all this that you do not think the Bland bill ought to be repealed?"

"As to that, if I were speaking from the point of view not of a director of the Bank of England, but of a philosopher, I might say that M. Cernuschi's position, that the bill ought to be repealed, is logically unassailable. But the world is not governed by logic. If the Bland bill were unconditionally repealed and if silver were demonetized in the United States, the tremendous collapse in trade which would follow that legislation would no doubt most effectually awake not the United States alone but the whole world to understand the importance of maintaining a sufficiency of the circulating medium and of assuring the stability of the international exchange ratio of the two precious metals.

Mark the significance and importance of the declaration, that as the *price of silver falls the exports from India to Europe will be stimulated in competition with our exports.* Engrave it indelibly upon your minds that a director of the Bank of England has stated it to be an immediate and direct consequence of the decline in the price of silver which has already taken place, that India now "pays her annual debt charge of $85,000,000 to England, *not in money, but in wheat or in cotton,*" and then say I have overdrawn or exaggerated the future prospects of our wheat and cotton trade, if you can, and vote against this bill if you wish to hasten and insure the calamitous result I foresee, and you must recognize as inevitable.

"But," I am asked, "granting all you say to be true, how will the passage of this bill prevent the disaster to our wheat and cotton trade?" I do not claim, Mr. Speaker, that the passage of this bill will certainly prevent the calamity, but I do maintain that it will tend to the accomplishment of that desirable result.

By making provision for the free and unlimited coinage of all the silver that may be presented at our mints we can at least

DEPRIVE ENGLAND

of the advantage of cheap silver in stimulating and fostering the productions of India in competition with us.

The American policy should be to enhance the value of silver. By raising the value of silver so that our present silver dollar shall have in all the markets of the world a purchasing power equal to gold, we can at least add 25 per cent. to the cost of the vast system of internal improvements in India which she now contemplates; we can add 25 per cent. to the cost of the agricultural products of India; we can add one-fourth to the cost of transporting these products to the distant seacoast and the still more distant European market. Deprive England of the immense advantage she now has in cheap silver and we may hope that the higher intelligence and superior skill of our farmers, supplemented and assisted by our greater proximity to market, will go very far to offset the advantages of her 8 cents a day ryots and her comparatively valueless lands.

Force England to pay 100 cents for everything she now gets for 80 cents, and the inequality of the terms upon which we now compete with her Indian products in the markets of the world will certainly be modified, and may be destroyed altogether.

"But," again interrupts my former querists "how can we be satisfied that the free coinage of silver in the United States will deprive England of her cheap silver?" In reply to this inquiry, I would say that the world's production of silver for the three years 1882, 1883, and 1884 aggregated $343,892,874, and the world's coinage of silver during the same three years is shown by the table to which I now ask attention.

Coinage of various countries.

[Compiled from official statistics.]

Countries.	1882.		1883.		1884.	
	Gold.	Silver.	Gold.	Silver.	Gold.	Silver.
United States	$65,887,695	$27,972,035	$30,241,900	$29,245,989	$23,991,756	$28,534,866
Mexico	452,590	25,146,260	407,000	24,088,921	328,698	25,377,373

Honduras		76,314				
Persia			47,117	605,579		
Peru						1,400,949
Sandwich Islands						700,000
China						160,000
Total	99,697,170	110,785,934	104,845,114	109,306,705	99,459,240	90,639,442

* Approximate.

From these figures it will be seen that the average annual production of silver of the whole world for the three years specified was $114,630,958; and that the average silver coinage of the whole world during the same period was $103,377,361, leaving an average annual amount of only $11,253,597 worth of silver bullion available for the arts and manufactures. During the same three years, 1882, 1883, and 1884, the silver product of the United States was as follows:

In 1882	$46,800,000
In 1883	46,200,000
In 1884	48,800,000
Total	141,800,000

Giving an annual average of $47,266,666.66.

During the same period the silver coinage in the United States was as follows:

In 1882	$27,972,035
In 1883	29,245,989
In 1884	28,534,866
Total	85,752,890

Giving an annual average of $28,584,296.66. Deduct our average annual coinage from our average annual product, and we have in the United States an average annual amount of $18,682,370 worth of silver bullion available for our arts and manufactures and for export.

If the United States produced an average annual amount of $18,682,370 worth of silver in excess of its average annual coinage, and the excess of the world's product over the world's coinage was only $11,253,597, it follows necessarily that $7,428,773 worth of our silver product must have been coined abroad and entered into the silver-money circulation of foreign countries.

From this table of the world's silver coinage—and I wish to call particular attention to this point—we learn that during the three years, 1882, 1883, and 1884, the coinage of silver in India was as follows:

In 1882	$29,386,322
In 1883	24,927,400
In 1884	13,847,656
Total	68,161,378

giving an annual average of $22,720,459; and during these three years I see by the official report of the Director of the Mint that India is not credited with the production of one single dollar's worth of silver.

It will be noticed in this connection that the average annual coinage of silver in India was $4,038,089 greater than the average annual excess of the silver production over the silver coinage in the United States. Of course I do not say that England bought and had coined in India the whole of our silver product that we did not coin, but I do insist that she must have bought from this or some other country every dollar's worth of silver that was coined in India during these three years. I do insist also that if the free and unlimited coinage of silver be permitted in the United States we shall have no

for melting and recoining in foreign countries, and that the supply being diminished without any decrease in the demand an increase in the value of silver would follow by natural and unavoidable consequence. And I insist further that within two years after the authorization of free and unlimited silver coinage in this country England would be unable to buy silver bullion for 80 cents on the 100. Every one must see that this would be inevitable, for every one must realize the absurdity of supposing that any owner of silver will sell 412½ grains of that metal in England for less than it will bring in the United States.

If any one objects that it will also inevitably result from free coinage that we will have all the silver in the world brought to our mints, I reply that such a result is not only not inevitable, but it is absolutely impossible. We have seen that the world's average annual silver coinage is $103,000,000, while the total product of silver is but $114,000,000. Admit that the world can get along with thirty millions less silver money—and certainly no one will have the hardihood to maintain that this is not a liberal, an extravagant reduction, and that every dollar of this silver would be annually added to our money of account—we should still be very far from having all the silver in the world, and would not have one dollar more than could be advantageously and legitimately used in our trade. Add these thirty millions of silver dollars to our circulation each year for fifty years, and though there were no increase whatever in our population in the mean time, at the expiration of the fifty years we would only have the same circulation per capita that France has now.

I think I have shown, Mr. Speaker, that we can only hope to compete successfully with the wheat and cotton of India by depriving England of cheap silver, and that the only means within our own control to accomplish this result is to provide for free and unlimited, unrestricted coinage. I think I have shown also that by adopting this policy we shall infallibly force England to pay a large per cent. increase on the cost of everything she now gets in India, and that we shall thus be enabled to compete with India wheat and cotton in the markets of the world upon comparatively equal terms. I have shown also that the restoration of this equality in competition is indispensable to our profitable export of wheat and cotton to European markets.

Having shown this, I feel justified in saying that I have also shown that, though this particular bill may be defeated, the ultimate passage of a kindred measure is as certain as that the American people possess the intelligence and the power to protect themselves.

It is possible that the great energy and industry of our people, the fertility of our soil, our unparalleled mineral wealth, may so relieve the distress of our toiling millions that they will not demand this particular measure of relief—but some relief they must and will have.

As it is an interesting and instructive study I will submit to the House this table, showing the stock of gold and silver coin and bullion held by the principal countries in the world.

Stock of gold and silver coin and bullion in the principal countries of the world.

Countries.	Population.	Gold.	Silver.	Total.	Per capita.		
					Gold.	Silver.	Total.
United States	58,000,000	$609,000,000	$283,000,000	$892,000,000	$10 50	$4 88	$15 38

As a reply to the argument that the continuation of silver coinage will drive gold out of the country, let us take a lesson from

GERMANY AND FRANCE.

France, like the United States, adheres to the gold and silver standard, but Germany, like England, has adopted the gold standard. In 1873 France paid Germany $1,000,000,000 in gold; but France, while maintaining the double standard, has already got so much of that gold back that to-day she has $848,000,000 of gold and $595,000,000 of silver, while Germany, attempting to enforce the gold standard, has but $334,000,000 in gold and $211,000,000 in silver.

As an additional proof of how diametrically opposed to the facts were the predictions that gold would leave the country, which were so confidently indulged in by those who opposed the act of 1878 which remonetized silver, I will mention the fact that at the time this act was passed the amount of gold in the country was less than $200,000,000. The last report of the Comptroller of the Currency states that the amount of gold in the country has increased, as I will read:

January, 1879	$278,310,126
November, 1882	547,256,262
November, 1883	581,970,254
November, 1884	585,611,872
November, 1885	586,727,787

It is estimated now that the United States has $609,000,000 in gold coin and bullion, and therefore has more than any gold-standard country, and more than any country in the world except France.

This shows conclusively that our present system does not drive gold away from us, but, on the contrary, draws it to us, for it will be observed that, while our production of gold has been steadily diminishing, our stock of gold has been steadily increasing.

The table which I will now read, giving our imports and exports of gold and silver during the past year, will explain how this addition to our stock of gold has been secured:

Imports and exports of gold during 1885.

Gold bullion imported last year	$11,221,846
Gold coin imported last year	17,842,459
Total imports of gold	29,064,305
Gold bullion exported	395,750
Gold coin exported	8,082,142
Total gold exported	8,477,892
Total gold imported	29,064,305
Excess of imports over exports	20,586,413

Exports and imports of silver during 1885.

Silver bullion exported	$13,272,239
Silver coin exported	20,422,924
Total silver exported	33,695,163
Silver bullion imported	4,530,384
Silver coin imported	12,020,243
Total silver imported	16,550,627
Excess of exports over imports	17,144,536

Silver and gold are governed by the laws of trade, and, like everything else, will seek the highest market. Gold will purchase more silver here than it will in Austria, Russia, Germany, Portugal, and the Latin or Scandinavian states and Great Britain. Silver will

PURCHASE MORE GOLD

in each of these countries than here, and with this fact staring them in the face, and the further fact that we import more gold than we export and export more silver than we import, the opponents of silver coinage keep up the false cry that unless we stop the coinage the United States will become the dumping-ground of all the silver in the world, and that our gold will be absorbed by the gold-standard countries of Europe.

I think I have shown, Mr. Speaker, that every theory of the gold-standard advocates has been proven to be without foundation, and that every anticipation of the friends of silver coinage has been verified. With this experience we advocate the bill now under consideration, which is in these words:

That from and after the passage of this act all holders of silver bullion of the value of $50 or more, standard fineness, shall be entitled to have the same coined into standard silver dollars of 412½ grains troy of standard silver to the dollar, upon like terms and conditions as gold is now coined for private holders; that the standard silver dollar heretofore coined and herein provided for shall be the unit of account and standard of value in like manner as now provided for the gold dollar, and shall be a legal tender for all debts, public and private, except where otherwise stipulated.

SEC. 2. That so much of the provisions of the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and restore its legal tender character," as provides for issuing certificates on the deposit of silver dollars, shall be applicable to the coin herein named; and so much of the said act of February 28, 1878, as provides for the purchase of silver bullion to be coined monthly into standard silver dollars be, and the same is hereby, repealed.

SEC. 3. That the Secretary of the Treasury is hereby authorized to adopt such rules and regulations as may be necessary to enforce the provisions of this act.

No one has yet given a satisfactory reason why we should restrict the coinage of silver any more than we should the coinage of gold, and I shall vote for this bill, Mr. Speaker, because it is right and because it is in the interest of the people.

It is a principle which no one will deny, that to increase the value of an article you must find uses for it. I will read a table stating our production of gold and silver for the last forty years:

Production of gold and silver in the United States, annually, from 1845 *to* 1884, *estimated by R. W. Raymond from* 1845 *to* 1873, *inclusive, and by the Director of the Mint since.*

Years.	Estimated product.		
	Gold.	Silver.	Total.
1845	$2,008,327		$1,008,327
1846	1,139,357		1,139,357
1847	889,085		889,085
1848	10,000,000		10,000,000
1849	40,000,000	$50,000	40,050,000
1850	50,000,000	50,000	50,050,000
1851	55,000,000	50,000	55,050,000
1852	60,000,000	50,000	60,050,000
1853	65,000,000	50,000	65,050,000
1854	60,000,000	50,000	60,050,000
1855	55,000,000	50,000	55,050,000
1856	55,000,000	50,000	55,050,000
1857	55,000,000	50,000	55,050,000
1858	50,000,000	500,000	50,500,000
1859	50,000,000	100,000	50,100,000
1860	46,000,000	150,000	46,150,000
1861	43,000,000	2,000,000	45,000,000
1862	39,200,000	4,500,000	43,700,000
1863	40,000,000	8,500,000	48,500,000
1864	46,109,000	11,000,000	57,100,000
1865	53,225,000	11,250,000	64,475,000
1866	53,500,000	10,000,000	63,500,000
1867	41,725,000	13,500,000	65,225,000
1868	48,000,000	12,000,000	60,000,000
1869	49,500,000	12,000,000	61,500,000
1870	50,000,000	16,000,000	66,000,000
1871	43,500,000	23,000,000	66,500,000
1872	36,000,000	28,750,000	64,750,000
1873	36,000,000	35,750,000	71,750,000
1874	33,500,000	37,300,000	70,800,000
1875	33,400,000	31,700,000	65,100,000
1876	39,990,000	38,800,000	78,700,000
1877	46,900,000	39,800,000	86,700,000
1878	51,200,000	45,200,000	96,400,000
1879	38,900,000	40,800,000	79,700,000
1880*	36,000,000	39,200,000	75,200,000
1881*	34,700,000	43,000,000	77,700,000
1882*	32,500,000	46,800,000	79,300,000
1883*	30,000,000	46,200,000	76,200,000
1884*	30,800,000	48,800,000	79,600,000
Total	1,651,568,769	647,050,000	2,298,636,769

*Calendar year.

It will be seen that the greatest amount of silver we have ever produced in one year was $48,800,000. This bill only proposes to coin that portion of the annual product which is not called for in the arts, and not needed for export, and this law would therefore provide a use for all our silver and none would be hunting a market under adverse conditions, necessarily a prey of those who are interested in depreciating its value.

The surprise is that silver has not depreciated, relatively to gold, more than it has. If any product becomes the subject of unfriendly legislation it will of necessity depreciate, and if any product be specially fostered it will by a like necessity become comparatively more valuable.

Gold has been favored by legislation. Its free coinage is provided for by law, and this assists in enhancing its value.

If this bill should pass the coinage of silver would not be increased to the extent claimed by the opponents of the measure.

The coinage of silver since its remonetization in 1878 has been as follows:

1879	$27,227,882	1883	$29,245,989
1880	27,942,437	1884	28,534,866
1881	27,649,966	1885	28,848,959
1882	27,972,035		

Last year we produced $30,800,000 of gold, and the excess of our imports of gold bullion over our exports was $10,826,096, giving total gold bullion available for coinage and the arts of $41,626,096, and coined but $23,724,879, slightly more than one-half.

I have shown that during 1885 we exported $8,741,855 more of silver bullion more than we imported, and deducting this from our total production in 1884 would leave but $40,058,145 for our arts and coinage, and assuming that the proportion of coinage of free silver would not exceed the proportion of coinage of free gold, it would only amount to $22,793,885, which is even less than the amount which, under the present law, is compelled to be coined.

This shows that no great increase of coinage of silver would result from the passage of the bill, and that the effort to alarm the country with predictions of a deluge of silver are groundless.

I do not wish to be understood as insisting that this is all that would

be coined under a free-coinage law. I readily admit that in all probability, under free-coinage, a portion of the silver that would otherwise be exported would be coined at our mints.

I admit that under such a law the imports of silver might increase, and that much of the imported silver might be coined at our mints.

But so long as our ratio is 1 to 16, and the ratio of France is 1 to 15½, and so long as England requires millions of silver annually for India, there can be but little danger that our coinage would be excessive.

A prominent gold-standard advocate has asked me if it would not be possible, under a free-coinage law, for all the surplus silver of the world to be brought to the United States, coined at our mints, and used to

PURCHASE THE LANDS

of our people. I think there could be no injury result to us from this. It would bring us a good population; it would add millions of dollars in coin to our circulating medium of exchange; the value of all our land would be enhanced, and the products of the land and of labor of every kind would necessarily increase in value.

If this would be one of the results threatened by silver opponents I insist it is a strong argument in favor of free-coinage.

Taking all in all, the facts developed since the passage of the coinage bill in 1878 have positively contradicted all the theories advanced by the advocates of the single gold-standard, and when they are confronted with the antagonism between their speculative theories and the actual facts they can only exclaim, So much the worse for the facts!

There is another reason why we should repeal the restrictive feature of the coinage law of 1878. It requires that at least $2,000,000 and not more than $4,000,000 of silver be coined each month. It might be convenient and economical, and consistent with the best interests to coin very largely during some months, and again there might be good reasons why it would be best not to coin any silver at all during certain other months.

The question is asked, what interest have the national banks in demonetizing silver?

I will endeavor to state some facts which will make their interest in this matter more apparent.

On July 1, 1885, the amount of gold in the country was $542,174,633. At that date the banks owned in—

Gold coin	$65,559,947
Gold certificates	72,983,340
Legal-tenders, redeemable in gold	69,738,759
Gold clearing-house certificates	23,614,000
United States certificates	18,000,000
Total	249,892,046

It will be seen that the banks hold substantially one-half of the entire stock of gold in the country. It is plain that if the coinage of silver was stopped this gold would be increased in value and the banks would be correspondingly enriched.

To show what little interest the banks have in silver let me call attention to the fact that of the $278,000,000 of silver in the United States the banks, on July 1, 1885, owned only $11,400,000; and, as a proof that I am correct in my statement that the stoppage of the silver coinage would increase the value of the gold held by the banks, I cite the fact that since Germany stopped the coinage of silver and adopted the single gold standard, gold in that country will purchase 25 per cent. more of the products of labor than it would prior to that action.

I am glad to say, however, that we have at least one national banker who can rise superior to the temptation to swell his gains at the expense of the whole body of the people. I do not pretend to say that we have but one such patriotic and honest banker, but I assert that Mr. John Thompson, the president of the Chase National Bank, of New York, is the only gentleman occupying that position whose published utterances, so far as they have fallen under my notice, are in positive and earnest opposition to the persistent efforts of the banks and money-monarchs of this country to impose the single gold standard upon us to the

OBVIOUS DETRIMENT

of the interests of the tax-payers, and to the equally manifest benefit of the creditor class, the holders of bonds, mortgages, promissory notes, and other evidences of debt, public and private.

I will read a few extracts from this gentleman's remarks upon the silver question, made before the Bankers' Association at Chicago last fall:

* * * Following the lead of Germany; Sweden, Denmark, Norway, and this country demonetized silver; France, Belgium, Spain, and Italy stopped coining it, and in July, 1876, $4 of gold was equal in the London bullion market to $5 in silver. * * *

The debtor class is 10 to 1 of the creditor class; the mortgageors are numerous as compared with the mortgagees. The debtor knows full well that the conversion of silver into merchandise, instead of being monetized, will fully double the burden of his debt. * * *

I regret the necessity of this plain talk and do sincerely hope that some measure can be adopted to perpetuate the double or bimetallic standard. The equities as between debtor and creditor should not be violated. The wheels of prosperity should not be blocked by the conversion of one-half of the basis of our currency and credit into mere property. The extra liability of suspending specie payments should not be incurred.

The most active financial minds of Europe are discussing the "hard times," much of which is attributable to the demonetization of silver. * * *

A most natural question arises, if the silver dollar and its paper equivalent (silver certificates) become our current money, what will be the premium on gold?

So long as European exchanges are in our favor and so long as our exports and imports run about equal, gold will be at but a nominal premium; but should our foreign trade run disastrously against us, involving large shipments of gold, the premium will be equal to the difference between gold and silver in the London bullion market. * * *

The laborer is appealed to to help repudiate silver. I would like to see the laborer who has discovered that a gold dollar buys more bread and butter than a silver or paper dollar. He wants prosperity and employment that he may get the dollar.

Every principle of monetary and economic science for which the advocates of free silver coinage have contended is sanctioned, indorsed, and advocated by this intelligent, sagacious, and honorable bank president, whose selfish interest is presumably identical with that of the great majority of his brother bankers who so clamorously demand the demonetization of silver and the establishment of the single gold standard.

He attributes the existing (relative) depreciation of silver to the same cause that we do. He, like ourselves, recognizes and appreciates the significance and important bearing upon this question of the relative numbers of debtors and creditors in our country whose immediate and remote prosperity is to be affected by the action which we as legislators may take upon this bill. He concedes the truth of the proposition which we have endeavored to emphasize, that the "conversion of silver into merchandise" by depriving it of its legal-tender function will double the burden now borne by the debtor, and regrets, as we do, the necessity that the utterance of plain and homely truths upon the subject should have been rendered necessary by the apparent inclination of some to "violate the equities between debtor and creditor."

If this honorable, high-minded bank president, whose many years of experience have given him a practical familiarity with the subject which we can hardly hope to acquire, can withstand the proffered temptation to augment his wealth at the expense of the great body of the people, what answer shall we, their chosen and trusted representatives, make to them when called on to explain why this grievous wrong was not prevented?

There may be upon this floor gentlemen whose constituencies are composed wholly of the creditors of less fortunate localities, though I have never visited or read of any such district. Still it is possible, but not at all probable, that there may be somewhere in this country a Congressional district in which the creditors outnumber the debtors. That such a representative, intrusted by so exceptionally favored a constituency with the duty of protecting and promoting the individual interests of his people, should feel it to be his duty to oppose this bill and thereby swell the tribute which the rest of the community must pay to their more fortunate brethren I can readily understand.

But even under this almost inconceivable condition of affairs I should feel that such an opponent of the bill was mistaken in his ideas of the duty which his position entailed. I should still entertain the belief, the conviction, that the duty of an American representative should not be limited or bounded by the lines of his own immediate district, but that the obligations of his office required him to do all that lay in his power to guard, shield, and

PROTECT THE PEOPLE

of the whole Union from any and every attempted wrong and injustice.

For a long period the laws of England sought only to pander to every whim and wish of the nobility, but her sagacious statesmen finally saw that the trade of England was her glory, and for years it has received the first consideration of Parliament, and this accounts for her greatly increasing prosperity.

Let America stop legislating for our moneyed nobility, and devote its wisdom to the resuscitation of our prostrate trade and commerce, and we will be able to successfully compete with England in all the markets of the world.

For my own part, Mr. Speaker, whatever opinions others may hold as to their duty to their own immediate constituency and to the people of the whole United States, it is not possible for me to be doubtful regarding my individual duty on this question. The great body of the people of the district I have the honor to represent on this floor are not bondholders and creditors who "toil not, neither do they spin." They are honest, industrious, tax-paying, producing people; and the labor of such people pays every dollar of the expense of our Government, national, State, county, and municipal, together with every dollar of interest and principal of the bonds issued by the Government, by States, by counties, and by cities.

Impoverished but not disheartened, deprived of property amounting to a vast sum by the war and its results, but still retaining their courage and fortitude, they have uncomplainingly submitted to exactions they felt to be inequitable, have patiently, if not smilingly, endured hardships and privations both bitter and mortifying, animated and sustained by an unfailing confidence in their own industry, economy, and self-denial to rehabilitate their fallen fortunes. Relying upon their own sturdy arms, and supported by an unfaltering trust in the justice of the American people, they have toiled and wrought and delved on their farms and in their workshops, hoping and expecting that each succeeding year would bring with it that quickened conscience, that reviving sense of justice in the American Congress which must inevitably lighten their burdens and increase the rewards of their labor.

REPRESENTING SUCH A PEOPLE,

and chosen to represent them because of my life-long devotion to the principles of that political party which is the special champion and defender of the poor and lowly—of the people, I should be false to every trust with which they have honored me, recreant to every obligation the acceptance of those trusts imposed, did I not seek by all honorable and legitimate means to secure the success of this and every kindred measure designed to sweeten the toil of the laborer by increasing the gains which should follow his industry, and to equalize the burdens laid upon the tax-payer by enforcing their more equitable distribution.

I want the laboring men upheld in their manhood, grand, glorious manhood. They are the heroes and the reliance of a republic. They create everything that makes a country great. To them we owe everything which makes a people happy. They brave the winter's cold and toil without a murmur under the scorching summer's sun. Without their honest hands the palatial cities, the railroads, the telegraphs, the steamers, and the teeming farms which now make our country the wonder and the envy of the world could not exist. In the front of battle they bear aloft the banners of our country. They bare their breasts to the terrible assault, and in the deadliest carnage they lead the charge which gives victory to our columns.

God bless the workingmen of America, and may it be the first duty of Congress to provide for their protection and defense.

Silver Coinage.

SPEECH
OF
HON. JOHN R. EDEN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 20, 1886,

On the bill (H. R. 5690) for the free coinage of silver, and for other purposes.

Mr. EDEN said:

Mr. SPEAKER: I do not propose to discuss the silver question or do more than give the reasons for my vote on the pending bill and proposed amendments. I am in favor of bimetallism, and will give no vote which I believe will tend to prevent the use of both gold and silver as the basis of a circulating medium. I am of opinion that the business depression now prevailing and that has prevailed for several years, both in Europe and America, is due largely to the attempt which has in recent years been made, with partial success, to make gold the sole standard of value and the only money metal of the world. Our legislation should all be directed to the restoration of silver to its old place, and no backward step should be taken until that object shall have been accomplished.

Under existing laws the Secretary of the Treasury is required to cause to be coined not less than two million nor more than four million of silver into standard silver dollars each month, and said coin is a full legal tender in the payment of debts. The silver bullion to be coined under this act (act of February 28, 1878) is purchased by the Secretary of the Treasury at its market price as required for purposes of coinage. During the fiscal year ending June 30, 1885, $28,528,552 of standard silver dollars were coined under the act referred to. The seigniorage to the Government upon this coinage was over 18 per cent., or in round numbers about $4,500,000, which was covered into the Treasury.

In other words, upon the purchase of silver by the Treasury during the last fiscal year for the coinage of standard silver dollars the bullion value of the silver purchased was on an average 18 per cent. below the coin value thereof, and the profit or seigniorage was paid into the Treasury. According to the report of the Director of the Mint the production of silver from the mines of the United States for the calendar year 1884 was in round numbers $48,000,000. Using that amount as an estimate for the production during the fiscal year ending June 30, 1885, it will be seen (leaving out minor coins) that $28,000,000 of the production was coined into standard silver dollars, and according to the report of the Director of the Mint $20,000,000 of silver bullion was exported. This statement substantially disposes of the domestic production of silver for the year.

There will be two propositions presented to be voted on by the House, as I understand, when final action is taken on the pending bill. The first will be in the form of a substitute providing that after a given day, unless an international agreement shall be reached, the coinage of the standard silver dollar shall be suspended.

I shall vote against this proposition for the reason that I believe the coinage under existing laws has been and will continue to be beneficial to the people, and for the further reason that to suspend the coinage would be a step backward in the march toward the restoration of silver to its old and honored place as one of the money metals.

The other proposition may be best stated in the language of the pending bill:

That from and after the passage of this act all holders of silver bullion of the value of $50 or more, standard fineness, shall be entitled to have the same coined into standard silver dollars of 412½ grains troy of standard silver to the dollar, upon like terms and conditions as gold is now coined for private holders; that the standard silver dollar heretofore coined and herein provided for shall be the unit of account and standard of value in like manner as now provided for the gold dollar, &c.

Now, this proposition looks fair; but is it fair? We have nearly $3 of gold coin in this country to $1 of silver coin. There is a difference of about 18 cents in the value of the bullion in a silver dollar and that in a gold dollar. When the Government coins a silver dollar there is, by the act of the Government in giving it a legal-tender quality, 18 cents added to its value for purposes of domestic circulation. It is of no more value as bullion, or for exportation, or to pay a foreign debt than it was before it went to the Mint. Hence, under this bill, the bonanza king who owns a silver mine and has on hand $1,000,000 of silver bullion has added to his wealth $180,000; and supposing that the owners of silver mines now have on hand $10,000,000 silver bullion, the passage of this act will add to their property nearly $2,000,000, which, under the present law, would go into the Treasury. But this is not the worst feature of the bill.

This bounty of the Government is not limited to our own people. Under the operations of this bill the holders of silver bullion the world over may be able to bring it to our mints and have it coined at our expense into standard silver dollars, and exchange the silver coin for our gold coin and export it to England, Germany, or France, where not a dollar of silver is allowed to be coined as full legal tender. This bill opens a way for Germany to get rid of her stock of silver, for which she has been seeking a market ever since her attempted establishment of the single gold standard, and have it coined into legal-tender dollars, which may be exchanged at par with our gold coins and transported to Germany. I can conceive of no better method of insuring the success of the European nations in permanently establishing gold monometallism than by the passage of this bill.

Mr. Speaker, I ask this House to consider the effect the passage of this bill will have on the coinage of gold in the United States. I presume the most ardent friend of the bill does not expect its passage to result in appreciating the value of silver so that our silver dollar will be equal in value to our gold dollar in the markets of the world. Then why should the holder of gold bullion take it to our mints for coinage at a valuation much below that of silver, when the coin value of the gold dollar will be no more than the coin value of the silver dollar? He can exchange his gold bullion for purposes of exportation for silver bullion for purposes of coinage, at a profit of 18 per cent. at present prices. Hence, if this bill passes, the silver bullion will all be coined and the gold bullion will all be exported.

I know that we have in the course of this debate been reminded of the fact that a large amount of silver bullion has been exported since the passage of what is called the Bland act. That is very true, and will so continue as long as the United States Government is a purchaser at its market value of a limited amount of silver bullion. The value of silver bullion at our mints is measured by its commercial value. What our Government does not want for coinage and our people do not purchase for other uses will go abroad where people do want it. If we by an arbitrary law give an artificial value to silver bullion over its value in the markets of the world, it will as naturally come here as the waters of the Mississippi flow into the Gulf of Mexico. If, on the other hand, we exclude gold bullion from our mints by undervaluing it from 10 to 20 per cent., it will naturally flow out of the country in search of a more friendly purchaser.

Silver monometallism would prove even more disastrous to the country than gold monometallism. This bill discriminates against gold in such a manner and to such an extent as will surely drive it from our mints. It will find its way to the mints of Europe, where it is estimated at its real value.

This objection to the passage of the bill might be obviated by an amendment providing that the Government, "in adjusting the account of gold and silver bullion coined under the provisions of this act, shall retain for the United States the difference at the date of coinage between the commercial value of bullion so coined and the coin value thereof, and the sums so retained in coined money shall be from time to time covered into the Treasury." I understand the gentleman from Indiana [Mr. HOLMAN] will, if he can get the floor for that purpose, offer an amendment to the bill such as I have indicated. The adoption of such an amendment would open the mints and make them free to all holders of both gold and silver bullion upon equal terms, with no discrimination against either.

The Government would retain the profit on the coinage of both gold and silver, and there would be no premium offered to the people of foreign governments to send their silver to our mints for coinage. It is true the millionaire mine owners would by the adoption of this amendment be cut off from their millions of profits this bill, should it become a law, will divert from the Treasury and bestow upon them. To give some idea of the enormous amount there is in this bill for the benefit of the owners of silver bullion, I refer to the fact that during

seven years, beginning at the passage of the Bland law in 1878, the profits on the coinage of the standard silver dollar amounted to over $25,000,000, every farthing of which went into the Treasury.

Under the operation of this bill, should it become a law, every farthing of the profit on the coinage of the standard silver dollar will in the future go into the pockets of the holders of silver bullion. Without amendment I will vote against the bill. I voted for the Bland act as it now stands and I will not vote to repeal or change it unless we can get something better. If we by our legislation exclude either gold or silver from our mints, we thereby strike a fatal blow at bimetallism. I shall vote against this bill because, in my opinion, under its operation gold will be excluded from our mints and silver monometallism will speedily follow in this country. I can not foresee all the evil consequences that would ensue, and will not undertake to point them out. That all values would be unsettled and all business operations would be thrown into confusion seem to be the natural consequences that would follow such a radical change in our monetary system.

Forfeiture of Railroad Land Grants.

SPEECH

OF

HON. WILKINSON CALL,

OF FLORIDA,

IN THE SENATE OF THE UNITED STATES,

Wednesday, April 7, 1886.

The Senate having under consideration the following resolution, submitted by Mr. CALL January 28, 1886:

"*Resolved*, That all railroad land grants heretofore made where the land was not earned by the completion of the line of railroad and the performance of the conditions required by the granting act within the time required therein, and where the time has not been extended by an act of Congress, or shall not hereafter be extended, shall be declared forfeited and opened to homestead entry and cash entry in small bodies, securing to actual settlers the preferred right in all cases to make entries of their homes to the extent of 160 acres, and confirming to all purchasers of town sites, where lots have been sold and improvements made, their title to the same.

"And the Committee on Public Lands is hereby instructed to report a bill to this effect to the Senate"—

Mr. CALL said:

Mr. PRESIDENT: The United States have granted over 150,000,000 acres of the public lands for the construction of railroads, an area more than five times as great as the State of Florida, which is one of the largest States in area in the Union. It is not my purpose to argue the policy of making these grants. A great public object has been accomplished by it. Perhaps it might have been done much better for the interests of the country than in the manner in which it has been done. No doubt there should have been reserved to the United States some portion of the receipts of these properties created out of a donation of the public land, something to contribute to the cause of education, something to relieve the burdens of taxation.

But it is not in regard to the general relations of this subject to the whole Union that I propose to address the Senate to-day. It is in reference to some of the grants made to the State of Florida, and their relations to the people of that State and to the development of the State. The area of land in the State of Florida is 59,268 square miles—35,575,000 acres, by survey and estimation. For school purposes the United States granted by the act of 1845 908,503 acres, and for a university 92,000 acres by the act of March 3, 1845. The swamp and overflowed land grant to the State had selected from 1850 to 1880 15,626,859.23 acres. To that amount there has been added since that time 2,000,000 of the remaining public land, and under the grant of 1856 2,275,570.53 acres. There remained unsurveyed in the area of the State in 1880, by the report of the Interior Department as contained in the History of the Public Domain, an official document published by that Department in 1883, 7,756,493 acres, supposed to be largely covered by the swamp and overflowed land grant to the State. This leaves from the entire area of the State 7,056,680 acres out of the 35,000,000 acres in the entire area of the State for private settlement under cash entries and the various land sales which have been made by the United States. The sum of 7,056,680 acres only out of 35,000,000 acres, the entire area of the State, remains ungranted to the State under the swamp and overflowed land-grant act and under the acts granting aid to the State for the construction of railroads, and for other purposes, being less than one-third of the entire area of the State, which cost the Government of the United States between $6,000,000 and $7,000,000 in actual expenditure, that have been and are available for purposes of entry under cash entry and homestead entry in the State.

The United States granted by an act approved the 17th of May, 1856, "to the State of Florida, for the purpose of aiding in the construction of railroads from Saint John's River, at Jacksonville, to the waters of Escambia Bay, at or near Pensacola; and from Amelia Island, on the Atlantic, to the waters of Tampa Bay, with a branch to Cedar Keys, on the Gulf of Mexico; and also a railroad from Pensacola to the State line of Alabama, in the direction of Montgomery, every alternate section of land designated by odd numbers for six sections in width on each side of each of said roads and branch. * * * And if any or either of said roads or branch is not completed within ten years no further sales shall be made, and the lands unsold shall revert to the United States." That is the language of the act. It is an imperative command, an exercise of the sovereign legislative will, and I have not been able to perceive by what process of reasoning any court had authority or power to veto this positive and absolute command of the law, this expression of the sovereign legislative will of the people in Congress assembled. Under this act several railroad companies were provided for, namely, the Florida Railroad Company, the name of which has been changed successively to the Atlantic and West India Transit Company, and then to the Florida Navigation and Railway Company; also the Pensacola and Georgia Railroad Company; also the Florida, Atlantic and Gulf Railroad Company; and in 1866 the roads were not completed, and the road from Waldo to Tampa is not completed at this time.

The land granted, under this act beyond the point to which these roads were completed at the expiration of the ten years when it expired, is now proposed by the bill which has been referred to the Committee on Public Lands to be forfeited, because the act contained within it a provision that if not completed to Tampa Bay on the one side and to Pensacola on the other, within ten years from the date of the passage of that act, the land should revert to the United States.

I call attention to an extract from the Public Domain, an official document published by Congress, a statement which I will print in an appendix to my remarks marked "A."

The road to Tampa is not even now, thirty years from the time of the grant, completed, and the road to Pensacola was completed by a new and different company, commencing in 1881, fifteen years after the grant expired. It is my intention now to present to the Senate, to the country, and to the people of Florida the peculiar condition in which this grant stands to the interests of the whole people and to the law. In 1856 railroad corporations were organized in the State of Florida under acts of the Legislature of Florida, which accepted and became bound by an act of the Legislature known as the internal-improvement act, the sections of which, important to this subject, will be found in the appendix marked "B."

I also read the first section of an act to amend "An act incorporating the Florida Railroad Company."

That the act incorporating the Florida Railroad Company, approved the 8th day of January, A. D. 1853, is hereby amended so that the said company shall have power to construct the railroad from Amelia Island, on the Atlantic, to the waters of Tampa Bay, in South Florida, with an extension to Cedar Key, in East Florida, under the provisions of an act to provide for and encourage a liberal system of internal improvements in this State, approved the 6th day of January, A. D. 1855.

There had been a previous charter granted by the State to construct the road to the Gulf of Mexico, with the following provisions:

SEC. 2. *Be it further enacted*, That the said railroad shall commence in East Florida, upon some tributary of the Atlantic Ocean, within the limits of the State of Florida, having a sufficient outlet to the ocean to admit of the passage of sea steamers, and shall run through the eastern and southern part of the State, in the most eligible direction, to some point, bay, arm, or tributary of the Gulf of Mexico, in South Florida, south of the Suwanee River, having a sufficient outlet for sea steamers, to be determined by a competent engineer, with the approval of a majority of the directors of said company.

SEC. 3. *Be it further enacted*, That the capital stock of said company shall be $1,000,000, divided into shares of $100 each. * * * Each subscriber shall, at the time of his subscription, pay to said commissioners $1 on each share subscribed for, and the books of subscription at each of the above-mentioned places shall be kept open for the space of sixty days, at the expiration of which time they shall be closed.

The act provided that upon the subscription of 1 per cent. of the total amount of $1,000,000 of capital stock the railroad should become a corporation and authorized to construct the road. The $1,000,000 was subscribed, the 1 per cent. nominally paid, immediately returned to the stockholders, and from that time to this it remains unpaid. The stock subscription has never been paid; but the State of Florida under the provisions of that act, through the internal-improvement fund, paid out of the proceeds of these sales of the public lands granted by the United States to the State under the swamp and overflowed land grant and the internal-improvement land grant $90,000, being the only paid-up stockholder that existed in the road from the beginning to the end.

Under that condition of things, which is verified by the answers that I read from the testimony taken in a cause pending in the circuit court of the United States at Jacksonville, it is abundantly proved that here was a railroad corporation with its stock subscribed for and never paid, held chiefly by two individuals, and from that day to this remaining unpaid. I read from the testimony of Joseph Finnegan, a witness in that case, on the one hundred and thirty-first page of the record of the circuit court of the United States, in the case of Robert H. Johnson against the Florida Railroad Company:

I was the receiver or person to whom the money was to be paid, and there was no money paid on this subscription. There was no payment ever made in money on the capital stock subscribed for as above stated by the association, but at a meeting of the above stockholders, held immediately after the books were closed at the Buffington House, the following board of directors were elected: D. L. Yulee, George W. Call, J. H. Bronson, Philip Dell, George R. Fairbanks, A. H. Cole, Thomas O. Holmes, and John Parsons, and myself, the

board of directors electing D. L. Yulee as president, and George W. Call as secretary and treasurer.

At a meeting of the directors $2,000 salary was allowed the president and $1,500 to me as treasurer, $1,500 to George W. Call as secretary; this amount was credited as a payment on our stock.

There was no other payment on the subscriptions for stock made as above stated, except $20,000, which was the estimated value of the land purchased from George Law and referred to in the preceding testimony, until it was transferred to the Florida Railroad Company.

The proceeds of that sale were credited on the stock of the associates.

No other payment was ever made in money on the stock subscribed for by the associates, as I have before stated, during my connection with the Florida Railroad Company.

There was no money paid or actually to be paid on the contract; they have no cash subscriptions, no available means. Their only means consisted of the bonds under the internal-improvement act and the lands donated under the act, and the two town sites, which were in a wild condition, and without population.

* * * * * * *

Upon this assurance and guarantee of Mr. Yulee that Moses Taylor and Marshall O. Roberts, of New York, were the real parties with whom I was dealing, and that they were responsible for and would make good the engagements of Mr. Dickerson in the contract, and would pay all the debts of Finnegan & Co., and would return our notes, and the additional assurance that they would put large capital into the enterprise and put a line of steamers at both ends of the road immediately on completion, the contract was executed with Mr. Dickinson. In pursuance of the obligations of that contract Finnegan & Co. transferred to David L. Yulee all their bonds and stock to be held by him in trust, to secure the performance of the contract by said Edward N. Dickerson, and a written agreement to that effect was signed by the said Dickerson, Finnegan, and Cole, and witnessed by said Yulee, and the said trust accepted by the said D. L. Yulee.

* * * * * * *

Mr. Dickerson never did carry out the contract or agreement with Finegan & Co. He failed to take up some of the notes of Finegan & Co., and I had to pay them myself. In fact, all the engagements of Finegan & Co. which were performed after that date and all the outstandinging debts were taken up by the Florida Railroad Company in its corporate capacity. [NOTE.—Complainant's counsel here offers in evidence memorandum of agreement marked Exhibit C in the bill of Yulee *vs.* Vose, and is hereto attached as Exhibit B, by consent of defendants' counsel, in lieu of the original on file in this court.] In reality, after I gave up the contract the Florida Railroad Company finished the road to Cedar Key.

* * * * * * *

If the powers contained in the two trust deeds creating the trust and the provisions contained in the second deed of trust for the protection of the free-land bonds, requiring an assessment of the stock 1 per cent. semi-annually, had been faithfully carried into effect the trustees would then have had ample means to have paid the interest and expenses and protected the trust.

This provision for a sinking fund by assessment of the stock was never carried into effect by the trustees. It required the trustees to take possession of the road and its franchises upon the failure of the company to pay the 1 per cent. annually assessed to the stock of the trustees.

* * * * * * *

The internal improvement fund owned more than $90,000 in paid-up stock in the Florida Railroad Company.

Mr. Dickinson and Mr. Yulee held a large majority of the unpaid stock.

The 32,000 bonds alluded to by me in the preceding as paid in Ed. M. Dickerson for purchase-money are numbered as follows: 1042, 1045, 1044, 1037, 1038, 1039, 1032, 1034, 724, 723, 1048, 1035, 1033, 1046, 725, 1036, 1047, 891, and 890, 1233, 1246, 1247, 1248, 1249, 1251, 1255, 1257, 1258, 1261, 1263, 1267, 1253.

On the 14th November, '59, I sent to New York a check on Riggs & Co., New York, $1,135, to take up the notes of Finegan & Co. Afterward Mr. Yulee gave me three internal improvement bonds as security for this amount.

JOSEPH FINEGAN.

It is agreed between Joseph Finegan & Co. and Edwin N. Dickerson, that the various bonds and certificates of stock conveyed by Joseph Finegan & Co. to Edwin N. Dickerson, under an agreement dated May 24, 1858, shall be held by David L. Yulee to secure the performance of the said contract by said Edwin N. Dickerson, and that the said Yulee shall release and deliver to said Dickerson the said bonds and stock as he satisfies the debts contracted to be paid by him for said Finegan & Co., and in proportion to the amounts discharged and paid.

Dated May 29, 1859.

EDW'D N. DICKERSON,
JOSEPH FINEGAN,
A. H. COLE.

I know that $32,000 of the bonds paid in by Edward N. Dickerson as the purchase-money for the town sites of Fernandina and Cedar Key to John McRae, trustee, were the same bonds which I had paid in for lots bought from trustees, and which were required to be canceled under the trust deed.

I have compared the numbers of these bonds with the numbers which John McRae received for the town sites, and I know that they are the same. Mr. Yulee was not a man of large property, and what he possessed was, I think, encumbered by mortgages.

Further on Mr. Yulee testifies that this money was a loan; and I read from his testimony:

But I will now say, further, that it was not expected that the gentlemen composing what was called "The Association" could furnish the means to build the road. It was known they could not.

I procured also the passage of the "internal-improvement act" by the State, whereby a good bonded security for $10,000 per mile, to iron and equip the road, and a grant of alternate sections of State lands were obtained. I also procured a grant of alternate sections of public lands from the United States. These assets seemed sufficient for the construction of the road. They were all put into the treasury of the corporation and devoted to the uses of the enterprise. They were all by mortgages made, primarily, appropriate to construction. The means for construction were obtained upon the credit of this property and of the road to be constructed, and not upon the credit of the stock. The only benefit the stockholders could derive would be in dividends of earnings after the construction and maintenance of the road was fully paid.

D. L. Yulee to George W. Call:

"But how stands the matter? We call for the restoration of the first 1 per cent., which was loaned to the subscribers till called for (I have faithfully regarded this as a loan, and have held myself in law and honor bound for the whole sum to the company, being myself responsible for it), and we also call for something further."

I do not know if the bonds specified by witness were paid in by Mr. Dickerson to the trustees. It is quite possible they were. The bonds he enumerates were in the hands of Mr. Soutter, one of the trustees.

* * * * * * *

In pursuance of a resolution of the board of directors a stock dividend is declared of $1.59 per share out of proceeds of land sales, there being $10,220 shares which is $16,249.80, and the balance carried to reserve-fund account, $73.45.

* * * * * * *

I find that he credits cash and charges himself with $245,526.98, derived mostly from four installments of 1 per cent. each, and two installments of 10 per cent. each, and further credits stock on account of land and interest dividends with $119,395.81, making altogether, up to September, 1859, at which date the entries in this book cease, a credit on stock of $364,922.79.

Mr. Yulee testifies further:

The contractors furnished the collaterals, paid for fastenings, duties, expenses of transportation, expense of laying, &c., themselves. The company did nothing but give their notes for the material secured by the bonds and subject to the risk of the inadequacy of the bonds to cover the debt. The bonds placed as collateral were always sufficient to cover the debt at a valuation of 80 per cent.

The fact then appears abundantly established in this record and consented to by all parties that here was a railroad company, with the great majority of its stock unpaid, on which no considerable amount was ever paid, and held by parties who paid little or nothing for it, while the State through the internal-improvement fund had become a cash stockholder to the extent of $90,000. Under an alleged authority contained in the internal-improvement act in 1866 this road was sold by the provisional trustees of the State of Florida, the officers of the provisional government, the governor, comptroller, the attorney-general, and treasurer of the State being *ex officio* under the law trustees for the State of this property. The act provided that the road should not be sold until after completion for any default in the payment of the interest or principal upon the bonds that had been issued; but without reference to that, without any judicial proceedings, this property was sold, and it was bought by a person who owned the unpaid subscriptions for stock of the railroad company, and who was obligated to pay them. It was bought with the statutory bonds of the road, which had twenty years to run, at an estimated value of 20 cents on the dollar—a very extraordinary proceeding, to pay for a property with its unmatured obligations having twenty years to run. The parties purchasing this road had become connected with its unpaid stock by assuming to pay the debts of the contractors who had built the road, as appears in this testimony.

I said I thought it advisable to specify the debts owing by this company to parties residing in the United States (now at war with this Government), which were contracted on account and in behalf of the contractors, Edward N. Dickerson & Co. The obligations of this company (Florida railroad) were given, but the collateral security, in every case large, was furnished to the company by the contractors, to be placed with the notes as security to the company, as well as the creditors.

The convenience of the company name in these cases was afforded to the contractors for reasons useful to the object of the company, but without any agreed pecuniary considerations.

The notes given by the company in the place of the contractors under this arrangement were as follows:

Table showing the amount and kind of collaterals.

Name of payees.	Amount.	Free-land bonds.	Internal improvement bonds.
Vose, Livingston & Co	$156,201 62	.....	$195,000-00

* About.

D. L. YULEE.

Sworn to and subscribed before me, at Fernandina, this 16th day of February, A. D. 1880.

[SEAL.] CHARLES W. LEWIS,
United States Commissioner for the Northern District of Florida.

It is that with which we have principally to deal now. This obligation was that of Mr. Dickerson, who became the contractor and the assignee of the preceding contractors and obligated himself to pay this note. It was not paid. It ran up into the large sum of $1,000,000, including costs and expenses. For that obligation the State paid 4,000,000 acres of the public land, netting the amount of $1,000,000. The school fund of the State, the proceeds of these 900,000 acres, was sold under an order of Mr. Justice Woods, then of the circuit court of the United States, to pay this debt.

Thus it was that the school fund of the State, and a million dollars of proceeds of the sales of the public lands, were paid to make good the default of this purchaser of the railroad company who then and now retains that property, or did until a short period ago.

We have then a railroad the entire cash stock of which is paid for by the State and the unpaid stock subscribed for and never paid, being an obligation resting upon the subscribers and those who assumed the obligation in place of them. We have a sale of the road and a purchase of it by its non-paying stockholder and its non-paying contractor. We

have the school fund of the State sold and a million dollars of the public money of the State, the result of the proceeds of the sales of public lands sold to pay this debt.

Whatever denials are made in general terms, whatever elaborate and ingenious explanations and statements are made in the record which contains these statements, it remains true that the 1 per cent. required to be paid on the organization of the company was only nominally paid and then returned to the subscribing stockholders, and never thereafter paid; that the majority of its stock was never paid.

That they had acquired the stock by an obligation to pay the debts of this road, which obligation they had never performed; but they had been paid by substituting the notes of the railroad company, in which the State was the only cash stockholder, through its internal improvement fund, for the obligations of the preceding contractors. The spectacle was thus presented of a road built out of the lands donated by the United States to the State of Florida, without any payment upon its stock subscription, and by the substitution of the notes of the railroad company for the notes of its contractors which had been obligated to be paid by the persons who made the purchase, and a purchase of the property by the non-paying contractors and payment for it with the obligations which they were themselves bound to pay.

Had their default in payment not been made the debts of the road would have been paid entirely by the persons who held its unpaid stock. Among the obligations thus assumed was an obligation of Vose, Livingston & Co. of which Mr. Yulee testifies as follows:

I had added to the obligations of the company my own individual indorsements in the case of Vose, Livingston & Co., and in several other instances where it was required to satisfy creditors. The bonds of the company had become much depreciated in the market from various causes, but I knew the internal-improvement bonds to be intrinsically worth par and that their face value was certainly realizable at some time from the internal-improvement fund and the road, and relied upon them for my security. I will add that similar support was given to the contractors before the transfer to E. N. Dickerson and without as good security to the company—notably in the cases of the contract with Drane and Singletary in 1857, and of three contracts with McDowell and Callahan in 1858. In the Drane and Singletary case, at a meeting of the board of directors on the 12th of December, 1857, Finegan & Co. being contractors, the officers of the company were authorized to execute a bond to Drane and Singletary as surety for the due performance of a contract with said Drane and Singletary on the 12th November, 1857, for the performance of certain work on the railroad.

Thus it appears that the internal-improvement fund was a paid up stockholder to the amount of $90,000; that the subsequent purchaser of the road and its franchise at the alleged trustees' sale (Mr. E. N. Dickerson) was the owner and holder of this unpaid stock and subject to all the obligations of its original subscribers under a contract with Finegan & Co. to assume and pay their debts and obligations as contractors; that among these debts was that of Vose, Livingston & Co.; that the note of the Florida Railroad Company was given for this debt; that Mr. Dickerson and his associates did not pay this debt, but the people of Florida through the internal-improvement fund did pay it by the sale of the securities of the school fund by Judge Wood of the United States circuit court, and by the sale of 4,000,000 acres of the swamp and overflowed and the internal-improvement land grant for $1,000,000 in 1881; that these facts are proved by the testimony of all the witnesses in the record who testify on the subject. The result of this state of facts was that the railroad and its franchise and whatever rights, if any, existed to the land grant of 1856 from Waldo to Tampa were claimed to be the property of Mr. E. N. Dickerson and associates, the purchaser at the alleged trustees' sale in 1866, the non-paying stockholders, the assignee of the contract of Finegan & Co., whose contract was performed by the railroad company and whose obligations the people of the State paid, while the internal-improvement fund of the State, the only paid-up stockholder, had nothing but the right of losing the State's money and her school fund and paying the debts of the railroad company and the non-paying stockholders and contractors, who thus became the corporation, and after the lapse of fourteen years from that time and from the expiration of the time at which the act commanded that the lands should revert to the people of the United States, to be appropriated under the laws of the United States to the use of actual settlers and to homesteaders, these persons as a corporation and their successors claim the 576,000 acres of this grant from Waldo to Tampa as their property, and at the same time that they make this claim they are in the United States court by their trustee swearing that they are an insolvent corporation, and we are now required to decide whether these persons have either legal or equitable claim to this 576,000 acres of land, and whether it shall now be a gift by the United States to them or shall be declared forfeited and subject it to the use of the people for homes for actual settlers.

I propose to investigate this question and to prove that this grant of land has not been applied and is not intended to be applied to the construction of a railroad from Waldo to Tampa, but that it has been and is to be used and has already been conveyed to the owners of the unpaid stock of the Florida, Atlantic and West India Transit Company as their individual property and for their personal use. I propose, further, to prove that this corporation is an insolvent corporation, and has become insolvent not by the use of its credit in the improvement of the property, but by the pretended issue of bonds and securities of the corporate property for some other use, and presumably for and in the interest of and still held by the same parties who were interested in the alleged purchase at the trustees' sale of 1866, who have not only received the whole of this great property, but also the securities issued by it, without applying any part of it to the preservation and improvement of the great highways of commerce required by the charter to be created and kept up for the benefit of the people.

I propose further to prove that 5, 10, and 25 per cent. of this grant instead of being applied twenty years after its expiration to the building of the railroad to Tampa has been contracted to be paid by these pretended owners of this property as a consideration in part according to the sworn statements of their agent in a cause pending in the courts of the United States for depriving actual settlers on the public domain of their homes and settlements to the extent of at least 20,000 acres, and this was an offense against both the criminal and civil laws of the United States. I propose to prove also by their own statements that fifteen years after this grant expired these persons, in defiance of the Secretary of the Interior, have openly advertised and sold this land of the United States, and dispossessed without law the settlers who were guaranteed in their rights by the laws of the United States.

I have here a record from the United States circuit court for the State of Florida. That record consists of a bill filed by one Sidney I. Wailes, being the agent of this company. I should remark, however, that these transactions occurred in the year 1866, immediately succeeding the close of the war; that in the year 1876, Mr. Zachariah Chandler being the Secretary of the Interior, and there never having been any part of the road from Waldo to Tampa Bay constructed or commenced to be constructed, and by the terms of the act it having expired in 1866, the ten years then being out, an application was made to Mr. Chandler in the year 1878 to reserve this grant, consisting of 576,000 acres of public lands, from public entry and settlement. He denied the application upon the ground that the act had expired by its own limitation, that no location of the road had been made, and he opened these lands to public settlement and homestead entry. In the year 1880–'81 a new company commenced the construction of this road, and an application was made to Mr. Schurz to make the reservation which had been refused by Mr. Chandler under the act which, by its terms, had expired in 1866. Mr. Schurz granted that application, and reserved this 576,000 acres of land from public entry for purposes of the railroad, and it has remained reserved from that time to this. In the mean time this company proceeded to construct the line from Ocala to Tampa Bay and have now completed about two-thirds of it.

This record by Mr. Wailes exhibits the fact that these 576,000 acres, being the portion belonging to the line from Waldo to Tampa Bay, have not been applied to the construction of this road; that every portion of it has been conveyed to the stockholders and contractors, who never paid for their stock, with whom the State was the only cash stockholder; and that every acre of this grant of 576,000 acres has been conveyed to Mr. E. N. Dickerson by a deed from this company as a security and in part payment of the purchase-money of the road built and completed before the war.

It is the most extraordinary thing that has ever occurred in the history of this country, and exhibits with what audacity and impunity the Congress of the United States, the courts of the United States, and the Executive Departments of the United States are used in the interests of those who have no equitable claim, no legal claim, nothing but the most audacious assertion of rights which have no foundation in the action of Congress or in the decision of the courts.

This is a record of the circuit court of the United States for the district of Florida, and will develop another very extraordinary proceeding; and I desire to call the attention of the Judiciary Committee of the Senate and of those elsewhere who are charged with the duty and power of seeing that the laws are faithfully administered and applied and executed to the condition of law which permits such an outrage upon justice and right, such an outrage upon honesty and upon the interests of the people. It is not creditable to us who hold the legislative power in this country that the condition of the law should be allowed to be such as to permit the existence of evils such as I have been depicting here.

Mr. Wailes states as follows in the bill of complaint to which he has made oath in the cause now pending in the circuit court of the United States for the northern district of Florida:

Your orator avers that disregarding the premises and the rights of your orator hereinbefore stated, the said company recently, to wit, on or about the 9th day of June, A. D. 1885, obtained a loan of about $140,000 and secured the payment of the same by encumbering or conveying about 85,000 acres of its most valuable lands situate south of Panasoffkee aforesaid, by executing to defendant, J. A. Johnson, trustee, an instrument in writing, of which a copy is hereto annexed or filed herewith marked Exhibit E, and which your orator prays may be taken as a part of this bill, and applied said moneys, to wit, said $140,000 to the payment of several years of arrears of taxes due the State of Florida and assessed upon its constructed road and property appurtenant thereto, not including, however, the said 85,000 acres of land.

Your orator avers that since the said Atlantic, Gulf and West Indies Transit Company entered into the said contract with your orator the said company, or some one or more of its successors or assigns, but which of them your orator does not know, conveyed to the defendant, Edward N. Dickerson, all of the lands included in said granting acts of Congress, embracing all lists of selections thereof which had been approved by the Secretary of the Interior, if any, at the date of such conveyance and unsold, as well as all other lands within said granting acts, lists of which have been filed with and in the General Land Office, or had not been made; that such conveyance was made in trust to said Dickerson to secure to him the payment of large sums of money which some one or

more persons, whose names are now to your orator unknown, but who, when discovered, your orator prays may be made parties defendant to this bill, had contracted to pay said Dickerson, as your orator is informed and believes and upon information and belief alleges, as a consideration for the shares of stock held by the said Dickerson in the said Atlantic, Gulf and West Indies Transit Company, or in one of the successors or assigns of the said company, and which said person or persons had purchased from the said Dickerson.

Your orator avers on like information, and believes it to be the truth, that said Dickerson did own or control a large portion of the capital stock of said last-named company, and some time about the year A. D. 1882 did sell his said stock in said compan', or in one of the said companies which became the successor and assignee of the said Atlantic, Gulf and West India Transit Company, for a large sum of money, and said deed of trust was executed to said Dickerson to secure the payment of the said moneys. That the existence of said deed of trust was not known to your orator, and your orator avers that he had no knowledge of the existence of said deed, nor any information with respect to same until about May, A. D., 1884, when he became land commissioner.

That about the —— day of May, A. D. 1884, the said Dickerson reconveyed to defendant company a large body of said land, including the 85,000 acres, on the credit of which the said $140,000 was borrowed or obtained as aforesaid; the said Dickerson being amply secured for the balance of the said moneys due him for stock sold as aforesaid by the portion thereof remaining in said Dickerson under said deed of trust to him.

Your orator avers that said defendant Dickerson has sold through Charles W. Lewis, an agent of said company, and conveyed some of the indemnity lands for which he has received the sum of about ten or twelve thousand dollars, of which sum your orator is entitled to have 25 per cent. under said contract, which your orator has not received and which your orator insists the said defendant company or the said Dickerson should account for to your orator, such sale having been made without the consent or knowledge of your orator.

Think of such compensation for obtaining lands which, if there had been any foundation for the claim, the legislation of the Congress of the United States had granted. What was there to do? It is very difficult to see what proper influences or efforts could be used by an agent or attorney to induce the then Secretary of the Interior to perform an act which if there had been any subsisting grant would have been imperative on him, which justified the allowance of 5, 10, or 25 per cent., being in some cases a quarter of the grant of 576,000 acres to an individual for services when there were no services to be performed!

It seems that this land grant given by Congress to construct a line of road to Tampa Bay has been applied to paying the taxes upon a road completed before the year 1866, completed before the war in fact, and to giving an agent 5, 10, 25 per cent., and for the payment to Mr. Dickerson for the road built and paid for by the State out of United States land grants before the war, and that for these purposes the actual settlers, guaranteed by the laws of the United States in their right to the public domain, have been dispossessed and their land, which was given them by the Government, sold to them at prices from three to five dollars an acre.

I desire to call the attention of the country and the Senate to the fact that here was a grant made in 1856 for the construction of a road that by its imperative terms it was required should revert to the United States in 1866 if the road was not built; that the road was not built and is not to-day built; that fifteen years after that, when the Secretary of the Interior had refused to recognize the grant, certain parties without equity and without right, who had never paid for their stock, whose debts the State had paid, the road being constructed as appears in this record entirely from the donations of the public land of the United States, applied for this reservation and it was set aside; that these same parties sold the franchise of the road, and that the purchasers conveyed every acre of this inchoate grant to the owners and vendors of the property constructed in 1860, and that they are now selling the land, depriving the actual settlers of the opportunity of homestead and purchase.

The honorable Senator from Vermont who is not now in his seat has had some correspondence which I have before me with the Secretary of the Interior, in which he calls attention to the flagrant wrong of this act. The honorable Secretary of the Interior, Mr. Teller, at my instance wrote a letter which was published giving notice to these people that they had no right to sell this land, that they had no title to it, that it awaited the action of the Congress of the United States; and yet they did proceed to sell, and they have embarrassed the people of that country and the receiver of the United States court, who I have no reason to doubt is a capable and honorable man—a court which has sold this road twice since I have been in the Senate of the United States—as stated in the letter which I have here, is now threatening that the insolvent company will take the iron up and leave the people without the road unless the people petition and Congress will give them this 576,000 acres of land. I call the attention of the Judiciary Committee to this foul wrong by which a judge of the United States court, without proof or knowledge of the facts, without contest, upon an application made by certain parties professing to hold securities without investigation of how those securities were issued, what consideration was given for them, without any controversy whatever, appoints a receiver and imports him from another State, irresponsible to the people of the State, suspending the charter contract between the State and the parties holding the franchise, coming into the court and asking of the court to take possession of the public lands of the United States for an insolvent corporation under a grant which expired twenty years ago, lands devoted to homestead settlement by actual settlers, take possession of those lands and intimidate the people of the country into besieging Congress with petitions to confirm a grant which is only a donation to an individual and not being applied to the construction of the road or carrying out the charter given by the State.

Mr. President, if this thing is to be allowed, if the will of Congress, the interests of the people, the homes of settlers are to be made the plaything of the United States courts, it is time that some inquiry was made as to those who are participants in such transactions. This record involving millions of property states that this road has become subject to a debt of about $4,000,000, and yet the iron never has been replaced.

Why, Mr. President, what are we here for as legislators, and what have the Judiciary Committee of this body to do but to devise such legislation as will protect the people of the country and prevent the courts of the United States from being made instruments of fraud and imposition upon the people?

These are facts that appear in these records and can not be denied—a railroad built without the payment of its subscription by its stockholders, a railroad in which the public, the State, and the people through the internal-improvement fund were the only cash stockholders; sold in violation of the terms of the act without judicial proceeding and judicial investigation; sold really because of a default of the payment by its stockholders of their subscription and their assumption of the debt of the contractors; sold to the very stockholders and contractors who had failed to make the payment, the State having paid a million dollars of the proceeds of the swamp and overflowed lands, and the internal-improvement lands granted by the United States for purposes of reclamation, drainage, and actual settlement for this debt thus assumed to be paid by these stockholders, who became the purchasers and owners of this property.

Now, when twenty years nearly had elapsed before they commenced the construction of the road after the expiration of the act, it turns out that about $4,000,000 of debt has been created on the road, and yet no improvement upon and no completion of the road has been made. This deponent swears that the iron had never been renewed, and then in the midst of this state of facts they come before a court of the United States and without the name of a stockholder in their bill, without disclosing who are the stockholders, who are the creditors, how the debts were created, they have a receiver appointed and borrow $1,500,000 more, and yet they claim 576,000 acres of the public land of the United States, testified by this agent of theirs to be worth $3 an acre, or $1,725,600, and at the same time they appear in the court testifying that they have obtained $4,000,000 on this property without applying any part of it to the improvement of the property. The best and greater part of the remaining public lands in the south of Florida subject to settlement and cultivation are included in this grant, and the question is whether the Congress of the United States will dedicate them to homesteads for the poor, to the settlement of the country by actual settlers, the poor, hard-toiling people of the country, or whether they will donate them as a gift to these parties who have stood in these relations to the improvement of the State of Florida.

I here insert extracts from the report of receiver H. R. Duval in the cause of W. Bayard Cutting *vs.* The Florida Railway and Navigation Company, and I take pleasure in stating that while I think the facts in this record demand in the interests of the people an inquiry by the House of Representatives I am informed that this receiver is a man of character, unconnected with these acts, and that he is improving the property:

I found upon taking the property into my charge its condition to be one of exceeding dilapidation; its road-bed in bad order; its ties and structure in like bad condition, and much of its rail, which is iron, rotten, a large portion of it having been in use from fifteen to twenty-five years; its sidings totally inadequate, its switches primitive and dilapidated, and the road-bed and track being in such a condition of decay that it is impossible to conduct its service without excessive cost and constant danger to the lives of its passengers and employés, and danger of loss and destruction to its property, rolling-stock and motive-power, and merchandise which it undertakes to transport. No regularity in service can be maintained or proper dispatch given to passengers, mails, or freights. Its motive-power, which consists of forty engines of all ages and patterns, one-third of which is totally unfit for service, and the balance of which needs repairs to a greater or less extent, which the road does not possess shops or materials to make or means to provide for, is therefore totally inadequate for the purpose.

* * * * * * *

The lack of traffic earnings by the property has not in my judgment been the occasion of its depletion in the past few years. The books of the company show earnings annually of about $1,000,000 gross, and its operating expenses, if the road was put in proper condition, should not exceed 65 per cent. of this amount annually.

I respectfully submit to the court, that I be allowed to make an issue of receiver's certificates upon the entire line of said railroad and its properties, not exceeding in the aggregate $500,000, but with leave to apply at a further day for the issue of an additional $500,000 of certificates, to be in sums of $1,000 each, to run for two years, unless sooner redeemed, to bear interest at the rate of 7 per cent. per annum, to be made payable in the city of New York on the 1st day of January and July in each year; the principal should be paid also in New York, unless said sum and interest as aforesaid is sooner paid by me out of the moneys coming into my hands from time to time applicable thereto, or the moneys therefor upon sale of property in my hands.

It is supplied with passenger and freight cars totally insufficient to the performance of even the present demands of its business. The business of both itself and its patrons is suffering for the need of a proper track and of sufficient motive power and cars. It can not perform its duties as a public carrier, and without great improvement immediately the operation of many parts of it will have to be suspended. And its owners, through their failure to supply the necessary money to economically maintain and conduct their property, are in danger of suffering a much further shrinkage in its value.

I find the property without one single yard of new rail to replace the many removals, which, through the natural breakage of rotten rails, are daily required; and without new fastenings of any kind, so that rails and fastenings which have been condemned two and three times must be culled over, to be used as substitutes for those which can not possibly be used any more. From these causes are constantly occurring accidents, as yet not resulting in the loss of

human life, but attended with some injuries to passengers and with great loss and destruction of property. The property is without necessary facilities for the handling and dispatch of its business at its stations and termini, and sadly needs an immediate enlargement of all of these, as well also the construction of many new station-houses, and the building of almost an entire lot of section-houses.

I found the property in this condition, without any money, with no credit, in debt to its connections for traffic balances, to its supply merchants for material consumed, to locomotive and car builders for equipment, which it had already materially worn before making payments thereon, and for divers other such obligations, all of which are insignificant in importance to the additional fact that its pay-rolls for its employés and laborers are behind in partial payment, exceeding 50 per cent. of same on each month's rolls, for a period of six months prior to my appointment, from which cause has resulted dissatisfaction, disloyalty, and desertion, and inability to maintain proper discipline among the employés, to the extent that it is impossible to obtain labor of good quality or sufficient of the bad to maintain the property in serviceable condition, and this bad labor is one-third more expensive than good service if we were in a position to employ the latter. In support of this, the result of my observations as to the condition of the property, I submit herewith the report, under oath, of D. E. Maxwell, the general superintendent, who has been connected with the road in this capacity for several years, and with it continuously for twenty years.

I also insert an extract from the bill in equity in the same court filed by Louis H. Myer, trustee, against the Florida Railway and Navigation Company:

Your orator further shows unto your honors that the consolidated defendan railway company is insolvent, and that it has no funds to pay the amount of said interest in arrears; that besides its liability upon its bonds secured by the said deed of trust dated May 10, 1881, amounting to $1,000,000, it is further liable to pay its so-called first consolidated mortgage bonds, amounting in the aggregate to $3,782,000, and is also liable to pay other bonds secured by several other mortgages upon different parts and sections of its line of railroad and railroad property, which, before the consolidation of the said constituent corporations into the Florida Railway and Navigation Company, belonging to them respectively, that is to say: Upon the line of railroad theretofore belonging to the Peninsular Railroad of Florida it is liable to pay mortgage liens amounting to $250,000; upon the line of railroad theretofore belonging to the Florida Central and Western Railroad Company it is liable to pay mortgage liens amounting to the sum of $2,808,000; upon a line of railroad theretofore belonging to the Fernandina and Jacksonville Railroad Company it is liable to pay mortgage liens amounting to the sum of $350,000; that the aggregate of all said bonded-indebtedness is upward of $8,190,000.

That the said consolidated defendant railway company is liable to pay upon all its bonded indebtedness as aforesaid for interest charges the sum of upward of $465,000 per annum; that it has a large floating debt amounting to upward of $1,600,000, which it is totally unable to pay; that it is indebted in certain promissory notes made and delivered by it for property essential for the maintenance and construction of its road and for moneys borrowed by it for the purpose of paying taxes, all of which notes will shortly mature; that upon the 6th day of July, 1885, a judgment was duly recovered and docketed against said consolidated defendant railway company in the circuit court, second judicial circuit of Florida, in and for Leon County, in a certain suit wherein W. Bayard Cutting was plaintiff and the said consolidated defendant railway company was defendant, for the sum of $104,088.11; that said consolidated railway company has no funds to pay said judgment or said maturing notes; that the business and profits and the earnings of said consolidated defendant railway company have heretofore been insufficient to pay operating expenses, maturing floating indebtedness, and interest on its mortgage debt; that it is now unable to pay its just debts and liabilities in full; that the property mentioned in and conveyed by the said mortgage, dated May 10, 1881, is a slender and insufficient security for the payment of said bonds secured by the said mortgage.

It is hardly necessary to say that the court granted the order asked for. This would make the sum of about $5,500,000 raised on the part of the property known as the Old Florida Railroad Company, the corporation for whose benefit this grant was made thirty years ago.

I commend it to the consideration of the Judiciary Committee of the Senate, and of others having power and standing in the like position, as a model proceeding which might be adopted by rule or statute for the use of the United States judges to make title to great public properties to unknown persons whose names and interests are not disclosed in the record, of whom and as to whom no inquiry is made and nothing shown and no proof demanded, to the detriment and in denial of the right of domestic creditors, in violation of the charter contract with the State for the honest and faithful construction of a great highway of transportation for the use of the people of the State. Not content with this $5,500,000 of securities held by them on a property built by the State and the United States with public lands, and the proceeds of their sales, under a contract with the State for its completion in eight years and with the United States in ten years, this grant of 576,000 acres, with the homes of settlers, is claimed, and it is stated in a letter of Doctor Strainger, a highly respectable gentleman of Brooksville, that the persons circulating the petition for confirmation of the grant stated that the receiver threatens to take up the iron from the road unless the people petition Congress to confirm this expired grant. What a commentary do these facts make on the administration, not of law, but on the exercise of judicial power by your courts! Is it beyond the power of the Judiciary Committees of Congress, of both judges and legislators, to find some means by which a charter contract to which the people of a State and corporations are parties can have some recognition in the courts and by the judges of the United States?

Do not these facts demand an inquiry and investigation by those who are charged with this duty and invested with power to redress this public evil, and to whom alone the judicial power is responsible for its proper and just exercise in the application of the law and the exercise of their functions? I have introduced a bill which I hope will receive the favorable consideration of the Senate, and which if passed by Congress will require the courts of the United States to apply the earnings of this property to the completion of the road to Tampa under the charter contract with the State. There can be no doubt that this grant expired in 1866; that every ground of public policy demands its forfeiture, and that the title to actual settlers to the extent of 160 acres, be confirmed and patents be granted to them and to the owners of town sites on which improvements have been made and the remainder of the grant opened to actual settlement under the homestead laws. The earnings of this property are ample for the immediate completion of the road, as the people and the State have a right to have it completed under the charter granted by the State.

No higher duty rests on this Congress than that of so legislating as to require the courts of the United States to perform their plain and manifest duty in all such cases to the people of the States where such franchiess exist in all cases where they take possession of the property.

And now, Mr. President, as to the Pensacola and Georgia road, the other beneficiary of this grant. This road was built to Quincy before the war, leaving a large part of its line to Pensacola not built. To this road 1,275,579.52 acres were approved for the whole 307 miles, more by 96,779.52 acres than the grant allowed. In 1881 a new company was chartered by the State, under the name of the Pensacola and Atlantic Railroad Company, and 20,000 acres to the mile was granted by the State out of the swamp and overflowed and the internal improvement land grants made to the State by the United States. This road was built without delay, and is a most excellent road, but there can be no question that the grant made by the State of 20,000 acres to the mile was ample. It is also very clear that there is no particle of either legal or equitable right to this grant of 1856.

In order that this railroad company should have the full benefit of having their claim made known to Congress I publish herewith a letter of Mr. W. D. Chipley, vice-president and land commissioner of this railroad company, censuring my conduct in supporting a bill for the forfeiture of this grant:

PENSACOLA, FLA., *April* 1, 1886.

DEAR SIR: Yours of 3d ultimo was received at Pensacola and forwarded to Atlanta. It arrived there after I had left that city, and laid there for some time. Since its receipt here I have been so engaged by more important matters that I have not found time to write. In fact upon reading your communication I do not know that it really requires reply. But I will say this: You refer to letters from a large number of citizens and settlers. If they governed you in a public act as a servant of the State, I can safely conclude that these letters have been made a part of the public record. If so, can I get a copy of these papers? I mean those from any citizens, and especially "settlers," in West Florida. If not, I must believe that you refer to other portions of the State, or else that people who write you are ashamed of a position into which you have allowed them to lead you. I also note you desire not to be misunderstood. I do not misunderstand you. Your letters asking your men in West Florida to send on petitions to sustain you in a bill already introduced was entirely clear. I did not refer to any advice you may have given.

I refer to your requests for petitions addressed to parties who cared no more about your bill than the "man in the moon," and who signed petition to comply with your requests. If you need any more I can send you several, as several parties on reflection became so ashamed of the matter that they sent the petitions to me. Your idea that no act of Congress can affect our rights is a novel one, coming from one who is introducing the bill. I believe you are right as far as the law in the premises is concerned, but it is strange that a Senator, the representative alike of the railroad property as well as other interests in the Commonwealth, would be willing to put the burden of litigation upon us to get rid of the embarrassment of your bill should it pass, and force us to test our rights before courts at great expense and utter suspension of development during years of litigation. You ask what manner other than petitions is open to you for an opinion of the people on our land grant. I beg to refer you to the act of the Legislature which gave us the grant, the same method of expression from the people which made you Senator. Your comment on the amount of land given to railroads is extraordinary. As the lands were held in trust for the railroads by the State what else, pray, could they do with them? What would the State be without the railroads, and what railroad in the State (even with the lands) can show a dollar's profit? As regards your views of the legal question I am happily sustained by the United States Supreme Court and will not intrude any argument upon your time. I made no implication in my last letter. I merely stated facts. You told me you only wanted to do what the people wanted, and on my return I found your letter asking that a petition be sent to you to sustain what you had already done.

Yours, truly,

W. D. CHIPLEY, *V. P. and L. C.*

HON. W. CALL, *Washington, D. C.*

It is my misfortune to differ with Mr. Chipley entirely. I regard the grant of a railroad franchise when a road is built as of great value, and when 20,000 acres to the mile are given as a gratuity to those who build the road, as a very large compensation. I consider the public policy now well established of appropriating the public lands of the United States to homestead settlement. That this land is a part of the public domain of the United States there can be no doubt.

I do not agree that the ruling of the Supreme Court in Schulenberg *vs.* Harrimen, 21 Wall., 44, is in any respect defensible. The acts of Congress making grants are laws. A law is always mandatory and compulsory. It is an exercise of power; what it commands must be done, and the only power of a court is to apply it according to its plain and manifest meaning. If this is not true, then one man holding office for life as a judge, or five men out of nine justices of the Supreme Court of the United States, with no responsibilty to the people, non-elective, and with a life tenure, have a supervisory power over the law-making power, and can themselves make and unmake laws. If this be true this is not a Government of the people, but is the most autocratic of all governments. The terms "shall revert to the United States" are very plain; they are either law or not law. But the Supreme Court say they shall not be law until a subsequent Congress shall give effect to them. But the Constitution says the Congress that makes the law shall have power to make it, and its will constitutionally expressed shall be the law and binding on all men and all courts. And its plain and manifest meaning can not be construed away in its application to individual cases.

There is not the least analogy between a grant by an individual and a law the words of which are plain and imperative.

But the decisions of the court, while not binding on Congress in any respect or to any extent as to the exercise of their functions, do not in any way deny the power and duty of Congress to declare a forfeiture of grants, the conditions of which have not been complied with.

In Farnsworth *et al. vs.* Minnesota and Pacific Railroad Company (2 Otto, S. C. Reports), the court says:

> The forfeiture is maintainable on strictly equitable grounds. It was the express contract of the parties based upon a good, valuable, and adequate consideration. Respecting the State, the company was a mere donee. It received a most liberal grant of franchises and lands and a loan of the credit of the State upon the sole condition that it should proceed with the construction and completion of the road with the dispatch agreed by the Territorial and State governments. This it undertook to do. Such completion within the time prescribed was not a collateral or incidental, but the exclusive, purpose of the amendment. Any default in this respect admitted neither compensation nor restoration of the *status in quo*.

Mr. President, I am the friend of associated effort, whether it be of capital or of labor. I believe that corporations may be made, when restrained by law, great instruments of civilization in our time; but the courts must be required to do their duty and not be the instruments of them. They must not be the mere tools to accomplish fraudulent purposes.

In this case, as I have said, I state nothing but what is sworn to upon the records of the circuit court of the United States in cases now pending there, and these most extraordinary facts are presented of a corporation created under a charter requiring the payment in money of a million dollars in stock, in consideration of State aid, in these grants made to them, paying nothing but pretending that as they sold these lands they might convert them into the stock which they had agreed to pay money for, and then these stockholders with the unpaid stock becoming the purchasers of the property and paying for it with bonds which had twenty years to run, and then failing to pay the debt for the construction of the road which they had assumed and agreed to pay, and then the school fund of the State sold to make good their obligation to pay these unpaid debts, and then a million of dollars of the public lands of the State appropriated to pay this very debt which these people had agreed and assumed to pay, and then twenty years after the expiration of this grant when Mr. Chandler had refused to make the reservation and declared it open to public settlement and entry, obtaining from Mr. Schurz a withdrawal of it upon the pretense that a map had been sent before the war of the location to the office but without the signature of the governor, and had been returned because the governor was required to sign it, and then selling this property and the franchise and the inchoate grant and right, whatever there might be in it, for a sum alleged to be several million dollars to other parties, and then the execution of a deed to the vendors of these 576,000 acres of the most valuable land in the peninsula of Florida, and then petition after petition coming here for its forfeiture and being met and counteracted by the receiver of the United States court, as is stated by Dr. Stringer, a highly respectable gentleman, of Brooksville, Fla., in a letter before me, stating that this company would take up the iron off its road unless these people petitioned Congress to make good this donation of 576,000 acres of public land to these individuals.

Every consideration of the public interests demands the forfeiture of this grant and an investigation by the proper committees of the two Houses of the facts disclosed in the records from which I have read. While the records of the United States circuit court which I have read show that this corporation is insolvent, and that this grant and everything else it possesses or claims to possess is claimed by its creditors and by Mr. E. N. Dickerson, Congress is asked to confirm it (a grant which expired twenty years ago) for the benefit of the creditors of the corporation, and the people of the State are deluded with the pretense that the confirmation is for the construction of a railroad to Tampa.

What has been done with the proceeds of the $8,000,000 of debt for which its securities have been issued? What has been and is to be done with the $1,500,000 of money just authorized to be borrowed; what with the earnings of the road? Has not this sum been sufficient, and is it not sufficient now, to build the road to Tampa? If money or land is given to an insolvent corporation will it not immediately become subject to its creditors, and pass to them and inure to their benefit to pay debts already contracted, and is it not in evidence here that this is the condition of this corporation? Is it not further proved by the statement under oath of their agent, Mr. Wailes, that the whole grant has been conveyed to Mr. Dickerson as a security for the payment of his stock or interest in the Atlantic and West Indies Railroad, built before the war, and that $140,000 of it has already been applied to the payment of the taxes on the road built before 1860, and another part to Mr. Dickerson's personal use, and another part to pay Mr. Wailes his 5, 10, and 25 per cent.? And yet there are citizens of great respectability, whose requests I would gladly comply with if in my power, who write requesting me to advocate an extension of time for this insolvent corporation, according to the sworn statement of its trustee and its alleged creditors, to complete the road to Tampa, and to give to them the title to this 576,000 acres of the public land of the United States, which, by the public law and the public policy of this Government, has been dedicated to the use of actual settlers, and to which both of the great political parties of this country are pledged, and especially the Democratic party.

Mr. President, in the presence of the evidence presented in the records I have read that this grant has not been and is not to be used for the construction of a railroad to Tampa, but is to be used for the personal benefit of a few individuals, with a knowledge of the fact that it needs only that those who are charged more directly with the powers and duty of protecting the State and her people in this matter shall require the earnings of this road and the proceeds of the State lands donated to it to be applied to the completion of the road to Tampa, as required by their charter; to have it completed, or forfeit the franchise granted by the State and confer it upon others. With my knowledge of these facts I can not reconcile it to my sense of public duty to lend my vote and aid toward depriving the citizens of the State of their right to enter and homestead the 576,000 acres of this expired grant in the southern part of the State, or that part of the grant in the western part of the State which was not earned before the grant expired in 1866.

It is no answer to this objection that the condition of the grant is the completion of the road to Tampa. This has been so for the last thirty years, and yet it has not secured its completion.

The inchoate grant has only been used as a basis of credit to obtain money (if the sworn statements of the record I have read are true) for the use of individuals and to accumulate great fortunes for them. But however this may be, the day for concentrating in the hands of a few persons vast quantities of land has passed even in England, powerful and aristocratic as she is. Public opinion demands that the land shall be opened to settlement, occupation, and ownership by the people. If I were to advocate a donation of this 576,000 acres of land, or of its equivalent in money, $1,728,000, which is the same, to be paid out of the Federal Treasury for the building of a railroad, I should certainly be in favor of giving it to citizens of the State, and of that part of the State where the road is to be built, instead of to strangers and non-residents who have already grown rich from donations by the State and the United States, without performing the conditions on which they were granted, and who now, at this very time, are in the courts of the United States declaring their insolvency and preparing for another sale of the property and their franchises and all rights possessed or claimed by them.

Mr. President, in concluding these remarks I do not wish to be understood as casting any reflections on the railroad corporations of the State of Florida. There are several other great companies in the State to some of whom the State has made extensive grants of State land from the swamp and overflowed land grant and the internal-improvement grant. These companies have honorably performed all their obligations to the State, they have paid the money for the construction of their lines of road through unoccupied portions of the State, and have contributed largely to that great progress and prosperity which, with her climate and soil, is rapidly making the State of Florida one of the most beautiful and desirable countries in the world. They are prosperous, and deserve to be so and to receive a liberal compensation for their investments. These companies are the Jacksonville, Key West and Tampa Railroad Company, the Florida Southern Railway Company, the Florida, Savannah and Western Railroad Company, known as the Plant Investment Company, the Pacific and Atlantic Railroad Company, the Jacksonville, Saint Augustine and Halifax Railroad Company, the Saint John's Railroad Company, the Tavares and Orlando Railroad Company, and the South Florida Railroad Company, and probably many others. Neither do I wish, Mr. President, to cast any reflection or disparage the future of the Florida Railway and Navigation Company and its widespread and consolidated lines which are destined in the future to be profitable and important lines of travel. My references to it have been and are only in connection with the facts stated and sworn to in the records, and can not of course affect any persons newly connected with it; and I cheerfully here state that the information I receive from the State is to the effect that Mr. Duval, the present receiver of the road, is doing much to place this corporation in a condition where it will perform an important part in the State's future.

Mr. President, I have exhausted the time which I agreed to occupy. I will not trespass further upon the attention of the Senate. It was my purpose to present these facts. I trust Senators will bear them in mind. The people of this country will not and ought not long to endure such a perversion of the powers of government as will permit such things to occur without redress. We need a law that requires the courts of the United States when they take possession of railroad and corporate property to carry out the charter, the contract between the State and the people to whom the franchise is granted by the completion of the road, and not that it shall stand for years as it has done, tossed about from hand to hand, the instrument of fraud and injury to the people of the United States and of the State.

Mr. President, it would take a volume to contain all the letters I have received from actual settlers asking to homestead these lands, stating the wrongs and outrages committeed on them and their families in the attempt to deprive them of their homes for the benefit of the rich men who live abroad and who have given no compensation for it; and the strangest fact is that their agent should appear before the judges of

the United States, who are appointed, sworn, and paid to administer and faithfully apply the laws of the United States for the protection of the people and of their homes and families, and claim compensation from the court for depriving the settlers on the public land of the United States, seeking to obtain homestead rights, of 20,000 acres of a land grant which expired twenty years ago.

The proceedings contained in these records are a travesty on law, on the decisions and orderly proceedings of courts, on the rights of the people, on the plain intent and meaning of the statutes. If they shall be sustained, or pass without inquiry, investigation, and condemnation, it will be evident that the judicial and legislative powers of this Government are in the hands of those who use them to enrich the few and impoverish and oppress the great body of the people.

APPENDIX A.

ATLANTIC, GULF AND WEST INDIA TRANSIT, FORMERLY FLORIDA RAILROAD.

This road was authorized by that portion of the act which provides for a road "from Amelia Island, on the Atlantic, to the waters of Tampa Bay, with a branch to Cedar Key on the Gulf of Mexico." The lands falling within the probable limits of the road (main line and branch) were withdrawn from sale and location, by telegram, on the 17th May, 1856, and by Notice 568, September 9, 1856. On the 22d September, 1857, a map of definite location of that portion of the road from Fernandina to Cedar Keys, 155 miles in length, was filed in this office. Eighty-four miles of the road so located was on the main line, and 71 miles (from Waldo to Cedar Key) was the branch line complete. The whole of said 155 miles was completed in 1860, entitling the State to, say, 595,200 acres for the benefit of the road. Up to the present time but 290,123.28 acres have been approved to the State under this grant. Said lands were approved prior to January 7, 1860.

The reservation of lands on that part of the main line from Waldo to Tampa Bay, 150 miles in length, was not respected by this office after May 17, 1866, entries being permitted of all lands (unless otherwise reserved) outside and south of the 15-mile indemnity limits of the constructed portion of the road. Under date of December 7, 1875, the president of the company, Mr. Yulee, transmitted a map showing the proposed route of the main line from Waldo to Tampa, and asked that the lands along the said line and within the limits prescribed by the act of May 16, 1856, be withdrawn for the benefit of the road. The map and accompanying papers were submitted to Secretary Chandler, who declined to receive or approve the map, and directed, by letter of April 27, 1876, that it be returned to Mr. Yulee. Secretary Chandler says in said letter that he does not question the principle established in the case of Schulenberg *vs.* Harriman; that the title which vested in the State by the grant and definite location of the road thereunder could not be divested by the mere failure to complete the road so located within the time fixed by the act, but that he finds nothing in that case to sustain the doctrine that the State retains the right for an indefinite period and long after the date fixed for the completion of the road to designate its route and thus give effect to the grant. He also held that failure to locate the road before the time fixed for the completion of the road should be regarded as evidence of abandonment of the grant.

On October 29, 1879, the company, through its attorney, filed in this office the map rejected by Secretary Chandler, and asked that it might, together with new and material evidence bearing upon the original location of the road, which accompanied it (the map), be submitted to the then Secretary of the Interior (Schurz) for review.

On the 10th of November, 1879, the map, evidence, and application for review were submitted to the Secretary. The evidence submitted showed conclusively that a map of definite location of the road from Waldo to Tampa was filed in this office by the engineer of the company December 14, 1860; which map being returned to him January 22, 1861, for the procurement of the governor's certificate, was lost or mislaid; and that the last map presented was a duplicate of the original map of definite location.

Secretary Schurz, after due consideration of the facts presented, held in effect that the return of the map as above related was unnecessary; that it should have been accepted by this office, as it was undoubtedly recognized by the officers of the company, and by the State authorities, as the definite location of the road; and that the map was filed in the same manner as the surveys of previous portions of the line had been filed in the office of the secretary of state of Florida. The Secretary therefore approved the map and directed that the necessary withdrawal of lands be made to protect the rights of the company and secure the proper adjustment of the grant upon the line designated. Such withdrawal was ordered by this office and took effect March 26, 1881. It may be proper to state in this connection that the company have filed a formal waiver of all claims to lands within the limits of the road occupied by *bona fide* settlers at the date of said withdrawal. Upon the question of certifying lands to the State under the grant, the Secretary decided that the lands could be legally certified, referring to the case of Schulenberg *vs.* Harriman hereinbefore quoted, opinions of Attorney-General, November 29, 1879, case of Southern Minnesota Railroad Company, and October 26, 1880, case of Atlantic and Pacific Railroad Company. The governor of Florida, under date of July 16, 1881, certifies to the completion of 44.88 miles of road from Waldo to Ocala.

PENSACOLA AND GEORGIA.

This road was authorized by that portion of the act which provides for a railroad "from Saint John's River at Jacksonville to the waters of Escambia Bay, at or near Pensacola."

The Pensacola and Georgia Railroad Company was organized to construct that portion of the road running from Lake City to Pensacola, and the grant for that portion of the road conferred upon them by the State. Said company filed maps of definite location for said portion, which covered about 307 miles of road, prior to May 30, 1858. The lands falling within the probable limits of this road were withdrawn by telegram and letter of May 17, 1856, and May 23, 1856, by Notice 558.

No evidence of the construction of any portion of this road has been filed in this office, but the road is believed to be constructed and in operation from Lake City to Chattahoochee River, a distance of, say, 150 miles. Had the whole length of road located (307 miles) been constructed, the State would have been entitled to 1,178,880 acres of land, provided so much vacant and unappropriated land could have been found within the limits of the grant. Prior to October 30, 1860, 1,275,579.52 acres were approved to the State for the benefit of this road. It will be observed that said amount exceeds by 96,779.52 acres the entire amount that the State would have been entitled to had the whole length of road (307 miles) been constructed; also, that it exceeds by 699,579.52 acres the amount the State could properly receive and sell upon evidence of the construction of 150 miles of road. It should be stated, however, that, although the 1,275,579.52 acres lie opposite that portion of the road from Lake City to Pensacola, which was to be constructed by the Pensacola and Georgia Railroad Company, the whole quantity was approved to the State of Florida for the benefit of the road "from Saint John's River, at Jacksonville, to the waters of Escambia Bay, at or near Pensacola."

Whether the State conferred any portion of the said 1,275,579.52 acres upon the Florida, Atlantic and Gulf Central Railroad Company (below referred to), which constructed that portion of the road from Jacksonville to Lake City, is not known to this office; but it is not probable that such action was taken, as the last-named road would only be entitled to a portion of the indemnity lands so certified. The vacant, unimproved, and unselected lands in odd sections within the limits of the withdrawal for this road have not been restored to market for sale or entry.

FLORIDA, ATLANTIC AND GULF CENTRAL.

The company bearing the above name was authorized by the State to construct that portion of the road "from Saint John's River at Jacksonville to the waters of Escambia Bay, at or near Pensacola," which was located from Jacksonville to Lake City, a distance of 59 miles. Said road is believed to be constructed and in operation, but no evidence to that effect is on file in this office or department. The construction of 59 miles of road within the proper period would entitle the State to 226,560 acres of land. Prior to October 6, 1860, 29,384.18 acres were approved to the State for the benefit of this road. No further approvals have been made for the benefit of said road; neither have the unselected or unimproved vacant odd sections within the limits of the grant been restored to sale or entry.

APPENDIX B.

SECTION 1. *Be it enacted by the senate and house of representatives of the State of Florida in General Assembly convened*, That so much of the 500,000 acres of land granted to this State for internal-improvement purposes by an act of Congress passed the 3d day of March, A. D. 1845, as remains unsold, and the proceeds of the sales of such of said lands heretofore sold as now remain on hand and unappropriated, and all proceeds that may hereafter accrue from the sales of said lands; also all the swamp land or lands subject to overflow granted to this State by an act of Congress approved September 28, A. D. 1850, together with all the proceeds that have accrued or may hereafter accrue to the State from the sale of said lands, are hereby set apart and declared a distinct and separate fund, to be called the internal-improvement fund of the State of Florida, and are to be strictly applied according to the provisions of this act.

SEC. 2. *Be it further enacted*, * * * said lands and all the funds arising from the sale thereof, after paying the necessary expenses of selection, management, and sale, are hereby irrevocably vested in five trustees, to wit, in the governor of this State, the comptroller of public accounts, the State treasurer, and the attorney-general, and register of public lands, and their successors in office, to hold the same in trust for the uses and purposes hereinafter provided, with the power to sell and transfer said lands to the purchasers and receive payment for the same; * * * also to receive and demand, semi-annually, the sum of one-half of 1 per cent. (after each separate line of railroad is completed) on the entire amount of the bonds issued by said railroad company, and invest the same in stocks of the United States, or State securities, or in the bonds herein provided to be issued by said company. * * *

SEC. 3. *Be it further enacted*, That all bonds issued by any railroad company under the provisions of this act, shall be recorded in the comptroller's office, and so certified by the comptroller, and shall be countersigned by the State treasurer, and shall contain a certificate on the part of the trustees of the internal-improvement fund that said bonds are issued agreeably to the provisions of this act, and that the internal-improvement fund, for which they are trustees, is pledged to pay the interest as it may become due on said bonds. All bonds issued by any railroad company, under the provisions of this act, shall be a first lien or mortgage on the road bed, iron, equipments, workshops, depots, and franchise; and upon a failure upon the part of any railroad company accepting the provisions of this act, to provide the interest as herein provided on the bonds issued by said company, and the sum of 1 per cent. per annum as a sinking fund, as herein provided, it shall be the duty of the trustees, after the expiration of thirty days from said default or refusal, to take possession of said railroad and all its property of every kind, and advertise the same for sale at public auction to the highest bidder, either for cash or additional approved security, as they may think most advantageous for the interest of the internal-improvement fund and the bondholders. The proceeds arising from such sale shall be applied by said trustees to the purchase and canceling of outstanding bonds issued by said defaulting company, or incorporated with the sinking fund: *Provided*, That in making such sale, it shall be conditioned that the purchasers shall be bound to continue the payment of one-half of 1 per cent. semi-annually to the sinking fund until all the outstanding bonds are discharged, under the penalty of an annulment of the contract of purchase, and the forfeiture of the purchase-money paid in.

SEC. 4. *Be it further enacted*, That a line of railroad from Saint John's River, at Jacksonville, and the waters of Escambia Bay, with an extension from suitable points on said line to Saint Mark's River or Crooked River, at White Bluff, on Apalachicola Bay, in Middle Florida, and to the waters of Saint Andrew's Bay, in West Florida, and a line from Amelia Island, on the Atlantic, to the waters of Tampa Bay, in South Florida, with an extension to Cedar Keys, in East Florida; also a canal from the waters of Saint John's River, on Lake Harney, to the waters of Indian River, are proper improvements to be aided from the internal-improvement fund, in a manner as hereinafter provided.

SEC. 12. *Be it further enacted*, That every railroad company accepting the provisions of this act shall, after the completion of the road, pay to the trustees of the internal-improvement fund at least one-half of 1 per cent. on the amount of indebtedness or bond account, every six months, as a sinking fund, to be invested by them in the class of securities named in section 2, or to be applied to the purchase of the outstanding bonds of the company; but it shall be distinctly understood that the purchase of said bonds shall not relieve the company from paying the interest on the same, they being held by the trustees as an investment on account of the sinking fund.

SEC. 13. *Be it further enacted*, That if on completion of any of the roads indicated in section 4, the net earnings should be less than 6 per cent. on the capital stock paid in and bonded debt of said company, first deducting the 1 per cent. per annum paid in to the sinking fund, it shall be divided pro rata between the stock account paid in and bonded debt, and the internal-improvement fund shall pay the deficiency due on account of interest, from time to time, as it may fall due. In the event the net earnings are over 6 per cent. on the capital stock paid in and bonded debt, and sinking fund of 1 per cent., then the president and directors shall first pay into the hands of the trustees of the internal-improvement fund the amount due on the interest account of the bonded debt, in addition to the provision for the sinking fund, every six months.

SEC. 14. *Be it further enacted*, That for all payments made by the trustees of the internal-improvement fund on account of interest for any railroad company, agreeably to the provisions of this act, said trustees shall demand and receive from said railroad company equal amounts of the capital stock of said company, which stock shall entitle the internal-improvement fund to all the privileges and advantages of private stockholders.

SEC. 21. *Be it further enacted*, That should the Government of the United States grant land to the State of Florida for the purpose of aiding in the construction of the lines of railroad indicated, and their extensions, by general or special act, said line of railway shall be entitled to all the benefits and advantages arising from said grant that the State of Florida would be entitled to by the construction of said lines of railway and their extensions; and the governor of the State is hereby authorized and required, should such an act be passed by the Government of the United States, to direct said railroad companies to select said land, and, after such selection, to give the Secretary of the Interior notice of such selection, and furnish him with a list of lands so selected, the number of each section, fractional section, or subdivision, and take such other action as may be

necessary to fully secure the grant of land to said railroad companies, subject to all the conditions and restrictions of the act of Congress making such grant.

SEC. 27. *Be it further enacted*, That after the railroad companies indicated by the provisions of this act shall for five consecutive years pay 6 per cent. on the capital stock paid in and the interest on the bonded debt, and apply the sum of 1 per cent. yearly to a sinking fund on said debt, then the trustees of the internal-improvement fund may apply under the direction of the Legislature the annual income arising from said fund to other purposes of internal improvement, or to the support of schools, so long as the said company shall continue to pay the same. But should any of said railroad companies thereafter fail to provide the interest upon their bonded debt, and 1 per cent. annually as a sinking fund, then said fund shall pay the deficiency on the interest account from time to time as it may arise.

APPENDIX C.

WAILES'S BILL OF COMPLAINT.

First. That by an act of Congress approved May the 17th, 1856 (2 Statutes, page 15), there was granted to the State of Florida, to aid in the construction of a railroad "from Amelia Island on the Atlantic to the waters of Tampa Bay, with a branch to Cedar Keys on the Gulf of Mexico," certain lands within prescribed limits on each side of the road and branch, with indemnity for lands lost within said limits to be taken within larger limits. That by an act of the Legislature of the State of Florida passed prior to and in anticipation of such an act of Congress, the Florida Railroad Company duly organized under the laws of the said State and became the beneficiary of the said grant of lands under the act of Congress aforesaid.

Fourth. That there was a limitation in the said granting act that if the road was not completed within ten years no further sales of land should be made, and that the lands which remained unsold should revert to the United States; that said road not having been completed within or at the expiration of said ten years the question and contention arose between the railroad company and the Commissioner of the General Land Office and Secretary of the Interior of the United States of America as to whether or not all of said grant then remaining unsold had become forfeited to the grantor without any further legislation of Congress, or any action on the part of the General Land Office other than ordering such unsold lands on the market for sale, pre-emption, and homestead entries. That such question and contention did not become fully settled and determined until recently, to wit, January 30, A. D. 1881, and subjected the companies and their officers to protracted correspondence with the General Land Office and the Secretary of the Interior and the employment of attorneys and agents to present their case in said General Land Office with a view to prevent a forfeiture of said grant or other action hostile to or adverse to the interest of the said companies. That on or about the day last aforesaid the Secretary of the Interior decided that said grant would not become forfeited without further legislation. That while the loss of said grant and indemnity lands was threatened, at least one Secretary of the Interior having decided that the State and railroad company had forfeited all their rights to the land under said grant as well as all indemnity lands, the said Atlantic, Gulf and West Indies Transit Company solicited your orator's services to secure this grant to the company; and heretofore, to wit, on the 24th day of November, A. D. 1879, the said last-mentioned company entered into a contract with your orator by the terms of which contract the said company agreed to convey for your orator's services to him "5 per cent. of all the land acquired by the company for the line between Waldo and Ocala and 10 per cent. of all the lands acquired by the company for the part of the line between Ocala and Tampa Bay," and 25 per cent. of any additional land "your orator might secure" on account of the part of the line constructed prior to 1861 from Fernandina to Cedar Keys, a distance of 155 miles, in excess of 281,000 acres which the company had acquired prior to the date of said contract with your orator, a true copy of which said contract with the correspondence with the acting president of the said company, which led to said contract is hereto attached and marked exhibit "A," which your orator prays may be treated and considered as a part of this bill of complaint for all the purposes of this suit.

That under the said contract your orator entered into the performance of his duties and performed valuable and important services, hereinafter more fully stated, and incurred and paid large expenses to secure the grant to said companies and prevent its forfeiture.

Your orator avers that the railroad companies aforesaid since the date of said contract with your orator, and as a result of your orator's services under said contract, have acquired large bodies of land embraced within the limits of the said grant and indemnity grant aforesaid, of which land your orator is entitled to his percentage according to the terms of said contract, which percentage had not been selected and been conveyed to your orator; and have acquired other large bodies of land within said grant of which your orator has received his percentage either in lands, or where the lands have been sold for the purpose and the proceeds applied to the purpose of extending the road southward your orator as a matter of convenience to the company and to avoid obstructions to its operations and to the extension of the road has waived his right of a conveyance to him of his percentage of said lands and has accepted his percentage of the cash proceeds of sales thereof in lieu of lands.

Your orator avers that of the lands so acquired between Waldo and Tampa, of which your orator is entitled to receive but has not received his percentage either in kind or in cash, there are about 260,000 acres remaining, a list of which containing a description thereof is hereto attached or herewith filed marked exhibit "B" which your orator prays may be treated and considered as a part of this bill of complaint and referred to as often as may be necessary.

That of said 260,000 acres of land about one-fourth thereof were acquired from the State of Florida under the internal-improvement act of Florida, known as swamp and overflowed lands, of which your orator is entitled to 10 per cent. under another contract with said defendant company entered into November ——— A. D. 1884.

That heretofore to wit on the ——— day of May, A. D. 1884, the said defendant company elected your orator to the office of commissioner of lands of said company and devolved upon your orator the duty of listing and selling the lands of the company acquired under the said grant, and as such commissioner and agent of the defendant company your orator on or about the ——— day of May, A. D. 1884, opened an office in Jacksonville, Duval County, Florida.

Your orator avers that he made special and extraordinary efforts to sell said lands, not only to advance his own interests but the interests of the said company; that as fast as the road was extended south the said company, under the terms of the said granting act, would acquire or have the right to acquire, the alternate odd sections within the 6-mile limit and the said indemnity for land lost therein; and your orator became entitled to have, under his said contract, 10 per cent. of all lands so acquired by the extension of said road; that your orator's said interest in having said road constructed southward furnishes your orator's chief reason for being willing to accept his percentage of cash sales, and for not insisting in every instance upon a division of the land and his percentage conveyed to him.

* * * * * * *

Your orator avers that such an appropriation of said money to the payment of arrears of taxes was a violation of its contract with the State of Florida and the United States, and a breach of said contract with your orator, and an invasion of the rights of your orator thereunder; that your orator was entitled to receive a conveyance from said company to 10 per cent. of said lands of average quality, and, in any event, in case the said lands were sold and proceeds properly applied your orator would be entitled to 10 per cent. of the proceeds thereof; and your orator avers and respectfully insists that said 85,000 acres of land could have been and could now be sold within a reasonable time for the average price of $5 per acre; and that your orator is in danger of losing his part of said lands or a great portion thereof.

* * * * * * *

Your orator avers that defendant Dickerson, if he did not have actual notice of the contract aforesaid between your orator and the said company, the Atlantic, Gulf and West India Transit Company, which, on information and belief, your orator avers he, Dickerson, did have, had constructive notice of said contract, and has since fully recognised your orator's rights under said contract, which will hereinafter more clearly appear.

* * * * * * *

That after your orator became such land commissioner, the said defendant company placed in your orator's hands and control for sale as such commissioner not only the lands reconveyed by said Dickerson to said company, but all the lands not so reconveyed, which were conveyed to said Dickerson as aforesaid for the purposes aforesaid, and that your orator sold as such commissioner the land of the latter class, to wit, the Dickerson lands, treating and regarding them as the lands of defendant company, reported such sales to said company, and of the proceeds of the sale of said Dickerson's land your orator retained his percentage, to which he was entitled under his said contract in lieu of lands, with the full knowledge and approval of and without objection from said defendant Dickerson; the balance of such proceeds, after deducting your orator's share, was paid over to Dickerson by said company, and thereupon said Dickerson executed deeds of conveyance to the purchaser.

And such has been the course of business in disposing of said Dickerson's lands ever since your orator was appointed such commissioner; but your orator avers that his contract business and dealings have been with the said company and not with the said Dickerson in any respect, and that whatever if any rights the said Dickerson has acquired they are subordinate to your orator's and acquired subject thereto.

But your orator respectfully alleges that the appropriation of said lands or the proceeds thereof by the said company to pay the said Dickerson the price of said stock sold by him is a violation of its contract and charter with the State, and laws under which said lands were granted and acquired and a breach of the said contract with your orator, and destructive of his just rights acquired thereunder as hereinbefore set forth.

That apart from the services rendered by your orator and his personal expenses incurred to secure the lands to said railroad companies and prevent a decision of forfeiture thereof by the said Secretary of the Interior, your orator, relying on the benefit and compensation to accrue to your orator under his said contract by the extension of said railroad and its completion to Tampa Bay with the aid of said grants of land justly and fairly appropriated thereto, has incurred and paid various other expenses in employing agents and attorneys to assist him and further his efforts to secure said lands to said railroad companies to the amount of $5,000 and upward.

* * * * * * *

That upon assuming the duties of such commissioner your orator found that there existed among the people and settlers in the country south of Waldo through which the road runs, and especially in that portion thereof embracing the projected but unconstructed line of road, an intensely hostile and bitter feeling toward the said company, arising from the failure to construct the road, the misappropriation of money received for that purpose, and from controversies with settlers upon lands owned by the company.

That it became necessary to allay such hostility on the part of the people in order to promote the sale of lands, and your orator did by direction of said company, by his tact and management, allay such feeling, which involved the expenditure of much time and considerable expense on his part.

That such services were no part of his duty as such commissioner.

* * * * * * *

Your orator avers that he has in his possession and control a considerable sum of money arising from the sale of the lands aforesaid as land commissioner, including both the lands which have been conveyed to said Dickerson and not reconveyed, as well as lands which have been reconveyed as aforesaid.

Your orator avers that the entire constructed line of said railroad, road-bed, rolling-stock, equipments, and depots and property appurtenant thereto, not including said lands owned by defendant company, are encumbered with a first lien to secure the payment of its mortgage bonds issued thereon and outstanding to the amount of $13,000 per mile, and the interest accruing thereon at the rate of 6 per cent. per annum, payable semi-annually; that the earnings of said road are not more than sufficient to meet the interest accruing on said bonds, its running expenses, repairs, and renewals, salaries of its officers, payment of employés, if indeed such earnings are sufficient for those purposes.

As hereinbefore averred said company was unable to pay assessed taxes on its property and was constrained under threat of sale of its property to misappropriate $140,000 raised upon the credit of its said lands to pay said taxes.

Your orator avers that said company has allowed extensive portions of its road, especially on that portion between Fernandina and Cedar Keys, to become in a dilapidated and unsafe condition, its iron rails on many miles of track not having been renewed since the road was first constructed; that said company is generally largely in arrears to its employés, and it is a fact and a notorious fact that the said company is now indebted to said employés for about four months' pay, such last-named indebtedness amounting to the sum of over $100,000.

In short, your orator avers that said company is utterly insolvent and unable to meet from the earnings of its road and property its current expenses and liabilities.

APPENDIX D.

In the circuit court of the United States, fifth circuit, northern district of Florida.
W. Bayard Cutting *vs.* Florida Railway and Navigation Company.

To the honorable the judges of said court:

H. R. Duval, who was heretofore, to wit, on the 26th day of October, A. D. 1885, by order of Mr. Justice Woods, circuit justice of this honorable court, duly appointed receiver of the defendant, The Florida Railway and Navigation Company, and of all of the lines of railroad owned or operated by it, and of all of its property as described in said order, and who was thereby empowered to run and operate the railroad and other property and franchises of said railroad company, and to preserve the property and maintain it in a proper condition and repair, so that it might be advantageously used, and to discharge other duties specified in said order as to the custody and care thereof, hereby respectfully submits this report, and asks the direction of this honorable court.

That as soon as he had given the bond required under said order of the 26th October last, and to wit, on the 31st day of October, 1885, he took into his possession the entire lines of railroad owned or operated by said defendant company, and which consist of a line of railroad from Chattahoochee to Jacksonville, with branches to Monticello and Saint Marks, designated as the Western Division, 223½ miles; Fernandina to Cedar Keys, known as the Central Division, 155 miles; Waldo to Tavares, 99 miles; Wildwood to Withlachoochee, known as the Southern Division, 23 miles; Hart's Road to Jacksonville, 22 miles; making a total of 332½ miles of railroad wholly within the jurisdiction of this honorable court, and took also into my possession the other property of said company.

Its capacity for increase in earnings upon like favorable condition is, in my judgment, 100 per cent. on its present gross earnings, and in this estimate I am

sustained by the opinions of some of the best expert traffic agents and railroad managers in the country, several of whom have considered the situation of the property and the development of the country tributary to it, agreeing with me that I do not overestimate its earning capacity.

I find the property encumbered with mortgage liens to the following extent:

On the western division, to the Guarantee and Trust Company, of Philadelphia, to secure an issue of bonds, for	$2,808,000
On the central division, to G. T. M. Davis, trustee, to secure an issue of bonds, for	250,000
To L. H. Meyer to secure an issue of bonds	1,000,000
On Fernandina and Jacksonville branch, to R. Fulton Cutting, M. Bayard Browne, and E. H. Herriman, trustees, to secure an issue of bonds	330,000
On the entire property, to the Central Trust Company, of New York, to secure an issue of bonds, for about	8,000,000

I find no other record of lien, or of parties entitled to notice of the filing of this report, or of my intention to ask the direction of the court as to the issue of receiver's certificates, as hereinafter stated, except that, as in the case of Bella A. Johnson and others *vs.* The Florida Railroad Company *et al.*, an order was entered by this court at Jacksonville, on the 4th instant, extending my powers as receiver of this property. In that cause also I have caused a notice of this filing and intention to be served upon the counsel for complainants in that cause.

That said certificates, to the amount authorized thereby, be declared a debt of the receiver incurred for the preservation of the property and to maintain it in proper condition and repair, so that it may be safely and advantageously used and to protect the title and force of the same until full payment, that they shall be a charge and lien upon all the property in my hands as a paramount lien thereon prior to any and all other liens, mortgages, and charges whatsoever, whether for principal or interest, unless the particular certificate be stamped as a specified lien upon some portion of said property, in which case it would be a permanent lien upon said specific property, and a lien upon all the equities of the Florida Railroad and Navigation Company, to all the property in my hands; and that I may be authorized to issue and sell such certificates from time to time, and in such amounts as may seem to me advisable, the total amount of certificates to be issued at any one time not to exceed the sum of $500,000, without the further order of this court, and that I may be authorized by an order of this court to use the proceeds of such certificates in my discretion and to pay the necessary and current expenses, and discharge the duties of this my trust, and the sums now due to companies operating connecting lines of railroad upon contract for the interchange of freight and passenger business, and for moneys due for right of way, and to pay amounts necessary for the proper management and operation of said railroad, and moneys due or to become due upon the rolling-stock or equipments of said railroad which must necessarily be paid to retain the possession, use, and ownership, and all moneys due or owing by defendant railroad company, for debts and balances due to laborers and other persons heretofore employed by said railroad company, for labors or services rendered or for necessary supplies furnished and delivered to said company in the operation of its road since the 1st day of May, 1885, and balances due other companies for rent, and all moneys due for advances to said company for the payment of taxes, and all taxes justly due, and the proper expenses of said receiver for the purchase of rails and other supplies required to keep said property in proper condition of repair and for renewals and repairs of tracks and bridges and other appurtenances of said road, for its safe and efficient operation.

That the certificates issued under an order to be made shall, until the payment thereof with interest, be a lien and charge on all the property whatsoever, of which I was appointed receiver, as a permanent lien thereon prior to any and all other liens, mortgages, and charges whatsoever, whether for principal or interest, and that in the final order herein, for the discharge of said receiver, provision should be made for the payment of such certificates as have not been previously paid by said receiver, and that said certificates shall, wherever practicable, bear upon their face the legible stamped name of the branch road or division upon which it is applied, to be filed in conformity with the provision of the order to be made; and such certificates shall, in every case, be a first lien upon such branch or division of said road and a lien also upon the equities or rights of the Florida Railway and Navigation Company whatsoever.

And that I be also directed to keep separate accounts, so far as practicable, showing the state of earnings and expenses of the road formerly owned by the Florida Central and Western Railroad Company, Florida Transit Company, Peninsular Railroad Company, Leesburg and Indian River Railroad Company, and Fernandina and Jacksonville Railroad Company.

That in my judgment the issue of certificates as herein suggested, and their sale and the application of the proceeds arising therefrom, is the only means by which the money can be raised to immediately redeem the property and place it in a position where it can transact the business which is tributary to it, and by which it will be enabled to maintain itself and earn money for its owners.

In this connection, I beg also to submit for the consideration of this honorable court a letter addressed to me on this subject by the honorable the governor of the State of Florida, on the 20th instant, which I file herewith as a part of my report, and I humbly submit myself to the direction of the court in the premises, and as in duty bound will ever pray, &c.

H. REIMAN DUVAL, *Receiver.*

NOVEMBER 20, 1885.

APPENDIX E.

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., April 5, 1886.

SIR: I am in receipt of your letter of the 29th ultimo, and in reply thereto have to state as follows:

The estimated number of acres in the land surface in the State of Florida is—

West Florida	5,718,080
East Florida	29,995,520
Total land area of the State	35,713,600

Under the swamp land grants the area claimed by the State of Florida to June 30, 1885, was 18,131,345.04 acres, of which there has been patented to the State 15,881,101.89 acres.

The area patented to the State for internal improvements under the act of September 4, 1841, embraced 484,184 acres.

Under the act of May 17, 1856, the following named railroads have received patents for the area herein given, under the act of May 17, 1856:

	Acres.
Atlantic, Gulf and West India Transit, formerly Florida Railroad	290,183.28
Florida and Alabama	165,688.00
Pensacola and Georgia	1,275,579.52
Florida, Atlantic and Gulf Central	29,384.18
Total approved to railroads	1,760,834.98

Very respectfully,

S. M. STOCKSLAGER,
Assistant Commissioner.

Hon. WILKINSON CALL,
United States Senate.

Silver Coinage.

SPEECH
OF
HON. GEORGE G. SYMES,
OF COLORADO,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 7, 1886.

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes—

Mr. SYMES said:

Mr. SPEAKER: The debate on the silver question has been actively proceeding in both Houses of Congress during the past four months. A very large number of speeches have been made. About twenty-five speeches have been delivered in the Senate and about fifty speeches have been delivered from time to time in this House on this most important question. It is about time that some of the results of this very voluminous debate should be summed up and stated. It must be admitted there has been about the same proportion of repetition throughout a large number of these speeches generally found in the numerous speeches delivered during an important political campaign.

One thing at least has been accomplished by this debate. The gold men at last admit that all the knowledge and all the acquirements upon monetary questions no longer remain with their exclusive few. I was surprised a few days ago to hear one of the most distinguished and oldest members of this House say earnestly to the advocates of silver coinage that he wanted to remind them they did not have an entire monopoly of all the learning and arguments upon the monetary question. In view of the continued dogmatic statements of the leading journals of the country, of the self-proclaimed leading economists of the country, the self-assertions of the so-called leading financial statesmen of the country, during the past ten years to the effect that the silver advocates did not know what they were talking about, and did not even comprehend the monetary question or the result sure to follow either the limited or free coinage of silver; that they were inflationists, silver lunatics, &c., this statement may at least be considered as a great concession on the part of the gold-bugs and their advocates.

Mr. Speaker, the advocates of silver coinage and true bimetallism have maintained during this debate several important positions which the gold-standard men and those urging suspension of coinage must overthrow, or admit their arguments and assumptions fail.

The silver men have stated and proved there was not gold coin enough in the world with which to do the business of the commercial countries and communities; that there is not enough to form a safe basis for the units or measures of value, and to form the reserves for a sufficient active circulating medium of paper money to answer the demands of trade and commerce; that during the past decade nearly, if not quite, all the product of the gold mines has been absorbed and consumed in the arts for ornamentation and manufactures, thus leaving no gold whatever, out of the current product, to repair the waste, loss, or abrasion of coin, or to expand the volume of money to keep pace with the increasing population, the enlarging commerce, and the expansion of trade and exchanges throughout the world.

It has been shown that the product of the gold mines has fallen off from one hundred and thirty-four millions a year during the decade ending with 1860; that it fell to one hundred and twenty-five millions during the decade ending with 1870, to one hundred and thirteen millions during the decade ending with 1880; that in 1880 it was one hundred and one millions, and in 1884 it was only from ninety-three to ninety-five millions. It has been further shown that the production of the gold mines will continue to decrease, and that the demand for use in the arts, for ornamentation, and for manufactures will continue to increase. So that in a few years at best not only will all the product of the gold mines be used in the arts and manufactures, but in addition to that a large amount of gold coin will be melted annually to supply this demand.

Mr. Speaker, how have these facts and arguments, urged and advanced by the silver men, been met, answered, or overthrown by the advocates of monometallism and the suspension of silver coinage. They have not denied the increasing scarcity of gold, the consumption of nearly all the product of the mines in the arts and for ornamentation, nor the probable increase of this scarcity and the probable increase of the consumption. They do not deny the great and continued increase in population, wealth, and commerce and the increased currency demand arising out of it.

The only argument advanced against the necessity of remonetizing silver because of the admitted scarcity of gold for coinage is that this scarcity can be supplied by an extended system of credit documents, such as checks, bills of exchange, and bank currency. This is a pernicious argument. Here the gold men unequivocally advocate real inflation. It is hardly necessary to state that at the base of all sound business transactions there must be a certain amount of an easy ex-

changeable equivalent of value, which the commercial world from time out of mind has always recognized as best represented by gold and silver reserves. Whenever there is a suspicion "noised abroad" that bank notes of issue have not a sufficient supply of current coin to redeem them, or that a commercial firm has drawn more bills of exchange than they have the legal-tender money to pay, such notes and such bills are immediately at a discount, the discount continues to increase, and soon confidence is lost and such bills or notes are refused in payment.

On this certain amount of reserve in legal-tender coin all commercial, bankable, and credit transactions rely for their stability. The cheap and fascinating idea of issuing paper currency on credit alone or on too small a reserve in coin has invariably resulted in panics and collapses. No genius has as yet put into practical operation a "*crédit foncier*" system which has not ended in disaster and calamity. We did not suppose the gold-bugs, who arrogate to themselves all the financial honesty, purity, and stability in this country, would be found advancing this unadulterated inflation doctrine. It shows the desperate straits to which they are driven when confronted by the scarcity of gold, the increase in its price, the falling off in prices of all other commodities, the depression of trade, and their attempts to escape from the necessity of supplying this admitted scarcity by silver coinage.

Another assumption and attempted argument of the gold advocates is that continued silver coinage will drive all of the gold out of circulation and out of the country. Although there was less than two hundred millions of gold in this country at the time of the passage of the Bland bill in 1878, and although there is over six hundred millions of gold in the country to-day, it has been continually reiterated that the coining of two millions of silver per month would drive all the gold out. These gold advocates are forced to admit that all their prophecies have proved untrue; still, like the false prophets of old, their ardor is not at all dampened, and they continue to repeat that if silver coinage is not suspended the gold soon will pass from circulation and leave the country.

Some of the speeches upon this subject deserve a passing notice on account of the eminent character of the gentlemen who made them. The distinguished gentleman from Massachusetts [Mr. LONG], with his usual ability, keenly appreciating this, attempts to answer the arguments presented by the silver men regarding the increase of gold in this country by a very classical figure of speech. He says:

> We are told that under our present policy gold is accumulating instead of diminishing, and that therefore such fears are unfounded. Once upon a time a certain frog, whose vanity had made his story immortal, began to swell. I doubt not some prudent observer suggested to him that the ultimate result of that process would be an explosion. I doubt not that the frog replied by pointing to his fair enlargement and plumper figure. But the result was none the less that he burst, and the places that had known him knew him no more.

The gentleman admits that his figurative silver frog has been prospering and growing beautiful in its rounded proportions on account of being fed two millions of silver coin per month since 1878, and that the increasing proportions of this silver frog has attracted to this country hundreds of millions of gold; that this silver batrachian reptile is larger and more prosperous at the present time than it has ever been since the honorable member from Missouri [Mr. BLAND] nursed it into life; but nevertheless the distinguished gentleman prophesies that in a very short time this silver frog is sure to "go on a bust."

This frog argument is undoubtedly intended by the distinguished gentleman to show that because the business of the country has absorbed two millions of silver a month for the last eight years that is no reason why it will continue so to absorb two millions a month in the future. The gentleman seems to forget, or he ignores the admitted facts, that the population increases in this country at the rate of over 3 per cent. per annum; that exchange trade and commerce increase in a much greater ratio; that there is no increase in the circulating medium provided for except by silver coinage; that the present circulating medium of this country is over fifteen hundred millions; and that an increase of 3 per cent. in the volume of the present circulating medium in this country would be between forty-five and fifty millions per annum—twice as much as the Bland bill requires to be coined, and more than can be supplied by all the silver mines in the country for coinage at the mints under a free-coinage law.

Mr. Speaker, another encouraging feature of the progress that has been made by the silver debate is that all the gold men now claim to be bimetallists. However radical their views against silver coinage, and however eloquent their arguments to show that by laws more unchangeable than those which any legislative tribunal can pass, gold must necessarily be the sole standard and unit of value throughout the commercial world, and must and will form the true basis of all important financial transactions and business, still they assert that they are bimetallists.

The brilliant gentleman from Maryland [Mr. FINDLAY] would apparently favor true bimetallism, that is the free coinage of silver on an equality with gold. In the first portion of his speech he said in classic language:

> I say then to the advocates of silver, follow your leaders and boldly repudiate the false position in which you have been placed by the Bland bill for the last eight years. Trample under foot the delusion that one of the great money metals of the world, coequal in use, dignity, and power with its helpmeet, can be degraded into servitude or sent like Hagar into the wilderness. Take the stand which logic, experience, and all the associations which spring out of a venerable antiquity, reaching back to the cradle of the race, require and demand for silver its instant, full, and complete rehabilitation.

Mr. Speaker, this is just where the silver men propose to take their stand. The free coinage of silver is the only logical and true position they can take. It will cut the Gordian knot of the inequality between gold and silver, and close the war of the standards and destroy the power for harm of the gold monometallists as surely as the star of Napoleon went down with the sun on the field of Waterloo.

Still it is contended by this gentleman that limited silver coinage or free coinage is impracticable at this time. He avows himself a great friend of the laboring man and for that reason would suspend silver coinage. The gentleman says gold can protect itself against any law and needs no law for its protection. Well, Mr. Speaker, if that is the case why is it insisted that silver shall not be placed, at least, on an equality with gold before the law? It is the free coinage of gold which makes its bullion value equal to its nominal value when coined the world over. The free coinage of silver would in a short time make its bullion value equal or near its coin value.

This eloquent gentleman finds fault with what he calls the limping, humpbacked silver standard created by the Bland bill. He says that free coinage is the only true and logical position to assume. He insists that it is impossible to keep the cheaper metal, silver, in circulation in the country and that it immediately returns to the Treasury after being paid out. Still he asserts that gold can not be kept in circulation with silver much longer. He closes his brilliant oratorical effort in behalf of the gold-bugs by an extravagant figure of speech, in which he builds a sort of mythological god to the different metals, the head of which is gold, and closes his special plea in behalf of a gold plutocracy as follows:

> It may be that there is yet to be a stone cut out of the mountain side by which this old money metal will be shattered into pieces and ground into powder, and gold, as the last perfected state in the progress of its development, disappear with the baser elements that compose the structure; but until that day comes no forcible inversion of parts, no violent subordination of function can change the eternal law by which the head fitly crowns and dominates the body. Gold, in my opinion, in spite of all your laws by virtue of a law of its own will still be king.

The inconsistencies of this brilliant speech, which attempts to erect gold into a king to govern the finances of this country, are not to be wondered at, because the brilliant gentleman had to pass through blizzards and cyclones to reach this conclusion. He says:

> But instead of the blizzard distribution of the buzzard dollar suppose you undertake the more usual and less violent and perhaps more regular mode of getting silver into circulation by calling in and paying off the Government threes in silver, would you be in a better condition?

It is not surprising that when a speaker attempts to make an oratorical path through a blizzard, with buzzards flying around his head, that he loses his way and finally arrives at his goal in inextricable confusion.

Mr. Speaker, the efforts of the monomentallists to create and perpetuate the power of gold-financial kings in this country will prove as transient and futile as the persistent efforts to perpetuate the rule of the slavery and cotton kings of ante-bellum days. This plutocratic and pernicious power will go down before the sovereign will of the American people, just as slavery was compelled to yield to the irresistible force of public opinion.

The gold men insist, with much apparent gravity, that they are better bimetallists than those who advocate silver coinage, and they claim that the way to restore bimetallism is to suspend coinage. I have not time to review the history of the leaders of the gold party who clandestinely demonetized silver in 1873, and gave as a reason for it that the bullion value of the silver dollar was so much greater than the bullion value of the gold dollar that it was practically kept out of circulation, because exported or purchased and put into the melting pot.

I can not at present review the history of the debate which resulted in the passage of the Bland bill in 1878, when the same parties said they were afraid to remonetize the silver dollar because its bullion value was less than the gold dollar, and show what this school of money economists stated at that time. It would take a large volume to contain the untrue assertions, the false prophecies, and the misrepresentations of these same gentlemen, and those from whom they take their economic ideas all published and pronounced to the world, first to bring about the demonetization of silver, next to keep it from being even partially remonetized, and then to bring about the suspension of silver coinage.

Any one who is familiar with the history of this subject from 1871 to the present time is driven to the conclusion that a harder struggle has never been made by any party at any time to accomplish an object than by this gold plutocracy to permanently demonetize silver. Not an assertion, argument, prophecy, or illustration is to be found in the books upon this general subject, or in the journalistic literature of the times, written by professed gold monometallists, that has not been used repeatedly and revamped to show that gold monometallism was the only true and correct policy of money economy, and that silver must necessarily, in the progress of events, take a subordinate place and be used only for a subsidiary or fractional currency. No economic ideas, no statements of fact, no illustrations drawn from the practical history of the times, none of the prophecies or warnings, of such able economists as De Laveleye,

Wolowski, Fruën, Ernest Seyd, Haupt, and several other economists who prophesied the stagnation and commercial depression which the demonetization of silver in Germany and this country, if followed by other countries, would bring about has ever been referred to or cited by any of these gentlemen who now say they are bimetallists and are in favor of bimetallism.

During this silver debate not one of these gentlemen who favor suspension but claim to be bimetallists has ever pronounced one word of criticism or censure against the demonetization of silver in 1873, although they pretend they desire to return to the double standard. They say they would be in favor of the coinage of the silver dollar if its bullion value was only equal to the gold dollar; but the first important thing to do is by some national or international policy to create a silver dollar which shall have a bullion value equal to that of the gold dollar.

The silver men heartily join with them in this desire; but in the name of common sense, aside from any theories of money economists, how can it be determined what is the proper ratio of coinage between gold and silver until both metals are given an equal chance before the law. When the silver dollar had an equal chance before the law with the gold dollar by free coinage it was worth from 3 to 5 per cent. more than the gold dollar for many years previous to demonetization. No one will deny that it was demonetization that artificially depreciated the bullion value of the silver dollar and artificially appreciated the bullion value of the gold dollar.

If, then, these gentlemen are in good faith in their desire for bimetallism and an equality of bullion value between gold and silver dollars, why do they refuse to give the silver dollar an equal chance before the law? It can then soon be determined whether the ratio should be changed.

Use is the foundation of all value. When there is an indefinite demand for the use of an article it must become valuable. When the demand for that use ceases the article must depreciate in value. The demand for coined money, which is made a legal tender under the law, is one of the insatiable desires of man, and will remain so. There has been an insatiable demand for gold bullion as well as gold coin, because there has been free coinage of gold in the wealthy and leading nations. There was an insatiable demand for silver bullion when there was free coinage of silver among the leading and wealthy nations, and that insatiable demand for silver bullion would again exist on the remonetization of that metal. Give silver an equal race with gold before the law by free coinage in this country, and the problem is solved.

What do these self-proclaimed bimetallists propose for the purpose of bringing about an equivalent in value between the gold and silver dollar, or bimetallism on that basis, which they pretend to desire? The only thing they seem to rely upon is an international bimetallic conference which shall fix the ratio of free coinage throughout the commercial world. They certainly know that this is impossible within any reasonable time. The only way to bring this about is for the nations desiring it to immediately establish the free coinage of silver, so that silver bullion will become scarce in the markets of the world, and thus show to the other nations that if they propose to obtain their share of the white metal for the purpose of increasing their circulation in the future they must give it free coinage at their mints. For the nations or people who desire bimetallism to close their mints against free coinage, which results in causing a surplus of silver bullion to be thrown into the market so that every nation can get all it wants at a depreciated price, and thereby to force such nations to an international acquiescence in the free coinage of silver, is, it seems to me, unreasonable and absurd.

When some of these gentlemen are pressed upon this subject they say they are international bimetallists. Here we have the solution of their true meaning and desire. They are bimetallists on condition that the monarchs of Europe allow them to be so. I am unable to appreciate the patriotic sentiments of American statesmen who propose to pursue one course or another on this most important question to the future welfare and material prosperity of this great country according as the statesmen and politicians of the monarchies of Europe may pursue one or the other policy upon the same question. When European statesmen find out what our policy and desire is, history universally shows that they try to thwart our wishes and desires. Their sympathy and encouragement in the enforcement of our policies we never can expect. But by pursuing our own course, guided by our own judgment and dictated to by our own interests, patriotism, and a desire for the welfare of our own people, we often force the statesmen and politicians of these monarchies to adopt policies against their wishes by the rigid and bold enforcement of our own.

An American international bimetallist is to me about the same kind of a heterogeneous combination as an international American high-protective tariffite. If I was a free-trader I should think I was consistent in saying that I was an international protective tariffite; but as I am and always have been in favor of a protective tariff candor compels me to say that I shall advocate a protective tariff notwithstanding the policies of all the nations of the commercial world may be in favor of free trade.

THE GRESHAM LAW AGAIN.

One of the most curious features of this debate by those in favor of suspension is their position with reference to the operation of the Gresham law. In my speech in the early part of the session I attempted to show the rules which govern the operations of this law. I have not the time to elaborate them here. The gold men have repeatedly said in their speeches that by the operation of the Gresham law all of the dearer metal gold, would be driven out of circulation and the cheaper metal, the silver dollars, would be substituted therefor. They will not even admit this to be a matter of argument. They tell us it is as certain as the laws of gravitation that if we do not suspend silver coinage soon we shall have nothing but the cheap silver currency in this country.

The next assertion they make is that this cheap silver will not circulate among the people; that the people of this country refuse to accept silver and it is impossible to pay it out from the vaults of the Treasury; that if a small portion of it is paid out it returns so quickly that the Treasury officials have become discouraged in their efforts to keep any considerable quantity of it in circulation, although their efforts in this behalf have been persistent, indefatigable, and herculean. Every report of every Secretary of the Treasury and Treasury official dwells upon this and says that the people will not have the cheap silver.

The distinguished gentleman from South Carolina [Mr. HEMPHILL] undertakes to show that cheap silver will not circulate. He dwells upon this with the usual assertions and arguments. He then invokes the Gresham law to show that cheap silver will circulate so extensively that it will drive out gold and exclude all other money. Many other speeches take the same position in effect; but this one presents the inconsistency in a clearer and more forcible way than some others, and hence I have referred to it in illustration of the positions assumed in this debate.

Why this Gresham law, which is so unerring in its operation has increased the stock and circulation of the dearer metal in this country more than four hundred millions since the coinage of cheap silver began in 1878, and why this cheap silver money has not circulated and will not circulate among the people since the coinage of it began in 1878, to the exclusion of gold, we are left to conjecture. Perhaps some speech is to be made which will explain this inconsistency and confusion, but as yet it has not been done.

THE UNIT OF VALUE.

Mr. Speaker, the gold advocates do not deny that the financial policy of the Government, through its Secretaries of the Treasury, since the passage of the Bland bill making the silver dollar a legal tender, has kept the country practically upon a gold basis; that the business transactions at the Treasury, and in the country generally, are measured by the gold dollar. The Secretary of the Treasury in his reply to the resolution of the House regarding his policy in not paying out a proper proportion of silver dollars for the indebtedness of the Government gives as his excuse that under the statutes of the United States 25.8 grains of gold constitute the only unit and measure of value, and hence every dollar of indebtedness must be paid in the gold dollar or its equivalent in value. This remarkable document, which admits upon its face a continued and inexcusable violation of the United States Statutes which provide for the coinage of the silver dollar and makes it a legal tender in payment of all debts public and private, justifies his course by arguing upon the basis of this technical quibble that the gold dollar is the only unit standard or measure of value.

The first and only unit and measure of value in this country was the silver dollar, established as such on the recommendation of Alexander Hamilton when the United States Mint was created. It continued to be, technically, the only unit of value until 1873, and then 25.8 grains of gold or a gold dollar was substituted for it. But the Bland bill practically made the silver dollar as much a unit and measure of value in this country as it had been from the foundation of the Government to 1873; and it occupies with reference to that subject exactly the same position in law as the gold dollar occupied from the foundation of the Government to 1873.

Sir, I was surprised to see the satisfaction with which intelligent gentlemen in this House viewed the so-called argument of the Secretary of the Treasury to show that 25.8 of gold is the only unit and measure of value and the only legal tender in payment of a debt in this country. What would have been thought of a Secretary of the Treasury if he had taken the same position, made the same argument, and conducted the finances of the Treasury upon the basis of it before 1873 with reference to the gold dollar? Before that time the gold dollar tested by the same technical quibble and frivolous argument was not a unit of value in this country. The silver dollar was the only unit of value, and hence the Secretary of the Treasury for many years before 1873 was not justified in paying any creditor of the Government in gold dollars at their nominal value but was bound to pay everything in silver dollars or the equivalent of the bullion value of 412½ grains of silver, which was worth from 3 to 5 cents more than 25.8 grains of gold in the gold dollar. These same gentlemen would have scoffed and sneered at such an argument and position at that time.

When the statute of 1878 fixed the number of grains of standard sil-

ver in the silver dollar at 412½ grains, and provided that it should be a legal tender for all debts public and private, it made it practically a unit and measure of value co-equal with the gold dollar. I have heretofore advocated that the statutes should be amended so as to make 412½ grains of silver equally with 25.8 of gold a unit and measure of value in this country, not because it is not by the Bland bill made such a unit and measure of value, but because I find many people are deceived by the specious and disingenuous arguments of the gold men upon this question. Such an argument would be more appropriate by a justice's court lawyer when defending a pawnbroker for overreaching his victim, than by a Secretary of the Treasury, or his advocates, upon important questions of economic policy.

FREE COINAGE WILL NOT MAKE THIS COUNTRY A DUMPING GROUND FOR FOREIGN SILVER.

The alleged insuperable obstacle against free coinage of silver is that it will make this country a dumping ground for foreign silver, flood the American mints, and result in the exclusive circulation of silver. Many people who really desire free coinage think it impracticable at this time because they are led to believe, from the exaggerated statements and misrepresentations of the gold men, that it will make this country a great dumping ground or reservoir into which all the silver of foreign countries will be piled in indefinite amounts.

This assumption and argument justifies deliberate investigation and answer. Characteristic of all the statements and arguments of the gold men, no facts or figures are produced to show where this great deluge of silver is to come from. We are not informed where, in any foreign country, is piled up any amount of silver bullion waiting to be dumped upon our shores when free coinage is established. They give us no facts or figures regarding the annual product of the silver mines of the world, the amount used in the arts, manufactures for chemical purposes, and for coinage. They do not attempt to show or even argue what foreign countries are going to demonetize silver and melt their coin into bullion for export, because they know that all the evidences from the discussions and agitation of the subject throughout the commercial world to-day point as unerringly as the needle to the pole that remonetization and not demonetization is the watch-word of the times.

Mr. Speaker, the expensive, sad, and bitter experience of Germany in her efforts to establish gold monometallism, and the financial troubles, depressions, and panics that it is now admitted to have been the greatest cause in bringing about, has taught a lesson that will not soon be forgotten. And while the Latin Union and other nations of Europe may not return to the free coinage of silver within a very short time, there can be little doubt that they will resume whenever the free coinage of it, added to the demand for silver bullion in India, China, Russia, Austria, and other single-standard countries, appreciates the price of silver to something near what it was before the demonetization of 1873.

Silver is coined in Europe at 15½ to 1, and in this country at 16 to 1. It is coined at about the same ratio in India; that is, the nominal value of silver coin in Europe and India is 3 per cent. over that of the United States. If the legal-tender silver coin of Europe, which is over one thousand millions, was melted and recoined at the ratio of coinage in the United States the loss would be over thirty millions.

There is no danger of the importation of any considerable amount of silver coin from Europe to be melted and recoined at our mints. When the balance of trade is against us it is as a general rule paid in gold, because gold is coined at as high a nominal value in this country as it is in Europe. If silver coin will not be melted and dumped upon our shores, is there any considerable quantity of silver bullion piled up in any foreign country to be sent to our mints and recoined? We have to combat the oft-repeated oracular statements and dogmatic assertions not borne out by any investigation of the facts. The demonetization of silver in Germany and the melting down of a portion of the silver coin into bullion and putting it upon the market caused a great depreciation in the price of silver bullion. Shortly after this the Latin Union, fearing this deluge of German silver, closed their mints to the free coinage of silver, and the United States demonetized it at the same time. The three acts combined, it is now admitted, constituted and will be known in history as the great financial misdemeanors and blunders of the nineteenth century.

When the future economist and historian of these times shall undertake to explain the paramount cause of the great and continued depression of all kinds of business in Europe, the limited production of the manufactories, the stagnation in all kinds of productive and useful industries, the suffering and strikes among the great laboring populations, and the sufferings even among the former thrifty agricultural classes of Germany, England, United States, and other countries, this history, when investigated in the light of philosophy, teaching by example, will result in a verdict that it was the demonetization of silver by Germany and the United States in 1873, causing the belief that other nations would follow the example, and the closing of the mints of the Latin Union against the free coinage of silver, that brought about these industrial and commercial calamities.

Mr. Speaker, let us inquire, where is this stock of silver bullion in any foreign country that can be dumped into our mints? According to the best information obtained by the United States minister at Berlin in 1880 the quantity of silver then remaining in Germany to be sold amounted to about $74,000,000. The coinage of eight other nations outside of the United States, Russia, Mexico, and Germany, during the year 1880 amounted to $54,541,648.

The Director of the United States Mint in his report for 1880 states:

It can hardly be said that there is any stock of silver bullion in the United Kingdom, the imports and exports being about equal.

India alone coined about forty millions during the year 1880. This must have been derived from a portion of the remaining German bullion and from American imported bullion. It did not come from Mexico, the next largest silver producer to the United States. Her product was about $25,000,000 for that year, $22,000,000 of which was coined. More than the balance was used in the arts and manufactures. It has been shown that the net export of silver from London to India and China for the years 1880 and 1881 was over $56,000,000. "Asia is a bourne from whence no silver returns."

All statistics agree in showing that much more silver has been coined in Europe and Asia during the past few years than has been exported from North and South America. Where, then, is this mysterious quantity of silver bullion deposited, waiting to be dumped into the American mints when free coinage is again inaugurated?

It is said there is a large quantity of silver plate in Europe that will be melted into bullion for coinage. If we admit there is, which we do not, no considerable quantity of that plate in Europe would be melted down and sent to this country to be coined at the ratio of 16 to 1. There will be a great demand for it in India to be coined at the ratio of 15½ to 1 after free coinage shall have absorbed the greater portion of our product at the United States mints. It is simply ridiculous to say that the manufactured silver of Europe would be melted for export to America after the supplies of cheap bullion from this country have been cut off by free coinage.

It has been estimated that over fifteen millions of silver per annum is consumed for manufactures and ornamentation in Europe. Where is this fifteen million to come from in addition to the amounts required for coinage? To say that European bullion-brokers will buy expensive silver plate, melt it down, and export it to America to be coined at the ratio of 16 to 1, instead of having it coined in Europe or India at 15½ to 1, or instead of selling it to the silversmiths for remanufacture, is, like most of the assertions and arguments of the gold monometallists, without foundation in reason or experience. Mr. Buchanan, in his Plea for Silver Coinage, has made a very thorough presentation of this subject, and conclusively shows that the "dangers of the dump" are purely imaginary.

If there is no bullion in foreign countries to be exported to our mints, if no silver plate will be melted and dumped upon us, and if no nations of Europe propose to demonetize silver, melt their coin, and sell it, we have nothing left to deal with but the production of the mines in anticipating free coinage.

Mr. Speaker, in my former speech early in the session I attempted to show the production of the mines and the demand for coinage. I do not desire to go extensively into that question again. I then said:

The best estimates place the annual production of the world outside of America at $10,000,000. The production of Mexico and the countries in South America has been growing less. These countries from 1852 to 1868 produced about $30,000,000 per annum. From 1868 to 1875 the production was about $25,000,000 per annum, a falling off of about $5,000,000 per annum, and it has been decreasing since 1875, with no probability of an increase. In 1877 and 1878 the yield of the Comstock mines decreased rapidly, and has been decreasing ever since, until it is now inconsiderable.

The celebrated carbonate deposits of Leadville have partially taken the place of the Comstock lode, and fortunately have kept up the silver product of our country. The great exaggeration regarding the actual and probable output of the silver mines had a great effect in depreciating the price of silver, and they were all made in aid of the same combination and conspiracy to demonetize silver.

Mr. Mulhall, in his Dictionary of Statistics, gives estimates of the production and consumption of silver in the world for fifty years, from 1830 to 1880, and the respective amounts used for coinage, manufacturing, and for exportation to the East. These estimates show that during this period the mines of the world produced 57,270 tons of silver, valued at $2,475,000,000. There was consumed 62,500 tons, valued at $2,725,000,000, or a consumption of $250,000,000 more than the production. The same authority estimates that 5,230 tons of old silver candlesticks, &c., in the temples of Europe and the East were melted down by the world to supply the deficiency between the production of the mines and the demand for current uses.

The average of the different estimates shows the product of the silver mines of the world for the past four years, from 1881 to 1884, inclusive, to be from one hundred to one hundred and ten millions per annum.

A very large amount of silver is annually consumed in the arts, converted into plate, and used for personal ornament and for chemical purposes. A large portion of the silver consumed in the arts can never be recovered or again used. When it is used for electro-plating, or beat into thin leaves for different purposes, a very small proportion, if any, can be collected or converted into bullion. The whole is practically lost.

The question as to the amount of the consumption of the precious metals in the arts and manufactures has been attracting much attention of late years. After thorough investigations by Dr. Soetbeer, of Germany, and by the Director of the United States Mint, extending over a period of several years, it is estimated that about thirty-five millions

of silver per annum is consumed in the arts and for manufacture, ornamentation, and chemical purposes.

A late English writer upon this subject has shown that these estimates include only the nations of Europe and the United States and India. He shows that the precious metals are largely used in the semi-civilized nations of Asia, Africa, and elsewhere for those purposes, and he concludes that not less than £8,000,000, or about $40,000,000, is annually consumed in the world in this way.

Many estimates have been made as to the loss by wear and tear, called abrasion, of the circulating coin, and by casualties, such as fires, sinking of ships, &c. In 1858 McCulloch estimated the annual diminution of the then existing stock of the world's coin through abrasion by wear and losses by casualties at $37,500,000. Other estimates have been made, extending to near the present time, which indicate that it would take something like fifty millions of the precious metals per annum to supply the loss by abrasion and casualties. It is probably fair to say that this loss is about one-half gold and one-half silver, making twenty-five millions of silver annually lost by abrasion and casualties.

The estimates are somewhat unreliable and perhaps exaggerated. But we are not called upon to rely strictly upon them in arriving at a conclusion as to the annual requirements of the precious metals for use in the arts and manufactures, to supply the loss by abrasion and casualties, and for coinage. We now have accurate statistics of the actual annual coinage of the world. These statistics show that the amount of coinage is more than the product of all the mines in the world, leaving none for consumption in the arts and manufactures, or to supply the loss by abrasion and casualties. This of course must be accounted for by the fact that much old coin is recoined.

From a careful statement of a reliable American author it is estimated that during the five years from 1877 to 1881 inclusive there was coined and used in the arts $670,682,516, which exceeded by $213,907,206 the total products of all the mines of the world during the same period; and that this excess is to be accounted for by the recoinage of the same metal in different years, and by the use of some coin in the arts.

A late writer in England, who has examined this subject, concludes that the amount of recoinage about equals the amount of loss by abrasion and casualties. Much of the recoinage arises from the fact that the old coins have become so abraded they are no longer a legal tender, and, consequently, they are sent back to the mints for recoinage. So we may estimate the amount consumed in the arts and for manufacture, ornamentation, and chemical purposes, and the amounts used for coinage as constituting the amount of silver which has actually been consumed in the world during the past few years, provided we estimate the amount of recoinage to be equal to the amount lost by abrasion and casualties.

During the past ten years, from 1875 to 1884 inclusive, the silver coinage of a number of the principal countries, the largest portion of which for the last eight years was executed by India, Mexico, and the United States, is as follows:

Years.	No. of countries.	Amount.
1875	18	$119,105,467
1876	15	126,577,164
1877	16	114,359,332
1878	15	161,191,913
1879	10	104,888,313
1880	11	82,397,154
1881	14	108,473,624
1882	13	107,997,952
1883	20	113,769,901
1884	20	*110,000,000
Total		1,148,760 820

*About.

It will be seen that the annual average coinage of silver in the world, since the demonetization and suspension of coinage in so many countries, has averaged about $114,000,000 per annum. So, with silver demonetized in Germany and England, and in the Scandinavian countries of Norway, Sweden, and Denmark; with coinage practically suspended in the Latin Union and Holland, and with a limited coinage in the United States, still the annual requirement for coinage is over one hundred millions. Add to this the amount used in the arts and manufactures, and we have an actual current consumption of silver of between one hundred and forty and one hundred and fifty million dollars per annum.

The average annual product of all the silver mines of the world, as herein above shown, for the past four years has been from one hundred to one hundred and ten million. This shows an actual current demand for between forty and fifty million dollars of silver per annum more than all the mines produce. Then where is this imaginary silver dump to come from?

The advocates of the gold standard, in their long speeches, have not attempted to refute any of these estimates or the conclusions drawn from them. Those who have attempted to frighten the people against free coinage because they said it would make this country a great dumping ground for surplus silver have not deigned to show us where it is to come from. These learned anti-bimetallic gentlemen assert that even gold is not becoming scarce, and that silver is such a glut on the market and accumulating so rapidly that free coinage would literally deluge our country with cheap silver.

Mr. Speaker, these gentlemen have only re-echoed and revamped the wise predictions, the prognostications, and the sad divinations of the capitalists, the gold-bugs, and the money-kings of this country and of Europe during the past fifteen years. The time has passed when their oft-reiterated statements have much effect, for the day of their influence is fast passing away. The people of this country and even of the countries of Europe are becoming informed, and will no longer receive as true the money theories, the dogmatic assertions, the false prophecies, and the inexcusable misrepresentations that have characterized all the writings and speeches of this gold plutocracy during the demonetization epoch.

The product of the mines in the United States during the past ten years has averaged about forty-two millions per annum. The average coinage in the United States since the passage of the Bland bill in 1878 has been about twenty-eight millions per annum. The estimated amount consumed in the arts and manufactures and for chemical purposes in the United States is about $5,000,000 per annum. This makes a total annual average consumption in the United States of $33,000,000, leaving a surplus product of $9,000,000 per annum, not counting any amount for loss by abrasion and casualties. So if our mints were thrown open to free coinage and no silver was exported from this country, there might be an increase of coinage of $10,000,000, or a total silver coinage of $38,000,000 per annum.

We have shown that the monetary requirements of this country necessary to keep the per capita circulating meduim on its present basis is over $40,000,000 per annum; and yet people allow themselves to be frightened at the prospect of an addition of $10,000,000 a year to the silver coinage.

It can not be expected that the import of gold will exceed the export during the next few years as it has in the past. While this will in a great measure depend upon the balance of trade, as we showed in our former speech, nevertheless, according to all late accounts and discussions of the subject in Europe, gold is becoming so scarce there, on account of the demonetization of silver, that every effort will be made to draw back some of the gold we have imported from that country. India and other Eastern countries have absorbed a large amount of gold during the past half century. The best estimates show that during the past half-century India and the East have absorbed not less than fifteen or twenty millions of gold per annum. This seems not to have been taken into account by several economists in making their estimates of the production and consumption of gold in the world and its increasing scarcity.

Prices are falling so fast in Europe on account of the scarcity of gold and the precious metals, both gold and silver, that European economists and statesman are afraid there will be a repetition of the panics, disasters, and even of the revolutions that occurred between 1820 and 1850 before the discovery of gold in California and Australia relieved the commercial world of the great dearth of the precious metals.

The gold product of the United States is continually falling off. It has fallen from $51,200,000 in 1878 to $30,800,000 in 1884, a decrease of more than twenty million in eight years, and the probability is that it will continue to decrease. The Director of the Mint estimates that more than ten millions of gold per annum is used in the arts for manufacture and ornamentation in the United States. The average gold coinage at the mints of this country for the last eight years has been about $60,000,000 per annum. In 1881 it was seventy-eight millions, in 1882 it was eighty-nine millions, and in 1884 it was only twenty-seven millions. What is to supply the place of the great falling off in the production of gold and gold coinage except silver?

The monometallists and those opposing the free coinage of silver fail to give us any information upon this important topic, which bears so directly upon the future material prosperity of this country and the well-being of society.

Mr. Speaker, a great source of alarm to the gold monometallists and those who oppose free coinage of silver is that it will drive the gold out of the country. A conclusion drawn from all the estimates and statistics, when considered in connection with the past history of the exports and imports of gold, shows that no fear can be reasonably entertained upon this subject. Statistics and predictions, however, often fail. Estimates and conclusions drawn from them upon the subject of money economy may be approximately correct, provided the trade and commerce of the world and the material and political prosperity of the different nations remain the same in the near future as they have been in the immediate past. But this can not be.

Great wars to maintain the so-called balance of power in Europe, to aggrandize dynasties and nations; a rainy season or drought around the Baltic and in the wheat-growing regions of Europe, and famines in India and Asia may entirely change all calculations regarding the balance of trade, and with it the movements, or exports and imports, of the precious metals from one nation to another. A great European war, or a war between Russia and England for the possession of the provinces of Asia, would cause such a demand for that class of our

productions called cereals and provisions as would enable us to continue to draw large imports of gold from Europe. On the other hand, peace, good crops, and material prosperity among the nations of Europe, and droughts, hard times, and internal commotions on this side of the Atlantic, would cause the balance of trade to turn against us, and a portion of the large amount of gold accumulated during the past few years would inevitably pass to the other side of the Atlantic.

The remonetization and the resumption of coinage of silver in Europe would give such a stimulus to all productive industries as to surely cut off a large amount of the exports of manufactured articles from this country. These things, generally somewhat temporary in their character, no human foresight or statesmanship can prevent. The best that can be done is to provide for such contingencies and to alleviate the distress resulting from them.

It is now conceded by most of the leading political and money economists of Europe that the demonetization of silver and the contraction of the circulating medium arising therefrom, and in particular the great and continued increase in the scarcity of gold, has had a most depressing and disastrous effect on the production and trade of the leading nations of that continent. This was sternly and dogmatically denied by the gold monometallists until within the last two or three years. The great falling off in prices, the great depression in trade, and the great falling off in the exports from England and Germany is now conceded to have had its paramount cause in the demonetization of silver and the scarcity of gold.

It is the duty of statesmen in this country, when the whole world is struggling for the few hundred millions of gold that exist, instead of demonetizing its sister metal, which has been since the dawn of civilization co-ordinate with it as a money metal, to restore it by free coinage to an equality with gold before the law. Then, if through unfortunate combinations of circumstances we lose a portion of our gold, we have a money-metal reserve as a basis for a convertible circulating medium of paper which will, in part, answer every purpose of our wonderful and enlarging internal trade and commerce.

But if we can not increase our stock of gold, and if we lose quite a portion of our present stock, will some gold monometallist or those opposing free coinage inform us what is to supply this deficiency?

Mr. Speaker, I can not conceive of a worse or more disastrous contest for my country to enter into with the creditor nations and the money-kings of the commercial world than a desperate struggle for the largest proportion of the world's stock of gold. I appeal to the economic history of the different nations of the world to show that when the struggle for gold becomes the order of the day, as it has been in Europe during the past fifteen years, the result is its accumulation in vast quantities in the leading money centers and by the millionaires. In such a struggle all productive property depreciates; the industries, trade, and commerce become stagnant and depressed; millions of laboring people are seeking employment and asking the privilege of earning bread; labor strikes and communistic agitations become the order of the day, and the rich grow richer and the poor poorer.

In proof of this it is only necessary to glance at the economic and industrial history of Germany, England, France, and the other nations of Europe since the demonetization of silver and the suspension of coinage in 1873 and 1875.

As Emile De Laveleye says:

> Observe what confusion has been introduced into the business affairs of the whole world by the unfortunate attempt of Germany to reduce herself to the exclusive use of gold money.

In order to procure two hundred millions of gold, Germany disturbed and embarrassed the money market of Europe for years. It raised the rate of discount on gold coin in the government banks of Europe. The sale of her silver after it was melted into bullion depreciated the price of silver about 10 per cent. Within three years after her demonetization she had coined $312,611,380 in gold. But the government dared not put these new gold coins in circulation to relieve the wants of trade and commerce in the place of the silver coin she had demonetized and melted, because these gold coins would flow back to England and France, from which countries the metal had been forcibly withdrawn in violation of commercial laws.

The balance of trade from the time of demonetization has been against Germany. It greatly decreased the products of her industries and trade. It was estimated a few years ago that more than one-third of the new gold coin which Germany had made such a sacrifice to secure had left the country never to return. She has retained the balance of her gold only by locking it up in the banks and in the public Treasury, and by keeping the rate of interest very high. Her domestic trade and industries are half ruined, her circulating medium very much contracted, and $134,819,104 of gold which was known to have been coined by the different states of the Germanic confederation before the demonetization of silver, which were attempted to be withdrawn from circulation to be substituted by the new gold pieces coined after 1873, only $24,663,050 were ever presented to the mints or banks to be exchanged for the new gold coins, although they were no longer a legal tender.

The German officials said they were at a loss to account for the balance of $110,156,099 in gold which were known to have been coined before 1873 which were never offered in exchange for the new coin. But, as stated by an economist of Europe, the mystery is easily explained. These old gold coins had gone to other countries to be recoined and only the abraded coins which were too light to yield a profit on exportation remained in the country. The governor of the Bank of France a few years ago said that Germany had been paying her balance of trade and exchange to France by sending back French gold.

The Bank of England raised its rate of discount from time to time during this period to keep Germany from importing her gold. It is admitted that the money market of the British Empire was thrown into confusion. Nothing but the great commercial superiority and wealth of England enabled her to retain her stock of gold. Trade, commerce and the industries of England from this time became depressed. Many English economists who up to a few years ago denied that the struggle for and the scarcity of gold had anything to do with the great depression in her productive industries and material prosperity now admit that it has been the leading cause of it.

The only leading commercial and industrial nation of Europe which escaped the calamitous consequences of this craze for the demonetization of silver and the struggle for gold was France. She retained her bimetallic standard. Her more than five hundred millions of legal-tender silver coin distributed among her people, and held as a legal-tender reserve for her paper circulating medium, quickened and vitalized all her productive industries, increased her exports, and enabled her to retain without sacrifice or effort on the part of the Government or the people all the gold that Germany left her after she had been conquered and impoverished by the war tribute; and it has enabled her to gradually draw back the gold from Germany which was forcibly wrested from her.

In my former speech at this session against the suspension of silver coinage I dwelt upon the advantages that have accrued to France from her bimetallic currency, and do not desire to repeat it here.

I say to the members of this House, beware how you commit this country to the accursed policy which overtook some of the monarchies of Europe after the first Paris monetary conference of 1867 in a craze for establishing a monometallic gold standard, and entering upon a struggle for the largest share of that metal. It will be a sad day for our country and our people when the plutocracy of America are allowed to enter upon such a contest with the plutocracy of Europe.

Mr. Speaker, if any country or people have ever been injured by having too large a quantity of silver or gold coin in circulation we have no account of it. If the free coinage of silver or gold has ever worked an injury to the national prosperity, the trade, or productive industries of any nations or communities, those economists who urged the demonetization of gold from 1850 to 1860, and, after 1867, the demonetization of silver, have never pointed them. These are imaginary evils, always approaching, but which never arrive.

Mr. Speaker, I am not an inflationist. I am not seeking to greatly increase the circulating medium of this county. I am only urging that it shall keep pace with our increasing population and our advancing trade, commerce, and civilization, so as to prevent depression, shrinkage in values, a fall in prices, and particularly a reduction in the wages of laboring men, which must inevitably result if we do not check the increasing scarcity of gold by restoring silver, as a co-ordinate money metal, to free coinage.

HISTORY OF THE PRECIOUS METALS.

Mr. Speaker, to those who have studied the history of the increase and decrease of the precious metals in the civilized world, the predictions of trouble, panics, and confusion to arise from any increase in the product or in the coinage and circulation of either gold or silver, seem to be at war with the facts and results of actual experience.

The history of the production of the precious metals, and their effect upon the industry, trade, commerce, and general well-being of society, may be conveniently divided into four epochs: The first, from the beginning of civilized society to the discovery of America in the latter part of the fifteenth century, which may be called the pre-trade or pre-commerce age:—the second, from the discovery of America to the discovery of gold in California and Australia in 1849–'52, which may be called the silver age:—the third, from the discovery of gold in California and Australia to the demonetization of silver in Germany and the United States in 1872–'73, which may be called the golden age:—and the fourth, from the demonetization of silver in Germany and the United States to the present time, which may be called the age of demonetization.

The first period, which we have called the pre-commerce or pre-trade age, is only interesting from a purely historical standpoint. The prosperity of nations and the movements of the precious metals from one country to another during this period were governed more by wars and conquests than by the natural laws of trade, manufactures, industry, or commerce. Writers have attributed the fall of the Roman Empire to the collapse of the mines in Greece and Spain. It is said that money was then so contracted and congested in the hands of the few that no business was profitable, capital was debarred from investment, and the plutocracy gave itself over to debauchery and vice until the most imposing empire the world has ever known fell to pieces.

A late writer has shown how money was transferred from one ancient

state to another by wars and conquests, how millions of treasure have been at different eras wrested by conquest from India, and how it has gradually found its way back again. But this is too antiquated for our present purpose.

When America was discovered in 1492 it is estimated the whole stock of gold and silver coin then existing in Europe amounted to about $200,000,000, and the annual supply and product of the mines was only $500,000. For about thirty years after the discovery of the New World the new supply of specie did not average more than $250,000 per annum. From 1520 to 1545 the annual supply was about $3,000,000, six times as large as it had been prior to 1492.

In 1545 the celebrated mines of the Potosi Mountains in Bolivia were discovered, and after that the annual supply averaged about ten millions per annum until the close of the century (A. D. 1600). A late writer shows that in A. D. 1600 the annual supply was more than twenty times and the stock of coin in Europe nearly four times as large as they had been one hundred years before.

About the year A. D. 1650 the annual supply had risen to about thirteen millions per annum, and the stock of coin in Europe was estimated at twelve hundred millions. At this time (A. D. 1650) the stock of coin in Europe was six times greater than it was at the time of the discovery of the Western Continent, and the annual product of the mines was twenty-seven times as great, while prices had increased, according to Adam Smith and Jacob, only three and one-half times.

Here the rise of prices stopped, although the yearly product of the mines continued largely to increase. Before the close of the seventeenth century the product of the mines amounted to $20,000,000 per annum.

Throughout the eighteenth century the annual output averaged $35,000,000, and during the first years of the present century, up to 1810, the annual product of the mines amounted to fifty million. This is one hundred times as great as it was in 1492, and four times as large as it was in 1640 when prices ceased to rise. The existing stock of coin in Europe and America in 1810 was about nineteen hundred millions, about ten times as large as it was in 1492 and about double what it was in 1650. Yet the best authorities show there was no rise in prices or fall in the value of money after 1640, even though in the interval the product of the mines had quadrupled and amounted in the aggregate to $5,000,000,000.

This shows that the production of the precious metals increased in a steady and uniform ratio during the three centuries which followed the discovery of America. The annual supply and the existing stock of coin in Europe and America during a century and a half after 1492, and after the opening of the Potosi mines, bore a greater ratio to the previous stock than was the case in subsequent centuries; yet there was no rise in prices and the value of money did not increase after the year 1640.

These facts and this long experience shows the correctness of the principles laid down by different writers, Jevon and others, that any new annual supply of the precious metals produces its greatest effect upon the value of money in the early years after it commences, because during this time it bears a greater proportion to the existing stock than any equal supply can bear in subsequent years.

The facts and experience of this portion of the silver age, from the discovery of America to 1810, more than three hundred years, demonstrates the great influence of the ordinary growth of population and trade upon the value of money. As population steadily increases, if this increased population is to be maintained even in its previous condition, industry, trade, commerce, and the profits thereof must increase in proportion. If the modes of life and the social condition of mankind are to progress and improve there must be an increase of the circulating medium per capita, and there must necessarily be a great increase of profitable employments and exchangeable property. All these things create increased monetary requirements.

This accounts for the fact that although there was a large and ever-increasing stock of precious metals from 1492 to 1640, and a still greater increase thereafter up to 1810, yet there was no rise in prices and no increase in the value of money from the middle of the seventeenth century (1650) to the early part of the nineteenth century (1810), although the annual increase of the precious metals after 1640 was four times as much per annum as it had been before that time.

The actual results drawn from the experience of this portion of the silver age may be studied to great advantage by those so-called bimetallists who are afraid that free coinage will result in a deluge of silver coin, or cause an inflation of the circulating medium in this country or an undue rise in prices.

After 1810 there occurred a great falling off in the yield of the gold and silver mines. In 1815 the product was about the lowest during the present century; and still the product during that year equaled in amount the yield in 1640, when prices reached the highest point. Between 1810 and 1830 Jacob estimates the annual product at $25,000,000, more than double what it was in 1640, when prices ceased to rise. But as shown, and now admitted, there was a great dearth of money and a great falling off in prices between 1810 and 1830.

This monetary scarcity went on increasing for the next twenty years from 1830 to 1850, although the annual production of precious metals increased before 1848 to sixteen million on account of the product of the new Russian gold mines in the Ural Mountains.

These facts show that between 1840 and 1850 a yield of ninety millions of the precious metals per annum did less for the wants of the commercial world than ten millions had done prior to 1810, and, as said, less than two millions had done three centuries before. The year 1850 was the close of the silver age; the mines of California were discovered in 1849.

Mr. Speaker, had the monometallic school of money economists carefully studied and appreciated the facts and lessons of these three centuries of monetary experience they would have been better prepared to meet in the proper spirit, and aid in alleviating, the distress and panics which have been laying so heavily upon the commercial world and our own country during the past ten years, arising from the accursed and short-sighted policy of the demonetization of silver.

We have not time to review and point out the great benefits derived from and the progress made in civilization, trade, commerce, and the well-being of society consequent upon the discovery and yield of the precious metals in the western continent from 1492 to 1800. The yield of the mines in the new continent did more to lift the world out of the darkness that had settled upon it during the Middle Ages and advance it again on the path of civilization and progress than all else combined. It is fortunate for the human race that no dogmatic theorist had influence enough during this silver age to cause any of the nations to demonetize the white metal.

The discovery of gold in California and Australia marks the beginning of the golden age. The production of the precious metals, mostly gold, was much larger than in the previous period. It was largest during the first ten years. The greater portion of the gold was taken from the placer mines, which are easily worked without capital and are exhausted in a short time. The yield of gold in the world in 1851 amounted to $80,000,000, and in 1852 and 1853 to $165,000,000 per annum. During the next six years it amounted to more than $130,000,000 per annum.

In 1860 the yield of silver began to increase on account of the discovery of the mines in Nevada. The silver supply began to increase about the time the gold product fell off, and sufficed to maintain the production of the precious metals at from one hundred and seventy-five to two hundred millions per annum. It is unnecessary to dwell upon the wonderful increase of trade and commerce, the growth of manufactures, and the wonderful advance in the material prosperity and welfare of man consequent upon the great yield of gold from the mines of California and Australia during the third quarter of the present century. They are fresh in the minds of many persons now living.

It was during this period that the American Republic grew in material prosperity until it overshadowed all other countries in the world. Thousands of enterprising merchants, manufacturers, and men of commerce throughout the commercial world, many of whom have been impoverished by the period of demonetization, look back upon this era as the brightest of their generation and hope for its return.

Mr. Speaker, is there a money or a political economist who will to-day stand up before the people of his country and say that the demonetization of gold, or its limited coinage, during this period would not have been a curse to the people of his race and country? But, sir, during this golden age many of the so-called money economists of Europe were urging the demonetization of gold and prophesying all manner of evils if their advice was not heeded. And what seems passing strange is that to-day some of these same economists and their followers are treated as authority by the so-called monomentallists and those who are urging the suspension of the silver coinage and who are predicting all manner of evil to grow out of the rebabilitation of silver by free coinage.

The agitation of demonetization commenced in 1867 at the first Paris monetary conference. The success attending the formation of the Latin Union in 1865 caused the gold monometallist party to call the conference of 1867 and to recommend to different nations the establishment of an international gold standard.

Short-sighted politicians and economists attributed the wealth and commercial superiority of England to her having adopted the gold standard in 1816; although England's own greatest statesman has said that the gold standard in England was not the cause, but the result of her commercial superiority and wealth.

In 1871 the unfortunate war between France and Germany broke out. Germany wrested one thousand millions of war tribute from France and consolidated the German Empire. She thought she was then in a condition to assume the same position of commercial superiority, and to follow the example of England by establishing a gold standard. We have herein shown the sad results of her experiment. She is to-day commercially and industrially a prostrate victim before the shrine of silver demonetization.

Mr. Speaker, like all misfortunes Germany's experience has produced at least one good result. It has effectually cured the disease of demonetization among the people and nations of Europe. I say to those who claim to be bimetallists and who oppose the free coinage of silver, because, as they say, they are afraid that some nations of Europe will melt down their silver coin into bullion and export it to this country, that they have no intelligent conception of the feeling throughout the commercial world to-day upon this question.

Even the gold monometallists of England, the gold monometallists

of the Latin Union and France who urged demonetization a few years ago, and many of the Germans who favored the imperial policy, now with one accord admit that it has been a great mistake; and the only question now discussed among them is how shall we remonetize instead of demonetize silver.

A few years after the great production of gold in California and Australia, Michel Chevalier and a number of economists of his school in Europe urged the demonetization of gold on the ground that money was becoming so cheap, and property appreciating so much in value, the creditor classes would specially suffer and the inflation of the currency would produce confusion and result in panics.

The fact that Professor Jevon and others had shown that between 1809 and the discovery of gold in California and Australia there had been a great appreciation in the value of money and a great depreciation in the value of all productive property, and that the prices of all commodities had fallen from 25 to 50 per cent., was ignored by this school of economists. Although it was pointed out that fixed incomes had more than doubled in value between 1810 and 1840 on account of the great falling off in the product of the mines and the decrease in imports of silver from South America and Mexico, and although the yield of gold for some time could only supply a pre-existing want instead of inflating the currency, still they insisted on its demonetization.

The same school of economists, after the increase in the production of the silver mines in the United States, commencing about 1870, began to agitate the demonetization of silver. Although there were panics and trade depressions in 1873, and the yield of gold in this country had fallen from fifty-three million in 1866 to thirty-six million in 1873, and the silver product was only thirty-five million in that year; although the increase in the product of silver did not equal the falling off in the product of gold; and although it had been indisputably shown that gold had risen in value from 20 to 25 per cent., that prices had fallen in the same ratio, that silver had not depreciated in value even when considered with reference to its bullion value in its relation to all other commodities except gold, nevertheless this same school of economists insisted upon the demonetization of silver and advanced the same dogmatic theories and assertions which they had before repeated, from 1850 to 1860, in favor of the demonetization of gold.

Suppose the different nations had listened to this school of economists thirty years ago, and by demonetization sent the gold of California and Australia into banishment, it would not have rendered to the commercial world the great service which it is admitted to have actually performed; we should have had only silver money, now admitted to have been very scarce at that time, and insufficient to meet the demands of industry, trade, and commerce.

As shown by a learned European economist, no more imprudent measure could be conceived of, at a time when many circumstances were conspiring to increase the use of metallic money, than the general demonetization of silver. The commerce of civilized nations is increasing in an unexampled measure. During about the last twenty-five years since accurate statistics of foreign commerce can be obtained it has increased in England over 100 per cent.; in France over 150 per cent.; in Belgium over 250 per cent.; in Russia over 250 per cent.; in Austria over 200 per cent.; and in Italy, as some attempt to show, over 500 per cent. The commerce of Europe has more than trebled; it has more than doubled upon the entire globe and there is nothing to show that it will not continue to increase.

These enormous commercial transactions are no doubt largely carried on by bills of exchange; but there must be a certain amount of coined money which forms the reserve and foundation of all well regulated and stable business and credit. International trade will therefore continue to demand more money.

In the United States the increase of trade and commerce has been marvelous. I said in my former speech:

> The increase in the accumulation and value of property has been, and is, immense, and the continued increase in population and in the volume of exchange, trade, and commerce is almost beyond computation. During the twenty years from 1850 to 1880 the value of property in the United States increased 214 per cent., at the rate of 10.7 per cent. per annum. The foreign commerce of this country from 1860 to 1880 amounted to 40 per cent. more than all the commerce of the United States from the Revolution to 1860.
>
> The internal commerce of this country has passed all precedent, and almost conjecture. It is estimated to be twenty times greater in amount than our foreign commerce. When we contemplate that this commerce is aided by the operation of over 100,000 miles of railroad, more than exist in all other parts of the world, and nearly all constructed during the last forty years; that it is aided by internal navigation upon thousands of miles of the greatest lakes and rivers in the world; that it is enlarged by the production of the greatest crops of cereals in the Western and Southern States the world ever saw, to be exchanged for the immense quantities of manufactured articles produced in the Middle and Eastern States, figures and statistics are set at naught and the mind staggered in its efforts to comprehend its immensity.
>
> To carry on this great commerce and trade we imperatively need, as one of the mediums of exchange and measures of value, the coinage of all the silver dollars our mines can produce. The amount of silver coined into money from 1875 to 1883 ranged from one hundred to one hundred and sixty-one millions per annum. This coinage among the larger states was as follows: The United States, twenty-seven millions; Mexico, twenty-five millions; India, twenty-nine millions; Spain, ten millions, and the balance among other countries. The best estimates show that during the past ten years a great deal more silver has been coined in the word than all the mines have produced.

Mr. Speaker, I have tried to discuss this subject according to the historic and inductive method. I have endeavored to throw aside the old deductive method of treating the subject by assuming dogmatic principles and theories and then proceeding to argue that certain things are so because they must be so or they would not be in harmony with the assumptions and dogmas laid down.

There are now two distinct schools of political economy. One may be called the old orthodox school. Those who differ with the dogmas and vagaries of this school are regarded as heretics. The late school has been called the historical and inductive, or the realistic. It seeks by inquiry and investigation to find out the true facts and results of the workings of economic policies among communities and nations, and to draw lessons of wisdom from their experience. The paramount object of this school has been well stated by De Laveleye as follows:

> The object to be attained, as I think all the world will now admit, is to ameliorate the condition of the laboring classes in such manner that each person may enjoy a measure of well-being proportioned to the part which he has taken in production; or to sum the matter up in a single word, to realize in the economic world that formula of justice to each according to his works."

This is the language of an economist now recognized as one of the foremost advocates of the free coinage of silver throughout Europe. He made this grand statement in an address delivered before the Economy Club of London. I have read and heard of nothing that I would so earnestly commend to the serious consideration of that class of capitalists and gold-bugs now designated as the plutocracy of America.

The prominent members of the historic school of economists in both Europe and America are true bimetallists and demand the free and unlimited coinage of silver on an equality with gold. They demand this because the economic history of the world shows by undisputed facts that during the periods when there was an increase of the product of the mines, and a consequent increase of the circulating medium, the people advanced in material prosperity and social well-being; and that whenever the yield of the mines has fallen off, or other cause, resulted in the contraction of the currency depression and stagnation in all productive industries has been the result. During such periods money has accumulated in the hands of the few and at the money centers. It has advanced in value without being invested or loaned for interest and the people generally, particularly the laboring classes, have suffered.

The old orthodox school are always ready to explain that it is not the contraction of the currency that brings about depression of trade. They always say at such times that money is not scarce but is plenty and cheap because it can be borrowed at a low rate of interest. This false deduction regarding low interest has always been made and repeated to show that money was not scarce. One of the very characteristics of depressed or "hard times" is that money can always be borrowed at a very low rate of interest. At such times prices are always falling; money is rising in value and everything else depreciating. Every person is afraid to invest money in any productive enterprise, or even in real estate. A small amount of property changes hands at such times, except at forced mortgage sales and upon the auction block. Few manufactories are operated, few railroads are built, the laboring men are thrown out of employment and asking the privilege of working for bread, and yet the orthodox economists say that money is cheap and plenty because you can go to the money centers and obtain it at a low rate of interest, and that you are mistaken when you say "times are hard" and you can not obtain work to earn a living for your families.

Mr. Speaker, I have heard since the opening of Congress railroad millionaires, the gold-bugs, and their advocates in speeches on this floor eloquently describe how the poor laboring man was suffering and would suffer from being paid in cheap silver dollars; and stating how they sympathized with the laboring man when he was compelled to take a silver dollar worth 20 cents less than the gold dollar. How gratifying it must be to the thousands of laboring men who are out of employment, awaiting the result of strikes and hoping for the privilege of earning food and clothing for their families, to be told that they will suffer from having to receive in payment for labor cheap silver dollars. The particular character of the dollar in the London market interests them but little. Their struggle is for the privilege of obtaining any kind of a dollar that will purchase the necessaries of life.

Mr. Speaker, I have heard many gentlemen upon the floor of this House contend that money was not scarce but was plenty and cheap, and to prove this assertion state that it could be borrowed in New York, Boston, or Philadelphia at less than 3 per cent. They do not seem to understand that money has two kinds of value, one for the purpose of loan and the other for the purpose of purchase and investment. They do not comprehend that low prices, hard times, and low interest go together, and that high prices, productive prosperity, and high interest go together. A review of the history of the different periods of what are commonly called "good times" and "hard times" shows that this is the absolute truth. When prices are good and rising, money seeks investment in the productive industries and all the avenues of trade and employment are active. When prices are low and falling, as they have been for the past few years, capital becomes timid and will loan its money at a nominal rate of interest rather than invest it in any enterprise or productive industry.

It is now conceded that gold has risen in value over 25 per cent. during the past ten years. So the owner of a quantity of gold could have locked it in a vault ten years ago and refused to invest it in any

of the productive industries for the benefit of the people or community, and still his wealth would have greatly increased. No future contracts such as stimulate enterprise are entered into. Real estate can not be sold or rented because it is continually falling. The British Parliament undertook to fix the rent rate for Irish tenants a few years ago, and now they are unable to pay them on account of the great falling off in prices and the rise in money. There is actual distress throughout the agricultural regions where the laboring classes have generally been most prosperous and happy.

The same state of things existed for a long time after the final establishment of the gold standard by England in 1820. The distress and depression that has followed demonetization of silver in Germany is almost a complete repetition of the experience of the British Empire when she established her gold standard. But the orthodox monometallists seem to have learned nothing from these historical facts and teachings. They absolutely ignore them. There is but one way to explain why so intelligent a class of men continually strive to ignore these facts and lessons and close their eyes to the existing condition of things arising out of the demonetization of silver. It is that the object of their school of economy is the opposite from the historic school, and always has been to promote and encourage the accumulation of permanent wealth in the hands of the few.

This school of money economists in Europe up to a few years ago had not denied that this was their object. The welfare of their government and the prosperity of their nation, according to their theory, depended upon this. There is consistency in the position of these European economists of the orthodox school. But the mystery remains unexplained how American statesmen can adopt the theories and dogmas of this school and still claim they are advocates of laws and policies which have for their object "the greatest good of the greatest number."

Mr. Speaker, these are practical questions in their application to our industries and the condition of the laboring people of this country. As so well said by Leon Say, the president of the monetary conference of 1878, "monetary questions are without exception practical questions, and should in my opinion not only not be decided but not even approached and discussed except after a study of the facts and their relations." No intelligent and unprejudiced man can diligently study the history of the facts and relations that have governed the production of the precious metals in past periods, in connection with the history of the demonetization of silver in 1873 and since, and come to any other conclusion than that the full rehabilitation of silver by free coinage will carry out the policy of "the greatest good to the greatest number" in this country.

Mr. Speaker, I can congratulate the people of this country upon the fact that very great progress has been made in the direction of the free coinage of silver during the past few months. A large number of the people of this country supposed, and the balance were afraid, that the influence of the administration and the money power of the East would be sufficient to bring about the suspension of silver coinage shortly after the meeting of the Forty-ninth Congress. Now, sir, I venture the assertion that the proposition to suspend silver coinage will be voted down in this House by more than two-thirds majority; and if the free-coinage bill does not pass this House at the present session, it will not be long before the people of this country will elect a majority of representatives who will pass a free-coinage bill.

A very encouraging feature of the money question in this country is that the people everywhere are beginning to discuss it. The orthodox school and the gold-bugs have heretofore contended it was a question the people knew nothing about and had no right even to discuss or agitate. But, sir, the people are discussing it all over this country and even in Europe. There is no doubt the laboring men begin to see that this money question is one which greatly affects their wages. The monometallists of England have lately frankly admitted that if gold continues so scarce and prices continue to fall wages must fall also.

The agitation throughout Germany in favor of the free coinage of silver is such that Bismarck, with all his power, can not much longer resist it. This great man said not long ago "gold is becoming like too scanty a blanket which everybody struggles for, and which makes people squabble."

Mr. Speaker, there will be a great squabble on the part of the politicians who represent the monometallists and oppose the free coinage of silver when they hereafter desire to become representatives of the people.

FREE COINAGE WILL RAISE THE PRICE OF SILVER.

Mr. Speaker, it is even contended that free coinage will not advance the price of silver. Here again all the facts of history have to be ignored to support such a statement. The free coinage of silver in France from 1806 to the time of suspension of coinage by the Latin Union controlled the price of silver in London and kept it at about 60 pence per ounce, or at the ratio of 15½ to 1 of gold. Mr. Ernest Seyd has proved by indisputable figures that the variations in the value of silver quoted at London during this period were governed by the monetary value of it in Paris and elsewhere in Europe.

It is said that money is nothing but a commodity, or merchandise, and law can not change the value of it. But money or money metal must not be confounded in value with other merchandise; it essentially differs from them; it has a peculiar nature and character arising out of free coinage; it is endowed with a certain fixed debt-paying power and a market value at the national banks and mints throughout the commercial world where free coinage exists. The price of gold bullion is practically invariable because there is free coinage of that metal. A gold dollar can be obtained for every 25.8 grains of standard gold, and hence the bullion price of gold is at that rate. When the free coinage of silver is established every 412½ grains of standard silver will be worth a dollar, because the holder of it can take it to a mint and obtain a dollar for it. When free coinage of the money metals exists their quantity is limited not by law but by nature, as it should be.

We have herein shown, by the history of the production of the precious metals, that the whole product of all the mines in the world at the present time, of both silver and gold, is not sufficient to keep the circulating medium, per capita, what it has been during the past quarter of a century; and that instead of the free coinage of silver causing an imaginary dump in this country, there is no probability that all the silver that can be obtained for coinage will increase the circulating medium in proportion to the increase of population and trade. The history of the output of the precious metals and their effect upon the material prosperity and well-being of society shows that such an increase would be a blessing indeed, but there is no reasonable hope of it.

Sir Roderick Murchison, of whom it has been said that he was the greatest geologist that ever lived, after he had examined the gold mines in the Ural Mountains and Australia and inquired into the probable output of gold in the future, said:

> The quantities of gold and silver procurable will prove no more than sufficient to meet the exchanges of an enormously increased population and an augmenting commerce and industry. Providence seems to have originally adjusted the relative values of the precious metals, and the fact that their relations have remained the same for ages, will survive all theories.

As was well stated by the German economist, Ottomar Haupt, regarding the effect of free coinage upon the price of silver:

> Why the effect would be precisely the same as with gold; that is to say, the mint pars and bullion points would work out exactly—let it be well understood, exactly—at the same figures as those before us. * * * The term gold point would, in fact, henceforth cease; at least that of silver point would just as much be employed for specie movements, and in any case be fully at par with it.

I do not claim to be able to state just how soon this entire parity of value between gold and silver will be brought about by free coinage. It may bring about a few jostles that can not be foretold correctly at this time. The great curse of demonetization has brought radical changes into the money markets, and if it takes a few slight jostles and reactions to bring about the readjustment they are necessary to cure a great evil and cause a return to sound principles.

Silver Coinage.

SPEECH

OF

HON. JOHN B. STORM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 20, 1886,

On the bill (H. R. 5690) for the free coinage of silver, and for other purposes.

Mr. STORM said:

Mr. SPEAKER: The currency of a nation is a matter of supreme importance. A sound currency is essential to national well-being. Commerce and trade can not prosper under an unsound, false, or vicious system of finance. It is now generally admitted that gold or silver or both, must be the foundation of a sound currency. While paper money may be preferred as an actual circulating medium, yet that currency must have a metallic basis of either coin or bullion. The attempt to maintain an irredeemable paper currency has so often and uniformly failed that no modern economic writer of good standing defends it.

The Greenback party, which favored an unlimited issue of paper promises, has had its day. Of the three hundred and twenty-five members composing this body my colleague from the Schuylkill district [Mr. BRUMM] is the only one, so far as I know, who is willing to write himself down as a Greenbacker. The contest is no longer between a paper currency and a metallic one. The issue as now made up is one between gold and silver, or monometallism against bimetallism.

But what do these terms mean when applied to the question now being discussed? The primary and etymological meaning of monometallism is a belief in one metal, as bimetallism is a belief in the use of two metals. But the discussions of the last twenty years have evolved another meaning of these terms, whereby monometallism is made to mean a preference for gold as the sole unit of value with an unlimited legal-tender capacity, together with silver as a subsidiary coin with a limited legal-tender capacity; and bimetallism is a preference for gold and silver, each being a standard of value, and each possessing a full legal-tender capacity.

In this latter sense I am a monometallist. I believe that gold alone

should be the unit of value, and endowed with a full debt-paying quality, with silver for smaller change, with a limited debt-paying capacity.

Mr. Speaker, if mankind were limited in its choice as to which of the metals, gold and silver, it would prefer for its currency, it would always select gold. This preference seems almost instinctive. It is true that in the early stages of society, when exchanges were few and commerce very limited, silver and even copper answered very well. But in our day when exchanges are many and great, and the affairs of life require a greatly increased use of a circulating medium as the measure of values, copper and silver are found to be too clumsy and burdensome for use as an instrument of exchange, and gold is naturally and universally preferred to them.

The events which have taken place in the world during the last quarter of a century, resulting in the demonetization of silver and the adoption of a single gold standard by nearly all the commercial states of Europe, bring us face to face with this question: which of the two precious metals will we adopt for our standard of value? If we can not keep both in circulation, which will we give up, and which will we keep? As our gold circulation is over $625,000,000 against about $262,000,000 of silver the matter of choice is not difficult.

It is denied I know that we are reduced to such a necessity of choice. I shall endeavor to show that we are. I shall try to prove that, if we wish to maintain our gold circulation, we must cease the coinage of standard silver dollars as provided in the act of February 28, 1878. It is admitted that there is no absolute, unvarying standard of value. Gold and silver fluctuate in value, but not to the same extent. Like all commodities which are bought and sold in the market, the law of supply and demand influences to a certain extent the market value of silver and gold bullion.

The great increase in silver between 1780 and 1820 depressed the market value of that metal. Again, the great increase in the production of gold in Australia and California in 1850 had a like effect on the value of gold. Again, in 1876, a remarkable fall in the value of silver took place, caused by the great yield of our mines and the vast quantity of it thrown upon the markets of the world by the demonetization of silver in Europe. Yet these metals do not vary like the common commodities of life. They are not dependent on climate, soil, and seasons. By an arrangement of an all-wise Providence they are so widely spread through the earth, mixed with baser materials, and the amount of labor required to mine and purify them is so constant, that the annual production is generally even and uniform.

While it is true that there is no absolute standard of value in the sense that we have an absolute standard of length, it is also true that the difficulty is greatly increased by attempting to maintain two standards of value. The skill of the mechanic has enabled him to produce a compensating pendulum which will maintain the same length through all the days of the year. But human ingenuity has not been able to produce two clocks which will keep company in their beats during the whole year. It is essential to the welfare of the people that the least changeable unit of value shall be adopted. When A loans to B $100 to be paid back at some future period, the former has a moral right to have returned to him not only the same number of dollars, but also of the same value they possessed when he parted with them. And B has a moral right to insist that in the payment of his debt he shall not be called on to pay more dollars, or dollars of a greater value, than those he received. But with two fluctuating standards of value, A may be compelled to receive less than he loaned, and B may be compelled to pay back more than he received.

The advocates of the continued coinage of standard silver dollars have indulged in a great deal of talk about the debtor and creditor classes in this country, and represent that this is a fight of the creditor class against the debtor class. It is evident that such is not the case. From the illustration I have just given it is manifest that the debtor class is just as likely to suffer from a fluctuating standard of value as the creditor class. In fact it is well known that they suffer more.

Mr. Speaker, I regret very much to believe that some motive of this kind underlies much of the opposition to the stoppage of the coinage of standard silver dollars. It has cropped out in this debate, and can easily be read between the lines of many of the silver speeches on this floor. It has been argued here that the eastern part of our country is the creditor portion; that they are the bloated "bondholders;" that a gold standard is only intended to benefit Wall street, stock-gamblers, and so on. To speak more plainly, they believe by the continued coinage of silver dollars, under the act of 1878, with 412½ grains of standard silver, they can scale down that debt 20 cents on the dollar, or, in other words, repudiate 20 per cent. of an honest debt. I have no doubt that this accounts for the strong support unlimited silver coinage receives from that section of the country which now prefers to style itself the debtor part of the United States.

Suppose such a division of the country into a debtor and a creditor class be correct, is this principle of indirect repudiation an honest one? I deny, however, such a classification by territory. The debtor and the creditor are to be found in all sections of the land, and in every State and Territory of the Union. The principle of repudiation implied in these silver speeches is a two-edged sword, and cuts both ways. It is a poisoned chalice which may be commended to the debtor's lips at no very distant day.

When the Government placed its bonds on the market for sale every citizen had a right to buy if he felt inclined. If some had more faith in the Government's inclination or ability to pay than others, and thereby secured a desirable investment, are they to be denounced as robbers and thieves and "bloated bondholders?" In point of fact, these bonds are held for a large class of deserving people. They are owned by savings-banks and trust companies for the benefit of widows, minor children, and orphans, and for depositors of wages and small earnings.

But the most absurd of all statements is the one that Wall street stock-gamblers and the Jay Goulds are benefited by and interested in a sole gold standard. The gentleman who can make such a statement on this floor is entirely too innocent even to be a "lamb." Wall street stock-gamblers and the Jay Goulds interested in maintaining a steady standard of value! Why, this is the very class of people who live and thrive by fluctuations in value. They deal entirely in margins. What they make or lose is done in the rise or fall of value. Look over the list of stocks which are daily kicked about in the markets like a football; you will find they are the watered stocks of some railroad or telegraph company, of some mismanaged corporation of doubtful solvency. The stocks of well-managed and honest corporations are never speculative. Stock speculators never deal with them. If they are bought and sold in the markets it is for the purpose of *bona fide* investment.

Mr. Speaker, I repeat we must make our choice between gold and silver. Both can not circulate *pari passu* when both are invested with a universal debt-paying capacity. There is no economic truth better established than the so-called Gresham law. That law briefly stated is, that an inferior coin will drive from circulation a superior one. It is based upon a universal principle of human nature, which is that the owner of any product, whether grain or bullion, will sell it to the person who will give him the largest sum of money. If gold is worth more in its bullion state than when coined the owner will not carry it to the mint to be coined. If the owner of silver bullion finds that he can get more for it at the mint he will take it there and get it back coined into dollars. This law has been demonstrated over and over for more than two hundred years in the financial experience of Europe and America. And what is the answer which has been made to the operation of this law? That it has not yet produced any such result; that we have coined silver since 1878 at the rate of two millions per month and gold has increased rather than decreased.

In the language of Holy Writ, "because sentence against an evil work is not executed speedily, therefore the heart of the sons of men is fully set in them to do evil." Because the predictions of our President uttered over a year ago have not been fulfilled, he is denounced as a false prophet, and our silver friends want to repeal all laws limiting the coinage of silver. The laws governing human society are more recondite and difficult to investigate and understand than those governing the material world. They are infinitely more complex than physical laws. While under certain conditions we can always predict even in social science that certain events must and will take place, yet owing to the presence of unseen influences which we can not satisfactorily determine the happening of the event may be hastened or retarded.

Several satisfactory reasons may be assigned for the fact that silver has not yet expelled gold under the operations of the Gresham law, or why it may not do so for several years to come. One reason is, that a favorable balance of trade has not made it necessary to ship coin or bullion abroad to adjust an unfavorable balance. Another is the restrictions placed in the act of 1878 limiting the coinage to not less than two millions nor more than four millions per month. And still another reason is to be found in the action of the present Secretary of the Treasury in trying to force silver into circulation. In his very able answer to the House resolution of recent date he sets forth what he has done in this respect. Among other things he says:

> Meanwhile the silver-dollar circulation has been enlarged from March 4, 1885, to date, from about $40,000,000 to about $51,500,000. I have labored to promote the circulation of silver with unremitting energy. I have pressed its circulation at a constant expense to the Treasury when other forms of lawful money could have been circulated without such cost. I have pressed its circulation at the expense of the United States notes (ones and twos), which as fast as redeemed have been reissued only in larger denominations. I have pressed its circulation at the expense of the circulation of national-bank notes. I have upheld its value by never compelling its receipt by any creditor of the Government and never failing to provide by exchange or transfers whatever currency might be preferred.

The railing accusations brought against the Secretary of the Treasury that he is trying to prevent the silver dollar from going into circulation are fully answered in this very able document. But with all these favoring circumstances the Gresham law will sooner or later produce its legitimate results, and the inevitable day must come when gold will cease to be a part of our circulation.

The very basis of inductive science is experience. We say those effects which have uniformly followed a given combination of circumstances in the past will under like circumstances be repeated in the future. In every case in our own history where we have had two currencies, and one was undervalued in the ratio of equivalence, the under-

valued one (which is the same as the more valuable coin) has ceased to circulate.

In 1792 Congress enacted the first coinage law. Hamilton, the greatest financier of his day, was then Secretary of the Treasury. By that act the proportional value of gold to silver was fixed at the ratio of 15 to 1. In this very first coinage law gold was slightly undervalued. The market ratio was then 15.6 to 1, and was in the process of increasing. By the year 1810 the gradual decrease in the gold circulation was noticeable, and was commented on by the public men of the day. The coinage of silver in 1812 was $814,029.50 against a gold coinage of $290,435. By the year 1820 silver had practically driven gold out of the country.

In 1834 Congress recognized the operation of the Gresham law, and it was not slow in applying what it then supposed was the remedy. It saw that gold was undervalued, and instead of going into the melting-pot it was sold at a profit as bullion. What was done? The ratio of equivalence was readjusted, and raised from 15 to 1 to 16 to 1, and the number of grains of pure gold in each dollar was reduced from 24.75 to 23.2. But in avoiding one extreme the statesmen of that day fell into another. They had now undervalued silver, and the Gresham law was reversed. Silver began to disappear and gold reappeared. So marked was the operation of the act of 1834, although not approved until the 28th day of June, 1834, that the gold coinage for the balance of that year was $3,954,270, as against $978,550 of the previous year. The large production of gold in California, Australia, and Russia by 1852 helped very much to aggravate the evils of the undervaluation of silver in 1834. Gold was thus reduced in value and increased in circulation, while silver was correspondingly increased in value, but decreased in circulation. In fact, silver practically ceased to be a part of our circulation, and we were deprived even of our small silver coin necessary for change in retail transactions; for under the acts of 1792 and 1834 the half and quarter dollars, dimes, and half-dimes had the same proportional amount of pure silver as the silver dollar. To remedy this evil Congress in 1853 practically abandoned the attempt to maintain silver dollars in circulation; but in order to keep in circulation a sufficient quantity of subsidiary coins it resorted to a device which proved effectual. It debased the smaller coin in order to free it from the evil effects of fluctuations between the gold and silver standard. When the coinage act of 1853 was passed the silver half-dollar contained 206¼ grains of standard fine silver, just one-half the number contained in the silver dollar.

The act of February 21, 1853, provided that after the 1st day of June, 1853, the weight of the half-dollar, or piece of 50 cents, should be 192 grains, and the quarter-dollar, dime, and half-dime respectively one-half, one-fifth, and one-tenth of the weight of the half-dollar. Another important provision of this act was that these subsidiary silver coins were made a legal tender in the payment of debts for all sums not exceeding $5. This act showed a better knowledge on the part of Congress of the true principles which underlie a sound system of finance than any of its predecessors had. It was the first statutory recognition of the fact that gold and silver could not be kept in circulation for any great length of time when both were endowed with full and unlimited debt-paying power.

Whereas in 1852 only $999,300 of subsidiary coins were struck at the mints, the next year, under the impulse of the act of 1853, $9,077,571 were coined—a ninefold increase. This act is justly claimed by approved writers as the one that really demonetized the silver dollar, and not the act of 1873, which but formally declared what had been accomplished twenty years before; for the "dollar of our fathers," about which we have heard so much, cuts but a sorry figure in our financial system. From 1793 to 1853, a period of sixty years, 2,507,732 only were coined; and from 1853 to 1878, a period of twenty-five years, only 5,539,948 were coined; making in all a little over eight millions in eighty-five years. How many remained in circulation in this country in 1873 no one can tell. But surely the act of 1873, formally demonetizing the silver dollar, was not such a serious crime as the gentleman from Iowa [Mr. WEAVER] would have us believe.

But why multiply instances to prove the correctness of the Gresham law? We had abundant corroborative evidence in the Revolutionary war and in the recent war, and the experience of the continental nations of Europe is to the same effect. From my study of the question, bimetallism in the sense it is used by the advocates of the unlimited coinage of silver dollars is as impossible as perpetual motion. Under the existing state of affairs here and in Europe it is as wild and chimerical as the search for the philosopher's stone or the fountain of perpetual youth. It is an *ignis fatuus*—a dream impossible of realization. To complete the proof of my proposition, that we must select which of the two precious metals we will retain for our standard of value and which we will use for subsidiary coinage, I will present the following tables to show, first, the fluctuations of the market value of silver itself; then the fluctuations in the value of the standard silver dollar of 412½ grains; and lastly, the fluctuations in the relative value of gold to silver from 1834 to 1885; these were prepared at the Mint of the United States, and are official.

The tables read like the annual register of the thermometer in the Signal Service Bureau. They show that silver is entirely too changeable to form a standard of value. A yard-stick, 36 inches long to-day and 29 inches long to-morrow, would be a fair illustration of the movement of silver and the silver dollar for the last half century.

Table showing fifty years' prices of silver, measured by gold.

[From tables prepared at the Mint of the United States.]

	Price of pure silver per ounce in London.*			Average price of pure silver, per ounce, in gold.	Value of standard silver dollar, 412½ grains, in gold.	Relative value of gold to silver.
	Lowest.	Highest.	Average.			
1834	59	60⅜	59 11/16	131.3	101.62	1 : 15.73
1835	59½	60	59 13/16	130.8	101.20	1 : 15.80
1836	59	60⅜	60	131.5	101.72	1 : 15.72
1837	59	60⅛	59 7/16	130.5	100.98	1 : 15.83
1838	59⅛	60⅛	59⅛	130.4	100.88	1 : 15.85
1839	60	60⅛	60⅛	132.3	102.36	1 : 15.62
1840	60⅛	60⅜	60⅛	132.3	102.36	1 : 15.62
1841	59⅜	60	60 1/16	131.6	101.83	1 : 15.70
1842	59	60	59 15/16	130.3	100.77	1 : 15.87
1843	59	59⅜	59 1/16	129.7	100.34	1 : 15.93
1844	59½	59⅜	59⅜	130.4	100.88	1 : 15.85
1845	58⅞	59⅜	59½	129.8	100.46	1 : 15.92
1846	59	60	59 7/16	130.0	100.56	1 : 15.90
1847	58⅞	60⅜	59 5/16	130.8	101.20	1 : 15.80
1848	58⅝	60	59⅛	130.4	100.88	1 : 15.85
1849	59	60	59⅜	130.9	101.30	1 : 15.78
1850	59⅛	61⅛	60 1/16	131.6	101.83	1 : 15.70
1851	60	61⅛	61	133.1	103.42	1 : 15.46
1852	59 7/16	60 7/16	60⅛	132.6	102.57	1 : 15.59
1853	60⅛	62	61⅛	134.1	104.26	1 : 15.33
1854	61⅛	61 7/16	61⅛	134.8	104.26	1 : 15.33
1855	61	61⅛	61 3/16	134.4	103.95	1 : 15.38
1856	60⅛	62⅛	61 3/16	134.4	103.95	1 : 15.38
1857	61	62⅛	61⅛	135.3	104.69	1 : 15.27
1858	60⅜	61 7/16	61 3/16	134.4	103.95	1 : 15.38

*Estimated by Dr. A. Soetbeers, in his Edelmetall-Produktur, Gotha, 1879.

Mr. Speaker, about the year 1876 a most remarkable revolution took place in the financial world; it was the sudden fall in the market value of silver. Many reasons have been assigned for it. Some attribute it to a world-wide desire for a gold standard of value; that prior to 1876 that desire could not be gratified because of the world's limited supply of gold. But that between the years 1850 and 1875 there was added to the supply of gold about $3,000,000,000. Silver was crowded out in Europe.

The vast supply of silver from the rich mines of Nevada, the demonetization of silver in Germany and the Scandinavian states, the suspension of its coinage by the Latin Union, comprising France, Belgium, Switzerland, Italy, and Greece, and the greatly diminished demand for silver in the East, especially in India, all aided in the movement against silver and made its dethronement complete. A vast quantity of silver was by this movement thrown upon the market when it was no longer desired for coinage. All the great commercial states of Europe had it for sale, and none wanted to buy.

From these potent influences at work all over the civilized world it will be manifest that the demonetization of $8,000,000 in 1873 was a very insignificant factor in the problem. It is not to the purpose to say these nations entered into a conspiracy to commit a great crime against silver; that most of these are despotic in their forms of government, and that we ought not to go to Germany or Bismarck for lessons in finance. This is all nice talk, but we can not help ourselves. We are one of the members in the great family of commercial nations. We can not isolate ourselves from the other nations; we can not ignore our national environments; and true statesmanship is the effort to bring a nation into harmony with its environments. We must have trade, commerce, and intercourse with other states. We must, to some extent, conform our financial laws to meet the changes which events have so recently cast upon us. When they with almost one voice decide against a double standard of value we will find it hard to maintain such a double standard single-handed and alone. They have decided to have no silver in their standard of value; we can not afford to say we will have it in ours. Such an attempt must result in our gold going to them and their silver coming to us.

In my judgment there is but one way to keep the two metals afloat on the same footing of debt-paying qualities; and that is by an agreement with the leading commercial nations of the world upon a given ratio at which the two metals shall be coined. But our coinage of standard silver dollars will not aid in bringing to pass such a desirable consummation. Shall we go on in our folly or madness till disaster overtakes us? Shall the Government go on purchasing silver bullion at the rate of $24,000,000 a year for the purpose of coining it into dollars which can not be coaxed into circulation, and which no one wants except for small change? Why are our overburdened taxpayers, for whom the gentleman from Texas [Mr. REAGAN] is so solicitous, compelled to pay $24,000,000 annually into the Treasury, to be coined into dollars worth only 79 cents? Simply to supply the silver bullion producer with a market for his production. It is said the Treasury has the silver in its vaults. Silver in the Government vaults is not silver in circulation. It might as well be hid in the earth or hoarded by the miser. But it is said its representative, the silver certificate, is in circulation. Why coin it into dollars? Why not deposit the bullion in the Treasury and issue a bullion certificate, based upon the market value of that metal? Why go to the expense of coining it? While I do not indorse to its full extent this latter plan, it is much better than the present system.

There is another feature of this question which I shall briefly allude to; that is the labor question. It has been said in this debate that the laboring man is benefited by the coinage of a short-weight dollar. Against this I place the statement of every writer on finance or political economy in this country of any note. Sumner, Walker, Perry, Wayland, and Laughlin all concur in the statement that the laboring man suffers more than any other class in the community from the fluctuations of value, or from an unsound currency. He lives, so to speak, from "hand to mouth;" he needs his wages daily or weekly for his support. He can not speculate on the rise and fall of gold or silver, for he has nothing to speculate with. He is always the first to suffer by a fall and the last to be benefited by a rise.

Webster fifty years ago declared that of all the devices the ingenuity of man had invented to cheat the laboring man an irredeemable paper currency had been most successful. Had he lived to see this day when we are forcing into circulation two standards of value, one of which is worth a dollar and the other 79 cents, he would repeat that denunciation.

It seems to me that our silver friends have gone mad. They pursue their suicidal course against the experience of the past and the teaching of the present. The sound policy of a wise and patriotic President is ignored. The recommendations of a most efficient and able Secretary of the Treasury, who has sacrificed his health to his sense of duty, are scorned and treated with contempt.

Had I not, sir, the welfare of my country at heart; had I no concern in the success of my party, I should be pleased to see the gentleman from Missouri [Mr. BLAND] have his way in this contention. For with the unlimited coinage of silver with a full legal-tender capacity the wide breach now existing between these two metals would increase; gold would disappear, silver would become the sole standard of value, inflation of prices would follow, and then a collapse which will cast into the shade every preceding crisis which has cursed our land

---

Rivers and Harbors.

SPEECH

OF

HON. NEWTON C. BLANCHARD,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 15, 1886,

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. BLANCHARD said:

Mr. CHAIRMAN: The gentleman from Iowa [Mr. HEPBURN] and the gentleman from Maine [Mr. REED] in their speeches on this bill have indulged in the usual assertions, periodically heard on this floor, of the failure of the work of improvement on the Mississippi River as inaugurated and prosecuted by the river commission.

Great bodies of representative men of the Valley of the Mississippi in convention assembled last year at the cities of New Orleans, Saint Paul, and Kansas City, known as the western water ways conventions, expressed no doubts of the system of improvement adopted by the convention. On the contrary, they demanded the carrying forward of these works rapidly and vigorously, and called upon Congress to meet the expectations of the country by making large appropriations for the Mississippi and the Missouri.

The river convention, which met at New Orleans on April 7, 1885, composed of delegates from Arkansas, Dakota, Iowa, Indiana, Kentucky, Kansas, Illinois, Louisiana, Mississippi, Minnesota, Pennsylvania, Tennessee, and West Virginia, adopted among its series of resolutions the following:

That this convention reaffirms its confidence in the general plan of the river improvement adopted by Congress in the act of June 8, 1879, and points with satisfaction and approval to the results obtained.

This resolution voices the sentiment generally of the people in the valley—eye-witnesses of the work of improvement and participants in its benefits.

But, as giving a comprehensive idea of the work of the commission, what it has accomplished and what may be looked for, I will cause to be read the very admirable speech delivered by Hon. Robert S. Taylor, of Indiana, a member of the Mississippi River Commission, before the water ways convention held in New Orleans in April of last year.

ADDRESS OF JUDGE TAYLOR.

MR. CHAIRMAN AND GENTLEMEN OF THE CONVENTION: Four years ago I stood before a convention like this, assembled at the heart, as we are at the foot, of the Mississippi Valley, to consider the great subject of the improvement of the Western water ways. Our work then lay all before us; we meet to-day with four years of it behind us. It is the misfortune of a body like the Mississippi River Commission that while its plans and proceedings are freely discussed, as they should be, in the public press and elsewhere, it has itself no means of communication with the people except through its official reports to Congress. And of all means of keeping information from the public I know of none more effective than that. Gentlemen, there is one of our reports, clothed in the regulation black of a Government document. I have no doubt it looks dry at a hundred feet range, and, in fact, it is not a book which you could not lay down without finishing. Four years ago I thought I would contribute to the spread of intelligence by a generous distribution of these documents, and I sent a number around to my friends. Several of those people died within a year.

There is a part of the work which was by law intrusted to the commission, of which little public notice is taken, but of which I wish to speak a moment. It comprises the surveys, observations, and examinations necessary to the complete study of the physical facts pertaining to the life and flow of the river. For five years that work has been in progress, and as part of the results of it I am gratified to exhibit to you the first complete map of the Lower Mississippi, made from actual surveys, which you ever saw. Upon this map, 11 feet long as you see it, is presented, upon a scale of 5 miles to the inch, the entire river from Cairo to the Gulf, with the lands adjacent, and subject to overflow.

The surveys from which this map has been made have been most painstaking and thorough. And in these reports have been preserved the recorded data of those surveys with such minuteness and care that at any time in the future, be it a hundred years hence, an engineer can compare the river of that time with the river here outlined with such exactness as to disclose every rod of its shifting and every foot of its deepening or shoaling. And to this I may add, that in these uninviting reports are preserved all measurements, gaugings, and observations of every kind made by the commission. If that body shall misinterpret the laws of the river and err in its plans, here are the facts by which its blunders will be shown and its errors corrected.

But it is in the practical work of improvement, gentlemen, that you are most directly and deeply interested, and it is to a brief statement of what has been done and is proposed in that work that I invite your attention. The Mississippi River has three great faults: it tears down its own banks; then with the material taken from them it builds great bars across its own path; then having blocked up its channel with them, it overflows its banks and spreads over the adjacent country. It is a self-willed and headstrong stream, and must be managed as a woman manages her husband—never offering to contradict him, and letting him think all the while that he is doing as he pleases.

A reach of bad navigation presents ordinarily an abnormal width, numerous dividing channels and shifting bars. The first step in the improvement of such a reach is to lay out a track for the regulated channel through it—a task requiring the greatest skill and good judgment, as upon its wise execution the success

of all subsequent work may depend. The next step is to induce the river to flow in the path thus prepared for it, which is accomplished by the closure of all other channels, and the narrowing of the space on the bar where necessary, by deposits of earth secured by means of permeable dikes, as open as a fence, through which the water flows freely, but which check its velocity below them sufficiently to cause it to make deposits of sediment. These structures are called "contraction works." They are in progress at Plum Point and Lake Providence reaches, and in those places have been entirely successful in execution and result.

I do not believe that any greater obstacles can be found anywhere in the execution of this kind of work than those which have been met and overcome in Bullerton and Stack Island chutes, and on Baleshed and Elmot bars. In their effects they have answered every expectation of their construction. Three years ago an experienced river pilot said to a member of the commission, speaking of the work laid off at Lake Providence, "You've staked her out right where she ought to run; the thing is to make her go there." Well, "she" is going there now, and with a channel depth at low water double that which she had before. The like is true at Plum Point. The practicability of narrowing the channel by contraction works, and the certainty of increased depth from the scour thereby induced, have been demonstrated by actual success. And it is a success at which I have never ceased to marvel.

The deposits which fill these chutes and build banks on these bars are mere specks of earth. A teaspoon would hold thousands of them. As the water bearing them slackens its speed after passing the permeable dikes, they quietly drop to the bottom like microscopic flakes of snow. And yet, the space which has been filled with solid earth by this process in the reaches under improvement measures thousands of acres in area, and from a few inches to 50 feet and upward in depth, and well on to 300,000,000 cubic yards in contents. The works by which these deposits have been secured have been costly, more so than like works would be now, and yet I think it safe to say that the cost of the earth filling has been little, if any, above a cent a cubic yard.

If the river would stay in the improved channel thus prepared for it, the work of improvement would be completed. But this it will not do until some means are employed to check the violent caving of banks in and about the reaches to be improved. Indeed, it will require but a moment's attention to perceive that the caving of the banks is really the prime cause of all the ills that afflict the river. As it cuts into the earth on one side and deepens the curve of its channel in that bend, it necessarily alters the direction by which its current swings into the bend next below, and so that bend, in its turn, is cut and carved in a new outline to fit the new curve of the channel. By the same process these changes are transmitted to the second bend below, and so on, from bend to bend, as the undulations travel down the back of a snake. And, indeed, you have but to look at the map before you, and mark the crescent-shaped lakes—fragments of old river-bed—that line its course on either side, to see how literally true it is that the Mississippi has writhed like a serpent in its broad, black nest through all the centuries that have measured its life.

As the river washes away its bank on one side it commonly adds to the opposite shore by deposit; so that one bank advances as the other recedes. But where the caving is violent it is impossible for the river to build the convex side up to full bank height as rapidly as it cuts away the concave side; so that the net result of the process is an increase of width. And finally the coarser parts of the earth taken from the caving bank are carried only a short distance, and go to build up the bars below, and as the caving is more active their growth more rapid.

So that we have three distinct consequences—instability of channel location, increase of channel width, and an acceleration, at least, of bar formation, each directly traceable to the caving of the banks. But these are the very things that impair the channel. If we could be rid of them our task would be done. It is necessary, therefore, to employ some means to fix and hold the banks—not everywhere, but wherever the location and rapidity of the caving are such as to endanger the other works of improvement about or below them. The devices used for this purpose—mainly brush mattresses, I can not take time to describe. They constitute a distinct class of work known as "revetment" or "bank protection."

The third kind of work employed is levees. The place which these structures hold in the general work of improvement has been defined repeatedly in the reports of the commission and elsewhere. In brief it is this: The ordinary flood is the period of the river's greatest energy; confined within the banks of uniform grade that energy is made useful in scouring and deepening the channel; allowed to escape through varying and uneven depressions, not only is its energy lost, but there is caused an irregularity of flow in the channel which tends to produce increased deposit of sediment.

These are the measures of improvement which have been recommended and inaugurated by the commission. Opinions differ as to their relative value, but in my humble judgment each of the three has its own specific usefulness—the levees for general conservation, the contraction works for local concentration, and the revetment to secure the permanence and augment the results of the other two. As means to the grand end, these three are as inseparable as liberty and the Union. They are the orthodox trinity; the true Godhead of Mississippi River improvement; and no complete salvation is possible by any plan which leaves out any one of the three.

It is the presence of sediment that makes all the trouble in the Mississippi. It is the original sin of the river, the vice of its constitution. The laws which governs its suspension, transportation and deposit have been the subject of much study. Within a limited degree they may be ascertained by ordinary observation, but in their ultimate and exact nature and operation they have so far eluded investigation. It is obvious that at some places the water takes up large quantities of sediment which it throws down at others, and that these alternations are accompanied by changes of velocity. In this way it forms the pools and bars which are the most important characteristics of the river.

These pools are narrow, deep, and curved. The outer and concave bank is high and perpendicular; the inner and convex bank low and sloping. The bar is a hill of sand lying like a dam across the channel. Its crest may be fifty or a hundred feet above the bottom of the pool, and two or three times the breadth of the pool between banks. As the high-water current emerges from the bend above and swings into one of these pools it comes with a momentum and power beyond description. It hugs the concave bank as though it would fly away at a tangent. It seethes and boils like a cauldron. To the sediment which it brings from above it adds that ground from the bottom and sides of the channel and the masses of the undermined banks, all which it stirs and mixes and churns together, until the whole body of it is so dense and thick that you can not see into it an inch. Then, with all its vast load gathered up, every drop carrying its share, its sweeps out of the narrow pool and up the slanting bar with velocity and power undiminished until at the crest of the hill, where the banks broaden away, it finds room, and to spare, and pauses, as if for breath. In an instant its fingers relax, and the heavy grains of sand which it could grasp and carry only in the fury of its charge through the narrow defile, rain down on the bar.

A very intelligent gentleman once said to me: "You don't say that the water in the bottom of the pool runs up hill to get over the bar?" "Certainly." "Nonsense," said he; "the water in the pool below the level of the bars lies there dead, while the top flows over it. Any one can see that." And he manifestly thought he could see it. But if that were so how would you account for the existence of the pool at all? What dug it out? Here was last year a cotton field 40 feet above the water where is now a pool 40 feet deep at the same stage. Did the earth leave its bed and climb over the bar of its own volition?

The obvious truth is that the river at its flood goes through its pools with a burst of energy that nothing could withstand. The quantity of sediment which it will sweep out of its path at such a place depends entirely on what is put in. It is a mere question of supply.

It is impossible to say how much sediment the Mississippi River can carry. Actual measurements have shown as little as 1 part to 3,453 parts of water, and as much as 1 part to 610, at the same point in the river at different times. And the heavier of these is nothing to some mixtures that I have noticed, and which you may have noticed if you have seen a hydraulic grader at work. This machine is a huge force-pump mounted on a boat, and is used to grade caving banks to a flat slope before putting on the upper revetment. As the foreman of the hose gang turns the nozzle on a mass of earth before him and cuts it through and through with the piercing stream, it yields, crumbles, dissolves, and at last flows down the bank to the river. It is thick as mush; yet it flows. It is just such a mixture as that in the river, except that it contains more sediment and less water to the cubic inch. It wants only the further dilution which it soon receives to take its place in the grand sweep seaward of the main river, as orthodox Mississippi water—that is to say, water which is totally depraved by nature. And I give it to you as my opinion that the engineer who thinks he hears the voice of the Mississippi singing, in the words of the good old hymn—

"Feed me till I want no more,"

and undertakes, accordingly, to stuff it sick with sediment, will find that he has a larger job on hand than "mortal e'er essayed before."

I am led to these observations, gentlemen, by the fact that there is a theory of Mississippi River improvement extant to which they have legitimate reference, as you will see directly. It is obvious that in a general way the power of water to transport sediment depends on the velocity of its movement. On this manifest truth has been predicated a doctrine to the effect that every stream flowing through an erosible bed has a tendency to take up sediment to the extent of its carrying power, as limited by its velocity; and that having taken up that quantity, it will carry it without increase or diminution as long as its velocity remains unchanged.

That is to say, clear water in motion has a kind of hunger for sediment, which it seeks to appease by gnawing its banks until it absorbs a normal stomachful, when its craving ceases, and it flows on contentedly. And it has been suggested, as an application of this theory, that if the width of the Mississippi River were properly regulated there would result a uniform velocity in its current; and from that uniform velocity would result a uniform diffusion of sediment, equal in quantity to the carrying power of the stream; and that in that condition the river would cease to erode its banks, because the water flowing past them would have in it already all the sediment it could carry. Thus works for bank protection would become unnecessary.

Now, this is a lovely theory, but I am afraid it is a little too fine-spun to be of any practical value. It would be expected, I suppose, in the application of it, to load the river up at Cairo with all the sediment it could carry, and keep it loaded from there to the Gulf; and that, being thus loaded to its maximum, it would flow around its concave bends without taking up any more sediment, as a man, already full to the maximum of his perpendicular, flows past a saloon door without stopping for another drink. But while it is true, as I have said, that the power of the river to carry sediment depends, in a general sense, on its velocity, it is also true that other elements enter into the problem, so complicated and various that they have so far eluded analysis.

The most careful observations and measurements which it has been possible to make have not only shown no constant relation between velocity and sediment, but have shown the most violent contradictions in that relation. Some of the most heavily loaded samples ever taken from the river when flowing at a low velocity; some of the lightest at a high velocity. From a table containing the mere sediment weight and velocity of all the observations ever made, a man with his eyes shut to all other facts would fail to find any law at all.

Nor have there been observed any actual differences in rapidities of caving at different times or places corresponding with differences in the quantity of sediment carried by the water. I never saw a caving bend where the river seemed to suffer the least embarrassment in its work from excess of sediment. But, of course, what I or any one else could see at such place would signify little, and it is more to the point to state, as I can, some observed facts which have a material bearing on the subject.

When the clear water of the Ohio and the muddy water of the Mississippi meet at Cairo, they do not mingle at once, but flow side by side for many miles, as though it required a little preliminary acquaintance and courtship to bring about a matrimonial blending of their lives and fortunes. The contrast between the east and west sides of the river is manifest to the eye for 20 miles below Cairo, and may be detected with a sediment trap at five times that distance. Now, if there is any practical significance in the doctrine of sediment hunger as characteristic of clear water in motion, it would seem that the Ohio, having come all the way from Pittsburgh without a single square meal would be ready by the time it reached Cairo, to eat the end right off the State of Kentucky.

But, gentlemen, actual measurements have shown that for 200 miles below Cairo the aggregate annual caving is greater on the west side of the river than on the east. For the first 50 miles the mean annual caving on the left is 3,600,000 square feet, and on the right 6,000,000; for 75 miles it is 5,000,000 on the east and 8,000,000 on the west; and for 200 miles it is 28,000,000 on the east and 35,000,000 on the west. It may be said truly that the river touches hard bluffs occasionally on the east and none on the west within these distances, and that fact will go some way to explain the greater caving on the west. But after making all due allowance for that circumstance, the fact remains that the clean water of the Ohio does not devour the bank which it washes any more, but rather less rapidly than the dirty water of the Mississippi eats up the bank on its side.

I do not argue from this that water carrying sediment will erode a bank more rapidly than if it was clear, although it is not certain that it will not, but it is an observation more nearly in the nature of an actual experiment than any other that I know of, and it fails, signally, to exhibit practical confirmation of the theory referred to. The fact is, that the Mississippi River, in handling its sediment, proceeds on uniform, well-defined, and established methods. It has been in the transportation business a good while, and has practiced for centuries some tricks of the trade which the railroads have just begun to learn. It classifies its freight with the nicest discrimination. It ships its fine sediment on a through bill, and its coarse sand by the local, just as the railroad companies ticket their fine-haired passengers—like yourselves, by the limited express, and ordinary humanity by the accommodation.

The finest sediment is never dropped until it reaches the foot of the river; the coarser is picked up and laid down a hundred times on the way. At flood stage the river scours the deep pool clean and piles the sand taken out of it on the bar below; at the succeeding low stage the quickened current over the top of the bar washes it into the pool below; the next flood piles it on the bar below; and so the sand goes down to the sea, like a tramp traveling by rail—put off the train every 10 miles, only to wait for the next one.

These habits of the river are part of its very life. To break them up you must make the river over again. You must bring it into such complete subjection that it shall neglect the laws of its original creation to observe the laws of your prescribing. And that you can not do. You may improve it to the highest point, but it will be a river still—not a canal; and no plan of improvement which fails to recognize this great fact is either wise or practicable.

It is of the essence of the plan proposed by the commission to attempt no violent conflict with the river, but to accomplish the improvement sought by means which will modify only slightly its natural course. To add a few feet to the existing bank by levees is no great change of condition—scarcely more than to

bring the lower and uneven parts to the grade of the highest parts. To contract the channel on a bad bar to a width no less than that found on bars above and below, where the navigation is good, is no violent change. And to revet a bend, so that the river shall flow around it without caving it away is but asking the river to do what it already does of its own volition in many bends above and below. The hope of improvement rests on the expectation that upon the modification of the conditions surrounding the river in its bad reaches, in imitation of those existing by nature in the good reaches, the river will alter its behavior accordingly, and afford as good navigation in the places where it is now obstructed as it affords now in its best reaches. In short, it is an attempt to reform the river by its own good example—an appeal from Cæsar drunk to Cæsar sober.

I have already consumed your time beyond all reasonable limits, but there is one other topic of such great concern to this city and the people of the lower river in particular that I must allude to it for a moment. I refer to the situation at the head of the Atchafalaya River. It may be said, in general terms, that the problem there presented is one of the greatest difficulty. It has been under consideration by the commission ever since its organization. We have visited the ground in person twice a year; have had repeated surveys made; and last fall examined by daylight the whole course of the Atchafalaya, from head to foot. We have considered carefully all possible plans for the solution of the difficulties presented, and have recommended to Congress the one which we believe to be the best.

The plan thus recommended contemplates the prevention of the further enlargement of the Atchafalaya, but not its entire closure; and for that it has been unfavorably criticised in this city. It is not surprising that you should regard with keen apprehension the bare possibility even of such changes at the head of the Atchafalaya as would divert the main volume of the Mississippi into that stream. And I suppose it is largely because the complete closure of the Atchafalaya would be, apparently, the surest guarantee against such a catastrophe, that that plan has found a good deal of favor in this city.

But, gentlemen, the Mississippi River Commission dare not shut up the Atchafalaya. I will try to tell you why as clearly as I can in a few words. Much more is known now than was known five years ago of the volume and course of Mississippi floods. Those of three years last past were the greatest on record in three consecutive years, and they were measured and studied more thoroughly than any that preceded them. I think we know with approximate exactness how much water came down the valley in each, and where it went. During the flood of 1882 the maximum discharge past the mouth of Red River was 2,200,000 cubic feet per second. Of this 1,100,000 cubic feet per second, or just one-half, flowed down the channel past New Orleans. The other half flowed down the Atchafalaya River and over the banks and through the breaks at the upper end of the Atchafalaya basin, and down through it to the Gulf. So that the complete closure of the Atchafalaya means, in a flood like that of 1882, doubling the discharge of the main river from Baton Rouge down.

A discharge of 1,100,000 feet gave you a stage of 15 feet at this city, which was more than your levees could stand with safety. What stage would you have if that discharge were multiplied by 2? If you ask me, I say frankly that I do not know. We know what the river did as its discharge increased from 200,000 at low water to 1,100,000 at extreme flood—just how much it rose for each additional 100,000 cubic feet. Its behavior in this respect was somewhat irregular, as is always the case; nevertheless an average of all observations taken discloses the law of its rise with approximate truthfulness. And if the law thus indicated should hold to a discharge of 2,200,000, you would have a flood surface 14 feet above that of 1882, and by the time you had built levees high enough to contain it you would have the Mississippi coming into New Orleans like an elevated railroad.

Do not understand me to say that it would reach that height. I can not think that it would. But at what point short of that it would stop, I do not know. It may be ascertained by an easy calculation where it ought to stop, if it had a proper respect for the recognized principles of hydraulics; but where it would stop no man knows. It is a subject upon which opinions may be formed, and upon which the opinions of some men may be valuable; but the man who tells you that he knows how high the river would rise at New Orleans with its present discharge doubled, is either deceiving himself or deceiving you. And in view of these facts—some of them disclosed, and all of them emphasized by recent observations and studies, and considering the enormous risk necessarily involved in an attempt to force the whole discharge of the valley down the main river, the commission can not recommend that plan.

At the same time it is but prudent that such steps should be taken as will prevent the possibility of a diversion of the Mississippi from its proper channel into the Atchafalaya. There is no immediate danger of such an event. The present tendency is toward the closure, rather than the enlargement, of the bed of Old River, which connects the Mississippi and the Atchafalaya. But if the levees on the Tensas front were closed, and all overflow excluded from that basin, so that the water which now finds its way to the Atchafalaya through the Bayous Tensas and Macon, and overland, were supplied via Old River, there would be real danger of disastrous changes at that place. And the consequences of such changes might be so serious that the utmost precautions ought to be taken against the mere possibility of them.

For this the first step recommended is the construction of such works in the head of the Atchafalaya as shall prevent its further enlargement; the second the preparation of the channel of the Mississippi below Red River, by bringing its levees to a suitable grade, for the conveyance of the volume which now escapes over the banks and through the crevasses at the head of the Atchafalaya basin; and finally the repair of the levees across the head of the basin, so as to exclude all water except that which enters the channel of the Atchafalaya at its head.

I beg leave, in conclusion, to add a word upon another subject—one a little foreign, perhaps, to the business of this convention, but which is eminently appropriate to this place and this audience, and of which I may never have another opportunity to speak to you. Some studies which I have been pursuing lately have brought to my attention impressively the infinite waste of the useful forces of nature which is going on in the valley of the Mississippi. You have here a river great enough, if its energies were economically expended, to carry the commerce of the continent to the sea, and the commerce of the sea to the heart of the continent. And yet we see it constantly wasting its powers in tearing down its own banks, piling obstructions in its own path, and wandering about its own valley, until after a great flood it comes back to its bed, like a strong man after a debauch, with scarcely strength to crawl over its own bars. You have millions of acres of land upon every one of which is accumulated the distilled richness of a score of acres lying far above, and on which fall copious rains and showers of sunshine with chemic power to transmute their mold to sugar and cotton, but which lie in wild and riotous waste.

The traveler who looks for the first time at your crowded wharves is amazed at the acres of bales and barrels that cover them; but that which he sees is only a sample of what you might do. You raise 250,000,000 pounds of sugar; you could raise 2,000,000,000 pounds. You raise from half to three-quarters of a million bales of cotton; you could raise four or five million bales. You raise forty or fifty million pounds of rice; you could raise a billion pounds. To make all these results as practicable and sure as the corn crop of Illinois there is one, and but one, prerequisite—the Mississippi River must be kept within its channel.

I know the heroic struggle which you have maintained against its floods for half a century, and I know that it is too great for your unaided resources. It is not—it ought not to be considered—your affair alone. It concerns the whole nation that its aggregate productions, fitly exemplified in the unrivaled exposition in the midst of which we sit, shall embrace the widest range possible of things useful to supply the wants of its citizens. And I believe it to be no less the interest than the duty of the United States to make common cause with you in the great work of reclaiming the alluvial valley.

But, gentlemen, it rests with you who live in it to inaugurate the measures that shall inaugurate the work. You must devise, propose, and justify the plan. No one else will do it for you. You must put into the hands and before the eyes of the American people the facts—of which they are, in the main, ignorant today—of the nature, extent, feasibility, and value of the work. You must by patient, persistent, wise, and united effort—let me emphasize that word—*united* effort, appeal to the intelligence, the patriotism, the justice of the whole people. Your appeal may go unheeded for a day, but I firmly believe that it wants but the time and the means to inform the public truly and fully of the necessity, the utility, the economy, and the national profit of the work to bring to its co-operative aid the strong arm of the Government of the United States. You have held the river at bay through many a hard fight, unaided and alone; re-enforced by the whole contingent of the Union, fifty million strong, your victory will be easy and complete; the Mississippi will submit to its rightful sovereign, man; and the land of the valley of waste will be transformed into the garden of the Republic.

Flint, Oconee, and Ocmulgee Rivers.

SPEECH

OF

HON. CHARLES F. CRISP.

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 15, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. CRISP said:

Mr. CHAIRMAN: I desire to say a few words on the amendments I have proposed to this bill. I shall ask the indulgence of the committee but a short time, and I would not say anything but that I am fully impressed with the importance, the national importance, of the enterprises that I seek to aid, and I think I can convince this committee, if it will only listen to me, of that fact. I do not wish, sir, to be understood as reflecting upon or criticising the action of the Committee on Rivers and Harbors. On the contrary, I feel indebted to them for the increase they have recommended in the appropriations for the rivers to which I specially refer, the Flint, the Ocmulgee, and the Oconee. The recommendations of the committee as to the two latter rivers are much more than double what they have been in the recent past; but still, sir, in my opinion the proposed appropriations are not large enough. Let me call attention to each of these rivers in its turn, the character of country through which they pass, and the necessity for a speedy and complete opening of all of them in order that the vast amount of supplies of all kinds that are now locked up for want of transportation may be opened to the commerce of the world. The Flint River rises in western Georgia, near the city of Atlanta. It flows past Montezuma, Drayton, Albany, Newton, and other smaller places to Chattahoochee, Fla., where it unites with the Chattahoochee to form the Apalachicola River.

This portion of Georgia, Mr. Chairman, is not excelled in fertility or in the industry and intelligence of its people in any part of that great State, and the opening of this river to commerce would not only be an inestimable blessing to the people of the counties through which it passes, but it would open to the world, at much cheaper rates, the large amount of cotton and other products which now for want of cheap transportation find no profitable market. I am specially interested in it because I immediately represent the people living upon that portion of this river between Albany and Montezuma. The present project is to give them high-water navigation. The distance between these two points is about 100 miles.

Montezuma, in the county of Macon, is situated on a railroad, and is the head of navigation now. It is a thriving, prosperous little city; its inhabitants are among the most substantial, intelligent, and enterprising of our State. With river competition, with the lower rates of freight that would follow the establishment of a regular line of boats on the river, industries that now languish would flourish, and general prosperity would follow. There is now upon the river a boat built by the enterprising citizens of this little city, and the freight carried by it indicates clearly the great advantage that would result from placing the river in a condition for navigation at all seasons of the year and giving an outlet to the sea.

This river flows between the counties of Dooly and Sumter, both large and fertile. The finest cotton-producing lands in the State are to be found here, and in Lee County, just below. Lee County and Sumter County are pierced by railroads, and thus have some mode of transportation to the markets of the world. The county of Dooly, containing an enterprising, industrious, and intelligent people, embracing some of the best cotton-producing lands in the State or in the South, is absolutely without transportation facilities. All the productions of this fertile county must be hauled weary miles to reach a market, and

then must pay such rates of freight as monopolies charge, thus increasing the cost to the producer to such an extent that production has ceased to be profitable. The opening of this river would afford to this people an easy and cheap mode of transportation, and thus increase not only the value of what they produce, but also the value of all property they now own. This is true of Sumter; it is true of Lee; it is true of all the counties along the line of the river.

There has been expended upon this river since 1873 $84,373.76, and this has resulted in obtaining a completed high-water channel from its mouth up to Albany; a completed low-water channel of the projected width and depth from its mouth up to Ferguson's shoals, a distance of 88 miles, and a partially completed high-water channel over that portion of the river between Albany and Montezuma. The estimated amount required for the completion of the improvement is $110,000, and the amount asked for this year by the engineer in charge is $20,000. The committee has recommended that sum; but, Mr. Chairman, last year the engineer estimated that $75,000 could be profitably expended. If that was true, and no one disputes it, why is so little required this year? The unexpended balance of last year's appropriation is only $12,626.24; added to the $20,000 proposed to be appropriated, it makes only $32,626.24. I ask, therefore, that the appropriation be increased from $20,000 to $40,000, so that we may have $52,626.24 this year, and thus enable us to have a more speedy opening of the river.

In November last, Mr. Chairman, I had the pleasure of attending at the city of Darien, in the State of Georgia, a convention of the counties interested in the improvement of the Oconee, the Ocmulgee, and the Altamaha Rivers in that State. That convention was largely attended, and the delegates would compare most favorably with any body of men I ever saw assembled. They were in earnest; they felt the need of national aid in developing their great water ways, and they left their homes and went many miles, some of them, for the purpose of having united action that might aid in the accomplishment of their object. A committee appointed by that convention prepared a memorial for submission to this body. I had the honor of presenting it here some months since. I have furnished each member of the committee with a copy, and also some other members of the House. But, sir, perhaps all have not seen it, and so clearly and succinctly does it set forth the importance of and necessity for the improvement of these great rivers that I here and now present it in full. It is as follows:

The undersigned, a memorial committee appointed by a convention assembled at Darien, Ga., on November 4, 1885, for and in behalf of the citizens of twenty-one counties in the State of Georgia, bordering on the Altamaha River and its confluents and tributaries, and the port of Darien, respectfully represent:

That the people in the counties of Appling, Baldwin, Bibb, Coffee, Dodge, Emanuel, Glynn, Houston, Irwin, Johnson, Laurens, Liberty, McIntosh (including the city of Darien), Montgomery, Pulaski, Tattnall, Telfair, Twiggs, Wayne, Wilcox, and Wilkinson, are greatly interested in the improvement of the Altamaha and its tributaries, and anxiously look to the General Government for just and equitable appropriations for its speedy accomplishment.

The Great Altamaha, with its confluents, the Ocmulgee and the Oconee, and its tributary, the Ohoopee, is the largest and most important water highway in the State of Georgia. The Ocmulgee and the Oconee, rising at the foot of the Blue Ridge Mountains, flow for several hundred miles through the heart of the State, and by their confluence form the Altamaha, which, enforced by its tributary, the Ohoopee, continues its course for 200 miles until it debouches into the Atlantic 12 miles below the city of Darien. At a good stage of water the Ocmulgee is navigable for 250 miles, from the junction to the city of Macon; the Oconee for 225 miles, from the same point to the city of Milledgeville, and the Atamaha for 200 miles, from the junction to the ocean—making altogether 675 miles of water way through the great cotton, timber, and rice belt of the State The Altamaha, at a good stage of water, averages 500 feet in width, with a mean depth of 8 feet. This average is reduced at a low stage of water to 300 feet in width and 4 feet in depth.

Your memorialists would further state that the commerce of Darien is of such magnitude as to make it a port of national importance. The quantity of lumber shipped to various ports in Europe, South America, and the West Indies, as well as our own ports, will not fall short of 100,000,000 feet annually. Of rice, 200,000 bushels are annually shipped, besides considerable quantities of wool, naval stores, cotton, and other farm products. The tonnage, foreign and domestic, employed in this carrying trade, will average annually 100,000 tons.

From the Oconee and Ocmulgee at Lumber City, where the East Tennessee, Virginia and Georgia Railroad crosses the latter river, the shipment of cotton, naval stores, and wool amounted last year to 20,000 tons, besides large amounts shipped from Hawkinsville on the Ocmulgee and Dublin on the Oconee. At Doctortown also, where the Savannah, Florida and Western Railroad crosses the Altamaha, heavy shipments of naval stores, cotton, and farm products are made, which are brought down the river by steamboats. For this carrying trade nine river steamboats are employed.

The manufacture of naval stores from the smaller timber is an important business, which is fast growing to immense proportions. At the beginning of the year fifty-eight turpentine distilleries were located upon the Altamaha and its tributaries. All the productions of these distilleries, as well as the supplies required in return, must be shipped by the river.

The climate of the valley of the Altamaha is salubrious, the soil fertile, and the farm products are varied and abundant. Cotton, corn, rice, root crops, small grain, and orchard fruits grow here in perfection. The great want is better transportation.

Carefully prepared estimates show that on the Altamaha $75,000,000 worth of naval stores and timber are in easy reach of the river. To this may be added $60,000,000 for the Ocmulgee and $50,000,000 for the Oconee, besides a large amount for the Ohoopee. On this latter stream one of the finest water-powers in the country is located.

Without the aid of the General Government in removing these obstructions and otherwise improving this water way these great resources can not be developed.

Wherefore your memorialists pray that surveys of the Altamaha and its tributaries, the Ocmulgee, the Oconee, and the Ohoopee, and the outlet to the sea may be ordered, and such appropriations granted as will, when judiciously expended, render this great water way navigable at all seasons of the year.

Your memorialists ask this in behalf of a territory comprising 13,000 square miles occupied by 200,000 people who are, in a great measure, dependent for transportation upon the great Altamaha.

They ask it in behalf of a great natural highway and an important seaport which have hitherto received but little aid from the General Government.

And your memorialists will ever pray, &c.

S. D. BRADWELL,
And others,
Of Liberty County.

This leaves very little to be said, and I shall occupy but a short time longer. So important are these rivers to the people of Georgia that during the first half of this century the State appropriated $60,000 for the improvement of the Ocmulgee and $35,000 for the improvement of the Oconee. The Ocmulgee flows past Macon, Hawkinsville, and other smaller places, and unites with the Oconee River a few miles below Lumber City to form the Altamaha. The Oconee flows past Milledgeville, the old capital of the State, Dublin, the county seat of Laurens County, and other smaller places, and unites with the Ocmulgee as I have said.

You will see in the memorial I have read the counties through which these rivers flow. With many of them I am well acquainted. Nine of them I have the honor to represent. Most of them are in the heart of the great timber region of Georgia. The finest pine in the world is here. The lands when cleared produce abundant crops. The people are well informed, industrious, and thrifty, and need only some mode of cheap transportation to be among the most prosperous in the State. If these rivers are opened, as they should be, they will have it. The project for the improvement of the Ocmulgee contemplates the removal of obstructions from the channel and cutting through rock shoals, so as to obtain a navigable channel 60 feet wide and 4 feet deep at low water from Macon to the Oconee. Assistant Engineer Locke says:

The work done up to the present time under the adopted plan of improvement has resulted in securing navigation of the river at a stage from 2 to 3 feet lower than was practicable before the commencement of the improvement, enabling boats to run during seasons in which they were formerly tied up.

During the past fiscal year the snag-boat belonging to this improvement was thoroughly repaired, but was kept at work until the 15th of June on the Oconee River in connection with the snag-boat for that river. The appropriation for each of these rivers being so small, it was thought best to concentrate the working plant of both rivers upon each in succession in order to reduce the cost of engineering, superintendence, and contingencies. On June 15 operations were commenced at Big Eddy, near Jacksonville, securing at that point a channel 80 feet wide by 10 feet deep at low water, where formerly existed one of the most troublesome places to navigation on this portion of the river. The Oconee boat will be sent to join the Ocmulgee boat in the latter part of July, so that the two may be worked together during the low-water season on the Ocmulgee River, as was done last season on the Oconee.

The balance of appropriation remaining on hand, together with appropriation asked for, can be profitably expended in continuing the work of improving the river channel.

The amount required to complete the improvement is $30,000; the amount that can be profitably expended this year is $15,000. In the last bill the House appropriated $3,000 only for this river; this year the committee recommend $7,500, more than twice as much as before. I thank them for this; I am glad to have been able to induce them to give me this increase, but, Mr. Chairman, I shall ask this House to increase it still further and give this river the full amount of the estimate, $15,000. I think it only right that this should be done. I give the commercial statistics of the river for the past fiscal year:

The following-named steamboats have been employed in the navigation of this river during the past fiscal year:

	Tons.
Ida	296
Colville	83
Mary Jeter	60
Wadley	190
Mary Cooper	150
North State	180
Cumberland	275

These boats have carried about 6,800 barrels turpentine, 28,000 barrels rosin, and about 3,200 tons of cotton, provisions, &c. In addition to this, about 30,000,000 feet of lumber (B. M.) has been rafted down the river.

The plan of improvement of the Oconee River contemplates the removal of obstructions from the channel and blasting through rock reefs where necessary in order to secure a depth of 3 feet at low water from Milledgeville to the Ocmulgee River. The work done up to this time has resulted in enabling steamboats to navigate the river at a stage of water 4 feet lower than that at which navigation was practicable before the improvement was commenced. During the past fiscal year the work done consisted in cutting a channel through the rock reefs at Cheney's Shoal, near the river's mouth, and removing obstructions between that point and a point 15 miles above Dublin. Engineer Locke says:

The limited appropriation available was supplemented by a donation from the Oconee River Steamboat Company of $300, which enabled the work to be recommenced and prosecuted for a short time this summer; otherwise the cost of the very extensive repairs required by the snag-boat would have prevented any work this season. This boat is old and rapidly becoming useless, and unless liberal appropriations are made at once the working plant for this river will have been worn out without peforming adequate service, because of inadequate appropriations heretofore.

The removal of obstructions from McLeod's Cut-down, a distance of 28 miles, has given about 2 feet greater depth of channel where these obstructions existed.

The last river bill carried an appropriation of $3,000 for this river; the present bill appropriates $9,000. I thank the committee for this increase, but ask the House to still further increase it to $15,000. It

will only require $30,000 to complete the work; and if you give us $15,000 now, in two years it can be finished.

I give the commercial statistics of this river for the past fiscal year:

The following steamboats are employed on the river:

	Tons.
Laurens	180
Wadley	190
Ida	250
Mary Cooper	150
North State	180

These boats have carried during the past year about 4,400 barrels turpentine, 17,000 barrels resin, and about 6,000 tons cotton, merchandise, provisions, &c., besides which about 20,000,000 feet of lumber have been rafted down the river.

Now, Mr. Chairman, I think I have said enough to show the importance of these river improvements; enough to show that the general commerce of the country will be largely benefited by their being opened. The large quantities of turpentine and rosin and cotton and lumber that now use them for an outlet to the sea are insignificant compared with the amounts that will be shipped when these rivers are open to safe navigation. I feel a deep personal interest in this subject. My great object as a member of this House is to represent the wants and the wishes of the people whose commission I bear. They are in earnest about this matter, and as their representative I feel it my duty, in season and out of season, to strive for the accomplishment of that which will benefit them so much and at the same time advance the interests of commerce generally.

Mr. Chairman, while on this subject permit me to suggest for the consideration of the House the propriety of changing the method of conducting river improvements. I believe, sir, that persons living along the water courses to be improved, persons familiar with the obstructions, the needs, and the wants of the rivers—persons who know the dangers and difficulties of their navigation—should have charge of their improvement. Now, sir, living along these rivers are men perfectly familiar with all these things, men of character and honesty and capacity, men who have a personal interest in the success of the project, who could be employed for a reasonable sum to take charge of, manage, and control the matter, and, with due respect for those now in charge, I believe such a system would produce better results than the present plan. I hope the committee will look with favor upon this suggestion and give it a trial.

Now, sir, I leave the subject. I know, when so many rivers and harbors are to be improved, we can not appropriate all to each that they require; but I present these as exceptional cases and ask an increase. I am not confident of getting it, still I shall try, and keep trying, while I remain a member of this House, believing that in the end, if not now, success will crown my efforts.

Silver Coinage.

SPEECH

OF

HON. CHARLES N. BRUMM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 7, 1886.

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes—

Mr. BRUMM said:

Mr. SPEAKER: Absolute barter and barbarism are inseparable twins. The birth of one creates the other, and both exist by feeding upon each other. Just in the proportion that you eliminate the one you destroy the other. Take from barbarism that which it feeds upon and it dies. The farther you get away from barter the nearer you approach civilization. Therefore, barter and civilization are as antagonistic as freedom and slavery.

Barter, or the interchange of value for value, is the unfathomable quagmire that has impeded the progress of ages, while purchase, or the interchange of value by a conventional representative of value, is the firm, progressive highway of commerce over which the masses must pass to a higher, a grander, a nobler civilization. Sir, just in proportion as you weigh down a medium of exchange with the value of the article or commodity out of which that medium is made, you impede the progress of exchange and you enter the quagmire of value for value, or barter. Therefore I insist that before you can elevate the masses to that high civilization which is so desirable, you must facilitate the interchange of commodities by a representative or measure of value, and not clog it by barter. That is, money should be a *medium* of exchange, not an *article* of exchange.

But the interested financier or the superficial statesman says: "Oh, this is fiat money;" and then he exposes his ignorance by crying aloud that it is the nonsensical theory of dreamers which never has been and never can be reduced to practice. Yet I challenge you to show me any money that is not fiat money; for if it is not fiat money it is only an evidence of indebtedness and carries the obligation of redemption by its author; while every dollar that is created by the sovereign power of a government, issued or paid out for value, and made a legal tender, not redeemable, but receivable for taxes or other dues to the government that issued it, is a fiat dollar, and that regardless of the nature or value of the commodity out of which it is made. Therefore our gold dollar is a fiat dollar. So is our silver dollar a fiat dollar, for, as money, both have the same attributes and will perform exactly the same functions; and so is our copper cent the one hundredth part of a fiat dollar, because it has, to a limited extent, the same attribute and function as a gold dollar; yet there is no parity of value in the articles out of which they are respectively made. So you see the fiat dollar is, of itself, not such a terrible thing after all.

Therefore if, in this discussion, you will eliminate the value or barter element from the dollar and treat that, separate and distinct, as a commodity, and then treat the money element, separate and distinct, as a medium of exchange, you will simplify this question very much; for the great error of the monometallist is in the confusion of these two elements or attributes of the commodity dollar.

I believe that money should have no commodity or barter value *per se*, but should be purely a representative of all value, based, through the Government right of taxation, on all commodities within its jurisdiction, and limited in volume only by the needs of commerce; and that it should not be confined in volume to any one commodity or to several commodities. Neither should it in the slightest degree be affected by the value of any commodity, and more especially when that commodity, like gold, is so rigid and limited in its supply as to put it absolutely within the power of a few gold bouncers to juggle with its value by manipulating its volume. And as I know that this Government will not, and I frankly confess can not, at once throw off this yoke of barbarism, but must for a while longer foster the dishonest barter dollar and thus keep commerce bouncing around on stilts, I will do all in my power to give her at least two pegs to travel on, and not force her to hop around and try to balance herself on one. [Laughter and applause.] Therefore I am for the present in favor of unlimited coinage of silver and gold. This will double its base and give at least two bearings for the superstructure to rest upon, and make it less susceptible to manipulation than if it were pivoted on a single basis. "But," says the gold bouncer, "you must have a standard of value, and therefore you must limit yourself to one thing, and as gold is the money of the world, that one thing or standard is or must be gold, because," he says, "it is the least variable, and always represents the fixed value of the labor involved in its production."

This, sir, is the premise upon which the whole monometal argument rests; and as this involves five separate, distinct, and palpable errors, all conclusions drawn from them must also be errors. First, it assumes that there is and must be a money of the world; second, that that money is gold; third, that there is and must be a standard of value; fourth, that that standard must have value *per se*, and therefore must be a specific commodity by which the value of all other commodities is gauged and regulated; fifth, that as gold is the least variable and always represents a fixed amount of value or labor in its production, it is and must be our standard. I shall consider these ridiculous fallacies in the order in which they are named.

First, that there is and must be a money of the world. Sir, there is not and never can be a money of the world until you establish a world government to create it. As money is a creature of law it must be the creature of some government that makes the law, and therefore it has powers as money only within the jurisdiction of the government that makes it. Hence money is never used in commerce between nations. You settle your international balances with bullion; you settle them with the commodity value or commodity element of bullion, and not with money; even if coin is used it is not counted, but is put in the scales and weighed and its alloy deducted in calculating its value as bullion.

Second, "the money of the word is gold." Since it is true, as I have shown, that there is no money of the world, this is already answered in the international or world sense; but even if it is contended that in a national sense it is the money of the world, this is also false, for gold of itself is never money, although money is often made of gold; yet there is not one nation in the world that makes all its money out of gold, while every nation makes some, and a majority of nations make all their money out of silver.

Third, that there is and must be a standard of value and that standard must be gold. Sir, no commodity can be a standard of value. All values depend upon usefulness. Therefore, any article or franchise that is just as useful or will perform the same function or answer the same purpose as any other article or franchise will be just as valuable, no matter what material either is made of. Although the cost of a thing generally represents the labor required to produce it, yet the intrinsic value of a thing still depends upon its usefulness, while the price of it depends upon supply and demand and is usually called the market value.

Therefore as the cost, the intrinsic value, and market value of all

commodities depend upon all the local as well as the general conditions, circumstances, and changes incident thereto, there can be no fixed value or standard nor relative value for any commodity in any locality for any length of time; for there is no commodity that maintains the same relative, intrinsic or market value at all times in the same place, nor at the same time in different places, no matter what material it may be made of or what its nature, whether it be diamonds or a right of way, a physician's prescription or a dignity, a druggist's emetic or gold, silver, or paper, iron or a railway pass, a serpent's tooth or a tax receipt, lawyer's advice or copper, cockle-shells or a priest's absolution, fiat paper money or a right of piscary. All, all are as unsettled and shifting as the winds.

If, then, you can not fix the cost, intrinsic value, relative value, or market value of *any* commodity for *any* time in *any* locality, sir, how infinitely do the possibilities multiply when you attempt to create even an approximate standard for *all* commodities at *all* times in *all* localities of this heterogeneous world.

But even if an approximate standard could be established, the most unfit article for that standard, next to diamonds, would be gold, for if there is any one article which more than any other article fails to represent the amount of labor in its production by its value it is gold; because it is an original element that cannot be manufactured, grown, or produced by any combination of elements or manipulation of man. It is a hidden element, most uncertain in quantity, locality, and conditions. It is a very limited element, wherefore its supply can not be accommodated to the demand, thus making its value depend almost entirely on the manipulation of its owners.

It is not an article of prime necessity, nor a substitute therefor, being neither food nor medicine for the mind or body; nor does it clothe, shelter, convey, or preserve man, beast, or any commodity, and outside of the gratification of the savage passion for personal decoration, it adds very little to the comfort of man; and were it not for the great value and power given to it by making money out of it by conventional laws, it would play but a very insignificant part in the affairs of men. Yet you tell us that you can not add value to anything by law, no matter how useful the law may make it, but that all values depend upon the amount of labor it takes to produce them, no matter whether the value be intrinsic, relative, or market. If that be so, then God help the laborer; for I think it is time that he should get at least a visible share of the value of his product. That is, you mean to say, that if you demonetize gold by law all over the world, and thus destroy its usefulness, it would still retain its value because it represents a certain or fixed average amount of labor in its production.

Upon the same principle, I suppose, you would hold that to remonetize silver by law, and thus increase its usefulness, you would not enhance the value of silver, because its value is fixed also by the amount of labor represented in its production.

But, again, how can gold alone represent the cost of its production when it is produced almost always with silver or copper, or with both, or with some still baser metal, in combination with it? By what rule of mathematics do you calculate the mammon value of the shattered limbs and the health and lives lost in its production? And if you had a rule, how would you apply it to each specific case or degree? Where have you the statistics of the number engaged in gold mining, with the hours of labor and the energy expended by the eager searcher for gold? And how will you ascertain the amount expended in the production of gold and how much should be charged to its companions, silver and other metals?

Moreover, gold under the commodity or barter-money system is of all things the most variable and uncertain, because it is not only subject to all the incidents of fluctuation that any other commodity is, but by reason of its limited supply it is absolutely under the control of the gold juggler on the one hand, while on the other hand its monetary uses subject it to all the whims ignorance, avarice, and corruption of every national law-making power in existence. Therefore in proportion as you keep it isolated and allow it to monopolize these attributes you in that proportion intensify and magnify these functions, until by its unlimited power it becomes the hellish dynamite of tyranny and oppression in the hands of the few all over the world. Whereas, if you separate these functions and impart to silver an equal share of this power, you will at one blow strip gold of more than half of its power for evil, and to that extent at least, by easing up the interchange of commodities, steadying values, and liberating commerce, bring relief and blessings to all humanity. [Applause.] For we must not forget that the price or value of a commodity in an untrammeled state of commerce will fluctuate on its own basis—that is to say, will be affected by causes wholly incident to itself and its component parts, modified by effects upon its substitutes—and will not materially affect other commodities. But where all commodities are transferred by a medium of exchange, all such commodities are subject to the additional fluctuations incident to such medium. Therefore, if that medium is gold alone, which is so absolutely within the power of the few, then these few will control all money and thereby control everything that money will buy; that is to say, by cornering this very small basis or commodity medium, aided by the credit based thereon, you simply play foot-ball with all values, and by bouncing them *ad libitum* you at times impart a sudden and often violent impetus to production by enlarging its basis and inflating its credit. So that when the commercial fruit is ripening for the purpose of gathering in the harvest yourself you lower its value and thus lower its consumption, and consequently by impeding the interchange of commodities you find every producer with too much of his own commodity on hand and not enough of anybody else's. Then the subsidized press, the fossil statesman, and the superficial pulpit orator, like Beecher and Cook, will join the money-bouncer, and pointing to the undistributed products will say, "Behold the dire result of overproduction." [Applause.]

Sir, it is for this reason that these bouncers adhere so tenaciously to this false doctrine of standard of value, for they know full well no commodity can be a standard, as a standard means something fixed, stable, and unalterable, as a yard, quart, pound, &c., and that is just what they do not want, for like all speculators and gamblers they live on uncertainties that may be fluctuated, manipulated, and contaminated.

Would to God that under our present system gold was a standard of value. Then, sir, parties to this controversy would be reversed; we would sustain it, while its present advocates would be its worst enemies and would demand its immediate demonetization. Sir, it would then no longer answer their purpose. They want no stability, no standard, no solid, honest basis, for just in proportion as the basis is widened and made firm you prevent manipulation and secure a more equal distribution of the products of labor, while just as you contract the basis to gold alone, it becomes the artful dodger of commerce that enriches the few and impoverishes the masses.

Although no article or commodity can ever be a standard of value, yet there may be an approximate parity or ratio of values maintained between two or more commodities that serve similar purposes or can be substituted for each other; *e. g.*, anthracite and bituminous coal. Increase the demand for anthracite by making it more useful you soon raise its price, and as its price advances bituminous will be substituted; this substitution of bituminous increases its usefulness and raises its value, while it decreases the usefulness of anthracite, and relatively decreases its value until the parity is again reached, and is in this way very approximately maintained. So it is with wheat and rye, gold and silver, oats and corn, the different kinds of meat, the different kinds of wood, &c.

But if Congress had jurisdiction over commodities as she has over money, and would allow an unlimited or free use of one commodity and would restrict the use of any or all substitutes, she would soon destroy the parity or ratio, especially if the favored commodity was very limited in its supply as gold is.

As the paramount object in commodity money is the maintenance of parity of value in the various commodities out of which the coins are made, the present discrepancy in the commodity value of our gold and silver dollar is the strongest argument (from monometallists' standpoint) against the limitation on our silver coinage—for unlimited coinage of silver would increase its value, while it would decrease the value of gold and thus bring both metals to the money or coinage ratio, namely, 16 to 1; because no metal can ever be above the coinage value and stay in circulation.

By the unlimited coinage of silver the bullion becomes more useful, and therefore more valuable, while gold is to that extent displaced, it becomes less useful and therefore less valuable, thus bringing them closer together until their parity is reached by an easy process that will do injustice to none, but will add unbounded blessings to millions. But, says the goldite, this country can not do this alone; we must wait until we get England and Germany to join us. Sir, I deny this, for England never will join us until we force her to, as it is her interest to widen the breach between the commodity values of gold and silver, as I shall show hereafter. Moreover, so long as we follow the British system we will be subject to their financial and commercial control, whereas if we adopt a system of our own we will be masters of the situation.

Therefore let us adopt unlimited coinage of gold and silver. We can hold the balance of power between the conflicting monometallic nations of the world, and maintain the parity of value between the precious metals, for we produce over half of all the precious metals; therefore the civilized world is largely dependent on us not only for the metal supply but for food, cotton, oils, and many other products, while we are absolutely independent of them.

Sir, by a proper protective and monetary system we could be as isolated commercially and financially as we are geographically. If gentlemen would have a clearer appreciation of the greatness of our country a better knowledge of its unbounded resources and infinite possibilities, with a proper realization of the eminently independent position this nation could occupy; if they would only have the courage and self-reliance to stand with us and declare ourselves financially and commercially independent, as our fathers declared themselves politically and socially independent, we could, and ought to have, the commercial world under our control more absolutely than England has ever held it. We could then utilize our powers for the honor and greatness of our Republic and the elevation of all mankind.

But I said I would show that England would never join us until we force her, and why? Because she with Germany are the two great creditor nations of the world, while we are a great debtor nation; hence it

is to their interest to shrink the basis and contract the currency by monometallism, so that we and all other debtors must pay them in a commodity coin upon which there is a premium and thus increase the value or purhcasing power of their assets at least twofold.

But while England seems to have suspended the coinage of silver, she really coins silver every year; in fact the charter of the Bank of England calls for a certain amount of silver reserve in her vaults, yet practically she is a monometallic country, as in England proper, gold is the standard of payment while in the rest of the British Empire silver is standard of payment, *i. e.*, all payments to her must be in the higher-priced metal, gold, while most all payments by her are in the lower-priced metal, or silver.

By the present disparagement in the ratio and market value of gold and silver England robs from the treasury of India £17,000,000 annually on the single item "loss on exchange," and this is only the bonus on the taxes she exacts from her India slaves. Imagine, then, is you can, the unmerciful robbery she commits on the productive industries of India by the London bills drawn on Bombay, Calcutta, and Madras for the difference in the metal value of the India silver rupee and the English gold pound for all of their interexchanged products. By this process she deprives us of the foreign market for our wheat and low grade of cotton. Henry Carey Baird says:

The real and the most immediate "silver danger" is that which impends over the American farmer, and grows out of the competition of the wheat of India, now looming up in the near future. Stop the coinage of the silver dollar, and the price of silver immediately and rapidly falls, and with it the rupee of India in sterling exchange. The normal price of the rupee in sterling is 1*s.* 10½*d.*, or 45 cents; but the average per rupee produced by the government bills drawn in London on India for four months, ending August 15, was but 1*s.* 6½*d.*, or 38 cents, indicating a discount of 15 per cent. This is just 15 per cent. premium on the export of Indian wheat, and precisely this same disadvantage to the American farmer. Let those who consider themselves as not "hopelessly ignorant of ordinary economic laws" drive the price of silver down still further, under the impression that they are damaging no one but "those who are interested in selling silver to the government," and this premium or bounty may be increased to 30 per cent.

That this is not an imaginary danger will be made more manifest when it is stated that while the export of wheat from India in 1877–'78 was but 4,150,000 bushels, in 1884–'85 it was 30,000,000 bushels, or more than one-third of the export from the United States during the same year, the latter being 84,653,714 bushels. Within the last five years 1,000,000 acres have been added to the wheat acreage of India without a particle of interference with the quantities of other crops raised.

Mr. William H. Oliver, of North Carolina, says:

When England buys wheat and cotton from the United States she pays gold or its equivalent for it, when she buys it from India she pays for it in silver. Her preferences are all in favor of India, and although the expenses of transportation are much heavier, yet the difference in paying for it in low-priced silver makes up for it.

The interest of England and the United States is diametrically opposite.

England produces no silver and wants it at ruinously low prices, hence she demonetized.

England on a gold basis wants to buy silver cheap, and with that silver buy wheat and cotton from her own dependencies and thereby cut off the United States from the sales of those articles which her necessities compel her to buy; and strange to say, in this country is found a class of our own people willing to assist England in this movement.

Then I ask again whether it is not high time for us to tear ourselves away from this barbaric English system, if not for the protection of ourselves at least let us no longer be accessories to the hellish crimes of Great Britain against her subjects and slaves. [Applause.]

Sir, with free coinage of both metals, a distinctive American system of finance and protective tariffs, we can tear the commercial jaw of the British lion, and so lubricate the wheels of progress that all the world will share its blessings.

But it is said that free coinage of silver would drive gold out of the country, under the operation of the Gresham law; but this is an error, because the Gresham law is applicable only to those countries where the balance of trade is against them, and where they are not gold-producing countries, as we are; moreover, the following circular from Moore & Schley proves the contrary:

[Moore & Schley (John G. Moore, W. K. Kitchen, Grant B. Schley), bankers and brokers, 26 Broad street, New York; 114 South Third street, Philadelphia; 1419 F street, Washington; Irving A. Evans & Co., Boston, Mass.; E. L. Brewster & Co., Chicago, Ill.; Hubbard & Farmer, Hartford, Conn. Connections by private wire.]

NEW YORK, *February* 17, 1886.

While it is conceded that the controlling factors in the financial and business situation favor a higher range of values on the stock exchange, there is a very general apprehension here at the East that some action by Congress on the silver question may affect the market adversely. It would be well, therefore, to consider this matter from a common-sense point of view, so that dealers in securities may know what to do if Congress should follow one of several possible courses.

The prevalent belief among those who are best posted is that the present Congress will not suspend the coinage of the silver dollar, and that matters will go on for another year as they have for the past eight years; that is, that every month $2,000,000 of silver bullion will be coined into standard dollars. Assuming that this will be the case, what effect will it have upon the market? The advocates of silver coinage claim that we can only judge by the experience of the last eight years, which they say has been favorable not only to the value of securities, but all values, because since that time we have been steadily adding to our stores of gold, without very largely increasing our silver reserve. The fact is emphasized that from 1873 to 1878 inclusive, a period of six years, the exports of gold exceeded the imports by $123,754,210, an average of $20,625,000 a year.

Since the passage of the silver bill in 1878, the imports of gold have exceeded the exports by $200,856,031; this, too, in addition to retaining in the country all the gold we mined. In 1877 we had in the United States less than $200,000,000 of gold. The Financial Chronicle estimates it at $175,000,000, but the Mint authorities say $193,000,000. The Director of the Mint, in his report just issued, estimates the total stock of gold on January 1, 1886, at $626,733,869, showing an addition to our gold reserve of $433,000,000 since the passage of the silver coinage act in 1878. Curiously enough the excess of our exports of silver over imports since 1878 has been about $16,000,000 per annum. According to the Mint authorities, our total stock of silver is $297,904,950, considerably less than half our stock of gold. Every year since the silver coinage act was passed has seen our store of gold increase, relatively to our store of silver. These facts are curiously at variance with the belief so generally entertained that the silver coinage, under what is known as the Gresham law, is driving gold out of the country. Bimetallic France has had similar experience. With 30,000,000 less population than the United States, it has a coinage of nearly 600,000,000 5-franc pieces, the equivalent of our silver dollars, or some $380,000,000 more than our total silver coinage. At the same time France holds more gold than any nation on earth. Its gold reserve is $850,000,000. The Bank of France shows a steady gain in its gold reserve, while that of England and Germany, the gold-mint countries, remains stationary. The Bank of France, at present, holds $30,000,000 more in gold than the banks of England and Germany combined. According to the silver advocates, were we to continue coining silver dollars at the rate of two million per month we would not have as many as France, relatively, until a good way into the twentieth century; and yet the French 5-franc pieces, with 3 per cent. less silver than the American standard dollars, circulates on a par with gold.

But there are other facts which seem to show that silver coinage has not proved detrimental. The following comparison of the condition of the national banks in 1877 and 1885 shows that they, at least, have lost nothing by the silver coinage:

	October 30, 1877.	October 30, 1885.
Capital stock	$479,500,000	$527,500,000
Undivided profits and surplus funds	167,300,000	206,500,000
Specie	22,700,000	174,900,000
Deposits	630,400,000	1,120,100,000

Then the deposits in savings banks in 1885 show that they were $200,000,000 greater than in 1881. The figures for 1877 are not available, or they would show a still larger increase.

The fact that exchange is near the gold exporting point, and that some of the yellow metal has been shipped since January 1, has led to the fear that we will lose a great deal of gold in the near future. But, as the Evening Post and other anti-silver publications have shown, this does not seem at all credible while the balance of trade is in our favor. The exports and imports of the United States, as reported by the Bureau of Statistics, for six successive years are instructive on this point. The values of the merchandise exports and imports for the entire year have been in millions of dollars:

	1880.	1881.	1882.	1883.	1884.	1885.
Exports	889.7	883.5	768.0	795.2	749.4	688.8
Imports	696.8	670.2	752.9	687.1	629.3	587.5
Excess of exports	192.9	163.3	15.1	108.1	120.1	101.3

Then the current stock speculation is attracting European money for investment this side of the water.

True, our exports have fallen off in money value; we are shipping some gold, and may continue for a time to do so, but we have plenty of the yellow metal to spare.

But suppose the extremists should succeed in committing the Government to as free a coinage of silver as of gold, what would happen? The silver men claim that even then there would be no premium on gold until the proportion of the silver to gold would be greater than it now is in France. With 20,000,000 more population we have only $220,000,000 in silver, less than $4 per capita, while France has $600,000,000, or about $14. Our gold reserve is about $11 per capita, while that of France is about $23. At this rate we could coin $1,000,000,000 in silver without excluding gold from circulation. What the silver men themselves claim for free coinage is perhaps best expressed in one of the resolutions passed at the Metropolitan Hotel silver meeting.

"*Resolved*, That in the event of free coinage being enacted the United States need not fear either an export of her gold or a very large increase of her silver; for if other nations send their silver to our mints to be coined in larger quantities than now, they must do so either to distribute it here in payment for merchandise which they have not hitherto been buying, in which case they would increase our exports and quicken and stimulate our production; or they must do so in order to exchange it in this country when coined for gold; but in such case, if gold is at a premium, its holders here will get the premium and the country will lose nothing, and if gold is not at a premium here in silver, then the inducement to send the silver here will have disappeared and it will not come."

While free coinage might be carried in the House of Represenatives, it would hardly go through the Senate, and if it did it would be promptly vetoed by President Cleveland. It is not improbable that Congress will authorize the issue of one and two dollar certificates in place of the greenbacks of similar denominations. This will practically add forty to fifty million more dollars to the hundred and forty million now in circulation. This will end the accumulation of silver, except as against certificates, which would be reassuring to the speculative public. In a general way it may be laid down as an axiom that every addition to the currency of the country enhances values, and that when either gold, silver, or their paper representatives are withdrawn their prices fall off.

It is now to be considered what would occur were the silver coinage to be suspended. The impression is universal at the West and South that there would be an immediate break in prices of all kinds. The price of silver has already fallen from 51*d.* to 46½*d.* per ounce. It would probably take a slump to 35*d.* if this one metal only was affected it would be a comparatively trifling matter; but in the shrinkage of values which has taken place since bimetallism was set aside by the commercial world, silver has proved to be the best measurer of values; that is to say, silver to-day will buy as much of any product of land or labor as it did before it was demonetized in Europe in 1872. The real phenomenon is that the purchasing power of gold has increased from 20 to 30 per cent. Were the American support of the silver market withdrawn the purchasing power of gold would be enormously enhanced, which fact would show itself in an unprecedented crash in prices. This view would not be the correct one, but every operator in the West would sell the market right and left, and there would be plenty here at the East to follow their example. Indeed, the main argument of those who favor the stoppage of the silver coinage is that it will create so much bimetallism. There has been great suffering in England, especially among those who do business with the East Indies, where silver is the

exclusive currency, and its depreciation makes exchange so high as to turn trade profits into losses.

Probably this reasoning of the anti-silver coinage advocates is correct; but as we are having a revival of business and a buoyant feeling, not only on the stock exchange but in all departments of trade, it does not seem probable that an American Congress would care to do evil that possible good may come, and thus voluntarily bring about the same distrustful condition of things which exists in England and Germany, the two leading gold-unit countries. Demonstrations by mobs of unemployed workmen, such as have been seen in London and the manufacturing districts in England, are not experiences such as the American public will care to go through.

In the above the silver side of this controversy is presented for the reason that the anti-silver newspapers and financial authorities of the East have had the ear of our public almost exclusively. Those who deal in securities should have all the data for forming correct judgments of their own.

Yours, respectfully,

MOORE & SCHLEY.

But, it is said, we have too much silver already; it will not circulate. Sir, there is no danger of too much silver as long as our per capita is below that of France, as shown by Moore & Schley, for the nearer we get to the French per capita the further we get from our miserable, uncertain, blood-sucking credit system, which is the mother of panics and hard times; and the nearer we get to a cash basis. Of course, as long as our President and Secretary of the Treasury remain the willing tools of the gold bouncers and act as their turn-key in locking up the silver, it can not circulate even as much as the felon in his cell; but, if like honest officials, they would execute the letter and spirit of the law, and issue their call for bonds to the full extent of the surplus hoarded in the Treasury, and pay only half in silver, then pay half the pensions, half the amount due the Government officials and employés and other creditors, in silver, do you suppose any one would refuse it? Oh, no; we would all take it, for we all know that it is, and always has been, a legal tender for all debts, and that a refusal to take it would cancel the debt pending such refusal.

But they say as soon as we pay it out it comes right back again. Well, what of that? Can not you pay it right out again? And thus it will circulate more actively than any other kind of money. But that is just what these bouncers do not want, for by that process the debt will be paid too soon and bank circulation withdrawn, and I hope greenbacks substituted for them. Then when the debt is paid wipe out the cursed internal-revenue system, and by a high protective tariff reduce the receipts to the current expenses of the Government.

But you say free coinage will decrease the purchasing power of a dollar, and therefore will deprive the poor workmen, and the widows and orphans of their savings; but this can only affect those whose assets are in money, while upon all other assets it will have the opposite effect. But even if true, it is no good argument, as the same reasoning would apply to the stockholders of a railroad who might object to the building of a competing line because their stock would depreciate by reason of the division of traffic with the additional road. But why is it the President, the Secretary of the Treasury, and my colleague [Mr. SCOTT] are so very solicitous about the few poor workmen and the widows and orphans who are creditors, and have no care for the millions of poor who are debtors, for if free coinage will injure the creditor then suspension of coinage will injure the debtor, and our debts, national, State, county, municipal, corporate, and private, are in excess of our taxable assets; therefore to demonetize silver or gold would double our debts and decrease the value of all property (except money assets or their equivalents) about one-half.

But, say these gentlemen, the silver dollar is a dishonest dollar; it is only worth 80 cents. I deny this, as you can not get a silver dollar anywhere, even at a discount of 1 per cent. It will buy just as much as a gold dollar and will pay just as much of a debt. But they say silver has fallen in value. This is also false, as silver has not depreciated in value, for it holds its own value with other commodities, all of which are lower, if measured by gold value, and if I had time would more clearly show, but as others have fully established this point it is unnecessary. Hence it is plain that gold has appreciated in value and is therefore the dishonest, robber dollar.

But to me the most sickening feature of this discussion is in the attitude that these bouncers assume toward the workingmen, especially my millionaire colleague, Mr. SCOTT. He takes such a fatherly interest in them that he prays to God in their behalf, and beseeches us not to pay them in the dishonest silver dollar, for he says on page 5 of his printed speech, as follows:

> And, sir, I make bold to state another theory, that if there be in circulation a good dollar and a poor dollar the rich man will always get the good dollar and the poor man the poor dollar. If public policy required that all dollars should be poor in order to rob the creditor class of our people in favor of the debtor, I appeal to this House to in some way protect the man who earns his bread and supports his family by his daily labor, and when he asks for bread not to give him a stone. How this can be done in any better way than by giving the rich and poor alike a good dollar I do not know; but protect, in God's name, the poor man. The rich man can take care of himself. He needs no sympathy, nor is he entitled to any.

Brave words these. But see how he trifles with the subject, for he devotes nearly all of page 10 and part of page 11 to show that there ought to be two kinds of metallic money. The one should be what he calls the world money (or gold) to be used by the rich, for large transactions and for foreign exchange, and the other should be silver for the poor man in smaller transactions, and for purely home use. The world's money or rich man's money should be made of better stuff and have greater value than the poor man's home money, so that the poor man's money would not leave the country, neither should the poor man's money (or silver) be redeemable in the rich man's gold money, yet on page 4 he justifies the United States Treasurer for not paying the bondholder in silver, because the bondholder should be allowed to choose between what he here calls the rich and poor man's money.

Yet he agrees, in another place with the President that if you pay the poor workingman with the silver dollar you cheat him, because it is worth less than the gold dollar.

Sir, if labor was paid in the commodity value of the silver dollar or its representative, then labor would lose; but being paid in its legal or money value it gets just as much as if paid in gold, as both have the same purchasing and paying power. But again, they say if you remonetize silver you depreciate the money value of the silver dollar. This is true; but by it you also depreciate the money value of the gold dollar relatively, and as the workingman as a rule has no considerable number of dollars of any kind on hand he need not be alarmed at their depreciation, especially when the depreciation of the value of the dollar will relatively appreciate, or raise the value of all his other commodities, whether they be labor or any other assets. Hence I say that the fatherly care these gentlemen have for the poor workman is the kind that the wolf gives to the lamb.

But let it be admitted that whether it be suspension or free coinage, wrong must be done either to the creditor or debtor. Then as the debtors are largely in the majority it is better to wrong the minority than the majority, for all producers, property-owners, stockholders, and taxpayers are debtors. Therefore the only ones that are not more or less benefited by the free coinage of the honest silver dollar are those who live on usury, or at least to the extent that their income is interest on money loaned. Therefore I want to legislate in the interest of the honest debtor. I want our debts paid whether they be public, corporation, or individual.

But, sir, it is not only a question as to the number or proportion that are to be injured or benefited by our legislation, but the degree of injury or blessing to those to be affected will always be considered by the honest statesmen. I contend that to impoverish the people is a greater crime than to tax the wealthy. The widow's mite was a greater sacrifice to her than all the contributions of the rich.

It is not so hard to take from the few a small, or even a large portion of their superabundance as it is to rob the poor of any of their necessaries. If wrong must be done, I would rather wrong the strong than the weak. I would rather have less gold for the rich than no bread for the poor. I would rather tax the luxurious surplus of the few than lay tribute on the sweat and blood of the masses. [Applause.]

Silver Coinage.

SPEECH

OF

HON. JAMES M. RIGGS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 20, 1886.

On the bill (H. R. 5690) for the free coinage of silver, and for other purposes.

Mr. RIGGS said:

Mr. SPEAKER: The importance of the question of silver coinage is conceded by all gentlemen here, and the people of the country fully appreciate that importance. For some time it has been the chief subject among them. And when we review the history of the last few years in regard to it all surprise at the interest manifested by the masses ought to disappear.

A few years ago we had as legal-tender money among us gold coins, silver coins (including the silver dollar), and greenbacks. While these were in circulation as legal tender a large amount of indebtedness was contracted. Included in this indebtedness was the large bonded obligation of the United States—some of it payable in any of the legal-tender dollars of the country, and some of it payable in any kind of legal-tender coin dollars.

After these obligations had been issued by the Government and bought by the money lenders and paid for in greenbacks a Republican Congress conceived the notion that the public credit needed strengthening. Just why it needed it at that time may be difficult for an ordinary mortal to understand. The Government had already contracted its public debt. The bonds had been sold, the proceeds received and expended, and we were not wanting to sell any more bonds or borrow any more money. On the contrary, we were getting ready to pay our debt. In private affairs the credit of the individual needs strengthen-

ing, if at all, during the borrowing or debt-contracting period, and not after that has been safely passed and the paying period has been successfully entered upon.

But so impressed was Congress with the notion that the public needed strengthening that it passed laws the real effect of which was to provide that the obligations of the Government which were payable in greenbacks should be payable in legal-tender coin only.

Not satisfied with this success those benefited by it secured, a little later, the demonetization of the silver dollar, which of course had the effect to make coin obligations of the Government payable in gold coin only. This legislation solely in the interest of the bondholding and creditor classes, and at the expense and to the disadvantage of the many, soon aroused the people; and Congress found it necessary to restore the silver dollar to our stock of legal-tender money, which was done in 1878, but with a limitation upon the amount of monthly coinage.

Lately those who profited by that unfair legislation have discovered that the coinage of the silver dollar ought to be suspended, their real object being no doubt to demonetize it again. The reason assigned, in brief, is that the relative values of our gold and silver coin have diverged and to continue the coinage of the standard dollar will endanger the business interests of the country. The whole field of statistics is put under contribution the world over in the attempt to convince Congress that the country is in danger from the continued coinage of this dollar. We are told that we are powerless in this matter because England and Germany choose monometallism; that our remedy is to follow their example and adopt a gold standard only. That is to say, we must yield to the mistaken or avaricious notions of European royalty and aristocracy and reduce the volume of our circulating medium, thereby adding to the difficulties and burdens of the toiling millions in this country.

I must be permitted to deny the necessity or the wisdom of such a course. We are a nation, and I will not quarrel with those who choose to spell it with a big "N." It is our duty to legislate for our own people, not to please the rulers of the imperial governments of Europe. Instead of yielding to the notions of those governments we should consider and, as wisely as possible, provide for the welfare of the American people.

I do not believe there can be a gentleman found on this floor who will sincerely contend that a reduction of the volume of our money at the present time will—can by any possibility—be beneficial to the masses of our people. It seems to me that all must admit such a course would add to the present distressing stringency in business affairs.

Of course, a contraction would be individually beneficial in a money point of view to the very wealthy, the lenders, the rich corporations, the plethoric bankers, the millionaires. But these constitute numerically only a small part of our population, and the larger part, the laborers, the mechanics, the farmers, the small manufacturers, in short, the mass of our people all over the country, would be materially injured by a suspension of silver coinage and many of them would be financially ruined by its demonetization.

I am sorry to say I believe such a result would be looked upon placidly and with pleasure by the very wealthy in the money centers. They have toyed with the poverty of the poor and fattened on the misfortunes of their fellow-men. They have grown so wealthy while the masses have been oppressed and growing poor that they have come to regard their good fortune, growing out of such a state of affairs, as their birthright, and want to see this state of affairs continued and intensified. They have built and enjoyed their yachts and their palaces, while the masses who work and make the wealth of the country have struggled, and struggled hard, to keep the wolf from the door, not always with success.

By means of unfair legislation and unfair administration the wealthy have grown very wealthy and the poor have grown very poor.

Now, I do not want any one to misunderstand me. I have no sympathy with the lawless spirit which would disregard property rights; no sympathy whatever with anything in the nature of communism. When a man, by industry and economy, has acquired property, he should be protected in his possession. But he should not be permitted to oppress those who are less fortunate; and, more than that, he should not be assisted by legislation in crushing to earth those who have little or nothing.

I would not improperly deprive any man of property or money properly acquired, no matter how much he may have.

But I have long felt, and still feel, that a millionaire is a curse to a Republic, and I firmly believe we would be better off if we had none. The poor and those of moderate means are the real support of the Government. I do not wish the millionaires any harm. If I were going to make a wish in regard to them I would wish them in heaven. I think the country would be much better off if a kind Providence should find need for all of them beyond "the shadowy valley." "They toil not, neither do they spin," yet "Solomon in all his glory was not arrayed like one of these." With their yachts, their palaces, their pleasure cottages, their liveried equipages, and, what is infinitely worse, their vicious notions of legislation and governmental policy, they constitute an element which is of no good use in a republic.

It is different under an imperial form of government. Their royalty and nobility must be maintained at all hazards, even though in maintaining it the subject be bowed to the earth. If a scion of royalty, or a descendant of a house of long and noble lineage, meet with mishap at the gaming-table or race-course, or otherwise, he must be provided for from the public treasury, so that by no means shall the line of distinction which separates him from the people be permitted to disappear. And the people furnish the money. We want none of that. Yet we are asked to follow the example of the two great imperial governments of Europe on this money question. And who asks this? Are the farmers asking it? Are the mechanics asking it? Are the laborers asking it? Are the small traders asking it. Are the poor or those in moderate circumstances asking it? No. But these classes constitute the real body of our population—nineteen-twentieths, probably ninety-nine hundredths. If legislative wisdom can not devise legislation on the subject which will benefit all, then it should consider the interests of the many even at the expense of the few, especially when the few are opulent while the many are poor.

But to return to the immediate subject. Who is urging the suspension of silver coinage and the demonetization of the silver dollar? We all know: The millionaire, the rich corporations, the plethoric bankers of the money-centers. Those who have been in the habit of playing "hocus-pocus" with the country's finances. I am aware that this may be called denunciation. Gentlemen on this floor who have championed the cause of these monometalists have charged that the friends of the silver dollar are denunciatory—that they seem to expect to settle the question by heaping abuse on their opponents. Mr. Speaker, the abuse and denunciation have not all been on one side. The advocates of the suspension of coinage and the demonetization have for a long time industriously denounced the friends of the silver dollar as "silver lunatics;" they have denounced the Government as dishonest. Here is a sample from a leading New York weekly, which assumes to be the spiritual teacher of its readers:

> We can not expect the people of this country to be very distinguished for their morality while the Government, by its laws and practices, is directly teaching immorality.
>
> A man who passes a counterfeit coin composed in part of silver or gold and the balance of it in some inferior metal is called a swindler, and is very unceremoniously hustled off to prison. The Government of the United States, however, may cheat in that direction, and force the people to take millions of 79-cent dollars, and then claim that such counterfeit morality deserves the name of honesty. It proposes still to do, in the future, as it is now doing, an act even worse than this—it proposes not only to cheat the people by compelling them to take these 79-cent dollars, but to lie about them also by calling them dollars. It now says to the world that these swindling 79-cent coins shall be called, each and every one of them, "one dollar," and be so stamped on the face of every one of them. By this monumental immorality the Government of the United States of America is now, in the judgment of all honest men, the world over, entitled to the high rank of being called the chief counterfeiter and champion liar among all civilized and uncivilized nations. This is, to be sure, very plain talk; but it is nevertheless the solemn truth.

The organs of the capitalists and lenders have been and still are filled with such denunciation as the foregoing. It would serve no good purpose to occupy time and space in the RECORD by reproducing other specimens. Gentlemen who have advocated the cause of the monometallists on this floor have taken up the refrain, and called our dollar "a fraud and a cheat," "a dishonest dollar," "a 79-cent dollar," &c. Why does any one so designate the silver dollar? Why charge the Government with dishonesty for making it? If the Government had made and put into circulation a new metallic dollar, containing less intrinsic value than had before been employed, and had made it a legal tender for all dues, I can understand why the creditor class might complain of being compelled to take it in payment of debts contracted before it was made.

But what is the fact in regard to the real, intrinsic value of our standard silver dollar? The truth is, it contains just the same quantity of pure silver contained in our silver dollar from the foundation of the Government to the present time. In 1792 the first act was passed regulating the coinage of the United States. It provided that the silver dollar should contain 371¼ grains of pure silver. The act of 1837 provided for a dollar containing the same quantity of pure silver; and the act of 1878, sometimes called "the Bland act," now in force, provides for exactly the same quantity of silver. So that the standard dollar of to-day, denounced as "a fraud and a cheat" on this floor, has precisely the same quantity of silver in it as has been contained in our silver dollar ever since we began to coin money. This being true, I should like for some one to point out particularly the dishonesty in paying our debts with it. Is it dishonest for me to pay my debts in the same money which was current and a legal-tender when they were contracted? It certainly is not. If I contract a debt at a time when there are two kinds of legal-tender dollars in circulation, and afterward one of those legal-tenders enhances in relative value, shall it be said I must pay in that alone?

Talk about dishonesty! Those who would thus impose on the creditor class, or require the tax-ridden masses of this country to furnish from their scant earnings the means to thus pay public obligations, have peculiar notions of honesty.

In the discussions which this subject has provoked throughout the country, in the newspapers, on the rostrum, and elsewhere, we have had many apostrophes and appeals to "honesty" and "patriotism"

from those who desire the demonetization of silver, and the consequent establishment of gold monometallism.

I never have known an experienced operator to go about a legislative body with a view of procuring legal sanction for a plan to rob somebody but that he went clad in the garments either of piety or patriotism, or both. It is really trying to witness the apparent evidences of pain depicted on the faces of some of these gold men when they contemplate and speak of the moral obliquity of the American people as manifested in their desire to pay their debts in the same kind of legal-tender money that was in circulation when the debts were contracted.

We are told that the business men of the country demand a suspension of the silver coinage. Do all the business men demand it? Certainly no one will have the effrontery to assert the affirmative of this question. Then, what business men? As before stated, they are the great lenders, the managers of rich corporations, the very wealthy. And there are reasons satisfactory to them based on the purest selfishness, in my judgment, why they demand it. A reduction in the volume of our money would enhance the relative value of their possessions. Many of them hold obligations of the Government soon to become payable which may be discharged in legal-tender coin, and a demonetization of silver, toward which suspension of coinage would be a long step, would make them payable in gold coin only and thereby further add to the gratification of their rapacity. It would no doubt be of financial benefit to the creditor class.

In looking over the many opinions of bankers which have been published to establish the necessity and desirability of suspending silver coinage, I felt refreshed when I found one that plainly and frankly stated the real facts in regard to the controversy. It is the address before the bankers' convention at Chicago last fall by Mr. John Thompson, president of the Chase National Bank of New York, and the following is a quotation:

> The warfare over the two precious metals is a contest between debtor and creditor. The advocates of the gold standard commenced the trouble. In 1873, Germany, having obtained a thousand millions of gold from France (indemnity money), undertook to substitute gold for silver. At the commencement of this movement silver was at a premium, but the natural effect of supply and demand soon followed. The German silver overstocked the London bullion market; this, together with the absorption of gold, caused a violent parting of the market value of the two metals. Following the lead of Germany, Sweden, Denmark, Norway, and this country demonetized silver; France, Belgium, Spain, and Italy stopped coining it; and in July, 1876, four dollars of gold was equal in the London bullion market to five dollars of silver.
>
> * * * * * * *
>
> Gold as money is practically unknown by the people; they handle silver and paper money only. If the paper money is redeemable in coin, then it is equal to coin, and is more satisfactory than the coin itself.
>
> The debtor class is ten to one of the creditor class; the mortgageors are numerous as compared with the mortgagees. The debtor knows full well that the conversion of silver into merchandise, instead of being monetized, will fully double the burden of his debt.
>
> Having stated only a few of the indisputable facts involved in the currency discussion, I will venture a prediction at the risk of being called a false prophet.
>
> Congress will not demonetize silver. It always has been and will continue to be money.
>
> * * * * * * *
>
> Finally, if the determination to demonetize silver is persisted in, silver will be the standard and gold will be merchandise.
>
> I regret the necessity of this plain talk, and do sincerely hope that some measure can be adopted to perpetuate the double, or bimetallic, standard. The equities, as between debtor and creditor, should not be violated. The wheels of prosperity should not be blocked by the conversion of one-half of the basis of our currency and credit into mere property. The extra liability of suspending specie payments should not be incurred.
>
> The most active financial minds of Europe are discussing the "hard times," much of which is attributable to the demonetization of silver.

This gentleman evidently is intelligent. He correctly states the situation. His statement may be briefly summarized, changing to some extent his order of arrangement.

First. The warfare over the two precious metals is a contest between the debtor and the creditor.

Second. The debtor class is ten to one of the creditor class. (I believe the debtor class is greater in proportion to the creditor class than he states.)

Third. The demonetization of silver will double the burden of the debtor.

Fourth. Congress will not demonetize silver.

Fifth. Silver will continue to be money.

Sixth. The wheels of prosperity would be blocked by converting silver into mere merchandise.

Seventh. The equity between debtor and creditor should not be violated by the demonetization of silver.

Eighth. Much of the hard times in Europe is attributable to the demonetization of silver.

Ninth. The advocates of the gold standard commenced the trouble.

Mr. J. K. Upton, late Assistant Secretary of the Treasury, and not a friend to the silver dollar, in his book entitled Money in Politics, makes a statement which is also interesting in this connection. Speaking of the demonetization of silver in 1873 he says:

> Had the silver dollar not been discontinued, its coinage at the mint for purposes of circulation would have been resumed upon the fall in the price of silver bullion, and resumption of specie payments would have occurred in 1876 upon a silver basis 20 per cent. below that of gold. Public, State, municipal, corporate, and private indebtedness, contracted prior to the change of standard and payable in coin, would then have been satisfied by the payment of silver dollars, these coins having had a legal if not an actual existence at the time the obligations were contracted. Nor would the debtor have had, in such an event, any just ground of complaint. No one had ever alleged of either metal an immutability of value, and the obligee to a contract calling for coin took a risk, which he was presumed to know, of being paid in the cheaper metal.
>
> The discontinuance of the silver dollar, however, took from the obligor the powers, if not the right, to satisfy his coin obligations by payment in silver coin. The number of private contracts affected by the discontinuance of the silver dollar in the country was probably not great, nor their amount excessive; but a large amount of corporate, municipal, and State indebtedness existed, payable in coin, and contracted previously to 1873, and this could now be paid only in gold.
>
> The entire bonded debt and the circulating medium of the United States was affected by the discontinuance. A large portion of the debt contracted during the rebellion called only for "dollars," and not without reason there had arisen in the country a considerable demand that these obligations should be satisfied with United States notes, those being the kind of dollars the Government received for the obligations.

This is a reasonably fair statement of what were the rights of the debtor class when the silver dollar was discontinued and what the legal effect of the discontinuance was. Coming from an enemy of the silver dollar and from one who seeks to justify the crime perpetrated against the people in the interest of the bondholders by legislation requiring our bonds to be paid in gold, including the demonetization of silver, it is worthy of the reproduction I have given it here.

To return to the charge that the silver dollar is a dishonest coin, a 79-cent dollar, let me ask who refuses to take it at par? All over this country the laborer takes it and is glad to get it. The mechanic takes it. The farmer takes it. The professional man takes it. All of them are glad to get it, and they never think, when it is offered in payment for a dollar's worth of work or commodity, of suggesting that it is only a 79-cent dollar. It will buy as much labor and as much of the necessaries of life anywhere in this land as a gold dollar. This is admitted by the gold men. The gentleman from Pennsylvania [Mr. SCOTT], in the same speech in which he characterized it as "a fraud and a cheat," uses also the following language:

> Sir, no gold monometallist denies that the purchasing power of the present standard silver dollar of 412½ grains is to-day equal to a gold dollar

True, he follows this statement with an attempted explanation in this language:

> But we do deny, sir, that this state of affairs grows out of the fact that the Government has stamped it a dollar and makes it a legal tender as such. This condition of affairs arises solely from the fact that the Government receives it as the equivalent of a gold dollar; and if the Government should stamp 412½ grains of copper and receive it as the equivalent of a gold dollar, its purchasing power would equal the present gold or silver dollar so long as we are on a bimetallic basis.

The attempted explanation is not altogether satisfactory, and leaves the fact in existence, and also concedes more to the fiat-money theory than I would have supposed a gold man would be willing to grant.

But they tell us if we continue the coinage of this dollar we will drive the gold out of the country. That cry has gone up so often that it has ceased to be alarming. We have heard that for years. We have heard it from the gold men, from their organs, from Secretaries of the Treasury, from Presidents, and in one instance—a monumental instance—from a President-elect.

But while the gold prophets and the Treasury prophets and other prophets have been assuring us that the gold would certainly all go out of the country, what have the facts—those stubborn things—been establishing? Simply this: that during the time which has elapsed since the passage of the Bland act, beginning with the year 1879, the gold imported into this country has exceeded that exported from it by over $183,000,000. In the same period of time the exports of silver have nearly doubled the imports.

The following table, compiled from official sources and believed to be accurate, exhibits by years during the period named the imports and exports of both metals:

Year.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1879	$5,624,948	$4,587,614	$14,671,052	$20,409,827
1880	80,758,396	3,639,025	12,275,914	13,503,894
1881	100,031,259	2,565,132	10,544,238	16,841,715
1882	34,377,054	32,587,880	8,095,336	16,829,599
1883	17,734,149	11,600,888	10,755,242	20,219,445
1884	22,831,317	41,061,957	15,504,777	29,868,748
1885	26,691,696	8,477,892	16,550,627	33,753,633
Total	288,048,819	104,540,388	89,397,186	151,426,861

This table discloses that in every fiscal year since the coinage of the standard dollar began under the Bland act, except one, more gold has been brought into the country than has been shipped out of it. In 1884 the balance was against us, but in 1885 there was a large balance, over sixteen million, in our favor. And thus, while the gold men have been year after year playing the rôle of alarmists and trying to scare the country into the belief that all our gold was going or would soon certainly go out of the country, the facts of history have been constantly accumulating against them and giving daily contradiction to their dire predictions. But still the predictions continue.

Now, Mr. Speaker, what has occurred in the past, under a certain state of circumstances, may be presumed to be of at least probable occurrence, in the future, under the same circumstances. The facts conclusively show that in the past, with the coinage and circulation of the silver dollar progressing, gold has not been driven out of the country, but on the contrary it has been constantly coming to us from abroad in greater quantities than have been going away. We have a right to judge the future by the past. So judging it we may properly conclude that the balance will continue to be in our favor so far as the importation and exportation of gold are concerned, and the prophesied danger from that source is not imminent.

The bill under consideration proposes not only to continue the coinage of silver, but to put its coinage on an equal footing with gold by making it free; and I am in favor of it. From the organization of our Government, or more accurately speaking, from 1792 when our first coinage act was passed, down to 1874, the coinage of silver was free, and I do not perceive any good reason why it should not be so. From time immemorial both these precious metals have been used as money. The Constitution of our country recognizes them both, and, I believe, makes them both legal tender and forbids the demonetization of either. This opinion has been entertained by eminent men in all periods of our history. I will quote the opinion of one gentleman, quite prominent in our late history, who ought to be accepted as authority, at least, on one side of this House. I refer to Mr. Blaine, who in 1878 said:

> I believe gold and silver coin to be the money of the Constitution, indeed the money of the American people anterior to the Constitution, which the great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare either metal should not be money. Congress has therefore, in my judgment, no power to demonetize either any more than to demonetize both. * * * If, therefore, silver has been demonetized, I am in favor of remonetizing it. If its coinage has been prohibited, I am in favor of ordering it to be resumed. If it has been restricted, I am in favor of having it enlarged.

But we are told the silver dollars accumulate in the Treasury and do not circulate. The accumulation, to a large extent at least, is due I believe to administrative discrimination against this coin. Let the Treasury officials pay the maturing obligations of the Government in standard dollars wherever not bound by previous legislative crime to pay them in gold, and the Treasury will be relieved of its burden, at any rate to some extent.

And now, in conclusion, let me say the Democracy of the country and the people in general demand and expect of this Congress, and are entitled to have, action which shall be in the interests of the people generally, and not solely in the interests of the few and the wealthy who are in condition to take care of themselves. All over the country there is business stagnation, and legislation which intensifies the malady, or a failure to legislate for the general relief, may prove disastrous to the party in power.

Hurd vs. Romeis.

SPEECH

OF

HON. RICHARD GUENTHER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 14, 1886.

The House having under consideration the contested-election case of Hurd vs. Romeis—

Mr. GUENTHER said:

Mr. SPEAKER: I have listened with great interest to the speech of the contestant. I presume that he addressed the Committee on Elections with the same burning eloquence; in fact, I have no doubt that he did so. In spite of all his oratorical talent, his plausibility and shrewd sophistry, he was not able to persuade a Democratic committee that he was elected. How poor, then, must his case be. That fact alone ought to be sufficient to assure every fair-minded and unprejudiced gentleman that he was not elected.

The distinguished and able chairman of the Committee on Elections in his closing speech showed conclusively that the contestant, Mr. Hurd, produced no evidence whatever in support of his charges, nothing but hearsay, and mostly second-hand hearsay.

The whole proceeding on the part of the contestant is an unmitigated farce.

Mr. Speaker, the case is so clear and the majority report of the Committee on Elections alone disposes of the claim of the contestant so thoroughly that it would be superfluous for me, especially after what has already been said, to present further arguments in favor of the contestee.

Some time ago I carefully studied the evidence and the briefs, and then I came to the conclusion that a jury of fair-minded and unprejudiced men, if I may say so, could not help bringing in a verdict for the defendant. I can not see how they could do otherwise.

It is a deplorable situation, Mr. Speaker, that there are so many people who entertain the idea that in questions of this kind men are incapable of being just and fair-minded, but are entirely guided by partisan bias, and that the only requisite for a party to a contest to be successful is to belong to the party having the organization of the respective political body.

This popular impression, Mr. Speaker, is a sad commentary upon the sense of fairness and justice which should govern our actions; but while I admit that there has been in the past some cause for such an erroneous opinion, I know that it is not altogether so; that something more substantial is required to be established than to belong to the party in the majority.

I rejoice, sir, that the world does move, and especially that it moves in the right direction. I am glad that the old Latin saying, "Let justice be done, even though the heavens fall," is gaining ground to some extent even in election cases in a Democratic House. It is a progressive step which entitles the committee to the plaudits of every patriotic citizen of the Republic.

But, Mr. Speaker, all this I would gladly have left to other gentlemen to say or not to say; I would have kept silent, had it not been for a certain article which was published in one of the leading Democratic newspapers of the country. Had it appeared in a paper of less prominence than the Louisville Courier-Journal, had it been less industriously circulated, had it not borne upon its face the stamp of inspiration from a certain source, had it not been written for the very purpose of prejudicing the cause of the contestee, had it not shamefully and maliciously attacked the honorable conduct of my friend, Mr. Romeis, and wantonly and brutally insulted the nationality to which he and I belong, I would not have taxed your patience and asked you to listen to me even for a few minutes.

This article, sir, is unworthy of a great American newspaper. The sickening adulation of the contestant and the unjustifiable, vulgar, and infamous slandering of the contestee ought to consign its author or authors to the condemnation of every righteous citizen. Of all assassins, he who stabs at the character is the most despicable. The tone of the article recalls the bygone days of the Knownothing movement, of the bloody days of Louisville in 1854 or 1855, and in other American cities, where Germans and Irishmen were killed like dogs. I will read the article:

> **Frank Hurd—The great tariff-reformer as he appears to a small tariff-reformer—His accomplishments as a man, a statesman, and an orator—The Dutchman whose seat he is contesting, and who must go—Thoughts upon men and things.**
>
> [Special correspondence of the Courier-Journal.]
>
> "He reads much;
> He is a great observer, and he looks
> Quite through the deeds of men."
>
> WASHINGTON, *February 21.*
>
> The most accomplished man in the last Congress was Frank Hurd, of *Ohio*. He is a scholar, a student, a thinker, a lawyer, a statesman, a poet, and an orator. No man in public life at this time has greater wealth of mental endowment or more varied mental attainment. He was born in Ohio in 1841, and was graduated with distinguished honors from Kenyon College in 1858. He was a conspicuous member of the bar at the age of twenty-two. Ten years later he entered Congress, and was doubtless the best-equipped man in the body for the duties devolving upon a philosophic lawgiver. Cox and Garfield were also members, but Hurd was more eloquent than Cox and more courageous than Garfield, as learned as either, and of more pronounced convictions than either.
>
> There are two kinds of statesmanship. One, that which is possessed of force, energy, impetuosity, virility, that overrides all opposition, subjects all wills, accomplishes its object at any and all hazards. Of this class were Richelieu, Cromwell, Warren Hastings, Chatham, Bismarck, Mirabeau, Thaddeus Stevens, and many others. The other is that class of statesmen who act from convictions of right, who love justice more than they love victory, who love mankind more than they love party. Of this class the most distinguished representative is Edmund Burke, and in the same class might be placed Daniel Webster and Thomas Jefferson. Partaking of the attributes of both classes are Henry Clay, the younger Pitt, William of Orange, and Abraham Lincoln. In stormy periods, in times of revolution and great political convulsion, the man of the first class is required at the head of affairs. In times of peace, when judgment dominates passion, the man of the second class in demanded. When political reforms, short of revolution, are to be ingrafted on a country's polity it requires a statesman who has read much, reflected much, and with a broad and comprehensive mind and patriotic instincts to formulate a policy and secure its adoption.
>
> In a deliberative body, such as the Congress of the United States, there should be assembled the mightiest intellects of the country, in order that mind might confer with mind in the settlement of great questions. It is important then that each constituency should be represented by its ablest man of whatever party he may be a member. During the past decade the curse of this country has been dense ignorance or contemptible mediocrity in Congress. Members from the East are merely attorneys for special interests. They are generally careless or ignorant of matters of statesmanship, but in the discharge of their trusts as the agents of monopoly they are vigilant, active, able, and adroit. The South and West, as a rule, send incompetency here who do not get warm in their seats before they let statesmenship go to hell in a hand-basket, and spend their whole time trying to secure a re-election, and to this end they make large drafts on the Seed Bureau and the Government Printing Office. As a result, the Eastern attorneys beat them every time, and that which would be reform if adopted now, may become revolution if deferred a decade in the future.
>
> Mr. Hurd is a man of broad and comprehensive views. He has disciplined his mind by severe study of the science of government in all ages. He has reflected much, and has strong convictions upon the great questions now paramount in our politics. It is the fashion to say that he is a crank, a one-ideaed man, but the same has been said of every reformer who has appeared among English-speaking people from Hampden to Franklin, from Wilberforce to Wendell Phillips. He has been ignored, or ostracised, by the money-changers and dove-sellers now in the Democratic temple in Ohio, and every inch of vantage he has gained he attained after an heroic struggle. In that State a tribune of

the people is little heeded. One day the legions of Marius are victorious, the next the hosts of Sylla are in the ascendant. Thurman has been retired, Pendleton exiled, Ward invalided, and Hurd betrayed, while Warner, Le Fevre, and Geddes are becoming high priests at the altar of protection.

Mr. Hurd is one of the most finished orators in America. He has a sweetly modulated voice, and his enunciation is without blemish. His command of language is perfect, and his words are carefully chosen and uttered without hesitation. He is never dull, but always interesting and instructive. In the discussion of dry questions of law he can retain the attention of layman and professional alike.

I was present last week when he closed the debate upon his election contest before the committee of Congress to whom it was referred. General Eppa Hunton had just ceased to speak for the contestee when Mr. Hurd arose, and the chairman announced that he had one and a half hours to speak. The members of the committee, the attorneys, the contestant and the contestee, one other gentleman and myself, together with the clerk of the committee, were all that were present. I had heard him before when he had a brilliant and a critical audience in the House of Representatives, whose attention he held from the opening sentence to the closing word, and had been delighted with his speech. On the present occasion, however, there were not a score of persons in the room. The question was one of dry legal detail in the main, with an incidental one of fact, but he had not been speaking five minutes before he had the closest attention of every one in the room. His language was so chaste and elegant, his reasoning so logical and forcible, his illustrations so pertinent and complete, and his conclusions so inevitable, that the merest tyro in the law could follow his line of thought.

He alluded to the question of agency. He advanced some theories that were combated by two members of the committee. I could see at a glance that, while they were good lawyers, they had not read Warren, or Trollope, or Disraeli. An expression of impatience came over Mr. Hurd's countenance, for he saw that much of his time must be occupied in explaining to the committee the distinctions between the ordinary agency in business transactions and the election agency as settled in the English decisions, but he did it to the satisfaction of every one. When his time expired all were astonished, for though the clock had struck twice during the argument no one in the room heard it. As he uttered copious streams of beautiful sentences, I could but repeat to myself the words of Dryden in allusion to one of the most accomplished men of any age:

"Of pleasing wit and pregnant thought,
Endowed by nature and by learning taught
To move assembly."

The contestee, Romeis, was present, a Thersites to Achilles, Tittlebatt Titmouse to Edmund Burke, Quirk to Lord Mansfield. Once or twice he put in a word, but was promptly squelched by his counsel, though not until he showed that in his make-up

"Every inch that is not fool is rogue."

Practically he admitted that he had bribed voters and seemed astonished that Mr. Hurd should object to it. He is a native of Bavaria, a crout-eating, pretzel-stuffing, beer-swilling Dutchman, who has about as much conception of the spirit of our institutions as a pickaninny on the Congo of the philosophy expounded in the Novum Organum. I have no idea that he could name the Presidents of the United States, even out of their order of service, or that he could tell the nationality of Alexander Hamilton, and would be willing to give odds that he does not know which of them first lived in this sinful world, George Washington or Julius Cæsar. Indeed, he is about as fit to represent an American constituency in the American Congress as a nigger field-hand to deliver a lecture on the Pragmatic Sanction and the campaigns of Frederick the Great. But he will have to go. If he lived in Kentucky and were a Democrat of the most pronounced type, he could no more attain a seat in Congress than he could discover the philosopher's stone. As yet we are not for sale, but when "progress" strikes us and we become Yankeefied, which will be in the not distant future, we will send just such men to Congress.

When Mr. Hurd was a member of the House he was rarely on the floor except when a vote was to be taken or he expected to deliver a speech. He was usually to be found in the room of the Judiciary Committee absorbed in a book or discussing some great question with some such man as COX, FRYE, KNOTT, TUCKER, or Garfield. He left the mere details of legislation to less cunning hands. When his party was to be convinced, then it was that he appeared on the scene, and then it was that he showed himself to be the peer of any man in the body. I well remember what a howl of satisfaction went up from every protectionist throat in the country when it was announced that he was defeated. He fought the Republican party in Ohio, the manufacturers of Pennsylvania, the national Republican committee, and notwithstanding bribery and intimidation of workingmen they were compelled to resort to ballot-box stuffing to defeat him, but he will get his seat all the same, and hold up the hand of MORRISON in the entering-wedge that was introduced last Monday.

I never spoke to Mr. Hurd but once. It is a story anent the Field Literary Bureau of 1880. Proctor Knott's committee-room was the headquarters of the show and I sometimes went there to note progress. As I was heartily for Tilden, I was not looked on with much favor by the privates. Of course the leaders paid no attention to me. On one occasion I entered the room and one of the minor Field men said to me: "My ticket is Field and Hurd." Said I, "Why, the devil do you want a kangaroo ticket? You had better say Hurd and Field." A voice at my back said: "Thank you, sir." It was Mr. Hurd who entered as I spoke, and I found him one of the most fascinating men I ever met. He is now in the prime of life and is destined to fill great space in our country.

SAVOYARD.

It is true, Mr. Speaker, that Mr. Romeis was born in Bavaria. That is about the only truth contained in this article. He was born there but it was involuntary on his part. He had no control over that affair. Could he have had, he might, perhaps, have selected some other part of this globe for his debut. He came to this country with his parents when a little more than eleven years of age. He became an American citizen; and, sir, in everything that goes to make a true and upright one, he is the peer of the contestant or of any member of this House. His people know him and have confidence in him. He has been honored repeatedly by the citizens of his home, the city of Toledo. Several times an alderman, he was elected president of the board and three times mayor of the city, and was then elected to Congress by the people of his district, and he never sought any office. Every position he has held he filled with honor to himself and to the satisfaction of his constituents. Besides he has always reflected credit upon his German fellow-citizens.

The German-Americans take a great pride in having one of their nationality filling a responsible position ably and honorably. The German-American citizens take great pride in their citizenship. They are willing to bear all its burdens without complaint. They consider themselves above everything citizens of this Republic, and as such believe themselves entitled to share to some extent in the government of their adopted country. They despise those low, narrow-minded, and contemptible creatures who want to breed strife, prejudice, and hatred on account of foreign birth. They love their adopted country, they espouse its cause, they glory in its free institutions, and strive to be good citizens.

They want to live in harmony and peace with all the rest of the American people of whatever descent. They want to stand side by side with the citizen of Scotch, Celtic, English, or Scandinavian stock, and with the three noble sons of Switzerland, who, standing upon the peak of the Ruetli, with hands uplifted to the heavens above, registered that solemn vow—with them we say to all the citizens of this country:

Wir wollen frei und einig sein,
Ein einig Volk von Bruedern.

We want to be united, free,
A union of brethren.

To this class belongs your German-American fellow citizen. To this class belongs my friend, Mr. Romeis, and I stand where he does.

He is an American in the best sense of the word. He will continue to be a worthy, useful, and respected member of this House. But, Mr. Speaker, I would not for a moment try and defend his claim to a seat in this House were I not fully convinced that he was as fairly and as honestly elected as you, sir, I, or any other member of this body.

Rivers and Harbors.

SPEECH
OF
HON. JOHN M. GLOVER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 15, 1886.

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. GLOVER said:

Mr. CHAIRMAN: The gentleman from Maine [Mr. REED] conjures up the specter of unnumbered millions to be used in leveeing the Mississippi. These shadows are but the apparitions of his own mind. Does the gentleman know the difference, I would ask him, between a tariff for protection and a tariff for revenue with incidental protection? If so, he knows the difference between levees as an object and levees as an incident. The former is expressly excluded, the latter must necessarily be permitted in this or in any bill on this subject.

The gentleman from Maine professes to be of the opinion that the money of the Government has been wasted in these improvements, and there has been no adequate return therefor. This, sir, is the apocryphal gospel of economy, and has no more to do with the genuine article than pharisaical cant has to do with true piety.

When the Government of the United States appeared to the railroads of this country like another Jupiter, descending in showers and streams of gold, the voice of the gentleman from Maine was not heard in the land, but upon the beggarly two or three millions per annum which the main trunk of the Mississippi has received, not always with regularity, he concentrates his eloquent and undivided attention.

Mr. Chairman, that man or that class of men who undertake to say that the improvement of the Mississippi River has not passed from the region of experiment to that of accomplished fact, only illustrate the prejudice that is too often founded on the wishes alone.

The course of the American Congress toward the Mississippi River, so far from being a course of unbounded, overflowing generosity, as the gentleman would paint it, has been, all things considered, the most parsimonious and the most beggarly ever displayed by a civilized nation in the world. The time has come, when if that improvement is to be starved, it must no longer be done in the name and under the protestation of overflowing liberality. Moreover, that wretched outlay has been repaid with a usury beyond the dreams of avarice.

That other nations, less able to expend, have bestowed upon projects with inferior possibilities for good a hundred millions where we have spent ten, so completely appears from the figures given by the chairman of the committee that I shall waste no time upon the first proposition, but prove the second by a demonstration as undeniable as a proposition in Euclid.

I shall begin with the text furnished me by the gentleman from Maine, who builded wiser than he knew when he gave those figures to this House. Said he: "The result of this mercantile [railroad] system under a great law of nature is that men, day after day, are obtaining at the least cost the products of the whole world. Look at the result upon one single railroad. I noticed the other day in the report of the Chicago, Milwaukee and Saint Paul Railroad some simple figures, to

which I ask the attention of the committee. In 1865 every ton per mile cost 4.11 cents; in 1875 every ton per mile cost 2.10 cents; in 1885 it cost 1.28 cents. There is a law here visible which is working inevitably to the benefit of the consumer, working without the cognizance and apparently without the knowledge of Congress, if one could judge from the speeches of members. These great laws of trade keep on without us, and we need not attempt here by this bill to make a change in them, because the result will be in this Mississippi part that we shall be only throwing away our money, not in a change, but in a futile attempt to make a change."

The gentleman would have us believe that the natural operation of railroad development is reducing the tonnage per mile to the figure stated, and that if we would only wait long enough we would have all our goods carried for nothing.

Sir, if it were not for the influence of cheap water transportation in this country, direct and indirect, the railroads would still be taking, as they have taken in the past, two-thirds of the product as the price of carrying the other one-third to market, and then standing, like Warren Hastings in India, "astonished at their own moderation."

The figures of the gentleman simply prove the influence of the great anti-monopoly highway to the sea. For its pools the railroads have no use; its stock they do not care to water. It is the one parallel line with which they can not consolidate. Statutes have been of little avail to prevent combinations for the purpose of extortion, parallel lines in violation of law, extortionate tariffs, pooling, discriminations, and the thousand other abuses practiced by these corporations, almost worse than those ills which our fathers once fled into the wilderness to avoid. It is believed that all these abuses can be better prevented by the competition of water traffic than by the enactment of statutes. By forcing down the rates of parallel railroad lines cheap water routes have forced down those of the whole country.

In 1865 at the close of the war, it is true, every ton per mile by rail cost 4.11 cents. We had but little in the way of river improvement at that time, but in 1875 much had been accomplished, and the tonnage had accordingly fallen to 2.10 cents, and in 1885, when the agricultural products of this country had begun to flow cheaply to the sea, it had been reduced to 1.28 cents per mile. In other words, as the improvement of the water ways goes up the extortionate charges of the railroads go down.

I do not intend to deal in exact statistics. This House has been wearied with the iteration of them. But I take it for granted that if the gentleman from Maine could increase the material wealth of this country by one hundred millions of dollars for every fifteen millions expended by the National Government, he would be contented to make that expenditure. The internal commerce of this country amounts to more than thirty billions annually. It is moved by the railroads and by the water courses. The cost of transportation is a mere tax, a pure burden, and its removal or reduction adds that much to the value of the product; and as you add to the value, the actual value, of the wheat or the corn or the cotton crop, you add that much to the material wealth of the country.

To illustrate this point: The internal commerce of the United States amounts to $30,000,000,000 per annum; upon $30,000,000,000 in value, if you reduce the cost of transportation 1 per cent. of the value, you increase the total wealth of the country $300,000,000 per annum. The cost has been reduced over 1 per cent. since the mouth of the Mississippi was opened to the commerce of the world.

The production of grain of all kinds in 1882 was about 2,000,000,000 bushels. With cheap transportation to the sea our foreign market will become practically unlimited, as the present production of the Mississippi Valley is a mere bagatelle compared to its amazing possibilities.

It has been computed by competent authority that with bulky articles, such as the agricultural products of this country, the ratio of cheap transportation between the Mississippi River and the railroads at their best is as 18 to 1 in favor of the cheap water route. Such is the condition when the railroads are in their best state, but the recent disorders which have occurred upon these lines indicate the necessity of including in our calculations a possibility of long interruptions of service, a lesson never more forcibly inculcated than by the present condition of affairs where labor and capital employed upon the Southwestern system are joined in an exhausting struggle "like two spent swimmers that do cling together and choke their art."

Sir, the figures which I have given represent the profits of the investment of which the gentleman from Maine complains. That profit has changed the balance of trade; it has made us a creditor instead of a debtor among nations. Previous to 1874, except in occasional years, the balance of trade was against us. In 1873 we paid to foreign countries over $119,000,000 more than we received, but since that time, except for the year 1875, the balance of trade has been in our favor, and for the year 1883 alone we have received over $100,000,000 more than we paid. This change was effected by the water route that lowered the rate on a bushel of wheat from 26.6 cents in 1872 to 14.2 cents in 1874 and 9.16 cents in 1883. These facts are known to all the world. They are imprinted on the economic history of this country and on the minds and memories of men as plainly as the signs of the zodiac appear in the heavens; and although now nearly everybody is willing to admit that "the earth do move," the gentleman from Maine wants more dividends on his investments, and ranges himself with Mrs. Partington and King Canute in a vain effort to "stop this transaction."

Mr. Chairman, the enemies of these improvements lag behind the age—they lag superfluous; the country has gone far, far beyond them. The question which they are desirous of debating has been decided, and the only question now before the people of this great country is how fast, how far, by what means and by what appliances they shall push that work to completion; and that is what the people expect of the National Legislature.

"There is the East, there is India," said Benton as he pointed toward the grain fields of the Mississippi Valley. "The discovery of America," as has been finely said, "called into existence a new world to redress the balance of the old." But, sir, while Congress halts the mercantile genius and the unlimited treasure of England have resurrected the Old World to overturn the balance of the New; and Indian wheat threatens the markets in Europe which we now hold. The competitor of the American farmer is found on the banks of the Ganges and the Bosporus, and the price of his wheat is fixed at Liverpool. I need not go into particulars with which every member of this House is familiar; it is enough to say there is a visible danger, and no cause therefor but the obstructive tactics of the enemies of cheap water transportation.

Mr. Speaker, this need is so crying and so just that it has become stereotyped in both our party platforms, and among our people it is as familiar as the precepts of the common-prayer books, and almost as sacred. It has created a literature of its own, so fine as to excel the best productions of the world on an economic question from the revival of letters until this day.

What nobler question ever engaged the attention of man than that of cheapening the bread of the world? Compared with it the tariff dispute is as empty as the crackling of thorns under the pot. In the light of the immense gain to be derived by the material interests of the country from cheap water transportation it could say both to the Illinois Cobden and to the gentleman from Pennsylvania who stands like a tower for protection to American industry, "A plague of both your houses." The profits of the Mississippi River improvement could pay the duties about which you dispute without feeling the deduction from the sum total.

Mr. Chairman, our Navy may disappear as before the breath from heaven that destroyed the Armada, our Army may be dissolved like wreaths of snow before the sun, and the country still move on in prosperity. But close the mouth of the Mississippi River and we will be a miserable insolvent and a bankrupt among nations. Sir, I shall never forget the fine comparison of Governor Winthrop, uttered from the eloquent lips of the gentleman from Massachusetts [Mr. LONG], who said that when the States became "dissevered, discordant, belligerent" the rise of the monument to the Father of his Country was stayed, but when they united again it began a second time to shoot toward the skies; and I could not help feeling the other day when I saw file round the Capitol that phantom army, relic of the Grand Army of the Republic who sleep on the brow of yonder hill, that the States, "dissevered, discordant, belligerent," had ever found in a common interest in this mighty stream a never-failing argument for Federal Union, and that in the project to cement that bond were to be found the anchors and the cables of the surest statecraft.

Mr. Chairman, I hear the voice of monopoly crying on this floor that "commerce is beyond the control of the Government of the United States;" that "commerce takes its own way," and "that way is from east to west, and by railroads."

Sir, the Government of the United States created the railroads of the country as God did the earth—out of nothing. They are the spoiled children of the Republic. We have kissed away kingdoms and provinces to them, filled their wishes to the brim with principalities, rained down gold upon them, sold them our birth-right for a mess of pottage, and the voice which echoes in the cry that I have quoted is demanding the fulfillment of that shameful bargain. It is monopoly crying behind the mask of public spirit. The voice is the voice of Jacob, but the hand is the hand of Esau.

To me it appears to be immaterial whether the internal commerce of this valley amounts to one-half or to the total of that of the whole country; whether the amount of money expended by the National Government on improving the water ways of the valley is equal to one-half, to one-fourth, or to any portion of that to which they are entitled; whether this is the granary of the world or whether it is a desert, that opposition which springs from a well-defined interest sets its face against these improvements as a rock against a storm. I say that it is this interest we have to meet and to do battle with and to overcome.

I do not believe that the people of this great valley use their political power as they should use it. I do not believe that they hold to responsibility the men who should be devoted to their interests. It seems to me that every man, no matter for what cause, who finds it necessary to antagonize those interests should see above his head, erect and

frowning, the tutelary genius of the Mississippi Valley with her hand upon the wheel of his political fortune until the sight has terrified him into submission.

Mr. Chairman, if the monopolies of this country continue to stand in the way of this improvement they will light such a flame of indignation throughout the length and breadth of that great valley as will consume their franchises like the stubble in the field.

Mr. Chairman, if the end we have in view in pushing to completion the improvement of the water courses of this country is accomplished we shall see no longer the very creatures of the people going among their creators like Persian despots and demanding earth and water of every legitimate enterprise as the price of life; we shall hear again the doctrine that corporations are the servants of the people—a doctrine which will sound to the American people as there sounds to a stranger in a far-off land the dimly remembered accents of his mother tongue.

Remove Unnecessary Pilotage Fees from American Coastwise Sailing Vessels.

SPEECH

OF

HON. NELSON DINGLEY, JR.,

OF MAINE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 15, 1886.

The House being in Committee of the Whole on the state of the Union on the bill (H. R. 7480) making appropriations for improvement of rivers and harbors—

Mr. DINGLEY said:

Mr. CHAIRMAN: The large expenditures authorized by the pending and previous river and harbor bills and by the bills annually passed for the erection of light-houses and the placing of buoys at the entrance of our harbors ought to relieve American vessels from the burdensome compulsory pilotage fees imposed at a time when our harbors were neither improved nor marked. The Committee on Shipping have reported a pilotage bill which ought to be passed. This bill simply places American sailing vessels engaged in the coastwise trade (which includes the great lakes and all the internal waters of the United States, as well as the Atlantic, Pacific, and Gulf ports), on the same basis as to pilotage that American steam-vessels in this trade have been placed since 1852.

The justice and necessity of removing the discrimination which eleven States are now permitted to make against American sailing vessels will be recognized when the facts are understood. Pilotage, as an instrumentality of commerce, is under the control of Congress. The first Congress which assembled after the formation of the Constitution, being pressed by multiplicity of duties, enacted that "until further provision" by that body pilots shall continue to be regulated by State laws. The necessity for a more uniform pilotage system became so apparent as our merchant marine increased and interstate communication by water developed that in 1852 Congress took up the subject and enacted a national pilotage law for American steam-vessels in the coastwise trade.

This law provided for the establishment of inspection districts throughout the United States, each covering the ports of a single State wherever these ports were within reasonable distance of each other, with a board of United States inspectors for each district. These district inspectors were authorized to examine and license the masters or mates of coastwise steam-vessels, to pilot their vessels into and out of the ports of such district, when such officers were found competent, and exempted the vessel so piloted from the obligation to pay a second pilot under State authority when the services of such State pilots were not employed, an exemption made necessary by the fact that the pilotage laws of many States compelled every vessel to pay State pilots, whether used or not.

This law was confined to steam-vessels, because on account of the opposition of the influential State pilotage associations it was found impossible at that time to also include sailing vessels. Even as it was the pilots strenuously insisted that the law would destroy the efficiency of pilotage and ruin their business. This law, covering steam-vessels, has been in force thirty-four years. It has proved of incalculable service to the country; has done much to promote the interests of the steam marine of the country, and has afforded more efficient pilotage than ever before. No voice is anywhere raised for its repeal. While it has rendered the services of a smaller number of State pilots necessary, yet those pilots whose services were not needed in their former employment have found kindred employment on steamships or tugs. A demand has still existed for State pilots for vessels in the foreign trade, and this demand has been abundantly supplied.

The great success of this national system of pilotage for coastwise steam-vessels induced those States which had considerable tonnage to inaugurate the policy of also relieving American coastwise sailing vessels entering or leaving their ports from the obligation to pay a State pilot whose services were declined. All the States bordering on the great lakes, namely, Vermont, New York, Pennsylvania, Ohio, Michigan, Indiana, Illinois, and Wisconsin, have relieved sailing vessels from the obligation to pay State pilots whose services were not used, the national act of 1852 having done this for steam-vessels. Maine, New Hampshire, Massachusetts, Rhode Island, New York, New Jersey, and Delaware, and Connecticut and Pennsylvania in part, on the Atlantic coast, and California, Oregon, and Washington Territory, on the Pacific coast, have also similarly relieved sailing vessels in the coastwise trade.

Thus, as there are no sailing vessels on the waters of the ten interior States, all their marine being steam-vessels, all the coastwise sailing as well as steam vessels of twenty-seven States of the Union are relieved from the unjust burden of paying pilots whom they do not use. But eleven States, to wit, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas, with Pennsylvania in part, while obliged by United States laws to relieve coasting steamers, still insist on compelling coastwise sailing vessels to pay fees to State pilots, when these vessels are piloted by their own masters or are towed by a steam-tug under the charge of a United States pilot.

This bill simply puts American coastwise sailing vessels entering and leaving the ports of these eleven States on the same basis as to pilotage as steam-vessels, and on the same basis as coastwise sailing vessels in the other twenty-seven States of the Union.

It removes a discrimination against our sailing vessels in the ports of eleven States which Congress can not in justice allow to continue. Coastwise steam-vessels can enter and leave any port in the Union without being compelled to pay a State pilot whose services are not used. Coastwise sailing vessels owned in Maryland and nine other Southern Atlantic and Gulf States may also enter the ports of either of the other States without being obliged to pay a pilot whose services are not employed; but a sailing vessel owned in Maine, or in either of the twenty-seven States referred to, can not enter the ports of the ten States named without paying fees to State pilots not used. Though such vessels are piloted by their own masters or mates, or towed by a steam-tug under the charge of a United States pilot, yet in entering and leaving the ports of thirteen States they are required to pay these unused State pilots.

The peculiar injustice of the pilotage laws of these States, which this bill, if it becomes a law, will place on the same basis as other States, is illustrated by the following statement of the master of a Maine vessel which recently visited Savannah and Charleston. The master writes:

I was bound from Boston to Savannah, Ga. We arrived off Savannah bar February 18, 1884; was spoken 10 miles NE. of bar and compelled to take a pilot. On arriving within 5 miles of bar was spoken by tug (wind light and ahead). This tug put us at our dock for $45. Now, our pilotage was $67.55, and the pilot on board of us was of no advantage, as we had only to follow the tug. On leaving Savannah for Charleston, in ballast, our pilotage was $21.60—another sum thrown away, as we had a tug that took us to sea for $20. I am now ready to leave Charleston and find myself obliged to pay a pilot $67 more, as I dare not risk crossing the bar without a tug. This is also unnecessary expense. I have a tug engaged that will take us to sea for $35. This makes our pilotage, which we did not need nor use, on this trip alone, 5 per cent. of our gross stock, and at rate of freights at the present time vessels can not stand such exorbitant charges. Hoping that attempts for our relief may prove successful,

I remain, respectfully, yours,

W. C. THOMPSON,
Round Pond, Lincoln County, Maine,
Master of schooner Jonathan Bourne.

The Commerce Committee of the House of Representatives of the Forty-fourth Congress, after a careful examination of the subject of pilotage, presented an able and well-considered report, drawn by Hon. H. L. Pierce, of Massachusetts, in which they said:

One witness who appeared before your committee stated that he represented twenty-three vessels, which made about seven hundred passages in the course of a year; they had never taken a pilot and had never yet sustained damages to the extent of a hundred dollars. The captains, he said were much more competent to handle the vessel than the pilots, for the reason that, while possessing an equal familiarity with the channels and harbors which they frequented, they had a better knowledge than the pilots could have as to the working of the vessels.

It is stated that the average capacity of vessels engaged in the coastwise trade is about 350 tons. On that basis the charges for pilotage would be from $20 to $45 each time a vessel enters or leaves a harbor. It is a tax which, in the present depressed condition of the shipping interests, bears heavily upon a class of people who are specially deserving of consideration and encouragement; and it is sufficient in many cases to change the adventure from one furnishing a moderate return to one in which there is a positive loss. Two statements of actual voyages by coasting vessels are appended, showing the amount paid for pilot fees. In the case of the schooner E. T. Cottinghan, with a cargo of coal, from Philadelphia to Savannah, and a cargo of lumber from Jacksonville to Baltimore, the pilot fees amounted to 8¼ per cent. of the total amount received for freight. On that voyage the captain lost $100 over and above his share of the freight.

Inasmuch as the ten Southern States which retain such oppressive pilotage laws have very few sailing vessels, it seems probable that because of the slight local interest in a merchant marine the pilots are allowed to dictate the State pilotage laws solely in their interest. The sail tonnage of the United States is 2,331,970 tons, of which only 214,345 tons is owned in the ten States that alone maintain laws compelling all coastwise sailing vessels, piloted by their own masters or

towed by a steam-tug under the charge of a United States pilot, to pay a second and unused pilot under State authority.

Some of these States, notably Georgia, exempt from the payment of compulsory pilotage fees vessels trading between the ports of such State, but impose this burden on vessels trading between the ports of such State and the ports of other States. It is time that Congress should put an end to such discriminations in a matter under Federal control and place all American vessels in the coastwise trade, whether sail or steam, on the same basis as to pilotage in every State of the Union.

What objections are urged to a measure of so evident justice? I will allow the pilots, who maintain a close and powerful association to maintain laws in their interest and who appeared personally and by attorney to oppose this bill, to answer for themselves. In a circular sent to labor organizations the New York Pilots' Association says:

> It is for the protection of vessels * * * that the [pilot] service must be maintained, and that is impossible if every master of a vessel is left free to take or reject the pilot. * * * The bill is in the interest of foreign vessels. * * * We would ask you, Is the interest of foreign steamship companies to be considered by the legislative power of America before the "life, liberty, and the pursuit of happiness" of those who are American citizens? * * * In the name of fraternity we ask you for sympathy in our effort to maintain the integrity and dignity of our trade and calling. * * * We request all our brothers to use their influence on all present members of Congress and all aspiring candidates, and induce them to pledge themselves to oppose the present pilot bill and all future bills.

As this circular was generally sent to labor organizations in sections of the country unfamiliar with the subject, it is not surprising that some of these bodies were misled into taking action in opposition to the bill. It is suggestive that not a single labor organization in which seafaring men were members raised its voice against the bill. Some which at first took action against it rescinded their vote on ascertaining the facts. And undoubtedly all would do so on a full understanding of the situation, for a fundamental idea of all such organizations is opposition to monopoly by law, which is the essence of the compulsory pilot-fee system.

I call the attention of the House to the misleading character of the circular sent out by the New York pilots. The circular charges that "the bill is in the interest of foreign vessels." It does not affect a single foreign vessel, but leaves such vessels to be regulated by existing laws. It simply relieves American coastwise sailing vessels and the masters, mates, and seamen who sail them.

The circular presents the picture of a pilot boarding a vessel, and asks if men who brave the dangers of the ocean in such service ought not to be considered by Congress, and protected in their hazardous calling. But are not the masters, mates, and seamen who sail our vessels, and who are almost constantly exposed to the buffetings of the deep, entitled to as much consideration as the pilots who are far less exposed? These hardy seamen are not supported by laws which compel any one to pay them for services not rendered. Why should the pilots alone be favored with such legislation? The workingmen of the country have no laws compelling men to pay them wages when they do not perform services. Why should the pilots ask workingmen to aid in maintaining laws compelling seafaring men to pay for pilotage they do not use?

They circulate appeals for help "to maintain the integrity and dignity" of pilotage by compelling vessels to pay pilots when they are not used. But other people maintain "the integrity and dignity" of their business by obtaining pay only when they perform a service. Why do the pilots seek for legislation which no workingman ever thought of in his own case?

The circular conveys the impression that the New York pilots are wage-workers who need laws enforcing the payment of fees by those who do not use them, in order to exist. The report of their earnings for the past year show that one hundred and thirty-three New York pilots earned last year $378,763 in fees, nearly $3,000 each. Even after deducting their own estimates for expenses, profit on capital invested, &c., there remained $1,435, or nearly $5 per day, to each pilot for personal services, besides the profit of their capital. And no one can get into this favored class except by appointment of a board of commissioners, consisting of three persons appointed by the Chamber of Commerce and two by the marine insurance companies. For such a close monopoly as the New York Pilots' Association to appeal to wage-workers receiving an average of $1.50 per day for sympathy and support in maintaining laws in their interest such as no wage-worker ever dreamed of for himself, is a strange proceeding. There is not a seaman, not a mate, not a master of a vessel, not one of the well-nigh impoverished owners of our coasters, who has earned from his venture on the ocean the past year as much as the average New York pilot that appeals to labor organizations "to influence members of Congress and aspiring candidates and pledge them" to favor laws which compel the impoverished masters and owners of coasters to pay pilots for services they do not need nor use.

The circular alleges that unless the laws compel all vessels to pay fees to State pilots "the pilot service can not be maintained," and vessels and lives will cease to have proper protection. It would seem as if the owners of American vessels and the masters, mates, and seamen, who have their own property and lives at stake, ought to be judges of what is best for them. If they are satisfied that they can pilot their own vessels and that exemption from the payment of pilots whom they do not use will not detract from the efficiency of their pilotage service, why need the pilots trouble themselves?

All experience shows that where any service is demanded or needed the supply is sure to follow. This is the principle on which all other business is successfully carried on; and why not pilotage? Skillful physicians are as necessary to the health of a community as pilots to the security of navigation. But no one comes forward as the pilots do and argues for a law to compel well persons to pay fees to physicians on the plea that this is necessary to maintain an efficient medical corps. The demand for medical services for the sick insures a sufficient supply of skillful physicians. So the demand for pilotage by foreign vessels and vessels in the foreign trade, and by such coastwise vessels as need other pilot service than their own masters, will secure a sufficient supply of skillful pilots.

But we can appeal to experience in this matter of pilotage. In 1852, when Congress passed the law relieving coastwise steam-vessels from the obligation to pay State pilots not used, it was predicted that this would destroy the pilotage system, but it has done nothing of the kind. It has made fewer pilots necessary, but a sufficient number of skillful pilots are always ready to meet the demand. When Maine, Massachusetts, and all the other Northern States bordering on the Atlantic and Pacific and the great lakes abolished their laws requiring coastwise sailing vessels to pay fees to pilots not used, the pilots contended that it would destroy the pilotage system and increase shipwrecks; but the result has been far otherwise. In not one of these States has the efficiency of pilotage been diminished or shipwrecks increased. The assertion of the pilots that it is impossible to maintain an efficient pilotage system if masters of coastwise sailing vessels are left free to take and pay a pilot or not, is disproved by the fact that every State in the Union but eleven has done this without impairing in the least the efficiency of their pilotage. Indeed, the result has been to increase the efficiency of the pilotage system by rendering it necessary for pilots to seek vessels as far out at sea as possible in order to secure employment, whereas, under the system of compulsory fees the pay is secured without service.

It is contended that the ten Southern States, whose laws still maintain compulsory pilotage fees, have not sufficient foreign trade to maintain pilots if coastwise sailing vessels are exempted. The facts prove otherwise. Maine and New Hampshire, which have abolished compulsory pilotage fees as to all vessels, and Rhode Island, New Jersey, and Delaware, which have abolished compulsory fees as to all coastwise vessels, have less foreign trade than any Southern Atlantic or Gulf State; and yet their pilotage systems are as efficient as those of any other States.

Much has been made by the pilots of the fact that the New York marine insurance companies have in the past protested against the change proposed in pilotage. But when it is borne in mind that these insurance companies are officially connected with the pilot commissioners their protest becomes of little value, especially when these same New York companies insure a vessel trading with ports which have abolished compulsory pilot fees as cheaply as they do vessels trading with ports making the fees compulsory. The fact that all the Boston marine insurance companies, located at a port where the system proposed by this bill has been tried for many years, unite in a petition for the passage of this measure is a sufficient answer to all suggestions that the system proposed will in any manner lessen the protection to vessels.

Indeed, it should be observed that this bill does not take away from any coastwise sailing vessel any existing obligation to secure competent pilotage. It simply authorizes the licensing of a master or mate to pilot his own sailing vessel where he is found competent to do so (just as the master of a steam-vessel may), and exempts a coastwise vessel so piloted and one towed by a steam-tug under the charge of a United States pilot from the obligation to pay a second pilot under State authority when he is not needed nor used.

There is nothing in the conditions surrounding sailing vessels in the coastwise trade which justifies withholding from them the pilotage privileges granted to steam-vessels in the same trade. If any preference should be given it ought to be extended to our coasting sailing vessels, for they are generally owned by individuals of small means and are much smaller than the steam-vessels in the same trade and therefore much better able to enter and leave our ports with the pilotage of their own licensed masters when the wind and tide are favorable, or under the tow of a steam-tug in charge of a United States pilot when the conditions are unfavorable. It should be remembered also that the same inspection board which successfully examines and licenses the master or mate of a steam-vessel carrying passengers to pilot his own craft in the ports of such district is equally competent to examine and license the master or mate of a sailing vessel which carries no passengers.

The suggestion has been made that it is unwise to modify a system of compulsory pilotage fees which has been so long in force for presumably good reasons. But it should be borne in mind that a change in pilotage has been going on until now compulsory fees as to coastwise steam-vessels have been abolished by Congress in all the States of the Union, and as to coastwise sailing vessels in twenty-seven States of the Union. The rule is voluntary fees; the exception in only eleven States of the Union is compulsory fees, and that only as to sailing vessels. Is it not time that the same rule as to pilotage fees as an instrumentality

of commerce should prevail for all the States? Over thirty years ago England abolished compulsory pilotage fees as to vessels in her coastwise trade.

Presumably this change from compulsory to voluntary pilotage fees where a vessel is piloted by its own licensed master or by a steam-tug under the charge of a licensed United States pilot has been made for substantial reasons. When the First Congress met under the Constitution few of our harbors were marked, and there was a necessity for guidance of every vessel by local pilots which does not now exist. Millions of dollars have been expended by the Government in improving our harbors, erecting light-houses and monuments, placing buoys and fog-bells, deepening channels, surveying harbors, and publishing charts, until now the masters or mates of any of our small coasting vessels can enter and leave the ports which they are accustomed to visit as safely as any local pilot. If they are found competent by United States inspectors to pilot their own vessels, or if they enter or leave a harbor by means of a steam-tug under the charge of a United States pilot—as three-fourths of our coastwise sailing vessels do—why should they be obliged to pay a second pilot under State authority whom they do not use?

Mr. Chairman, the justice of this bill is so evident that there ought to be no hesitation in passing it. It is asked for by the vessel-owners, masters, mates, and seamen of the country. From all parts of the country where shipping is owned to any considerable extent there have come up petitions for its passage. It was recommended by the House Shipping Committee of the Forty-eighth Congress. It was recommended by the late Secretary Folger, who said in a letter dated December 26, 1883:

Inasmuch as the bill puts sailing vessels of the United States upon the same footing, as regards pilots, as steam vessels of the United States, I approve of the bill. There is no reasonable ground for discriminating against sail vessels in the matter of pilotage by conceding greater privileges to steam vessels.

It is recommended by the Bureau of Navigation. It is recommended by the shipping committee of the present House.

More than a million of dollars was paid by our shipping in the last fiscal year for pilotage, much of it unnecessarily. This is the heaviest burden remaining on our merchant marine. In seeking measures to encourage and revive our shipping interests, we shall fail to do what is within our reach if we refuse to give our coastwise tonnage the relief offered by this bill.

Rivers and Harbors.

REMARKS

OF

HON. JOHN A. SWOPE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 15, 1886,

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. SWOPE said:

Mr. CHAIRMAN: It is not the province of this Government to interfere in the business of any individual, and by its paternal aid to help him conduct it. Nor, as I regard it, is it any part of its duty to assist any number of people of any particular locality to cheap transportation when it is done at the expense of many who have no special interest in it, except to pay their share of the expense.

Mr. Chairman, I am of the opinion that it is a monstrous perversion of the provisions of the Constitution to pry around mountain rivulets and sluggish lagoons to ascertain whether they contain a sufficiency of water to entitle them to an application of this much-abused clause. I fail to see any special virtue in water in such small quantity that it requires a dam to collect it in sufficient quantity to float a flat-boat, and then leave the question in doubt as to whether it was worth a dam. I believe that water has a special virtue in church ordinances for purposes of baptism or immersion. I concede that it has special properties when judiciously mixed with the staple product of Kentucky—say in the proportion of half and half. But I utterly fail to see why there is anything in the composition of the aqueous fluid that takes it out of the category and gives it special properties and attributes of its own. I can readily understand why the important harbors of the country should be fitted for the commerce which comes to them either for refuge or to unload the commodities brought there from other countries. I can also see, though not so readily, that certain rivers which drain a continent, or others which flow through many States, should be put in navigable order at the public expense. But to prospect around to find a stream on which through some pretext a certain amount of the public money can be expended is entirely outside of public policy and against the general welfare.

The first step in the process seems to be to discover the water, and the next to get an engineer's report thereon. Now, put a thoroughly trained and well-equipped engineer to work to make a report on any stream whatever and you may rely upon it that he, with the aid of those interested in that particular locality, will make a very readable report thereon and demonstrate the entire feasibility and absolute necessity of the improvement. The problem is not so difficult as it might seem, for given a few inches of water measured at the flood, with timber fitted for the saw-mill and an undergrowth of scrub suitable for hoop poles and barrel staves, and the necessity for the improvement is absolutely and beyond all peradventure clearly demonstrated.

When you add to all this wealth lying unused for the want of a water way to the sea the immense and almost incomprehensible production of eggs and butter, the former of which become addled and only fit for hotel use scrambled, and the latter rancid, and all because of the want of facilities for transportation, the absolute necessity for the improvement becomes at once apparent. It seems hard indeed that that particular outlying part of creation should any longer be allowed to pine and languish on account of the niggardly refusal of Congress to appropriate a few thousand or a few million dollars. The reports of engineers, which fill several ponderous volumes, are a study which will richly repay a close examination on a rainy day at an outlying railroad station in the absence of the weekly newspaper, the Shorter Catechism, or Baxter's Saint's Rest.

It is interesting to observe the cautious and extremely prudent manner in which the adventurous engineer approaches the intricate survey, the exactness with which he designates the depths of water at 8 inches at low water which develops into a roaring flood of 4 feet 2½ inches after a two-weeks rain, and the demonstrable certainty that if this superabundance could be held in absolutely water-tight dams and dealt out economically the needs of a prostrate commerce could be subserved and the waning prospects of the member from the district promoted. Commerce in those far-off regions could be still further promoted by the payment of a liberal subsidy to flatboats and dugouts carrying the United States mail.

I quote a few extracts from an engineer's report which one could scarcely believe to be in solid earnest did they not appear in good company among the valuable collection of reports. Speaking of a certain river, which shall be nameless lest a full knowledge of its extraordinary merits should at once entitle it to a first place among the big rivers of the country with a corresponding increase of appropriation, he says:

Its course is tortuous, as is shown by the fact that the distance is 54 miles in a straight line and 100 miles by the windings of the stream.

Evidently, Mr. Chairman, there is nothing mean about that stream; it gives good measure as to length, but not "running over," as will appear farther on in the report:

The pools vary in depth from 3 to 10 feet and are separated by shoals of cobble-stones and gravel, on which there has been at low seasons a depth of but a few inches of water.

Could a stronger appeal than this be made to the tender sensibilities and sympathetic feelings of this House? Think of it, Mr. Chairman, so vast in its beginnings and reduced probably by its own liberality in the way of length and by cobble-stones to the low ebb of a few inches of water!

The approved project of improvements has been the removal of rocks, snags, overhanging trees, &c., and the cutting of narrow sluices.

We are then told that the principal interests to be served are those of lumbering, but also much country produce is carried down in small boats. The cost of the improvement is estimated at the insignificant sum of $100,000. O great and roaring Kanawha! O shade of the mighty Kiskiminetas! So small a sum for so great a river!

In the report on another river the navigation is represented as being "tortuous and dangerous." As it is proposed to deepen the channel to two feet it is easy to understand how the navigation of this river on foot should be described as "dangerous," for it is apparent that if any one were to attempt to cross it with low-cut overshoes there would be serious danger of wet feet, with all the evils resulting therefrom, even to the total wreck of the constitution. Mr. Chairman, the whole business of improving these so-called navigable rivers would seem like a huge jest were it not that it has been seriously proposed in this House to expend millions of the people's money on just such projects.

The key-note to the situation is given by the repeated and ever-recurring attempts to have the appropriations increased in almost every instance where the river runs through a member's own district. Evidently the idea is that it will be water on his mill, however scarce it may be for all purposes of navigation. But, sir, the eyes of the taxpayers of the country are well open to the iniquity of this bill. They will not submit patiently to such a monstrous perversion of the true intent and meaning of that clause of the Constitution authorizing, or rather intimating, the right for Congress to spend money in this direction. Nor does the evil end with the useless expenditure of large sums of the people's money.

Aside from the evils always resulting from profligate expenditure there remains the certainty that sooner or later the Treasury of the country will be emptied and the pretext afforded for further taxation, and the encouragement of monopolies which have already consumed the life-

blood of the people. The sword is double-edged and cuts both ways. It proposes, in connection with other projects of like character, to exhaust the so-called surplus and to create the necessity for a recurrence to war tariff and war taxation, or at the very best to fasten the present incubus firmly upon our shoulders. And this it is proposed to do in the name of and in the interest of the laborer. Every measure involving expenditure is claimed to be chiefly in the line of his interests and his prosperity, and to be in opposition to railroad monopoly, and the name of the great Architect of the universe has been appealed to to prove that the highways created by His hands could never be perverted to the base uses of human greed.

But, sir, though the water ways may be free to all, how long would it be before their navigation would fall into the hands of the worst kind of monopolists in the shape of navigation companies with capital large enough to relegate to the back-waters all the flatboats, scows, and dugouts in the country. Capital and combination are alike powerful on the water as on the land, and will make their influence felt everywhere, alike in the bowels of the earth as on its surface; on the "deep resounding sea" or on the placid bosom of an inland lake, ay, even on that poetic dream of the imagination, that Miltonian creation of the bard whose "eyes in fine frenzy rolling" beheld a Hennepin. You can not get away from their influence. They are all-persuading and all-powerful.

When these improvements have been completed, when the dams hold every drop of the precious fluid except that which is parsimoniously dealt out through locks duly made and provided as per plan and specification, it is to be supposed that the work is completed and the dwellers upon the shores of the loud-resounding sea can rest in peaceful content, satisfied that their products can now be shipped to the remotest bounds of the earth. But lay not this flattering unction to your souls. River and harbor bills contain a clause for continuing improvements, which means, being interpreted, that when once a work of this kind is begun it must be continued *ad infinitum*. The more money that is spent the stronger reason why more should go in the same direction. A river once down in the bill for an appropriation is sure to make its annual appearance thereafter.

The gentleman from Missouri in pressing upon the attention of this House the superior claims of his special river for a large addition to the amount allowed by the committee, urged as in argument the vast number of bushels of corn, I think he said 413,000,000, and said that at home it brought only 19 cents, while in New York it was selling for 40 cents; claimed that the difference was paid to railroad companies in extortionate freight charges. Land is comparatively cheap in that country, the soil fertile, and the expense of growing a crop so small that Eastern farmers, even adding the freight, which the gentleman calls extortionate, are no longer able to compete with their Western brethren.

The extortion they claim is on them, and that living near to market they are assessed by the railroad companies and compelled to help pay the freight of farmers shipping great distances. For instance, the cost of shipping a barrel of flour from my place, which is within 50 miles of tide water, is just as high, or I believe a little higher, than it is from Chicago, which is 850 miles from the same tide-water point. So that, in my opinion, the argument works altogether in the other direction. The people in my section of the country ought not to be asked to help cheapen the freight of their competitors. It is too much like kissing the rod that scourges them.

Mr. Chairman, in this as in all other respects, every branch of industry, whether it be agriculture or manufactures, should stand on its own basis and let the fittest survive. In the East proximity to market should be an offset to dearness of land and increased cost of cultivation. In the West, on the contrary, increased freights are more than made up by the cheapness of the land, its unexhausted fertility and other advantages so apparent that they suggest themselves to every mind, and in fact account for the astonishing growth in population, and I may add in wealth, of that land of Goshen, flowing with milk and honey. I submit that the equitable way to reduce the freights is to move a thousand or fifteen hundred miles nearer to the markets of the world or else to wait patiently until they have a market at home which will surely save them the abhorred necessity of paying freight.

It may be out of place in the discussion of a bill of this character to say a good word for the railroads. It has, I think, been too much the fashion to hold them up as horrible and terrible monsters of insatiate greed, which swallow whole provinces, and, like Smike in Dotheboys Hall, still cry for more. And yet our almost miraculous growth in population and in wealth is due largely to them. Villages, towns, and cities have sprung up like magic wherever they have extended, and without their aid many of the flourishing States now represented on this floor would at this day remain almost unknown and their praises unsung or unspoken here.

But it is claimed that we want river navigation to act as a check on railroads, and the whole country is asked this year to contribute $15,000,000 to establish this check, and will be asked to pay millions more every year to keep in good working order the old checks and to establish new in the shape of canals where there is no sign of their having been attempted by nature; or as it has been put on this floor, by an overruling and beneficent Providence as a check on railroad monopoly. And I suppose that it is this idea which has led so many to attribute the special and peculiar property to water already alluded to. On any other theory I fail to see why the Government for the reasons assigned should not also be asked to build railroads and run them free.

Think of it, Mr. Chairman, a railroad to every Congressional district in the land, with free passes not only to the member but to each and every one of his happy constituents! But this would be the millennium of transportation, and in the mean while we must be content to be benevolent in spots and streaks and restrict our benevolence to those who, as it were, have been sanctified by water.

The fight between river transportation and railroad is an unequal one, and in my opinion sooner or later will end in the victory of the latter. The engineer's estimates and the amount carried in this bill indicate that the contest can not be continued for many years at the cost and charges of a large portion of the tax-payers of this country who have no direct interest in it. The work requires to be constantly renewed at an ever-recurring cost, and when it has been completed a single spring flood may undo the whole of it and render a new plan, new estimates, and renewed discussion here necessary; and so the matter goes on *ad infinitum*.

As already stated, I am not opposed to the expenditure of a reasonable amount of money in the direction indicated in this bill, but not a cent should go with my consent to rivers which are so only in name, and whose improvement serves only limited and local interests. Neither am I willing to expend vast sums—and they are vast when compared with the results which have been thus far attained—on uncertain improvements, whose merit can not be demonstrated by any actual and practical results. The problem of the improvement of the Lower Mississippi is one of the most uncertain, least understood, and most problematical of any on this bill The experiment is costly in the extreme, and the results so uncertain that a return for the money invested in this is about as improbable as it would be to cast it into the rushing flood, and then to dredge for its recovery from the source to the mouth of the great river.

Before I close, Mr. Chairman, I wish to repeat so plainly that it can not be misunderstood, that I do not object to the improvement of rivers whose claims to recognition as national water ways are, and have been for years, fully recognized. But even in the improvement of these we should "hasten slowly" on well-matured plans cautiously tested at every step. In short, we should act precisely like every prudent business man does in the enterprises in which he embarks his own funds. We should ascertain what it is that we desire to accomplish, what its cost, and see well to it that we are not drawn unconsciously into expenditure undreamed of at the start. Let us not follow in the footsteps of the well-intentioned spendthrift who, having an inherited income to spend, proceeds to scatter it lavishly among all who ask a share of his patrimony. He may every now and then help the meritorious, but the bulk of his estate will be yielded to the clamorous importunity of the undeserving.

I do not entertain a doubt but that the Committee on Rivers and Harbors have given this bill their closest scrutiny and that they have kept out of it everything that in their opinion should have no place in it. But it has nevertheless grown to the vast sum of fifteen millions or more. If that large amount were expended in strictest accordance with the requirements of the bill I very much doubt whether river navigation would be largely benefited thereby. The mistake is in endeavoring to do too much in the attempt to comply with the idea prevalent here, and frequently hinted at on this floor, that the amount carried by the bill should be divided as evenly as possible among the different sections and States.

This is a grave error, impossible to be practically carried out. That theory of expenditure would be a serious hardship to those districts which, while they may be required to pay their full share of the cost, have not a sufficiency of water within their borders to entitle them to the benediction of the committee and a place on the bill. Mr. Chairman, after many days of tedious debate we reached on Friday evening a portion of the bill in which I, for one, thought there would be plain sailing to the end of the voyage and our deferred dinners. No hidden rocks nor treacherous quicksands, no caving levees nor dangerous snags were longer to be dreaded or avoided by amendments. Mistaken confidence!

That portion of the bill simply requested the Secretary of War, in the exercise of his own discretion, to have certain rivers surveyed, and these seemed to be pretty evenly divided among various States. While I suppose everybody felt assured that the good judgment of the Secretary would induce him to let the most of them severely alone, and without the advertisement of an engineer's report, yet still a flood of amendments straightway poured in upon the exhausted clerk. It was proposed to add to the list, among many others, "Cassity Bayou," "Noxubee River," to "ascertain whether it could be made continuously navigable by a system of locks and dams." This last was amended by inserting after the word "dam" or "otherwise."

This last amendment, Mr. Chairman, seems to me to open a wide field for speculation. If a dam will not do the business and close it up satisfactorily, then what will be the potency of the "otherwise?"

Will it be constitutional and will it be in strict compliance with the requirements of the Christian religion? These numerous amendments so freely offered and so readily accepted reminded me forcibly of commencement day at a school which I attended in my youth. On that eventful day premiums were pretty lavishly distributed. We had first premiums and second premiums and premiums *ex æquo*, which were neither first nor second, but had the merit of including a good many boys in its comprehensive grade. In addition we had what was termed "honorable mention." This last grade included about all the boys in the school "not otherwise provided for." When well-mouthed and *ore rotundo* it sounded well and pleased the anxious parents and interested friends. This is, I suppose, pretty much the state of the case with respect to some of these forlorn rivers with the hard names. They come in for "honorable mention," and their names on the bill will please the people who dwell upon their banks.

It will be observed, Mr. Chairman, that during these remarks I have not referred to statistics nor quoted figures, nor asked to have them published in the RECORD. There was a period in my life when I, too, thought that figures could not lie, and when I had an immense respect for statistics. But one of the reports issued by the Reading Railroad Company (previous to its becoming insolvent and going into the hands of a receiver), utterly and forever destroyed my faith in that kind of mathematics which goes to the making of a report. Sir, they are a delusion and a snare for unwary feet. Nothing can be made to lie like figures when ingeniously handed.

I do not, Mr. Chairman, claim the sole merit of this discovery. The unreliability of balance sheets was discovered years ago by a Scotch merchant, whose confidential book-keeper led him into unwarranted expenditure by simply adding the year of our Lord to the credit side of the year's accounts. There may, however, be an honest difference of opinion as to the value of statistics and "books of estimates" and "reports," and recognizing the possibility of this, I with the kindest motives, but with great misgivings as to the effect on their mental and physical health, respectfully refer the members of this committee to the statistics as printed in the RECORD during the progress of this debate, and I advise them in the language of Captain Cuttle, "when found to turn down the page and make a note of it."

The exceeding gravity of that subject might seem to demand a more ponderous treatment than I have thought proper to accord it. Undoubtedly, sir, it is a weighty and exceedingly difficult problem—one concerning which a great diversity of opinion exists at present and the difference will become greater from year to year in exact proportion as the scope of the bill is attempted to be widened and its provisions enlarged. The "other purposes" of the bill may mean a crevasse, small in its beginning, but ever widening until a river pours through in a flood and devastates the country. Let it be our effort to close these dangerous and wasteful openings in the levees which have been erected for our protection, and let us substitute for them flood-gates, if you will, which will be controlled by the needs of commerce and regulated by the necessities of the people.

Rivers and Harbors.

SPEECH

OF

HON. PRESLEY T. GLASS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 15, 1886.

On the bill (H. R. 7490) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. GLASS said:

Mr. CHAIRMAN: Fifteen millions of dollars is a large sum to be appropriated for the improvement of our rivers and harbors. Yet when it is considered that there was no appropriation made for this purpose by the Forty-eighth Congress, and this is an appropriation for two years, it will appear to be quite reasonable. Production, distribution, and exchange are the three great economic questions that address themselves to us as legislators, and we should meet them in a broad and liberal spirit. No parsimonious policy will ever secure to us the highest development of our industrial pursuits. Of all the world's great arteries of commerce none bear upon their bosom a tonnage equal to that carried upon the Mississippi and its tributaries.

The navigable streams of this system of rivers have a mileage of 15,640, there being forty-three that have been declared navigable, draining twenty-one States and Territories, and the twenty-one States and Territories contain 51 per cent. of the nation's area, and 58 per cent. of the population—the most productive country of equal area on the face of the globe. And it is to this great valley of unsurpassed fertility that the country must look in all time to come for its meats, its breadstuffs, and its clothing. It is the duty of our Government to take hold of these great thoroughfares provided by nature, and so utilize and improve them as to put them in the best condition for the safe and cheap transportation of the products of the country to market, especially the farm products, that are always bulky and heavy in proportion to their value. Much the larger portion of these farm products must have cheap transportation, or their values will be consumed in the charges it takes to get them to the market. They are compelled to seek distant markets, and furnish more than 75 per cent. of our foreign exports. How important, then, that they should have cheap outlets to the ocean.

The jetties at the mouth of the Mississippi have already proved a success, and constitute the grandest achievement of hydraulic engineering of this age. Prior to their construction there had passed out through the mouths of the Mississippi River about 4,400,000 bushels of wheat. Since that time there have gone out more than 48,700,000 bushels. Continue this and other proper improvements all the way to Cairo and along the forty-three tributaries, giving to the farmers and manufacturers and miners the free navigation to the Gulf, and when in the course of time the isthmus shall be canalled by private enterprise, the Gulf will become the western Mediterranean and the commerce of the world will be focused upon it. And as commerce upon the ocean had its birth upon the ancient Mediterranean, it is destined to reach its highest development and greatest magnitude in this our western Mediterranean.

Invention, discovery, and the developments of science have directed the attention of the world to our progress and rapid accumulation of wealth. And the time is not far distant when the commerce of the world will pass through the Gulf of Mexico and be distributed from that point to every civilized quarter of the globe. When Vasco Da Gama discovered a new route from the Mediterranean to the East, by way of the paths of the ocean, he revolutionized the trade and commerce of the East and concentrated commerce upon the Mediterranean; and so will the commerce, not of the East alone but of the world, be centered in the Gulf when Eads and De Lesseps shall have triumphed over nature's obstacles and united the two oceans by rail and water. The teas, the spices, and the silks of the far East, and the fabrics of the shop and the loom of Europe will be brought to the cities now around the Gulf and those that will spring up hereafter, to be exchanged for the cotton, cereals, and meats, as well as the manufactured fabrics of our country, and also the cabinet and dyewoods and tropical fruits of Mexico, Central and South America. Then we will enjoy real prosperity, and dictate the financial and commercial policies of the world.

Hence I say improve our Western water ways, and more especially the Mississippi, in order that this happy event may be hastened. The amount asked for is not large when we consider that the Government is collecting from the people daily in the way of taxes a million and a quarter of dollars. These taxes can be applied to no better purpose than to improve and increase the facilities for transporting the products of the country to the markets of the world.

The Mississippi River washes the western border of the district which I have the honor to represent on this floor, and the work done on the Plum Point reach is on the border of the county in which I reside. And I know from personal inspection and observation that the navigation at this reach has been very greatly improved. During the low-water season, in the summer and autumn, prior to the beginning of the work, it was not at all unusual to see one or more steamboats hard aground on the bars, there being scant 6 feet of water across them.

Often these boats would remain stuck on the bars for days at a time, with the water spread over the surface a mile and a half in width. Since the contraction and revetment work has been in an advanced state of progress. There has been no boat aground at that place that has kept in the channel, the water being from 10 to 12 feet in depth across the bars all the year round. The expenditures, though large, have been in the interest of commerce, and will bring in tenfold greater returns to the people than the work will cost to complete it, and it gives every promise of being entirely successful.

I give an extract from an address made at Saint Louis by Hon. R. S. Taylor, of Indiana, a member of the Mississippi River Commission, who made personal inspection of the work at Plum Point:

> Plum Point reach is 20 miles long, and in some parts nearly 2 miles wide. It embraces eleven bars, some of them, heretofore, among the worst on the river; it contains five chutes, which are to be closed, varying from 600 to 3,400 feet in width. Its complete improvement will require the revetment of six caving banks, of which the shortest is half a mile and the longest 4 miles in length.
>
> Permeable dikes have been constructed across four of the chutes to be closed. No work has been done on the fifth, known as Yankee Bar Chute, because it is hoped that the influence of the works above it will suffice to close it. The effect produced by these structures has exceeded all anticipations. The quantity of earth which has been deposited by means of them is enormous. The deepest fill in any one place is 30 vertical feet.
>
> In Elmot Chute there has been an average fill of 6½ feet distributed over an area of 500 acres; in Upper Osceola Chute, an average of 5½ feet distributed over 240 acres; and in Bullerton 7 feet, distributed over 250 acres. While the closure of the chutes is as yet only partially complete, it has produced a large concentration of water in the main channel, which has been followed by marked and gratifying results. The bars which formerly obstructed navigation have been cut down from 6 to 10 feet throughout the reach.
>
> The last season was one of unusually low water, the lowest within ten years. In other parts of the river 5 and 6 feet depths were not uncommon. But here there was a 12-foot channel throughout the season. If every part of the river had been as good as Plum Point reach the J. M. White and the Natchez could have raced from New Orleans to Cairo in dead low water.

DIAGRAM AND EXPLANATION

SUBMITTED BY

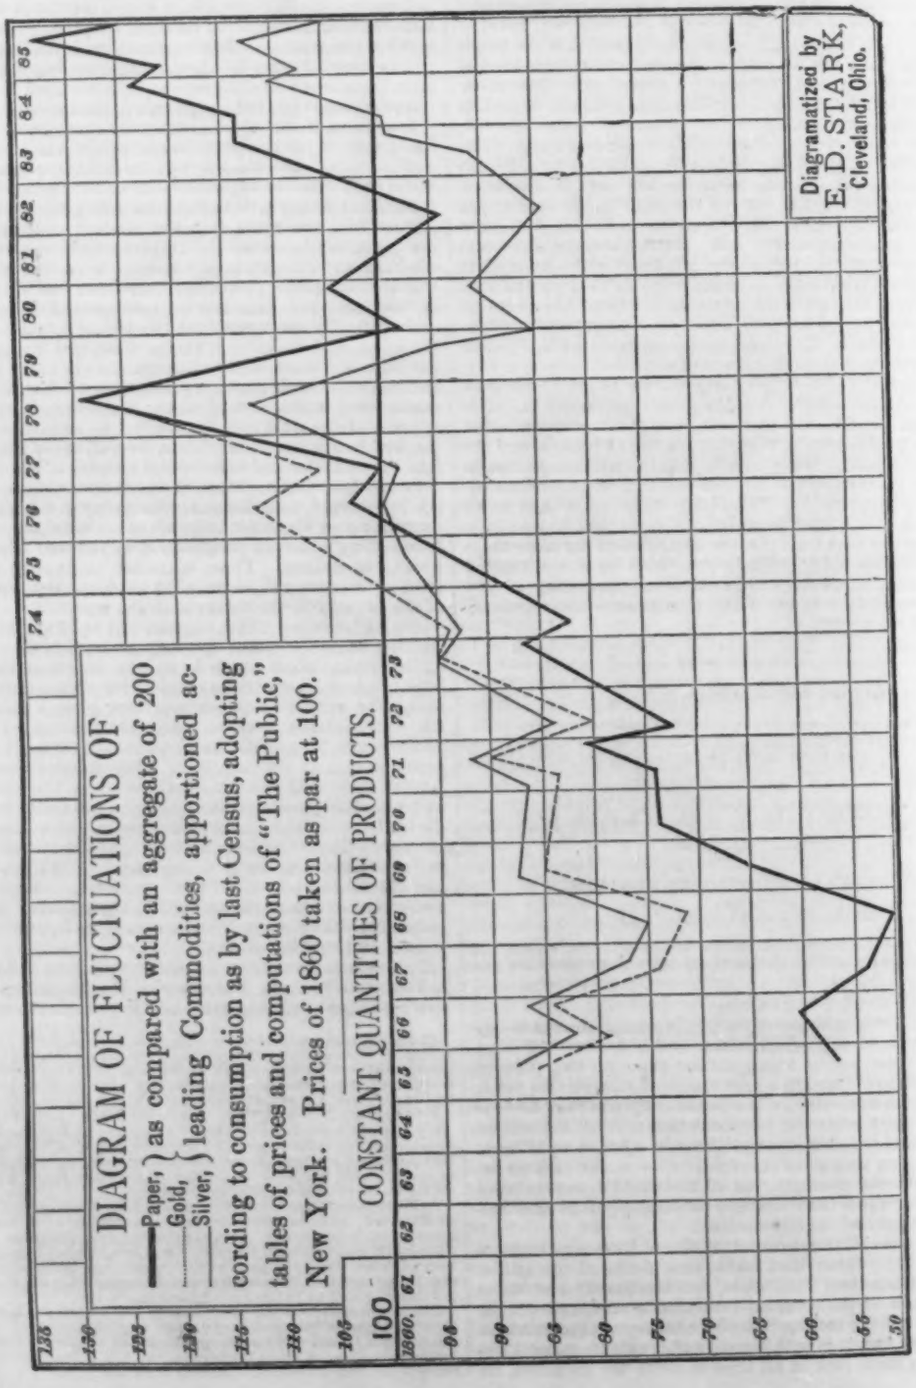
HON. A. J. WARNER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 7, 1886.

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes—



Mr. WARNER, of Ohio, said:

Mr. SPEAKER: I ask leave to insert in the RECORD a diagram showing the variation in value of gold and silver as compared with commodities, prepared by Mr. E. D. Stark, of Cleveland, Ohio, with a brief explanatory statement.

The SPEAKER *pro tempore*. Without objection the leave will be granted.

There was no objection, and it was so ordered.

Mr. WARNER, of Ohio. If from two vessels at sea, A and B, observations were taken, first from A on B, which showed that B was drifting eastward, and then from B on A which showed that A was drifting westward it would be necessary in order to determine which vessel had moved or whether both had not changed positions to refer to some object relatively fixed, or to the stars. So in the following diagram two hundred commodities in the proportions in which they enter into consumption per capita are taken as such standard. Tested by this, the best possible standard, it appears that both metals have changed, that both since 1876 have risen above the level of 1860, but that gold has risen much more than silver. Tested by this scale silver bullion has not fallen, but since 1883 has risen 12½ per cent. above the price-level of commodities for 1860. This diagram has been carefully prepared by a close and accurate student of the subject, and is worthy of careful study.

This diagram has been constructed for the purpose of showing graphically what has been the behavior of each of the three kinds of standards of money in use for the last twenty-five years, as to each other but more especially as to commodities.

In a dispute about standards we must first settle what is the chief excellence in a standard. Happily on this point there is perfect unanimity. Everybody says we want a standard that has stability and uniformity in value. By that is meant that a definite weight or quantity of the metal adopted as the monetary unit shall have approximately the same value through long periods and shall not be apt to take on sudden and violent changes of value. This money unit must buy, not indeed the same quantity of each product—that would make it impossible for commodities to vary among themselves—but that in the large aggregate of all commodities it should buy about the same one year with another. That is what is meant by stability in value.

In order to make a careful comparison we need a commodity unit made up of representative articles used in every-day life. The heavy media line in the cut called "constant quantities of products" represents such a composite or aggregate unit. It is composed of two hundred leading products, such as wheat and all the other grains, fruits, potatoes, and garden products; hog products, as mess pork, bacon, ham, lard, &c.; beef and mutton, ditto, and dairy products; the different metals; over fifty chemicals; leather, lumber, glass, paper, the material of all textile fabrics, rubber, turpentine, &c. By the census of 1880 it appears that in all its various modes of consumption thirteen and a half bushels of corn were consumed to each inhabitant of the country; accordingly that quantity of corn is put into our commodity unit. One-fortieth of a pound of gum arabic per capita was used; so much of that, therefore, goes into it, and so on for each of the two hundred articles. They all go in in proportion to their actual consumption for that year. This aggregate is now reduced down to such a size, preserving all the time the proportions above described, as will be equivalent to some definite sum of money, say $100, according to the prices of 1860. The average prices of the year 1860 are taken as our standard of comparison; that is, the value—the purchasing power of a dollar; gold then is assumed as par. We have thus a commodity unit of the value of $100 in 1860, and the varying money equivalent of that afterward will indicate the varying value of our money at the successive periods embraced in our table—from 1860 to 1886.

It should be carefully noted and remembered that the 100 line is an aggregate of commodities that was worth $100 in 1860, and that its constancy is not in its money value, but it is constant as a quantity of the two hundred things apportioned as described. Where the heavy line, which represents currency, crosses the medium line, as in 1876-'80-'81-'82, it means the current prices of 1860 were recovered; where the dotted line crosses it, the dotted line being gold, it means $100 in gold would buy the same aggregate of commodities it would in 1860.

The prices of 1860 are taken as being normal, and if anything below the average of the preceding ten years, and prices were undisturbed by novelties in money legislation. The eccentricities of both coin and paper during the war involve elements foreign to the discussion and are therefore omitted.

Commencing with November 1, 1865, $174.77 in paper (greenbacks) was required to buy our commodity unit which makes the value of the greenback dollar .54 of the par of 1860. Gold at that date had fallen from its war price down to $1.46, so that $119.81 in gold would have bought the unit, making gold .85. In May, 1866, $167.60 in paper and $126.04 in gold would buy the unit, making their values respectively .60 and .84. In 1867 the mean annual price of the unit was $189 in currency and $136 in gold—.54 and .74. In 1868, the year of highest prices, paper went to .51 and gold to .716, their mean value for that year. For 1869-'70-'71, the mean annual value of paper and gold are indicated in the diagram. From November, 1871, on, the prices are indicated as of specified dates and not yearly averages. The gold line is lost in the currency line in 1873, by greenbacks coming to par.

It is thus made plain to the eye that the value in commodities of our dollar of account in 1868, averaged .51 and became, in 1878, $1.29 and in August, 1885, $1.34 as compared with $1 in 1860. There is in this showing no legerdemain, no selecting, tinkering, or distorting of facts to make a case. On the contrary a little reflection upon the constitution of our unit will reveal that the fall of prices (rise of money) is, in fact, minified for the reason that agricultural product and raw material have the controlling weight. A locomotive engine, a printing press, and a sewing-machine are each quite different things from those twenty-five years ago, and if increase of efficiency is taken into account, they would show a greater fall than has occurred in the great staples. Or if the products of these great implements, transportation rates, newspapers, and books, and needle-work could be counted in and improved quality as well as quantity estimated, a still greater increase in the producing power of money would be shown. It is in implements of industry, especially those that contribute to the elegancies and luxuries, where the greatest fall has occurred, but they can not conveniently be wrought into the unit we want. We must have products that are about the same in quality as of old, and they must therefore be raw material.

Of course the diagram is constructed so as to throw the value change upon money and not on commodities. This is contrary to the familiar way of treating value change.

Yellow-Fever Investigation.

SPEECH

OF

HON. NEWTON C. BLANCHARD,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 3, 1886,

On the bill (H. R. 5542) providing for the appointment of a commission to investigate the truth of alleged discoveries of the specific cause of yellow fever and of a method of preventing that disease by inoculation, and to obtain all information possible as to the cause and prevention of that disease.

Mr. BLANCHARD said:

Mr. CHAIRMAN: No question more nearly concerns the commerce of the South Atlantic and Gulf cities and the Lower Mississippi Valley than the prevention of the yellow-fever scourge. Hence, under the "commercial clause," as it is called, of the Constitution we find abundant warrant in the fundamental law of our land for the appropriation contemplated by this bill.

If there are reasonable grounds for believing that the investigation will tend to the development and establishment of truth in the great field of public health, then this measure is one demanded by every consideration of public good.

The originator of the idea of this investigation is Dr. Joseph Holt, president of the State board of health of Louisiana. His views and plans relative to same have been adopted by the American Public Health Association and by medical associations and authorities all over the country.

The most eminent medical officers of the Government, such as Surgeon-General Hamilton, Drs. Billings and Sternberg, and others, appeared with Dr. Holt before the committees of both Houses of Congress indorsing the reported discoveries of Drs. Freire and Carmona to the extent at least of joining Dr. Holt in asking the creation of a commission to investigate the subject.

If it be true that this discovery of the prevention of the fever has been made, it marks a great advance in medical science—ay, in civilization and progress—and ranks by the side of the discovery of the circulation of the blood by Harvey, and the great discovery by Jenner of the prevention of small-pox by the process of inoculation.

Mr. Chairman, in 1770 the most dreadful malady afflicting the human race was small-pox. It had been growing apace for decades, numbering its victims by tens of thousands, and bid fair to depopulate the most favored portions of the world. Like a great, gloomy pall, pregnant with suffering and death, it hung over the human race threatening its destruction.

In the providence of God, Jenner appeared upon the scene; and his genius conceived the idea, and his patience and industry worked out the details of the great discovery of inoculation, with which his name is linked and before which the gaunt specter of pestilence fled in dismay.

From a great plague, upas-like, fatally destructive to all within the radius of its sphere, and aggressive and virulent in its malign progress, small-pox, throttled by the preventive measures of medical science, became comparatively a harmless disease, easily handled and stamped out by proper care and attention.

Mr. Chairman, the diseases to-day upon the earth the most dreaded, the most destructive of human life, are yellow fever and cholera. They are twin scourges, compassing the death annually of thousands of human beings, and against whose encroachments and attacks the best medical skill of the world has proved unavailing. They have become the pests of the race. No antidote for their attacks has been found, and unless Freire, in Brazil, and Carmona, in Mexico, as respects yellow fever, have solved the problem, no process of prevention has yet been discovered.

It is natural, sir, that those throughout the world who live in the regions of country which constitute the habitat of yellow fever should be looking with hopeful anticipation to the tidings of success which come up to us from those countries of the South. Many millions of our own countrymen live within the belt liable to visitations of yellow fever, and oft-recurring epidemics have but too forcibly recalled the fact to the attention of the American mind.

Yellow fever has prevailed periodically to a terrible extent at points on our Southern seaboard, and has even, at intervals, penetrated the interior, spreading over the entire country south of the Ohio. These ravages have done incredible injury. Commerce has been paralyzed, hundreds of thousands of lives destroyed, values depressed, and suffering and misery beyond all computation entailed.

One single yellow-fever epidemic alone—that of 1878 in New Orleans—cost that city, it is estimated, eleven and a half millions of dollars.

Great epidemics, it has been said, like that of 1878, ramify far beyond the areas of the disease itself. The derangement of business over such vast districts inevitably affect the rest. The commercial currents can not be checked at one point without injury and disaster following at others.

The prospect, therefore, of discovering a preventive of yellow fever at Galveston, New Orleans, Memphis, Charleston, Mobile, Savannah, Pensacola, Vicksburg, and Shreveport is interesting and important to New York, Boston, Cincinnati, Saint Louis, and Chicago. Epidemics which destroy the market can not fail to prostrate the sources of supply.

The investigation provided for in this bill—

Says a recent writer—

offers a hope, and a brilliant one, of putting into the hands of our people the means of self-protection. The plan offers the possible emancipation of the American people from the dominion of a pestilence which has cost tens of thousands of human lives and hundreds of millions of dollars.

The experiments and methods of Freire and Carmona attack the yellow-fever problem in a direction heretofore untried, but in line with inoculation and vaccination against small-pox and Pasteur's method for protection against hydrophobia. These discoveries have challenged the attention of the enlightened medical world. It is better to prevent disease than to cure it. That medical man is greater, who, like Jenner, points out to his fellow-man the way to immunity from contagious disease, than the one whose skill cures thousands upon whom the disease has fastened.

The Brazilian and Mexican Governments have given to the discoveries of Freire and Carmona the sanction of their indorsement.

By this bill Congress is asked to create and equip a scientific commission for the investigation of these discoveries and for the exploration of the sources of yellow fever contagion. As some one has stated it, "it is proposed to lighten up the hidden, germinating recesses of pestilence with the torch of scientific inquiry, and to stifle the potent poison in the nursery of its engendering beds."

I submit, sir, it is entirely proper and legitimate for the Government to engage in this work. Did not the German Government send Dr. Koch to India to study the cause of cholera?

Has not the British Government also set on foot investigations into the origin of cholera?

In our own country, sir, you will recall that in 1814 Congress appropriated $320,000 to enable Robert Fulton to construct, test, try, prove, and complete the first war steamboat that was ever launched, and thereby "recognized and encouraged, and brought to the attention of the people the great worth and measureless value of the use of steam."

It will also be remembered that in 1843 Congress appropriated $30,000 to enable Morse to test, prove, and perfect the first line of electric telegraph that was ever built.

Why not now equip a commission to investigate a subject which involves the social, industrial, and commercial prosperity of an immense territory embracing some of the fairest and richest portions of the Union?

If this reported discovery be true, we can not get hold of it too soon. We can not be too swift to ascertain it, to know what it is, to learn its principles, processes, and methods, and apply them to the amelioration of the condition of our own people by giving them immunity against liability to the attacks of this dreaded yellow scourge.

If a foreign human foe were to invade our country millions would be freely spent with patriotic zeal to repel his attacks. Can not we spend a few thousand to prevent the invasion of this enemy—disease? One of the most distinguished of living Americans, now residing in dignified retirement on the beautiful banks of the Hudson, in a letter to the eminent gentleman who fills the chair of this House, some months since called attention to our great need of coast defenses and urged large appropriations by this Congress for that purpose. Out of the millions which might be well spent in this direction can not a few thousand be spared to test the merits of an alleged discovery, which, if true, is a great boon to the human race and a long stride in the progress of civilization?

I believe so, sir, and hence give to this bill my cordial support.

Rivers and Harbors.

SPEECH

OF

HON. EDMUND N. MORRILL,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 28, 1886.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 7490) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. MORRILL said:

Mr. CHAIRMAN: I desire to occupy the brief time allowed to me in speaking in favor of the amendment offered by the gentleman from Missouri [Mr. DOCKERY]. His amendment proposes to increase the amount appropriated for the improvement of the Missouri River $120,000, and to expend this amount in improving the river and protecting the banks at Saint Joseph, Fort Leavenworth, and Kansas City the sum of $40,000 at each point. I have only time to give briefly some urgent reasons why the improvement should be made and made at once at Fort Leavenworth.

The Government years ago set apart a large reservation at this point for a military post, and has since expended large sums of money in improving it for military purposes, until now it is the largest and most important post in the whole country. It will doubtless continue to be the center for all military operations of the West. Millions of dollars have already been expended there, and large annual appropriations are made to continue the improvements already made and to inaugurate new ones. The Missouri River runs through this reservation, the fort having been established on a beautiful and commanding eminence on the west bank, secure from any possible encroachments of the river. On the eastern bank the river has for years been making serious inroads, having in the past twenty years cut away more than half a mile of the reservation lying in Missouri. It now threatens, unless immediate steps are taken to arrest its progress, to cut a new channel.

If this is done the width of the river will be largely increased, the depth of water will be correspondingly lessened, and it will at some future time require a much larger outlay to secure the river within reasonable limits. The expenditure of the sum asked for now if made at once would accomplish more in improving the navigation of the river than five times the amount would a few years hence when the new channel is made. It seems inevitable, judging from the rapid encroachment the river has made the past year, that this result will soon follow. If it does follow the interests of the Government will suffer materially. A large amount of land owned by the Government will be destroyed and the valuable improvements at the fort will be left more than a mile from the main channel of the river.

Mr. CUTCHEON. Does not the gentleman think the Missouri River Commission can be depended upon to expend that money properly?

Mr. MORRILL. Judging the action of that commission for the future from its policy and action in the past I see little to hope for in that direction. For some reason, perhaps from the fact that the appropriations for that river have always been inadequate to carry on the work as it should be done, and perhaps partly from the pressure brought to bear upon the commission for similar expenditures at many other points, they have refused to deviate from their policy of confining all expenditures to the lower portion of the river.

Mr. GIBSON. The milk in that cocoanut is the railroad bridge there.

Mr. MORRILL. The engineer at Fort Leavenworth has, under the direction of General Miles, who until recently has been in command of that post, prepared an accurate and quite elaborate map showing the full reservation and the course of the river through it, and the changes in the channel since 1839. The commanding officer at the post recommends that this work be done with the least possible delay. This recommendation is heartily indorsed by Major-General Schofield, commanding the Department of the Missouri, and warmly approved by the present able Secretary of War, who a few months since made a personal inspection of the river at this point.

No prudent business man with the large interests at stake which the Government has would hesitate for a moment to make the improvements asked for. While it would confine the channel to its present limit and thus be a valuable improvement to the navigation of the river, it would at the same time protect the Government property from serious and lasting injury.

The CHAIRMAN. The gentleman's time has expired.

Mr. MORRILL. Then I ask unanimous consent to have the accompanying documents and map printed in the RECORD.

No objection being made, it was accordingly ordered.

The papers are as follows:

WAR DEPARTMENT, *Washington City, April* 5, 1886.

The Secretary of War has the honor to transmit to the House of Representatives a copy of a report of the 11th of February last, and map, from the Chief Engineer of the Department of the Missouri, showing the encroachments of the Missouri River, opposite Fort Leavenworth, Kans., from 1839 to 1885; and also a copy of a communication of the 16th ultimo from the department commander, from which it appears that if the river should force its way through an old channel as indicated on the map herewith, the facilities for moving troops and supplies to the Missouri River, and crossing the same by the railroad bridge now spanning its waters, would be lost, and that the utility of the military depots, garrison, school of application, and prison at Fort Leavenworth depend largely upon these facilities.

The commanding general of the Department of the Missouri earnestly recommends that a sufficient appropriation be made to meet the necessities of this case, and his recommendation is concurred in by this Department.

It may be added that a communication, on the same subject, was transmitted to the House of Representatives on the 9th ultimo.

WM. C. ENDICOTT, *Secretary of War.*

The SPEAKER *of the House of Representatives.*

HEADQUARTERS DEPARTMENT OF THE MISSOURI,
OFFICE OF THE CHIEF ENGINEER,
Fort Leavenworth, Kans., February 11, 1886.

SIR: In accordance with verbal instructions from the department commander I have the honor to forward herewith a map showing the encroachments of the Missouri River opposite Fort Leavenworth, Kans., since 1839, with the following brief report on the same.

The map has been compiled from data on file in this office. The latest survey having been made in February, 1885, under the direction of Capt. J. E. Greer, Ordnance Department, acting engineer officer, practically represents the position of the channel as it at present exists.

The Chicago, Rock Island and Pacific Railroad Company have riprapped something over 1,200 feet of the bank most threatened, to protect their roadbed.

The main road to Weston has been cut off and now follows the railroad to Beverly Station as shown on the map. The west bank opposite the encroachments as shown in 1839 is still practically the west bank proper of the river, while between it and the present channel extensive sand flats, interspersed with sloughs and lakes, exist.

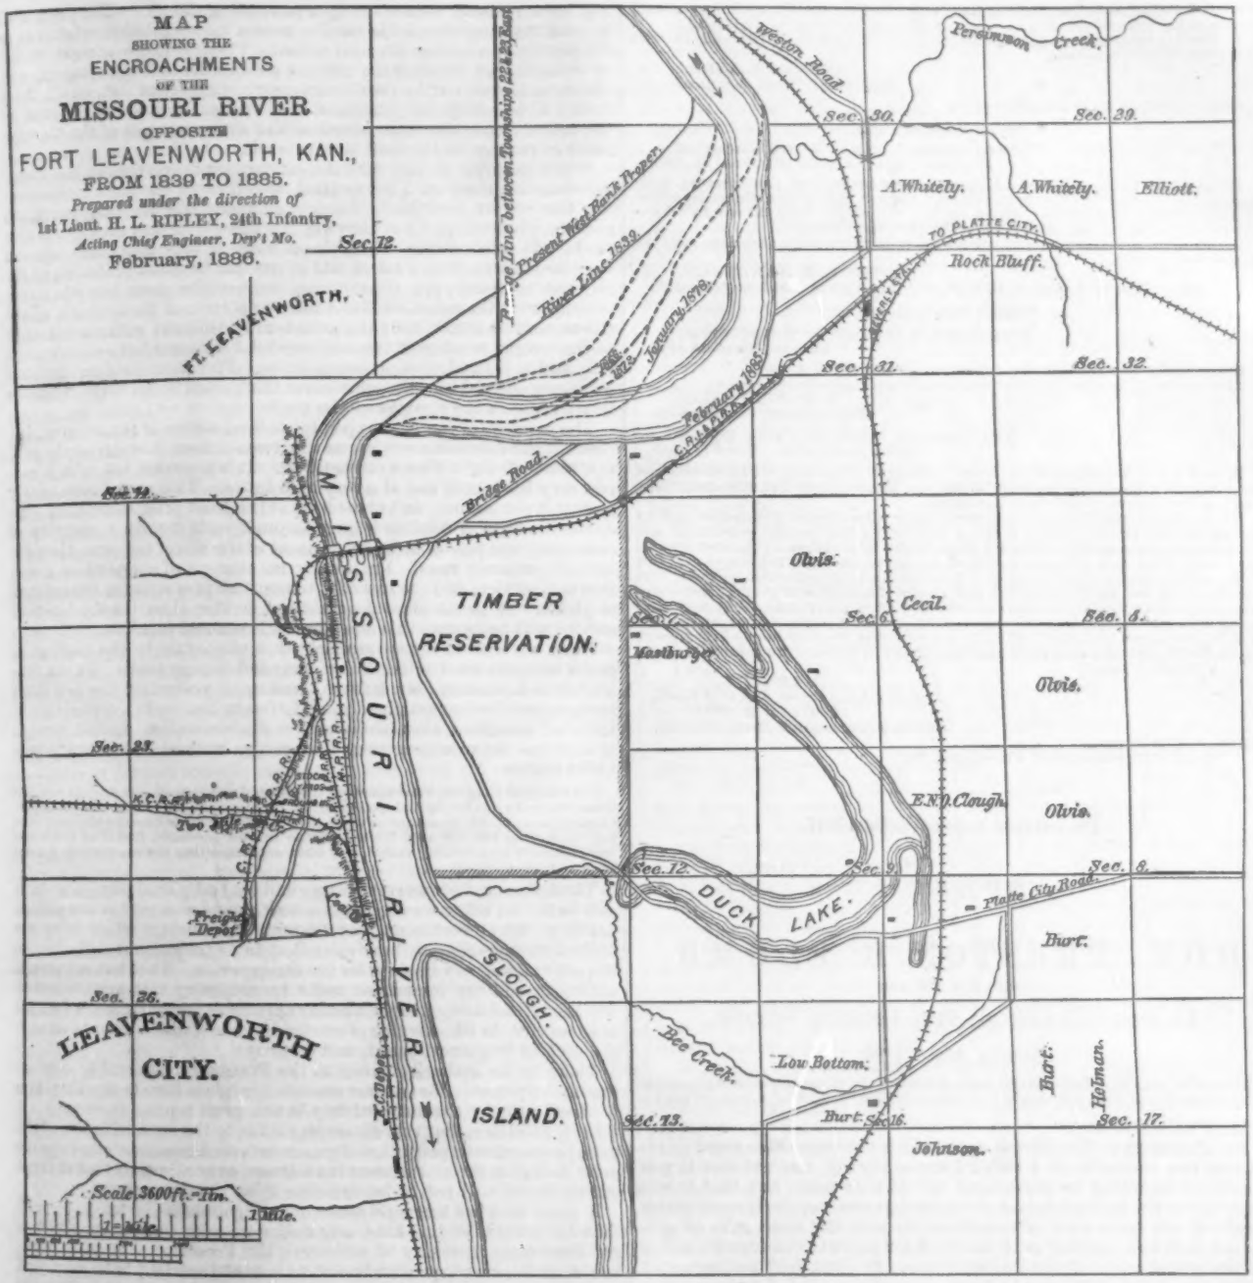
These flats are ordinarily uncovered, but during the periodical rises they are submerged, the river then running full between its banks proper.

Owing to the position of Duck Lake, immediately south of the greatest encroachment and the low dividing ground between it and the present channel, a rise by no means improbable would be attended by serious consequences.

Very respectfully, your obedient servant,

H. L. RIPLEY.

First Lieutenant Twenty-fourth Infantry, Acting Engineer Officer.



The ASSISTANT ADJUTANT GENERAL,
Department of the Missouri, Fort Leavenworth, Kans.

[First indorsement.]

HEADQUARTERS DEPARTMENT OF MISSOURI,
Fort Leavenworth, Kans., March 16, 1886.

Respectfully forwarded through Headquarters, Division of the Missouri, to the Adjutant-General of the Army.

In view of the very great interest the Government has in retaining the Missouri River in its present or original channel, I recommend that this matter may

be laid before the Committee on River and Harbor Improvements during the present session of Congress.

The utility of the military depots and garrison of infantry, artillery, and cavalry, department headquarters, school of application, and military prison located at Fort Leavenworth depend largely upon the facility for moving troops and supplies by the Missouri River, and crossing the same by the expensive railroad bridge now spanning its waters. Should the river force its way through an old channel, as indicated on the accompanying map, all of the above-mentioned facilities now so valuable to the Government would be lost and the only bridge between Atchison and Kansas City, Mo., a distance of 47 miles, becomes useless.

HEADQUARTERS DEPARTMENT OF THE MISSOURI,
OFFICE OF THE CHIEF ENGINEER,
Fort Leavenworth, Kans., February 11, 1886.

SIR: In accordance with verbal instructions from the department commander, I have the honor to forward herewith a map showing the encroachments of the Missouri River, opposite Fort Leavenworth, Kans., since 1839, with the following brief report on the same:

The map has been compiled from data on file in this office. The latest survey having been made in February, 1885, under the direction of Capt. J. E. Greer, Ordnance Department, acting engineer officer, practically represents the position of the channel as it at present exists.

The Chicago, Rock Island and Pacific Railroad Company have riprapped something over 1,200 feet of the bank most threatened to protect their road-bed.

The main road to Weston has been cut off and now follows the railroad to Beverly Station, as shown on the map.

The west bank opposite the encroachments as shown in 1839, is still practically the west bank proper of the river, while between it and the present channel extensive sand flats, interspersed with sloughs and lakes, exist. These flats are ordinarily uncovered, but during the periodical rises they are submerged, the river then running full between its banks proper.

Owing to the position of Duck Lake, immediately south of the greatest encroachment and the low dividing ground between it and the present channel, a rise by no means improbable would be attended by serious consequences.

Very respectfully your obedient servant,

H. L. RIPLEY,
First Lieutenant Twenty-fourth Infantry, Acting Engineer Officer.

The ASSISTANT ADJUTANT-GENERAL,
Department of the Missouri, Fort Leavenworth, Kans.

[First indorsement.]

HEADQUARTERS DEPARTMENT OF THE MISSOURI,
Fort Leavenworth, Kans., March 16, 1886.

Respectfully forwarded, through headquarters Division of the Missouri, to the Adjutant-General of the Army.

In view of the very great interest the Government has in retaining the Missouri River in its present or original channel, I recommend that this matter may be laid before the Committee on River and Harbor improvements during the present session of Congress. The utility of the military depots and garrison of infantry, artillery, and cavalry, department headquarters, school of application, and military prison located at Fort Leavenworth depend largely upon the facilities for moving troops and supplies by the Missouri River and crossing the same by the expensive railroad bridge now spanning its waters. Should the river force its way through an old channel, as indicated on the accompanying map, all of the above-mentioned facilities, now so valuable to the Government, would be lost, and the only bridge between Atchison and Kansas City, Mo., a distance of 47 miles, becomes useless. Again, should the channel of the river be

changed, and a great slough of stagnant water be left near this military post and garrison, the present drainage and sewerage system would be destroyed.

I earnestly recommend that a sufficient special appropriation be made to meet the necessities of this case.

NELSON A. MILES,
Brigadier-General, Commanding.

CHIEF ENGINEER OF THE DIVISION.

[Third indorsement.]

HEADQUARTERS DIVISION OF THE MISSOURI,
Engineer's Office, Chicago, Ill., March 22, 1886.

Respectfully returned to the adjutant-general Division of the Missouri, with the suggestion that this matter be referred, though the proper channels, to the Missouri River Commission, which by law is charged with all works of improvement affecting the navigation of the Missouri River.

In the office of that commission there are numerous maps and data relating to this very point.

THOS. H. HANDBURY,
Major Corps of Engineers, U. S. A., Engineer Officer, Division of Missouri.

[Fourth indorsement.]

HEADQUARTERS DIVISION OF THE MISSOURI,
Chicago, March 23, 1886.

Respectfully forwarded to the Adjutant-General of the Army.

This is a very important matter and deserves serious consideration.

J. M. SCHOFIELD,
Major-General, Commanding.

LEAVENWORTH BOARD OF TRADE ROOMS.
Leavenworth, Kans., March 18, 1886.

DEAR SIR: At a meeting of our board of trade to-day, the great importance of securing the necessary appropriation for the protection of the Missouri River bank at Fort Leavenworth was discussed.

We were requested by the board to call your attention to this matter, and to say that unless prompt action is taken to prevent the further erosion of the banks a new channel will be forced through the reservation on the east side of the river. This new channel would of course be east of the present railroad bridge at Fort Leavenworth, and would cut off the communication between Fort Leavenworth and the roads on the east side of the river, and would deprive the post and possibly the city of Leavenworth of whatever advantage they may now enjoy by a location on the river bank. Our people fully appreciate your earnest zeal in this behalf, and most cordially desire to stay up your hands in this good begun work, and earnestly hope and trust you will succeed the present session.

Very truly yours,

A. CALDWELL,
President Leavenworth Board of Trade.
H. MILES MOORE,
Secretary Leavenworth Board of Trade.

Hon. E. N. MORRILL,
House of Representatives, Washington, D. C.

Post-Office Appropriation Bill.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Tuesday, May 4, 1886.

In concluding the debate on the amendment of the Committee on Appropriations to the Post-Office Appropriation bill (H. R. 5887) providing for ocean mail—

Mr. PLUMB said:

Mr. PRESIDENT: The theory upon which the committee acted in reporting this amendment, I think I can safely say, was not that it was a subsidy according to any proper use of that term, but that it was applying to the transportation of the foreign mails of the United States precisely the same rule of compensation and the same rule of procedure as is now applied as it has been for years to the transportation of the inland mails of the United States. A great deal has been said about the fact that there is to be no competition, and I presume that in many of the cases and perhaps in most of the cases in which we shall transport our foreign mails by means of American steamships there will be no competition; but neither is there competition in the railroad carriage of the inland mails of the United States. Neither is there competition on most of the steamboat lines by which the mails are carried on the inland waters of the United States. The Government in other words in regard to transportation of this kind fixes what is a fair compensation and pays it without requiring competition.

I call the attention of the Senate to section 4002 of the Revised Statutes fixing the rate of pay upon railroads for carrying the mails, furnishing, as I think, a complete illustration of the rule which the committee sought to have applied to the carrying of foreign mails. That section provides the rate of pay as follows:

That the pay per mile per annum shall not exceed the following rates, namely: On routes carrying their whole length an average weight of mails per day of 200 pounds, $50; 500 pounds, $75; 1,000 pounds, $100; 1,500 pounds, $125; 2,000 pounds, $150; 3,500 pounds, $175; 5,000 pounds, $200, and $25 additional for every additional 2,000 pounds, the average weight to be ascertained, in every case—

according to the plan named in the succeeding portion of the section. Under the practice of the Post-Office Department the lowest price paid to any railroad now is forty-two dollars and a half a mile per annum, no matter how small an amount of mail is carried, the rates having been reduced somewhat by a succeeding statute. The price that is paid for carrying on the smaller routes has no relation whatever to the postage received on the mail carried. There is no comparison sought to be instituted between the amount paid to the railroad company and the amount received by the Government. In point of fact, on all these routes which carry 200 pounds of mail or less the amount received by the railroad company is in excess of the entire receipts of the Government as postage on the mail thus carried.

When we come to deal with the carriage on railroads like the Pennsylvania and the New York Central, which carry the great mails leaving the city of New York, we pay only one-half for carrying 2,000 pounds what we pay for carrying 200 pounds or less on the smaller roads. In other words, where the carriage is very large, and where a very large carriage at a small rate of pay can be made profitable to the railroad company, the Government reduces the rate; but when it is dealing with the railroads in the interior portion of the country, where the carriage is small, it fixes a price totally different without reference to the weight or value of the mail carried. It is fixed at a rate deemed fair, and it is fixed without competition. The question of competition has never entered into the relations of the United States to the railroads in reference to the carriage of the mails.

The carriage of the mails upon the inland waters of the country, including the coast-line service, as the Senator from Iowa reminds me, is almost wholly without competition. It is a service, too, which carries very little mail and at a very high figure. This service costs nearly $600,000 per annum, and is paid for at the least price attainable. No doubt the form of bidding is gone through with, but in a majority of cases only one person bids, for on most of the rivers not more than one suitable steamer runs. Practically no element of competition enters into this service, and the cost of it is out of all proportion to the revenue it yields. It is far more a subsidized service than the foreign-mail service will be in case this amendment is enacted into law.

Now, we seek to apply precisely this same rule to the carriage of mails between the United States ports and foreign ports. As the Senator from Louisiana [Mr. EUSTIS] well said yesterday, the law itself recognizes a distinction already, and always has made a distinction in favor of American steamships and a discrimination against foreign steamships, because in section 4009 of the Revised Statutes it is provided that—

For transporting the mail between the United States and any foreign port, or between ports of the United States touching at a foreign port, the Postmaster-General may allow as compensation, if by a United States steamship, any sum not exceeding the sea and United States inland postage; and if by a foreign steamship or by a sailing vessel, any sum not exceeding the sea postage, on the mail so transported.

The difference between sea postage and sea and inland postage is about as 2 to 5. In other words, the law now provides as part of the settled policy of the Government that American steamships which carry the United States mails may have more than twice the amount authorized to be paid to foreign steamships for the same service. That has not proven sufficient, and the committee seeks in proposing this amendment to further extend this principle, already applicable generally in our foreign-mail service, to the carrying of our foreign mails with a view to encourage greater frequency, speed, and security.

There is no authority given to the Postmaster-General to pay extravagant prices. No one has risen in his place here to say that $1 a nautical mile for the outward trip is too great a price to be paid. I take it, therefore, that there is no dispute as to the reasonableness of the price proposed to be paid; that if we are to favor American steamships the price named in the amendment is a fair one, or at all events that it is not excessive and will not be burdensome upon the Government.

A great deal has been said about our obligations to the tax-payer, and that in matters of this kind any dollar we take from them which is not absolutely necessary is robbery. Mr. President, I agree to that; but what is necessary must be left to a wise discretion to be exercised by Congress. The same Senators who have spoken so earnestly upon this subject and who have characterized this proposition to pay $800,000 as robbery are here consenting to the proposition that we shall pay to a railroad mail line running from New York to Jacksonville, Fla., $291,000, more in proportion than we pay to any other mail line in the United States, in order that the communities along that line and the communities beyond the terminal point of that line, to wit, at Key West and the foreign community at Havana, may have a more speedy and more frequent delivery and distribution of the mails than they would have if we applied to that line the general rule which we apply to all other railroad lines in the United States. If that is the exercise of a wise discretion, wherein is the payment of $800,000 to produce a similar result in the carriage of our mails between our ports and foreign ports robbery?

The United States receives each year a large sum of money from its foreign mail service beyond the cost of that service. I believe the net results to have been during the last year over a million and a half of dollars, because we appropriated only $375,000 for the service and received $2,078,000 from it. But whatever the sum may be, there is no one who has addressed himself to the question but says there is a profit. Why should we not apply that profit to the extension of this useful and necessary service?

When we come to deal with what is known as the free-delivery service we find that it is established in one hundred and seventy-six of the cities of the United States. The service taken altogether yields a profit, but every single one of the cities in which that service is rendered, except seventeen, shows a deficiency. That is to say, only seventeen yield a profit, all the rest of them returning a deficit, yet the whole service results in a net profit to the Government, and the Postmaster-General has proposed in his last report that it shall be further extended—extended to still smaller cities than now, to entail a still greater loss of revenue—and he puts it upon the ground that this can be afforded because the seventeen cities yield profit enough to pay not only the deficiency now existing but also that which will be created by extension to other places. Therefore he proposes to take from New York, Philadelphia, Boston, Cincinnati, Chicago, Louisville, Saint Louis, and so on, the net revenue which they give to the Department for the purpose of extending the service to towns where that service will be carried on at a loss. I do not complain of this; but why is it that we may do all these things with reference to our inland mail service, everything of this kind within our discretion at home, but the very moment we seek to apply any of these rules, conceded to be useful and proper and necessary internally, to our foreign mail service, we are met with this great cry about the robbery that is involved?

Mr. President, it would seem as though upon this statement, which can not be gainsaid—it does not rest upon my authority; it stands upon the law and the universal practice of the Department under it—that there ought to be nothing here to contend about in regard to this appropriation of $800,000 to give greater and better mail facilities between this country and South America and the other countries whose trade we are seeking.

I have wondered why it was that when we come to this particular branch of the question, all at once we divide and get into the most earnest and anxious contention in regard to what is proper to be done. I think it is because for now nearly or quite a generation we have devoted ourselves so exclusively to the internal affairs of this country, to the development of its internal commerce, to the extension of its lines of railway, to the settlement of new communities in the far West, to cultivating home trade for our manufactures, and all the other things which have led to the enormous growth and development of the country, that we have to come to exclude ourselves wholly from the consideration of those things which pertain to our relations with foreign peoples and to our trade with them.

Great Britain furnishes an example of exactly the opposite character. In generations her policy has been wholly external. Her statesmen know the by-ways of international affairs better than they know the highways of home affairs, and she gives foremost attention to what concerns her subjects in foreign lands, including the establishment of the swiftest possible communication with them. This external policy has been so consistently and always pursued as, while developing her trade enormously, to also draw her statesmen from the consideration of domestic affairs to such an extent when she is confronted, as she is now, with a very serious matter of domestic concern, she is as much at sea as to the treatment to be accorded to it as we are when we come to consider questions that relate to the extension of our foreign intercourse and trade. What reason can be suggested why the United States should not have adequate mail communication with South and Central America and with other countries with whom we desire to have better trade relations? And why should we not be willing to give as adequate compensation for our foreign as for our domestic mail service, in order that it may grow better in speed, in frequency, and safety? Are not there essentials in the domestic service as well as elements which make the mails a better instrumentality of trade?

What section of the country will derive the greatest benefit from this appropriation if made? The greatest and most direct benefit will come, if it is to yield any benefit at all, to the Southern States. It is conceded that if we are to have foreign trade of any very great proportions, the most sure field for its development is in South and Central America. The mouths with which we shall speak to those countries are the harbors and the cities upon the Gulf of Mexico—Galveston, New Orleans, Mobile, Pensacola, Tampa—and on the South Atlantic—Savannah, Charleston, and Wilmington—not only because of the less distance between them and the countries to be reached, but because the South is in a particularly favorable natural and industrial condition to meet the wants of the people in South and Central America. It is making to-day cheap cotton goods successfully, the goods with the greatest amount of material for the smallest amount of labor, and which by reason of this fact are the most attractive to the people whose necessities and tastes require them, the class of goods of American manufacture which are to-day sold in Manchester, the seat of England's cotton manufacture, and also in India.

If we can sell in these markets in competition with Manchester's own mills we can do the same if we have proper means of communication in South and Central America. The Southern States not only manufacture each year an increasing quantity of this class of cotton goods, but also an increasing quantity of a better article of cotton goods. The South is to be, if the natural law of development is to work out its perfect work, the seat of the great cotton manufacture of United States. More than all that, it has within its limits, within easy reach of tide water and connected with tide water by streams that are always open, great deposits of coal and of iron, with which the commerce of the Gulf of Mexico and the Caribbean Sea and the South Atlantic can and will be supplied, if there shall be established frequent and certain and safe steam communication.

One would think that with these facts it would be the Southern members on this floor, and not the Northern, who were proposing, defending, and maintaining amendments of this character. And yet this amendment in any event will get but a handful of votes from among those who represent the Southern States on this floor. In speaking and voting against this and similar measures they do not represent modern progress, commerce, or civilization. To-day the South in power in the National Government and as represented in this Chamber is the South of Calhoun, of Yancey, of Jefferson Davis.

Mr. MORGAN. Mr. President——

The PRESIDING OFFICER (Mr. ALDRICH in the chair). Does the Senator from Kansas yield?

Mr. PLUMB. Certainly.

Mr. MORGAN. I would say to the Senator from Kansas that it would have been very fair in him to have made his announcement earlier in the debate, and not to have waited until the conclusion; and that I think it is extremely unfair that he should take the opportunity of concluding the debate to bring up accusations against Southern men to which they have no chance to reply.

Mr. PLUMB. Mr. President, I think the Senator from Alabama knows me well enough to know that I would not deprive any one of a chance to reply to anything that I might utter here or elsewhere; and so far as I am concerned, if there is anything which I shall say in connection with the pending question that calls for reply, he can have my vote, and I have no doubt the vote of a majority at least on this side of the Chamber, for all the time for debate that may be desired.

I said what I now repeat, that the South of to-day in national control responds to the wishes and to the principles inculcated by Mr. Calhoun, enforced by Mr. Yancey, and illustrated by Jefferson Davis. I do not mean this as in any sense personally offensive; nor do I speak of it as in any sense qualifying the perfect sincerity of all the men who utter the sentiments to which I refer.

Mr. MORGAN. I beg to say to the Senator from Kansas that no such impeachments or accusations have the slightest personal offense toward me. Every name that he has mentioned is consecrated in my memory as the name of an honorable and a great man. I hope that the State of Kansas may some time or other produce some such character as Mr. Calhoun, Mr. Davis, or Mr. Yancey.

Mr. PLUMB. Mr. President, the Senator from Alabama has that aspiration for Kansas all to himself; not that I would take one leaf from the chaplet of any one of these men as an honorable, sincere, and earnest and able man, but it is the South of slavery, of an institution which did not want and would not have free labor either in field or in shop; and so the South takes up to-day the burden of its old song where it left off in 1861, yielding to the same disposition and the same determination against free labor.

Why, Mr. President, there would have been no contention about this matter if it had not been for the words "American ships" found in this paragraph. The Senator from Kentucky [Mr. BECK], with all his great ability, found no fault with it except that it did not recognize the doctrine of the right of British ships to render this service as well as American ships. The Senator from Missouri [Mr. VEST] said he was in favor of the largest mail pay, and had voted for the repeal of a provision of the statute which compelled vessels to carry the mails for the price of sea and inland postage—what the Postmaster-General now offers—thereby admitting that the present compensation is too small; but he opposes this provision because we do not open the service to foreign ships; and he said in the same breath that American ships could not compete, and we never could build ships on this continent that could compete for the world's commerce, because we could not build them cheap enough; and the Senator from Alabama [Mr. MORGAN], representing a State with more natural ability to build ships than Pennsylvania even, proposes an amendment which he intends to indicate to the Senate his view, and that which will satisfy him in this connection, to open this whole $800,000 to the service of foreign ships.

Mr. President, it is not because this is a subsidy, so called, nor because the amount is large—large enough to add to the cost of the coat of the Senator from Missouri—that it encounters the opposition of these Senators and their associates. It is the fact that in this amendment is a recognition of American vessels, of steamships to be made out of American material, dug out of American soil by American laborers, and fashioned afterward into the plates and all the things that go to make the thing of life known as a steamship by American mechanics in American ship-yards. There is where the shoe pinches. If this money were provided to go to foreign ships there would be no complaint. There are no voices raised on this floor for the Birmingham of Alabama, but there is a score of them to be heard in favor of the Birmingham of England; encouragement for the ship-yards on the Clyde, but none for

those at Chester, Philadelphia, and Wilmington. And yet the South, if it were free from its old distrust and hatred of intelligent and free labor, would rejoice over aids given to American shipping, for Birmingham in Alabama is the seat of iron manufacture designed, if the system of protection is not broken down, to excel that of any other portion of the country. The iron and coal deposits of Alabama are in close proximity and are reached by water transportation leading to the Gulf of Mexico, at a short distance, on whose shores there ought to be erected a great naval establishment as well as private ship-yards. But this interest, great now and to become infinitely greater in the near future, if not injured by unfriendly legislation, finds no advocate on this floor except from some distant State.

Something has been said, in fact a great deal has been said, about the interests of labor in this connection. The voice was the voice of Jacob, but the hands were the hands of Esau. Mr. President, the argument against this amendment is simply the old and familiar argument of capital against labor. The capitalist with his coffers filled, and believing in the law of supply and demand, applied to labor as well as everything else, says, "Give me the right to buy my ships where I please, give me the right to buy the products of the ship-yards of the Clyde and of Marseilles built by that foreign labor which is cheaper than American labor, and then give me the privilege of hoisting the American flag over it, and I do not care anything about American labor." That is the old cry of the South, in favor of capital—capital that owned labor and which contemned free labor and ostracised it, and rebelled in order to get rid of possible contact with it. And so long as the South clings to the old sentiment against free labor and against labor which demands what it has a right to have, equal share in the control of matters of State, it will never take its proper place in the race of progress, of industrial development, and of civilization.

John McLean, in advocating slavery in Kansas, in 1857, said, "I want a nigger to black my boots, because I can kick him without any danger of being kicked back." That was the spirit, the logic of slavery; a laborer at one end of the scale so weak, so ignorant, so lacking in spirit that the man at the other end, rich, owning all the land, educated, proud, could kick him without risk. The State, as prescribed by the law of slavery, consisted of these two classes alone—no small farmers; no "well-paid laborers, counting their task a play;" no manufacturers; no middle class, owning their own homes and their own bodies; no free speech—nothing but the subordination of labor to capital, nothing but the dreary despotism of slavery.

As under this theory of the subordination of labor to capital manufactures were impossible, the South was compelled to seek outside markets for the manufactured goods it must needs have. Naturally it sought these in foreign countries, not desiring manufactories anywhere on American soil on account of the possible contagion, and so the South of those days favored free trade and free ships, and was wholly concerned about the foreign market in which it elected to both sell and buy. It was expensive and exhaustive, but it was the price which had to be paid for the maintenance of slavery. The disastrous effect of this policy upon the South was emphasized in the result of the war of the rebellion. The armies of the South were skillfully commanded, they were composed of as brave men as those of the North, they were as large in proportion to what was required of them—but they failed of their purpose more because of the lack of the skilled labor which could make implements of warfare, means of transportation, and ships to sail the sea. The dependence of the South on foreign countries for those essentials of modern warfare which the North had, the skilled labor to create on demand and in unlimited supply, was certainly a prime cause of its defeat. And yet such is the power of the spirit of slavery remaining after the institution itself is gone that the dominant influence of the South is still opposed to manufactures and to intelligent well-paid labor, and still bent on seeking a foreign market in which to both sell and buy. Hence its favor as expressed through its representatives in Congress, in favor of free trade against protection and a home market, in favor of free ships and a foreign market against American artisans and industry and in favor of labor on foreign shores.

It is said there is a new South interested in material development, anxious to get into the tide of advancing civilization, to profit by the development of the great natural resources of the South, ambitious to put it into line with the growth and progress of the age; but these aspirations find no expression in Congress, except in occasional instances and in minor degree. It is the reactionary free-trade, pro-capital, and anti-free labor ideas that are represented in public life, such as are now demanding that the foreign ship manufacturer shall have the right to American registry for and to fly the American flag over his ships in order to give him a more certain and profitable market for them, and which practically denies to the American manufacturer the same advantage. This is neither the act of self-interest nor of statesmanship.

This debate has been made the occasion of an attack upon the principle and policy of protection, while only incidentally involved if at all. Still I do not object to the question being brought in.

I do not believe in all the provisions of the existing tariff law; I do not believe in "protection for protection's sake," according to an expression often quoted; but I do believe that the money necessary to carry on this Government, to discharge its debts and other obligations, may be most properly raised by duties imposed upon articles imported from foreign countries, and I do not believe in imposing any duty which shall result in bringing more money into the Treasury than is necessary for these purposes; but I do believe when we come to distribute the impositions and the burdens, if you please to call them so, of the tariff that, given the necessity of raising a particular sum and the determination to raise only that sum, the distribution of the burdens shall be such as to as adequately as possible protect American labor and build up upon American soil all the industries of every kind which the natural condition of things here warrants. I believe in this, because I believe it better and safer to deal with my own neighbors than to deal with a stranger and a foreigner. I believe in that, because I believe it is an element of national strength to manufacture at home as nearly as possible all that the necessities of our people require.

I know that a country which can support itself wholly from within so far as essentials are concerned, which can make its own arms and ammunition, its own ships and engines of destruction and defense, can clothe itself and feed itself, needs no standing army, and can defy the world in arms. I know, too, that whatever the tariff may cost us in any of its irregularities or its unnecessary features, if there be such, is cheap by comparison with even the lowest possible cost of a free-trade policy which would compel us to buy abroad. I prefer to trade with my neighbor, as do the farmers of the West, because the neighbor is under the same law; and if by any misadventure he is permitted to exact more than he ought, if it is within the range of the law, the law can correct the wrong; but if he deals with a man across the sea, living under different laws and institutions, he is entirely and wholly without remedy. He must, besides, take his chances of what a war which disturbs communication may bring.

But it will be in order to attack the tariff when some one shall show here that too much money is being realized from its operations. I have not discovered that when we come to appropriate the money which it brings into the Treasury those who claim that we are raising too much, although they do it in a very general way, are unwilling to take their aliquot part, and more. When it comes to that the catholicism that rises above all considerations of party, and is for "the old flag and an appropriation," is a sentiment that never disappears.

There are inequalities in the tariff. Circumstances so change as to make that unequal which was right when the duty was fixed. But on the whole it has worked well. The money necessary to carry on the Government and to discharge its manifold obligations growing out of the war has been raised in the easiest and cheapest way. Manufacturing has been stimulated, and each year the needs of the people in this direction are more fully supplied by the products of American shops, and the prices of manufactured goods have steadily declined. We are also each year sending an increasing quantity of manufactured goods into foreign markets, and with a fair chance at the markets of South and Central America through adequate means of transportation American manufacturers will in time dominate those markets.

I do not look to see the millennium of trade or communication brought about by an appropriation of $800,000. But I believe that if it is expended as it can be and should be, that we shall multiply our communications with Brazil and the Argentine Republic twice, perhaps three times. I am willing to cast that much bread on the water. If nothing comes back, I shall at least have the satisfaction of having helped to try to do something in the right direction. And if it is lost, it will be only that much more added to other sums we have lost, such as the New Orleans Exposition and other things of that kind, the design of which was right, but we miscalculated; that is all. I do not begrudge that expenditure made at New Orleans. I thought that we should get more out of it than we did. I do not know yet that we will not in time get all we hoped. No one can tell how much the good-will engendered in the minds of foreign people will aid in the future, nor how many orders to our manufacturers will come on account of the exhibit there made, but if New Orleans and the South generally are to have special benefit from it, it can only be brought about by the establishment of lines of communication whereby they can reach their neighbors of South and Central America. At least the expenditure was an honest and well-meant effort in the right direction. If we never spend money more unwisely than that was spent, we ought to go back to our constituents feeling that we have done well.

I believe that out of this will come, if properly expended, not only increased frequency and speed of communication between American ports and the ports of Brazil and the Argentine Republic, but I believe that we shall have better and more valuable communication with Venezuela, and I stop there to call the attention of the Senate to the fact that while an American line is now plying three times a month between New York and Venezuela, it will not and does not carry the United States mail because its owners believe that as a commercial speculation they can not afford to do it. They are not here asking for anything; and I may say further that I have neither seen nor heard since this proposition was broached a single word outside what has been said in discussion in committee and on this floor in favor of this proposition, nor of doing anything whatever to aid the American steamship lines. The companies have not been here to urge this appropriation; but it remains as a fact that an American line plying three times a month be-

tween New York and Venezuela decline to carry the mail for the compensation which the Postmaster-General feels authorized to give under the present law, because they say they could only carry it at a loss, and so the mails are sent by British vessels to Trinidad and from Trinidad by other British vessels to Venezuela. I am told on good authority also that under the present plan the mails are detained on an average of over two weeks longer in transit than they would be if sent by the American line.

I noticed with interest what my colleague [Mr. INGALLS] said yesterday about some of the barriers that stand between us and the South American trade. I have read the testimony. Undoubtedly there was a large measure of truth in it. The American manufacturers are in the habit of catering for the best markets of the world, for the most enlightened, intelligent, and civilized people under the shining sun. They have been constantly called on to make a better class of goods, and now the complaint is that they do not make goods that are poor enough for the South American market. I venture to say that the universal Yankee will avail himself of that hint, and hereafter South America can get goods of a poor enough quality to satisfy the leanest purse and the poorest comprehension.

Mr. President, trade is the result of many circumstances. It is the result, in the first place, of opportunity, means of communication. Where would the West be but for the railroads that connect it with New York and the other seaboard cities? When the railroads are first built and the keen-eyed man on the Atlantic coast goes out West seeking markets for his goods, undoubtedly he would rather have the Nebraska or Kansas merchant take something he has already made for somebody else, and if he can get him to take it he will do so; but if he does not, he will make something that the merchant wants for his trade, and by reason of the fact that every day a railroad train runs outward and inward carrying the mails and carrying the persons who are to be made the subjects of this negotiation there comes about one accord, and the style of the wagon, and the cut of the coat, and the pattern of the boot, and the character of the harness, and everything else that the Western man wants demands a reciprocal creation on the part of the man who wants to supply him. It does not come at once, but it comes.

Given lines of steamers plying between New York and any South American port once a week even, and more men will travel over that line; and the man who has an impulse to trade with South America, to look about for opportunities for speculation down there, can gratify that impulse on the instant, as it were, by going to the wharf and taking the outward-bound ship; and he would go, as he would not go perhaps if he had to wait a month. When he is there he will find some way of doing something that will pay expenses at least. A journey which could be made in three weeks would have attractions which one to occupy as many months would not.

I had a long and very interesting conversation with a glass manufacturer of Steubenville, Ohio, two or three years ago. I saw the patterns of goods he was sending to South America, to Mexico, to Australia, and even to France, and he told me how when he first sent his agent down to Brazil and to Central America looking for a market he thought he could persuade the people down there that the lighter, the cheaper, and the more graceful articles he furnished his American customers would suit them best; but he said he finally gave that up, and he made up his mind he would make for them what they wanted to buy, and he did so; and he showed to me the patterns of goods which he sold to the people of Mexico and South America, each different, according to the different tastes of the locality in which the goods were used, and he was doing a thriving trade, having learned how to avoid the difficulties that my colleague spoke of yesterday, and which are liable to occur in the beginning of all trade.

When we get along to the river and harbor bill my friend from Missouri [Mr. VEST] who is so much concerned about this appropriation will vote for all the millions that anybody will propose to improve the Mississippi River and likewise the Missouri, notwithstanding the fact that the most of it will be absolutely wasted, and notwithstanding the further fact that the commerce which should go down those rivers to New Orleans is now directed elsewhere by reason of the fact that it can not be sent to its foreign market from there on account of lack of means of transportation. Why spend money to improve the Mississippi River if when you get to its mouth you encounter a condition of things which makes the transit absolutely unavailing? We have put on an average ten or twelve million dollars a year into our rivers and into our harbors, and why do that unless we are prepared, as the Senator from Georgia [Mr. BROWN] so well said, to take advantage of the road-bed and the track of the great sea that lies just beyond, to put on our ships and let them carry these products to the waiting foreign markets?

The transportation of mails, both foreign and domestic, is a national function—something to be provided for out of the national Treasury. And when the mails to be carried are those relating to our intercourse with foreign people or with our own people in foreign lands, they are in the line of our foreign commerce, which is also under the exclusive jurisdiction of the National Government. The States can not enter it, and individuals can only do so subject to the direction of the National Government. Whoever enters this field is entitled to the especial care and protection of his government, which alone can guard his interests. He is out from under the protection of the laws of his country, and is only safe so long as he is the subject of the watchful care of his own government. He encounters the merchants and sailors of all nations. His chief contention is with those of the English, the French, and the German nations, and he finds them each backed by the good-will and the power of his government, keenly solicitous for his success, ready to make war if necessary for his interest. Is it proposed that this Government, finding this condition of things existing, shall do nothing for its own; that it shall surrender its own merchants and shipmasters and adventurous people bound hand and foot to this unequal competition? Burke, the greatest of English statesmen, said:

> The stock of materials by which any nation is rendered flourishing and prosperous, are its industry, its knowledge or skill, its morals, its execution of justice, its courage, and the national union in directing these powers to one point and making them all center in the public benefit. Other than these I do not know, and scarcely can conceive any means by which a community may flourish.—*Burke's Works*, volume 5, page 279.

Whether that is the parent of the much derided "general-welfare" clause of our Constitution I do not know; but I do know that the idea was never more exactly and truly stated than in this quotation. The American people have industry; they have knowledge; and they have skill; they have morals; they see to the execution of justice; they have courage. They have a national union which can and should combine all these great attributes together for the national good and for the national welfare. Why not? Why should not our Government help its own people as much as other governments help theirs? If we are to carry on trade in foreign markets we must in some way meet the conditions imposed by what other people in the same markets are doing.

Our home market is the best in the world. There are no sixty million people anywhere and no people who use so much of all the products of industry as the American people do. Great Britain would give a mortgage on India and all its foreign possessions if it could have even one corner of our blanket lifted so that it could put the goods of her manufacturers free of duty into our market. This market we chiefly supply with home production, and it keeps our manufacturers mainly busy, but it is to our interest to still further increase manufacturing and export the product rather than to continue to export food. There need be no fear that if adequate communication is furnished with the foreign markets our manufacturers will not supply an increasing amount of products to those markets each year. The tide that has turned inward so long will with proper encouragement turn outward.

Let the National Government bring together all these faculties of which I have spoken and take the added one of the increasing disposition of our people to engage in foreign venture and see how quick in Central America and in South America there will be North American railroads, how quick in these places there will be American merchants and colonies that will not only use American goods themselves but will also establish and enlarge the markets for such goods among the native people.

American manufacturers make the best goods made in the world in most lines. There is not a saw-mill in South America that is not the product of an American foundry machine-shop; and when last year I was in the State of Iowa I found that in the Senator from Iowa's own town, Dubuque, they had just sent three large saw-mills to Manitoba. American locomotives draw trains upon English railways in Australia; me make saws and hammers, the cheaper class of cotton goods, and a thousand things that illustrate the ingenuity and the ability, the great and overmastering skill of the American mechanic, enabling him to overcome the burden of higher wages paid, and compete even against the pauper wages of Europe. Give the Yankee a chance, a fair opportunity to get from his port to the port of the foreign people whom he seeks to serve, and he will find some way of furnishing them with that which they desire, taking what they have to give in return, and I am persuaded that the time is coming when the South will enter with success into this field of trade—nay, the time has come, for notwithstanding the way in which those interests are misrepresented here I know that Birmingham and Anniston, in Alabama, Nashville, Chattanooga, and Knoxville, in Tennessee, Atlanta and other places in the South are preparing to take possession of the markets for manufactured goods in which iron and cotton are staples to be found in the countries lying along the Gulf of Mexico and the South Atlantic.

I know that with a weekly line of steamers plying between New Orleans and Brazilian ports not only the manufactures of that section of the country, centered there, could find market in South America, but I know that the bacon and breadstuffs of Missouri and Kansas would by the same route find their way to the South American people. The Texas people urge us to appropriate money for the creation of a harbor at Galveston and they say if they had a harbor Kansas agricultural products would find their way to market by that route; but if there were ten times the harbor at Galveston there is, Kansas would not send its wheat, its corn, its bacon to market that way, because when it reaches Galveston it will not meet means of transportation to the nearest and best foreign market.

Is it not a small thing to ask of the Government that it shall provide adequate mail facilities based upon the same principle of compen-

sation applied to existing inland service upon the routes leading to our foreign markets? There can be no trade without corresponding mail facilities, and similarly there can be no mails without trade. The establishment of certain, frequent, and speedy mail service will increase trade, and by increasing trade increase the postal revenues, just as such a result follows the establishment of new lines of star-route service in the West.

Is it seriously doubted that after a time, at least, there can be built in American ship-yards vessels which can, in all essentials, compete with the products of foreign ship-yards?

American capital and American labor have been too busy building railroads and ministering to the wants of Americans in new fields at home to seriously and determinedly enter upon the construction of ships for the foreign trade. The last few years have been years of great depression in ocean transportation, and so the field has been less inviting than usual. But this depression will not last forever. The time is near at hand when the adventurous American, sighing for other worlds to conquer, will go abroad seeking a field for his enterprise. He naturally wants to go in an American-made ship and under the American flag. Such proof of the skill and power of his country will aid him in his business and minister to that pride and determination which will enable him better to maintain himself in competition with the citizens of other countries.

But the Senator from Kentucky [Mr. BECK] with a philosophy which is out of line with his patriotic impulses, and sadly at variance with the truth of recent history, says there is no sentiment about ships or flags; that the average American would just as soon sail a foreign vessel and under some other flag, and that at all events he would as soon fly the American flag over a vessel made in a foreign ship-yard by foreign labor as over one built in an American ship-yard by American labor. All of which means that the American is lacking in patriotism and in national pride—in the feeling that his country is worth fighting for and dying for.

Mr. President, I think whoever comes to meet this question in that great forum in which all national questions are settled, whoever comes finally to reach the imperial will of the people of the United States, will find that down in their hearts there is such a thing as a sentiment about the flag. He will find that there is a national pride, a pride in what this country is, in what it has accomplished, in the glorious future which all believe awaits it; in the triumphs of the courage and skill of its people, and in the flag which floats over and symbolizes it all.

If the Senator from Kentucky had been with me in attendance upon a soldiers' reunion in one of the frontier counties of Kansas last September, and had witnessed and heard what I did while there, I am sure that even he would have admitted that there was not only a sentiment but a strong and a wholesome sentiment in favor of the American flag, and that it was altogether too sacred a thing to be hoisted at random over anything that was not fully American. After the more formal exercises of the day a sort of "experience" meeting was held in the evening, and among those who told what he personally knew about service in the Union Army was one who had spent a year or more in Andersonville prison. Without any of the arts of speech he told how one bright day in April, 1865, the gates of that prison were for the first time swung outward and the victims of the incarceration, the particulars of which have been burned into the recollection of every one, stepped forth and started westward for the Union lines in the vicinity of Vicksburg. The strong walked when necessary, the weak rode in the cars, where Wilson had not broken up the track, and were carried over the broken places, and thus journeying they made their way slowly westward. During the period of their incarceration none of the prisoners had seen the flag which they had enlisted to serve under, but all had doubly proved their devotion to it by refusing to desert it when in the time of their greatest suffering and despair they had been offered release on condition that they would join the confederate army—an offer which they indignantly spurned. Finally they came to the Big Black River, a short distance east of Vicksburg, where was a Federal military outpost, consisting of a company or two, and over the camp floated the Stars and Stripes.

When the flag came to the view of the men who had fought under it, and whom hunger and disease could not tempt to desert it, such a scene occurred as I have never elsewhere heard of. Some shouted, others too weak to shout wept and fell on their knees and prayed and thanked God aloud amid their sobs that they had lived to once more see the old flag. The pathos of that recital exceeded anything I have ever heard, and I had no difficulty in then and there determining for myself that whatever others might do I would never vote to put the Stars and Stripes over any vessel which was not as thoroughly American in all its parts as the flag itself—that was not representative of the best skill of the free labor of American citizens exercised upon the products of American mines and forests.

That, Mr. President, is the sentiment of nationality, which is not going to be satisfied now or hereafter with the purchase of English ships, or French ships, or German ships, out of which to make a so-called American navy or an American merchant marine over which shall float the emblem of American nationality.

It has been asserted that no matter what price we pay as compensation for carrying the mails it will not affect the freight charge made by the same vessels. Perhaps not. It will at least give us better and more frequent communication. But the Brazilian experience was such as to lead to the belief that lower freight charges may be counted on.

I quote from an official publication of the Empire of Brazil, being the report made by the commission sent by the Emperor to the New Orleans Exposition, in which the value of the establishment of new lines of steamers by means of a subsidy as realized in the experience of Brazil is set forth as follows:

The Empire of Brazil does not profess a policy of protection, nevertheless, in consideration of the question of freights on coffee to the United States, it saw that the establishment of a line of steamers under the American flag, in competition with English steamers, would produce a reduction in freight rates, and therefore determined to grant a subsidy to a new line. The result justified the expectations of the government, and the rate of freights, which eight years ago was 75 cents to $1 per bag of coffee by the English steamers, has fallen to an average of 40 cents, and cargoes have been brought as low as 10 and 15 cents. It has been said of such cargoes that it actually cost less to bring them from Rio de Janiero to New York than to transport them after their arrival from Brooklyn to the railroads in New York or Jersey City. The truth is that the expense of the subsidy has been a profitable one to Brazil since it brought about so marked a difference in the freight rates, a difference which more than balances the tax laid to pay the subsidy.

The Argentine Republic has proposed a subsidy for a line connecting that country with the United States. The Australian colonies are paying a subsidy now for a line of steamers to San Francisco. Have we less interest in this question than those countries? And can we not afford to pay our own steamers a decent sum for carrying the mails? And if we are willing to ignore entirely incidental benefits, let us try it as we try our star-route lines on the Western prairies and see whether it will not bring increased revenues to the Post-office Department, and in this way, if in no other, compensate us for the expenditure. Is it not better to do something than to do nothing? Certainly there is room for the exercise of statesmanship in the matter of our intercourse and trade with foreign nations. Standing still furnishes no remedy. I will add but a few words for the purpose of introducing a table which was published in Executive Document No. 7, Forty-fifth Congress, third session, being incorporated in a message of the President of the United States, in which occurs a letter to the President by the then Secretary of State, now a Senator from New York [Mr. EVARTS], transmitting a reply to a resolution of the Senate adopted on the 5th of December, 1878, in which the Senate requested the President to send to it any information which might have been received by the Department concerning the postal and commercial intercourse between the United States and the South American countries, together with any recommendation desirable to be adopted for facilitating and improving such intercourse. The letter of the Secretary goes on to say, referring to the document which was transmitted in response to the resolution:

I. It seems to be very evident that the provision of regular steam postal communication, by aid from government, has been the forerunner of the commercial predominance of Great Britain in the great marts of Central and South America, both on the Pacific and Atlantic coasts of the continent. It is no less apparent that the efforts of other European nations, Germany, France, and Italy, to share in this profitable trade have been successful in proportion with their adoption of regular steam postal communication with the several markets whose trade they sought.

II. These papers show, also, that the enterprise and sagacity thus shown by European nations have actually reversed the advantage which our geographical position gives us in relation to this extensive commerce of the American hemisphere. The commercial correspondence of our merchants with the trading points on the east and west coasts crosses the Atlantic twice to make a postal connection in a circuit of trade which has its beginning and its end on our own continent. The statistics of our limited trade, under this extraordinary disadvantage, show that the growing preference for our products in these South American markets insists upon being gratified, even at the cost of a circuit of importation which carries our merchandise to Europe and incorporates it as a contribution to the volume and profits of European South American trade. No stronger demonstration of the tendency of commerce to follow in the train of postal communication can be conceived than this vast and expensive circuit of importation resorted to in default of direct opportunities between the countries of demand and supply.

And more to the same effect; and in connection with that is an appendix showing the steam fleet of the Pacific Ocean sailing under the British flag—a fleet of British vessels all the way from 500 to 4,000 tons' burden, consisting of some forty-odd steamers. Following that is a statement of the Italian and German steamers engaged in the same traffic in a locality in which the American merchant marine is practically unknown, and which, as the Secretary of State says, has been built up largely by reason of the subsidies of the British Government granted for the establishment of postal communication.

Following the suggestions made by the Secretary of State, the Senate at that session of Congress inserted in the Post-Office appropriation bill by a large majority an amendment appropriating a large sum of money as mail pay for American steamers which ply between our own and South American ports; but it failed to pass the House for reasons very like those which inspire opposition to the amendment now pending.

The PRESIDENT *pro tempore*. The Senator from Kansas will take notice that the hour of 4 o'clock has arrived.

Mr. PLUMB. I will only take two or three minutes longer.

Of course, Mr. President, British steamers can bid for the carrying of British mails when the Government is subsidizing them already to run between the ports from and to which the mails are to be carried; but that competition is merely a nominal one. Actually wherever an important British line exists it is a subsidized one (there are three such plying between Liverpool and New York now), and in view of the sub-

sidy it can not only carry the British mail for a nominal compensation if necessary, but it will also be glad to have the American mails at almost any price, not only because whatever the price may be it is that much added to their already ample compensation, but because by so doing they are thereby contributing to keep an American line off the same route.

I will ask to put these tables into the RECORD at the conclusion of my speech [see Appendix A] together with a table [see Appendix B], which I do not care to read, found on the nineteenth page of the report of the Central and South American Commission, being House Executive Document No. 226, second session Forty-eighth Congress, showing the subsidies paid by the British Government to its steamship lines from 1848 to 1882 inclusive, and with that I shall close my remarks.

APPENDIX A.

STEAMSHIP FLEET OF THE PACIFIC COAST OF SOUTH AMERICA.

The principal steamship service of the Pacific coast of South America is conducted by the Pacific Steam Navigation Company, English, which has on this immediate service, inclusive of its extension through the straits to Lisbon and to England, the following-named vessels:

	Tons.		Tons.
Aconcagua	4,106	John Elder	4,151
Amazonas	2,020	Liguria	4,666
Araucania	3,088	Lima	1,803
Arequipa	1,329	Lontue	1,648
Ayacucho	2,200	Lusitania	3,825
Britannia	4,128	Magellan	2,856
Bolivia	1,925	Oroya	1,596
Callao	1,062	Pacific	2,008
Chili	1,750	Panama	2,008
Chimborazo	3,846	Patagonia	2,866
Colombia	2,200	Payta	1,800
Coquimbo	1,975	Peru	1,400
Cordillera	2,860	Potosi	4,218
Cotopaxi	4,027	Quito	800
Cuzco	3,845	Santa Rosa	2,000
Galicia	3,829	Santiago	1,500
Garonne	3,870	Sorata	4,013
Guayaquil	750	Supe	432
Huacho	449	Tabaquilla	240
Iberia	4,670	Talca	700
Illimani	4,023	Truxillo	1,500
Ilo	1,793	Valderia	1,975
Islay	1,588	Valparaiso	3,574

The largest of these vessels, including all of 3,800 tons capacity and over, are employed on a fortnightly line between Callao, Valparaiso, and Liverpool, sailing on every alternate Thursday from Callao and every alternate Wednesday from Valparaiso and Liverpool. On leaving the west coast, these steamers call at Punta Arenas, in the straits, and at Montevideo, Rio Janeiro, Bahia, Pernambuco, Lisbon, Vigo, in Spain, Bordeaux, and Liverpool.

The Callao and Valparaiso line runs semi-weekly, sailing from each extremity every Wednesday and Saturday, calling at twenty intermediate ports, including the shipping ports for nitrate and guano in Bolivia and Southern Peru.

The Valparaiso, Callao, and Panama lines leave Valparaiso semi-weekly, and leave Callao for Panama, and Panama on return, weekly, calling at all important points in Ecuador and Northern Peru.

Through bills of lading and passenger-tickets are issued to and from the west coast and the United States, in connection with the Pacific Mail Steamship Company and the Panama Railroad Company; also in connection with the following companies to and from Europe and the west coast, via the Isthmus of Panama, namely: The Royal Mail Steam Packet Company; West India and Pacific Steamship Company; the Compagnie Générale Transatlantique; also to to Central American and Mexican ports and San Francisco on the west coast. The Atlas Steamship Company and Hamburg-American line connect with some of their vessels at Colon (Aspinwall) to carry the freights and passengers brought up the coast by the Pacific Steam Navigation Company.

The Compania Sud America de Vapores has the following vessels on the west coast:

	Tons.		Tons.
Amazonas	1,373	Itata	
Los	1,010	Rimai	
Loutue	1,121		

These vessels run in connection with the Pacific Steam Navigation Company's vessels between Valparaiso and Callao.

STEAMSHIP FLEETS OF THE ATLANTIC COAST OF SOUTH AMERICA.

The Royal Mail Steam Packet Company (English), the oldest of these lines has the following-named vessels in this service:

	Tons.		Tons.
Arno	757	Minhs	1,491
Belize	590	Mondego	1,540
Corsica	681	Moselle	1,093
Dee	1,208	Neva	1,882
Don	2,406	Nile	1,642
Douro	1,785	Para	2,406
Ebro	853	Severn	1,119
Eider	1,018	Tagus	1,892
Elbe	1,773	Tasmania	1,547
Esequito	1,341	Tiber	974
Guadiana	1,597	Tyne	1,207
Leone	1,068		

A considerable share of this fleet now runs in the trade of the West Indies, and does not extend to the Brazilian coast. These vessels are inferior in capacity and appointments to the newer lines.

The Compagnie des Chargeurs Réunis (French) has the following vessels in a line from Havre to the River Plate:

	Tons.		Tons.
Belgrano	1,054	Villa de Bahia	817
Henry IV	963	Villa de Rio de Janeiro	817
Bigadaria	1,778	Villa dos Santos	817
San Martin	1,743		

The Bordes Line from Bordeaux (French) has fifteen steamers irregularly in this trade, namely:

	Tons.		Tons.
Aconagua	691	Pacifique	851
Adolphe	675	Tarapaca	692
Alexandre	683	Valentia	723
Valparaiso	1,230	(And others.)	

The Liverpool, Brazil, and River Plate Steam Navigation Company (English) has the following large fleet, chiefly in the trade of the east coast, but with some voyages to the west coast, and to the West Indies and Mexico:

	Tons.		Tons.
Archimides	900	Humboldt	995
Biela	1,491	Lalande	679
Calderon	660	Laplace	901
Camoens	660	Leibnitz	1,485
Canova	602	Masklyne	1,678
Cervantes	698	Meuling	673
Delambre	998	Memmon	833
Donati	947	Newton	838
Euclid	995	Olbers	1,389
Galileo	1,446	Ptolemy	758
Gassendi	801	Rubens	1,267
Halley	995	Thales	995
Helvetius	1,682	Vandyke	1,008

This is usually known as Lamport & Holt's line, and it is more widely distributed than any other, but chiefly on the east coast.

The Hamburg American line, or lines, afford the following list of fine vessels, a few of which go to South America and the West Indies:

	Tons.		Tons.
Alemania	1,766	Pomeramia	2,105
Cimbria	1,857	Rhemania	2,117
Cyclops	783	Silesia	1,900
Franconia	2,111	Suabia	2,454
Frisia	1,982	Thuringia	1,886
Gellert	2,394	Vandalia	1,945
Herder	2,313	Vulcan	745
Holsatia	1,847	Westphalia	1,945
Lessing	2,360	Wieland	2,385
Lotharingia	715		

The West India and Pacific Steamship Company (English) has the following vessels irregularly in the trade of the West Indies and South America:

	Tons.		Tons.
American	1,369	Connecticut	1,103
Andrean	1,375	Cuban	845
Australian	1,699	Haytian	1,400
Bolivian	1,577	Jamaican	1,227
Californian	1,287	Venezuelan	1,691
Caribbean	1,186	West Indian	1,278
Chilian	1,367		

The Messageries Maritimes (French) has a large fleet of fine vessels, a few of which are engaged in South American trade.

The Compagnie Générale Transatlantique (French) has a large fleet chiefly in trade with Atlantic ports of the United States and the West Indies.

The Companhia de Navigacio do Vapor de Pernambuco (Brazilian) has five small vessels in coastwise Brazilian trade.

The Amazon Steam Navigation Company (English) has a fleet of ten or twelve steamers, a part of which are for river navigation only, while a part run from Liverpool to Para.

APPENDIX B.

The following statement shows the amounts annually paid by England to steamship lines since her present system of subsidies was adopted:

Years.	Bounty or subsidy paid British ships by British Government.	Years.	Bounty or subsidy paid British ships by British Government.	Years.	Bounty or subsidy paid British ships by British Government.
1848	$3,250,000	1860	$4,349,760	1872	$5,693,500
1849	3,180,000	1861	4,703,285	1873	5,665,296
1850	5,313,985	1862	4,105,353	1874	5,697,346
1851	5,330,000	1863	4,188,275	1875	4,860,000
1852	5,510,635	1864	4,503,050	1876	4,480,261
1853	5,805,400	1865	3,981,995	1877	3,976,580
1854	5,950,559	1866	4,227,018	1878	3,914,990
1855	5,741,633	1867	4,079,996	1879	3,768,230
1856	5,713,485	1868	4,047,586	1880	3,873,130
1857	5,133,485	1869	5,481,690	1881	3,601,350
1858	4,679,415	1870	6,107,761	1882	3,538,835
1859	4,740,190	1871	6,070,741

The Silver Problem.

SPEECH

OF

HON. SAMUEL DIBBLE,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 8, 1886,

The House having under consideration the bill (H. R. 5690) for the free coinage of silver, and for other purposes.

The SPEAKER. The bill, the title of which has just been read by the Clerk, is now in order for consideration and debate, and the gentleman from Pennsylvania [Mr. SCOTT] is recognized as entitled to the floor.

Mr. SCOTT. I yield half of the time allotted to me, to the gentleman from South Carolina [Mr. DIBBLE].

Mr. DIBBLE. Mr. Speaker, I thank the gentleman from Pennsylvania for his courtesy.

I am opposed to the unlimited coinage of silver dollars, as proposed in the pending bill, not because I am opposed to silver, but from the position of a bimetallist—in favor of international bimetallism, if that can be obtained, and, if that be impracticable, then in favor of maintaining both gold and silver as legal tender in our own country. In my judgment, the cause of silver is imperiled by free coinage at present. Before determining to open our mints to any one, who may desire to bring silver bullion, and have it coined into standard legal-tender dollars, it is but simple prudence for us to consider what stock of silver would flow into them for coinage. To arrive at this, let us make the best calculation we can, as to the quantity of silver bullion for sale, outside of our home supply from our own mines.

STOCK OF SILVER BULLION IN ENGLAND.

I have been unable to find any one, who is able to state, with any certainty, the stock of silver now piled up in the London market. It must, however, be very large, since in the period of about fifteen years, the price of silver bullion in that market has fallen over 20 per cent. I have been able to get some statistics, taken chiefly from the annual supplement to the London Economist, published February 21, 1885, which throw some light upon this inquiry. In that able commercial periodical, I find that from 1867 to 1884, inclusive, a period of eighteen years, silver was imported into the United Kingdom to the value of £193,000,000, or $950,000,000; while during the same period there was exported to the East, silver valued at £101,000,000, or $500,000,000.

By the tables of the British mints, we find, that in the eighteen years we are considering, less than £10,000,000, say fifty million dollars' worth of silver, was coined; and this amount included some old silver recoined, which was not supplied from importations. The parliamentary commission to inquire into the causes of silver depreciation reported in 1876, that the annual British consumption of silver in the arts was of the value of £600,000, or nearly $3,000,000—say $50,000,000 for the eighteen years. From these figures we derive the following calculation:

Imports of silver into United Kingdom		$950,000,000
Exports of silver to the East		500,000,000
Stock remaining in England		450,000,000
Deduct coinage	$50,000,000	
Deduct art consumption	50,000,000	
		100,000,000
Leaving unaccounted for, in eighteen years		350,000,000

Bear in mind, that in this calculation we have not taken into account the stock of silver bullion on hand in the London market at the beginning of the year 1867, nor the allowance to be made for recoinage of worn British coin at the mints. It is reasonable to suppose, that these two items will nearly, if not quite, counterbalance any further deductions, which should be made from the amount I have stated. And, while I do not claim that absolute accuracy can be attained in a calculation like this, yet, when coupled with the remarkable fall in the price of silver bullion, it brings to the attention of the House, that an enormous accumulation of silver has taken place at London in the last eighteen years.

STOCK OF SILVER FOR SALE IN GERMANY.

In addition to the stock in London, we learn from the statement of Baron Von Theilmann, delegate of Germany at the international monetary conference of 1881, that Germany, after coining all the silver allowed by law, and reserving 115,000,000 marks for possible increase of silver circulation, would still have for sale "a mass of three hundred and thirty-seven to four hundred and twenty-seven millions of marks," or about $100,000,000. This silver is still unsold, and in addition the German mines produced in three years, from 1882 to 1884 inclusive, silver of the value of $28,835,611. It is reasonable to suppose, therefore, that Germany has still a silver stock for sale, besides her currency, of about $125,000,000 in value.

We have, therefore, outside of and in addition to the coin in circulation a probable stock ready for sale in England and Germany of over $400,000,000.

EFFECTS OF FREE COINAGE.

If we open our mints to every one who may bring silver, and coin it at the standard weight of 412½ grains, nine-tenths fine, when in the London market that weight of silver bullion is worth only 80 cents, we would offer so great an inducement for profit, that the silver bullion of Europe would be drawn to our shores. The European purchaser of our exports, instead of paying for them with goods or gold, would send to London and buy silver bullion at 80 cents, and bring it across the ocean to our mints, have it coined into standard silver dollars, and with those dollars he would pay for our products. But when we import foreign commodities the seller of them will demand payment in gold. The consequence would be, that silver would flow in, and gold would flow out, and in a little while this country would become practically a silver nation, like Austria or Mexico, where gold is at a premium to-day. I have not yet heard any advocate of this bill discuss the consequences of such a condition of our currency; and for my own part, I am not prepared to take the risk of losing our gold, and resting our monetary system entirely upon silver. I know that the buyer in Liverpool of Southern cotton, or of Western wheat, can purchase for 80 cents in London, as much silver bullion as will furnish the raw material, out of which a standard silver dollar can be coined, and if he could send it to our mints, and have it coined for his benefit into a dollar he could pay for our cotton or wheat with it, and there would be 20 per cent. extra profit for him in the transaction; while under our present system of allowing no coinage of silver, except on Government account, he can not make such a profit, and therefore pays us for our cotton or wheat in gold. Hence we find, under our present system, that our stock of gold has been steadily increasing for the last eight or ten years.

In case of free coinage of silver, our foreign exchanges would become complicated in the extreme. At present we import foreign goods, and pay for them with our exports, and settle the balance, one way or the other, either with gold or silver, or by redeeming our bonds held abroad, when the balance is in our favor. But with open mints, and silver bullion in London 20 per cent. lower than silver legal-tender coin in this country, there would be two sets of exchanges going on. Many persons abroad, buying our goods, would send over silver to be coined into dollars to pay for the goods as I have explained; and such transactions would constitute one set of exchanges, where the accounts would balance, leaving nothing open in favor of either buyer or seller. In another set of exchanges we would be required to send abroad our gold to pay for our imports, and, in addition, to send more gold to pay interest on national, State, and corporation bonds held by foreign creditors.

At present the coinage of twenty-eight million Bland dollars every year by the Government itself, does not prevent gold coming in from abroad in much larger quantities than go out, because our exports are much greater in amount than our imports, and the surplus comes back to us either in our bonds or in gold.

I am willing to admit, that, with free coinage, the demand for silver, in order to make the profit here on the coinage into dollars, would cause a rise in the price of silver in London, and after a time it would reach or approach our ratio of 1 to 16 as compared with gold; but here would arise, in my opinion, another complication.

We know that from 1871 to 1873, Germany, Sweden, Norway, and Denmark, which had been previously silver countries, adopted gold as the basis of their currency and demonetized silver.

We are told also that France had previously contemplated a change from bimetallism to a gold standard, and Germany subsequently adopted this French idea after the Franco-Prussian war, assisted by the French indemnity of $1,000,000,000, while France was unable to do likewise on account of her reverses. But, to-day, France has recovered her financial strength, and has three times as much gold and silver as Germany, possessing $873,000,000 of gold and $600,000,000 of silver currency. She would probably embrace the opportunity, as soon as the price of silver rose near to the ratio of 1 to 16, to sell one-half of her silver coins, and establish her currency, and that of the Latin Union, on the gold basis.

British India has over $1,000,000,000 of coined silver, with scarcely any gold coinage, and has the single silver standard. It has been the fond dream of her statesmen for some time past to change to the gold standard, so as to have the same system as Great Britain, with whom her trade is carried on. In 1881, at the international monetary conference, Sir Louis Mallet, first delegate of British India, used these significant words:

> As to India, the great wish of the financial authorities in that country has been, if possible, to have a common monetary system with England. Silver being impossible, on account of the English system, they must choose between bimetallism or gold, and although for the present the latter solution would be too difficult, it is certain that if the depreciation of silver continues, and if by reason of the discovery of fresh deposits of gold, or from some other cause, the opportunity should offer itself, we should be only too ready to seize it, &c.

Russia, Austria, and Italy have already made preparations for a similar course from paper money to specie resumption in gold. Under these circumstances the free coinage of silver at our mints would give all of these nations the opportunity of parting with some of their silver, and, getting the gold which I have shown, would flee from our shores to Europe to pay the purchase-money for our imported goods and the interest we owe abroad.

Furthermore, Mr. Speaker, so long as the coinage of silver legal tender is under the exclusive control of the Government and no private person is permitted to share in any profit that may arise from the manufacture of the raw material into the finished coin, the Congress of the United States can effectually exercise its constitutional power "to coin money and regulate the value thereof." Nothing can abridge or diminish this power in such a case, except a very large over-issue beyond the needs of the people for a circulating medium. In order to disturb the parity of the silver dollar with the gold dollar in legal-tender value, there must be an inflation, not of silver bullion, but of silver coin in the country. Herein lies another danger in attracting the silver of Europe to open mints, for the silver would come to us expressly for the purpose of being coined into legal-tender money on private account, and would enter into our circulation, without governmental limitation or control. And while in ordinary times a nation coins for its citizens their gold and silver bullion, whenever presented, into money, yet the theory upon which this free coinage is based, is that the normal demand for certain coins is an indication, that they are needed for purposes of currency. But, in a crisis like the present, when some nations of Europe

are struggling for gold, and trying to repudiate silver, and therefore gold as a commodity rises in market value, on account of this demand of the nations, beyond the supply in existence, it becomes not only the prerogative of Congress under the Constitution, but its bounden duty, to control the coinage of both metals, and to regulate their value as money, so as to keep both of them in circulation at par with each other, as the "ready money of the merchant."

In the next place, the rest of the world coins silver and gold at the ratio of 1 to 15½ or less, while the United States has at present the ratio of 1 to 16, thus putting 3 per cent. more of silver in our coins, than any other commercial nation. This disparity is one of the principal obstacles to an international monetary agreement. For example, France and the other states of the Latin Union have over $600,000,000 worth of full legal-tender silver in circulation at par with gold; we have, say, two hundred and fifty millions. They will never unite with us in the free coinage of silver, unless we reduce the quantity of silver in our standard dollar, so as to conform to the ratio of 1 to 15½. Every dollar coined by us renders it more difficult for us to do this in the future; and free coinage by us now, in advance of an international agreement on the subject, would thus greatly embarrass any future arrangement with foreign nations. I believe that such an arrangement is becoming every year more and more attainable.

For these reasons, I am opposed to the free coinage of silver as proposed in the pending bill. I can not believe that it would be advantageous to the country, or to our silver currency.

AMERICAN COIN VS. BRITISH BULLION.

But, Mr. Speaker, while opposed to free coinage, I can not concur in the proposition, that the standard silver dollar is worth only 80 cents, and is "a fraud and a sham," as its foes assert. The value of silver bullion in British gold coin in the London market, is not the criterion of value of an American coin, possessing in our markets the same purchasing power as a gold dollar. I maintain, without hesitation or reserve, Mr. Speaker, that the silver dollar is worth 100 cents of our currency, in all the qualities that pertain to money.

If it were true that the standard silver dollar is "a fraud or a sham," then we should withdraw it from circulation. Upon this issue, there is no middle ground. If it is honest money, it should be sustained. If it is dishonest money, it should be replaced by honest money. And its fierce assailants are inconsistent, unless they insist that the amount now in circulation should be called in and melted down; but they have never taken that position. They seem willing that it should continue to pass from hand to hand as currency, provided the Government coins no more. In epithet, they attribute to it all the disgrace attached to counterfeit coin, but in epithet only, for they acquiesce in the continued circulation of those now in the hands of the people.

But they are still more inconsistent. They extol the wisdom of making light-weight halves and quarters, to avoid the operation of Gresham's law, and to keep them in circulation with legal-tender limit of $5. It is dishonest to issue a dollar, that has not a dollar's worth of bullion according to the London market, but it is commendable to make a half-dollar with less than half as much silver as the dollar they condemn! If one of them owes a creditor $5, and pays him five standard silver dollars, weighing 2,062½ grains of standard silver, the creditor is really paid but $4, and is defrauded of $1, because, they say, each one of those dollars is worth only 80 cents; but if the same debt of $5 is paid in ten silver half-dollars, weighing only 1,929 grains of standard silver, the creditor is paid in full, though he gets less weight of actual silver than in the former transaction! In other words, they contend that 1,929 grains of silver in token money is better than 2,062½ grains of silver of the same fineness with full legal-tender functions!

The truth is, Mr. Speaker, those who seek after fine-spun speculations in economics, are apt to lose sight of the high and sovereign function, which the American people have bestowed upon the Congress, in the power "to coin money and regulate the value thereof." This power would be of little value to the people, who require as much certainty in their business transactions as possible, if the coinage of the United States is to be affected by every fluctuation of bullion in a foreign market, and if the British silver-broker is to regulate the value of our coins, instead of the Congress of the United States. If this power is not to be exercised in favor of a stable currency, there is no efficacy in establishing a monetary unit; for the idea of a monetary unit is inevitably allied with the weight and fineness of the metal which represents it, irrespective of the fluctuations in the value of the metal as bullion, and without regard even to the purchasing power of the coined monetary unit itself.

Hence we find that Great Britain, whose example has been eloquently cited for our imitation, has in her currency to-day the silver crown, which is valued by British law at 5 shillings or 60 pence, and yet the bullion, which composes it, is worth to-day in her own markets only 44 pence, a difference of over 25 per cent. Some of our monometallists would call that silver crown "a fraud and a sham," "75 per cent. money and 25 per cent. fiat," and yet those skillful connoisseurs in trade, the British merchants, accept it cheerfully in their currency at par with gold. France and Belgium, Switzerland and Italy maintain for the 5-franc piece of silver full parity in value with the gold coinage of the several countries named, although the metal in it is worth less than three-fourths of its valuation as money, and although France has about five hundred and fifty million dollars' worth in circulation, with full legal-tender functions.

STANDARDS OF VALUE, SO CALLED.

There is much learned discussion about "a fixed standard of value," but those who use the expression will find it difficult to define it. There can be a fixed monetary unit, but, whether that unit be represented by a silver coin, or a gold coin, its purchasing power will vary, and the value of the bullion composing it will be subject to the law of supply and demand, like any other commodity. And gold bullion fluctuates in value, as well as silver bullion. Professor Laughlin, in his recent work, The History of Bimetallism in the United States, although he is an advocate of gold monometallism, says:

> Monometallists do not, as is so often said, believe that gold remains absolutely stable in value. They hold that there is no such thing as "a standard of value" for future payments, which remains absolutely invariable, &c.

And again:

> No commodity, not even gold, has any sacerdotal qualities, which keep its value invariable.

Mr. Jevons, in an able publication, proved clearly that after the discoveries of gold in California and Australia, its increased production caused a fall in its value of from 9 to 15 per cent. Chevalier, the great French economist who advocated so ably the adoption of the gold standard in France, then advised the silver standard, in consequence of the decrease of the value of gold. Several European nations were seized with a gold panic then, and took refuge in silver, in like manner as they have recently been anxious to flee from silver to gold. In fact, therefore, there is no absolute standard of value, and can not be, for the items that constitute value are changeable. Hence the fallacy of comparing gold to a yardstick, or a quart measure, and speaking of silver and gold bimetallism as the using of two yard-sticks of different lengths, each called a yard, or two quart measures of unequal capacities, each called a quart.

The answer is that if gold is adopted as a standard of value you have a yard-stick that is longer to-day and shorter to-morrow; or a quart measure that holds more at one time than it does at another. Currency of gold, or of silver, or of both, is simply a medium, by which to compare the relative values of commodities at any given time. And when money becomes the medium of credit transactions, its use involves an additional incident, which does not enter into spot transactions, and that is, that both the creditor and the debtor take the chances of the future purchasing power of the commodity, into which they resolve their bargain. Every credit is in one sense a speculative transaction, for the parties are not certain, that when the transaction is completed, the creditor, in getting principal and interest, will get as much purchasing power, or more, or less, than when he lent his money, or than the cash value of goods sold by him to his debtor. It is in view of this fact that Professor Laughlin says:

> The highest justice is rendered by the state, when it exacts from the debtor, at the end of a contract, the same purchasing power which the creditor gave him at the beginning of the contract—no less, no more.

PRICE LEVELS.

It is interesting to consider this subject in connection with the doctrine advanced by Mr. Mulhall, the eminent author of the History of Prices, published last year in England. He maintains, that the aggregate of the world's commercial transactions at any given time, compared with the prices of that particular time, will give the price level; and by applying to the same volume of transactions the prices of a different period, it is possible to ascertain whether prices have risen or fallen, and how much; and that the real standard of value would be the average of prices in the exchanges of the world at a given time, used as a standard of comparison with the prices at any other given time, Take the whole volume of exchanges during one year—say the exchanges of 1884—and compare prices with the prices of 1860, and make the inquiry: "What would the same quantities and kinds of goods as were exchanged in 1884 in the civilized world have brought, if the prices had been the same as they were in 1860?"

This is Mr. Mulhall's method of comparing prices. By taking the prices of 1860, and applying them in detail to the whole volume of the exchanges of 1884, and comparing the result with the aggregate of the actual prices of 1884, he ascertained whether prices have risen or have fallen, and how much. Now, in that comparison the average of prices of 1884 is, for the time being, the standard with which to compare the prices of 1860; or you can transpose the factors, and say that the prices of 1860 are the standard, with which to compare the values of 1884. The average of prices is the only standard of value, with which you can compare values at any other time.

We are told by mathematicians, that when the ocean is lashed into a storm, and the waves are rising and falling in madness and fury, there is, at every instant of the tempest, amid all these violent fluctuations, a general average level, to which the surface of the ocean conforms. That surface changes with every motion, but the general average level remains the same; and such a level as truly exists, as if the ocean were in a dead calm, and its surface were like a sea of glass. So is it with the average of prices at any given time. Prices fluctuate in the commotion of commercial exchanges, but, despite the rise of some and the fall of others, there exists a general average or level of prices, just as the

sea has its level even in a storm, and that level of the current exchanges is the standard for the time being of prices and of values.

HAS SILVER FALLEN IN PRICE?

Now, Mr. Speaker, let us take silver and, measure it by this standard. In 1871, 100 cents' worth of silver bullion in the standard dollar coincided as a unit of currency with our gold dollar, whose metal was valued then at 97 cents. The quantity of silver in a standard dollar was then worth about 3 cents more than the gold in a gold dollar. To-day, taking the London market (simply for the sake of the argument, without conceding that it should enter into the matter at all), we find the silver bullion in the standard dollar now, in that market, to be 20 cents less in market value, than the gold we put into a gold dollar. That makes a fall of 23 cents for silver, as compared with the gold standard of England.

Mr. Mulhall is a British writer, and constructs all his tables on a gold basis; hence I take the London market for the comparison I am about to institute. By examining his tables, and those of other distinguished financial statisticians, we find that from 1871 to the present time the fall of prices has been between 23 and 25 per cent., taking the average in the manner I have indicated, and also by the old methods, previously adopted by political economists. So that the bullion in a silver dollar melted down to-day will buy of the commodities of the world just about the same amount, as the silver dollar melted down in 1871 would then have bought of those commodities.

No more striking illustration of this can be found, than is presented in the table prepared by Mr. Joseph H. Walker, a gold monometallist, and attached to his "Address on the perils of wage-workers in continued silver coinage," and referred to in the recent speech of the gentleman from Massachusetts [Mr. LONG] on the silver question. I accept that table, from the enemies of silver, as showing the purchasing power of silver bullion at this time, compared with its purchasing power in 1871, fifteen years ago. I will insert so much of the tables as will illustrate the matter I am discussing.

Yearly cost of supplies of a family of four persons at the lowest point.

This table shows the yearly cost of supplies for a family of four persons at the lowest point. Computing provisions, clothing, rent, and all the supplies of a family by the market prices of 1871, it took at that time $304.89, at the lowest point, to supply a family of four persons with the necessaries of life. In 1885, exactly the same quantities of the necessaries of life could be obtained for $216.11, a fall of 30 per cent. in our prices in fourteen years. We can take two hundred and sixteen standard dollars now, and buy those articles, which it would have required three hundred and four standard dollars to have purchased in 1871.

But suppose we submit this matter to the "fire test," as some gentlemen have called it, as if the Bland dollar was to be melted by fire in the pockets of the people, or in the fire-proof safes of the country. Take the three hundred and four standard dollars, that purchased the supply of life's necessaries in 1871; take them out of the pockets of the people, and melt them down, and make bullion of them; send that bullion to London and sell it at 80 cents on the dollar, and bring back the proceeds of sale to this country, in gold, if you please. There will be $240+; and it takes only $216 to buy the same amount and kind of products, which the three hundred and four standard dollars, in their original coined state, would have bought in 1871, so that you have now $24 to spare.

I give this illustration, Mr. Speaker, to show that silver bullion has not fallen, in comparison with the price level of the world; and that in purchasing power—the true criterion of the value of metallic currency—it has not depreciated. And I have already cited one of the most distinguished monometallists of the day, to show the recognition of the doctrine, that purchasing power is the true criterion of the value of money; and upon that basis there can be but one conclusion, that silver has not depreciated, but that gold has appreciated in value.

WHY HAS GOLD RISEN IN PRICE?

What have been the causes of this disparity between the two metals? For my part, Mr. Speaker, I believe it to be a temporary disparity, and that it has no element of permanency about it. It has resulted from a temporary abnormal demand upon the gold market, which I trace in this way:

We find that, at the close of the Franco-Prussian war, France required 5,000,000,000 francs ($1,000,000,000) to pay the German indemnity. The statistics of the transaction show that she paid $58,000,000 of that amount in gold, coined at the French mint; that she had to use her credit, and borrow from England and her neighbors another portion of the amount, and if I remember rightly, the only portion paid in silver, was a small part of the indemnity drawn on the Belgian Bank. The rest of it was settled in gold, or by drafts on the basis of gold, and the payment of such large amounts necessarily created a stringency in the money markets of Europe. What followed? Germany, while the money markets of Europe were straitened by this heavy drain upon their resources, determined to abolish the local coinage of the several states, based on silver, and to adopt instead an imperial coinage on a gold basis. In order to accomplish this result, Germany offered for sale over 11,000,000 pounds of silver, and actually sold over 7,000,000 pounds from 1873 to 1879 inclusive, while she coined, up to the end of 1880, imperial gold coins amounting to 1,747,237,095 marks, withdrawing during the same time 1,080,486,138 marks of old coins of the several states, and therefore purchasing to the amount of about 700,000,000 marks, or $170,000,000 worth of gold for the purpose.

The SPEAKER *pro tempore* (Mr. HAMMOND). The time of the gentleman from South Carolina has expired. Does the gentleman from Pennsylvania [Mr. SCOTT] desire to yield further time?

Mr. SCOTT. The gentleman from Texas [Mr. LANHAM] proposes to give the gentleman from South Carolina [Mr. DIBBLE] ten minutes of his time.

Mr. LANHAM. I am entitled to the next hour; and it is my purpose to yield ten minutes of my time to the gentleman from South Carolina. After that, I believe the gentleman from Pennsylvania will occupy the residue of his time, and then I shall have fifty minutes.

The SPEAKER *pro tempore*. The gentleman from South Carolina will proceed for ten minutes longer.

Mr. DIBBLE. Thanks to my friend from Texas for his kindness.

I have been discussing, Mr. Speaker, the causes of the appreciation of gold bullion in the money market, and have mentioned two of the agencies producing that effect:

First. The drain upon the monetary resources of Europe, in order to supply France with the means to pay to Germany the indemnity of 5,000,000,000 francs, or $1,000,000,000.

Secondly. The consumption of $170,000,000 worth of gold by Germany, in addition to old gold coinage, in establishing an imperial currency under the laws of 1871 and 1873.

The third cause is found in the action of Denmark, Norway, and Sweden, who formed the Scandinavian monetary union, by treaties made in 1872 and 1873, and adopted a common monetary system, changing from a silver to a gold basis, and selling silver and buying gold.

Fourthly, the action of the United States from 1873 to 1879 in hostility to silver, and our resumption of specie payments practically in gold, rather than in gold and silver, exercised a much greater influence in disturbing the parity of gold and silver than is usually supposed. And, in order to appreciate this fully, let us briefly review the position of the silver dollar in our currency.

The standard silver dollar of 412½ grains, nine-tenths fine, contains 371¼ grains of pure silver; the rest is alloy. It was first coined in 1792, and from that time to the present, the quantity of pure silver in it has never been changed. The weight was reduced from 416 grains to 412½ grains by act of January 18, 1837, by reducing the alloy, a matter not affecting its intrinsic value, but simply rendering it more convenient as currency. Until 1849, it was the sole coin representative of our monetary unit, and our gold coins were multiples in value of that unit. In 1849, one-dollar gold coins were authorized for the first time.

Up to 1834, by reason of having fixed the ratio of silver to gold in our coins at 1 to 15, when the bullion market ratio, and the European coin ratio also, was 1 to 15½, the bullion in our gold coins exceeded slightly in value the coins themselves. To remedy this the Congress (in 1834) reduced the quantity of gold in our eagles and other gold coins about 6 per cent., thus establishing the present ratio of 1 to 16 between the two metals. From the first enactment our coin basis was bimetallic, with the dollar as the monetary unit, containing 371¼ grains of pure silver, its equivalent in gold coinage being estimated at first at 24¼ grains of pure gold to the dollar, and after 1834 at 23¼ grains, at which last rate one-dollar gold pieces have been coined in small quantities since 1849. The weights I have given are exclusive of alloy.

This condition of our coinage continued until 1873, when the coinage of standard silver dollars was suspended; and in 1874, in the codification of the United States laws, the legal-tender quality of all silver coins was limited to $5; and thus, through inadvertence, Congress impaired the legal-tender function of the standard silver dollars then in circulation. In 1878 the full legal-tender function was restored and the coinage of standard silver dollars was resumed under the law usually called the Bland act; but which came from a bill of Mr. KELLEY, of Pennsylvania, in 1876, providing for free coinage of silver, which was then passed by the House, but was not taken up in the Senate; and in the next Congress Mr. BLAND, of Missouri, renewed the proposition. It was again passed by the House, but was modified in the Senate by the amendments of Senator ALLISON, of Iowa, striking out free coinage, confining the coinage to Government account and directing the purchase of not less than two million nor more than four million dollars' worth of silver bullion per month for the purpose. Silver is now coined under this law.

Having thus briefly sketched the history of the silver dollar in our currency, it will be noticed that in 1873, when the actual circulating medium of this country was paper money entirely, the act was passed demonetizing the silver dollar, and establishing the gold monometallic basis in our currency. And although in our own country it was unnoticed for several years, and had no appreciable effect on our home circulation, since at that time gold and silver were both at a premium, and not used as currency, yet to foreign nations, who, as we have seen, were just at the same time grasping for more gold, and changing from silver to gold, it was an indication of a new demand for gold in the future, whenever the United States should resume a specie basis. Hence it is reasonable to suppose, that the act of 1873 had an important influence in London, in raising the price of gold. And when, in 1875, the resumption act was passed, providing for the specie basis on and after January 1, 1879, another blow was struck at silver, in my judgment still more hurtful than the act of 1873. This act provided that on and after January 1, 1879, the Secretary of the Treasury should "redeem in coin," at the New York subtreasury, the greenbacks in sums of not less than $50.

Now, it will be observed that silver coins by the act of 1873 and the Revised Statutes of 1874 were, at the time of the passage of the resumption act, legal tender only to the amount of $5; therefore the resumption act was really a provision for resumption on a gold basis in 1879. It appears to me, Mr. Speaker, that nothing could have been more unwise and unbusinesslike, than such a provision. Our country was involved in the meshes of a paper currency, with the precious metals at a premium, and with only a small quantity of gold in the Treasury, and it was regarded as very doubtful whether, in the short time provided in the act, the United States would be able to meet the demand for specie on the day named for resumption, without embarrassing the Treasury or producing financial disturbance in the trade of the country. And yet, with a large home production of both silver and gold, and therefore having the resources of two metals, ready at hand in that emergency, the act virtually provided for resumption without the assistance of silver at all. And although, prior to the date fixed for resumption, the act of 1878 was passed, restoring the full legal-tender function to the standard silver dollar, and providing for its coinage, yet the executive department of the Government, in carrying out the directions of the resumption act, ignored silver and made use of gold only. Hence we can easily see that the acquisition and storing of gold in the Treasury of the United States from 1875 until and after resumption had begun must have had a very great influence toward increasing its market value, both at home and abroad, as compared with silver, which failed to receive equal recognition as a money metal from those who administered our finances.

While these events were transpiring, the silver mines of Nevada and the surrounding Territories gave promise of unlimited production. The Comstock lode became of world-wide fame. The prospect of immense fortunes to be made in silver-mining stocks urged the speculators and stock jobbers to represent every vein of silver as of priceless value, and while dishonesty salted the mines, skillful financiering bulled the stocks. The consequence was, that the commercial world took a panic about silver, and the nations hastened to get under the shelter of gold, very much as had happened earlier in the century, when, during the Californian and Australian gold fevers, they had rushed into silver.

At that time France, having the largest metallic stock in the world, threw herself into the breach and arrested the panic by her free coinage of both silver and gold on the basis of 1 to 15½.

But at the time of this silver panic we have seen that France was being drained of five thousand million francs of her metallic currency, in the German indemnity, and she was, therefore, powerless; and our United States financiers themselves seem to have partaken of the panic; and besides, the United States was then struggling under the disadvantages of a paper currency. Hence came the rapid appreciation in the value of gold bullion as compared with the prices of all other commodities, silver bullion included.

INTERNATIONAL BIMETALLISM.

But let us look at the situation calmly, and we will observe that the prospects are favorable to a restoration of the par of the metals. France has recovered her gold, and is the strongest nation of the world in the supply of both metals; Germany is no longer selling her silver, and a strong party is now urging the adoption of bimetallism, and the coinage of the surplus she now has on hand; and the annual production of our silver mines has become known to the world through official statistics. There are no new or continuing causes in operation tending to depress silver, which are likely to have any effect upon the markets, excepting, perhaps, the sensational attacks of a few newspapers upon it, and these will die away, as soon as we come to a conclusion upon this question in Congress. And, in my judgment, the conclusion ought to be a compromise between the extreme positions taken by the gold monometallists and the silver monometallists. There is room here for wise legislation; and I regret that this bill is to be considered under the operation of the previous question, for it should be open to the utmost freedom of amendment permitted by parliamentary usage.

The advocates of the passage of this bill, in view of what I have said, may cite the example of France when she arrested the gold panic of thirty years ago by free coinage of both metals, as a precedent for similar action now on our part. But our monetary condition is not such as that of France was at that time, nor even is it such as that of France to-day. It is possible that France and the United States, with the other States of the Latin Union, might to-day bring complete relief to the situation by open mints, provided that our ratio of silver to gold was the same; but the fact is, that France and the Latin Union have closed their mints to silver, and no one at all informed on the subject need be reminded, that the United States has not sufficient resources to attempt single-handed the feat of regulating the metallic circulation of the world.

When France accomplished this, she was, as she is to-day, the strongest of all the nations of the earth in metallic currency, and could endure any drain upon either of her metals from the surrounding nations without exhaustion, while the United States is weak in gold and silver, considering our immense territory and rapidly increasing population. France is compact, and with a dense, settled population, changing but little, and conservative, rather than speculative, in their habits, while we have large areas now being opened to civilization, with a sparse population, so that money does not circulate rapidly, as in dense communities, and with a spirit of enterprising speculation in every part of the country.

But what is more than all this, France is a creditor nation, and receives money from other nations, while the United States is a debtor nation, and large amounts of our securities are in the hands of foreign creditors, in England, Holland, France, and Germany. If we had the same amount of gold and silver coin per capita as France, and were also a creditor nation, so that we would be receiving from the rest of the world instead of paying out, then our gold and silver coin would probably both be safe with free coinage; but as a debtor nation, and with a scant stock of gold and silver money, the effect of free coinage would be, as I have stated, to bring us to a silver basis. In this connection, it is well to consider that France has per capita over $23 of gold, and over $16 of silver money; while the United States has per capita less than $17 of both gold and silver combined.

It is in realizing such facts as these, that the advantage of settling the money question by international agreement becomes apparent. And in spite of assertions of the friends of this bill to the contrary, I think that there is a great advance in public sentiment in Europe, in the direction of such a settlement. It is very manifest, when a comparison is instituted between the conduct of the European nations in 1878 at the international conference of that year, and their action at the conference of 1881.

By the act of February 28, 1878, the President was directed to invite the nations of the Latin Union, and such other European nations as he deemed advisable, to join with us "in a conference to adopt a common ratio between gold and silver for the purpose of establishing internationally the use of bimetallic money, and securing fixity of relative value between those metals."

THE CONFERENCE OF 1878.

Commissioners were appointed to represent the United States, and the invitation extended to the commercial nations of Europe, was accepted by France, England, Holland, Belgium, Russia, Austria, the Scandinavian Union, Switzerland, and Italy. Of these nations, at that time, only Austria and Italy supported with energy the bimetallic propositions of the United States. Holland, though in favor of bimetallism, thought it would require agreement of France, England, and the United States, to make it practicable. Russia said she would offer no obstacles, if the others agreed. France, England, Belgium, Switzerland, and the Scandinavian Union were opposed to any international agreement on the subject. Germany refused to accept the invitation of the United States, and also declined a subsequent invitation from the conference itself, after it had assembled, to take part in its proceedings. At the close of the conference, the European delegates joined in reply to the American proposition, in these terms:

1. That it is necessary to maintain the monetary rôle of silver in the world as well as that of gold, but that the choice between the employment of one or other of the two metals, or the simultaneous employment of both, should be governed by the special situation of each state or group of states.

2. That the question of the limitation of the coinage of silver should also be left to the free decision of each state or group of states, according to the particular conditions in which they may be placed, and this the more so as the perturbations which have arisen of late years in the silver market have variously affected the monetary situation of the different countries.

3. That in view of the divergencies of opinion which have been manifested, and of the impossibility even for the states which have the double standard to make any engagement relative to the unlimited coinage of silver, there is no ground for discussing an international ratio of value to be established between the two metals.

In other words, the propositions of 1878 were declined by the European states, acting together, and their reply meant simply that each state would act for itself, and stand ready to profit by any mistake made by its neighbors. And thus the conference of 1878 terminated.

THE CONFERENCE OF 1881.

But public sentiment had greatly changed by 1881. In that year France and the United States simultaneously invited the other powers to reassemble in monetary conference at Paris. This invitation was accepted by all the nations which had been represented at the conference of 1878, and also by Germany, Greece, Spain, Portugal, British India, and Canada. This conference, after thirteen sessions, adopted as its opinion—

That there is ground for believing that an understanding may be established between the states which have taken part in the conference, but that it is expedient to suspend its meetings; that, in fact, the monetary situation may, as regards some states, call for the intervention of their governments, and that there is reason for giving an opportunity at present for diplomatic negotiations.

And it then adjourned for one year. Since then, France and the United States jointly proposed further adjournment, to which the other powers consented. It is interesting to note specially the suggestions submitted by England and Germany, after a full interchange of opinions among the delegates of the several states, for Germany and England are the two great powers which have the single gold standard.

The English proposition was, that if other countries adopted rules insuring certainty of conversion of gold into silver and silver into gold, the Bank of England would be willing to issue their notes for silver, at the ratio used by other nations, to the extent of one-fourth of its gold on hand in the issue department, and to redeem the notes on demand in gold.

The German declaration was made at the second session of the conference, and proposed (1) to abstain from all sales of silver for some years; (2) during another period, to be fixed, to sell annually only a small quantity, so as not to glut the market; (3) eventually to withdraw gold and paper money of the denomination of 5 marks ($1.19 in United States currency), and replace them with silver pieces of 5 and 2 marks, taking as a basis the ratio of 1 to 15½.

Hence we find that at this conference Germany and England both favored the rehabilitation of silver to its proper place in the money of the world, and proposed to give it further recognition in their own monetary systems. The contrast is very great between this action and the course of these powers three years before. Then Germany refused even to attend, and England attended only to declare war upon silver and an international agreement, but in 1881 both earnestly declare a friendship for silver, and confess an anxiety that an international agreement may be consummated.

THE PRESENT.

Five years have elapsed, and what is the situation now? All of the agricultural interests in the German Empire are demanding the restoration of silver to full currency powers, and in the Reichstag the question is now in agitation, as is the case here to-day. England is inquiring whether bimetallism has not become with her a necessity of trade; and some of her ablest financiers, including two who have occupied the position of governors of the Bank of England, are pronounced bimetallists. A convention of delegates from her chambers of commerce has demanded parliamentary inquiry upon the subject. And it is significant to observe that it has been proposed that a British trade-dollar be coined, to take the place of the Mexican dollar in the Eastern trade; and in its issue of February 13, 1886, the London Economist editorially advocates its coinage. And in January of the present year the Latin Union, which maintains the full legal-tender power of both gold and silver at the ratio of 15½ to 1, renewed their agreement to do so for five years longer.

AN INTERNATIONAL RATIO.

Such is the situation across the ocean, and it is auspicious for the renewal of negotiations to arrive at a common ratio, and to attain international recognition of gold and silver alike as legal tender at such ratio. At the last monetary conference, Mr. Evarts, on behalf of France and the United States, proposed the ratio of 1 to 15½, and as nine-tenths of the legal-tender silver of the world is coined upon that ratio or a lower one, there is little doubt it would be the one adopted by common consent.

If such should be the case, it would settle in a satisfactory way several problems of financial policy, which are sources of constant difficulty and irritation. One of these problems is, how to avoid general contraction of the currency of the world to about three-fifths of its present metallic basis, by the universal demonetization of silver. Against such contraction, the common consent of the nations to a binding agreement

for mutual international recognition of both gold and silver at a fixed ratio, is the only certain safeguard.

In round numbers the coin currency of the world is estimated at about $7,000,000,000, of which about one-half is gold, and the other half is silver. Should silver be demonetized, I estimate that, after a liberal allowance for the use of silver in small change, the volume of the coin circulation would be reduced to about 60 per cent. of its present aggregate, and all prices would gravitate downward, and we would have falling markets, until the new price-level was established to match the diminished circulation. Contemplate for a few moments the disasters which would arise from the constant decline of prices in all business transactions. The retail merchant would find that ere he could dispose of his goods the prices would have fallen below the wholesale rates he had paid for them. The debtor who had borrowed money, would find such scarcity in the gold, in which he would be required to pay, that he would be unable to meet his obligations, and bankruptcy and black ruin would settle over commerce and credit like a pall. The holder of gold would cling to the yellow treasure, and by the process of hoarding, the circulation would be still further contracted, and the cry of the poor for bread would necessitate the issue of large volumes of paper money, without metallic support, to meet the exigency. No such convulsion has ever occurred in the history of trade, as we would experience, on the world's demonetization of either one of the standard money metals.

To a debtor country like the United States, it would mean increased burdens of taxation, and injury to the public credit. Our volume of imported goods paying duty might be as large as at present, but the value would be little more than one-half, and all ad valorem duties would be reduced to correspond with the cheaper invoices. The revenues from customs duties would be constantly decreasing, and yet the interest and principal of the public debt would be on the same basis as at present. Hence our financial resources would be crippled, while our obligations would not be correspondingly diminished in their burdens.

In this connection it is well to observe that only the public creditor, the holder of United States bonds for instance, could derive any advantage from such a contraction of the world's currency. The circulating medium of trade being diminished in amount, its purchasing power would be greatly increased, and in obtaining from the Government his interest and principal, he would receive payment in a medium having much greater purchasing power than the money which he lent to the Government. But the private creditor would be ruined, for the general bankruptcy of the debtors of the land would cause him to lose his debt.

If the private creditor could collect his debts he would be benefited in like manner as the public creditor; but, as I think I have shown, the debtor class would not be able to respond to their obligations, and but few private debts would be worth anything at all. This would destroy credit and faith in further commercial transactions absolutely, until the world's business had fully adjusted itself to the new state of the circulation.

Speaking for my own constituency in the South, I present another consideration here. We feel that the silver monometallism of India is exceedingly injurious to the prices of our principal exportable product. The common farmer of that country, far removed from the intelligence conveyed by the railroad and the telegraph, and conservative, as Asiatics are, in his habits, receives cheerfully the same price per day for his labor, the same price per pound for his cotton, in silver, without regard to the depreciation in silver and Indian council bills in the London market. Hence the cotton buyer in England, paying for Indian cotton in silver, uses the depression of price thus secured, to depress the price of American cotton also. And when any one compares the present price of cotton with the prices of previous years, it will at once be realized how great an influence is thus exerted in lowering the price of the cotton crop of the South. In like manner, the wheat-fields of India affect the grain prices of the West.

Again, the Birmingham manufacturer of cotton goods finds the principal market for his sales in India and other silver-basis countries. But with exchange in England against those countries affected 20 per cent. by the departure of silver from its proper ratio with gold, their purchasing capacity is diminished 20 per cent.; and to meet this exigency, the manufacturer has to reduce correspondingly either his production or his prices. Hence he will either buy 20 per cent. less of cotton to be made into goods, or he will purchase the same quantity at prices lower by the same percentage; for in no other way can he secure his ordinary profit in his business.

Both of these evils will be cured when India and other silver-basis countries become bimetallists; for in commercial transactions between a gold-basis country on the one hand and a silver-basis country on the other, the difference of price of gold bullion and silver bullion affects the rate of exchange; but the case is different where one or both of the countries is on the double basis of gold and silver at a fixed ratio for coinage, for the coinage rate, as all experience shows, will control the bullion rate. For example, in France and the Latin Union, with both gold and silver coins at full legal-tender at the ratio of 15½ to 1, gold and silver moneys are circulating at par with each other; while in Austria, which has only the silver basis, gold is at a premium of about 20 per cent.

Another reason why it is better for commerce that gold and silver both should compose the currency and be recognized in international exchanges is, that there is less danger of disturbance of the purchasing power, from fluctuations in production or demand. That is, it is harder to affect seriously a volume of currency of $7,000,000,000 in value by additions to it from the mines, or subtractions from it for the arts, or by destruction by fire or shipwreck, than if the entire volume were worth only $4,000,000,000.

This proposition is so plain that I will not dwell upon it. Hence it is manifest that an international agreement, sustaining both gold and silver, will satisfy all the silver men except the extreme silver monometallist, will satisfy the debtor classes and nations, and will also satisfy the private creditor class, who depend upon the solvency of their debtors for the safety of their investments and other credits.

But I go further, and maintain that such an arrangement ought to be satisfactory to the public creditors, the holders of Government securities, for two reasons. The first is, that the holders of public securities are also largely the holders of claims against private individuals, or of stocks in corporations which owe large debts, and hence their interest is not all in one direction.

What they might gain in the payment of their principal and interest of Government bonds in a medium which in its entire volume is only $4,000,000,000 over a payment in a medium having a volume of $7,000,000,000 they would lose by the failure of their private debtors and the depreciation of their corporate stock investments. So that this class are really not to be benefited, unless it be such of them as have no other investment of their fortunes except Government bonds of prompt-paying governments, and even they may suffer by disturbance in the market value of their bonds in the general tumbling of prices.

But there is a second reason, why the public creditor in this country should favor an international agreement, if the ordinary ratio of the civilized world be adopted between silver and gold, the ratio of 1 to 15½, as proposed in 1881 by the American and French commissioners to the other delegates at the international conference. Under the express terms of the bonds of the United States, and by the express declaration of Congress, the interest on the bonds of the United States is payable in coin of the standard weight and fineness, which were lawful in July, 1870, at which time both gold and silver were unlimited legal tender—gold at the rate of 25.8 grains, nine-tenths fine, or 23⅕ grains pure gold per dollar; and silver at the rate of 412½ grains, nine-tenths fine, or 371¼ grains pure silver per dollar. Hence the terms of the contract are satisfied by payment either in gold coin or in standard silver dollars of our present currency.

But if an international agreement be made, by which the ratio shall be adopted of 1 to 15½, instead of our American ratio of 1 to 16, then, in order to conform our silver coin to the new ratio, our dollar would have to be reduced to 400 grains, nine-tenths fine, or 360 grains, pure silver, to conform to the legal-tender silver of France and the Latin Union, and in fact to the silver currency of Great Britain, Germany, and all of the great nations. If this were done, it is easy to perceive that the United States could not pay her debt in the new silver coinage, for by the terms of her contract the coin must be of the weight and fineness of July, 1870. Hence the bondholders would be sure of payment of the interest and principal of their bonds in gold, while at present the Government would certainly exercise its option to pay in silver, if the stock of gold in the Treasury should be so diminished, as to be insufficient for current payments of interest on the debt. The bonds are payable, as expressed upon the face of them, both principal and interest, "in coin of the standard value of the United States on said July 14, 1870."

It is true that, at present, the interest of the bond debt of the United States is being paid in gold, and I am in favor of its being so paid; for there is no disparity between silver and gold coin, and so far as our bonds are held in England and Germany—which are gold-standard countries—it tends to strengthen our credit abroad, at no additional expense to the Government. In fact, so long as the volume of the circulation of the world is kept up at seven thousand millions, there is no difficulty in each nation maintaining the parity of silver and gold, provided both are given the functions of full legal-tender money. It is only a demonetization of either one of the metals, that can affect us in prices, and the result would be the same if we attempted to demonetize gold, and to rest upon silver. Monometallism, either of gold or of silver, would be equally disastrous to the commerce of the world; and the most perfect system, in my humble opinion, is bimetallism, with a ratio between the two money metals fixed by international treaty, and recognized by all the great commercial nations of the world.

Under the legislation already had, two international conferences have been held; and the conference of 1881 simply adjourned temporarily, and could be reassembled, in order to complete its work. It is probable that, if the conference were now invited to resume its labors, something definite could be agreed to, in settlement of the questions involved.

THE UNITED STATES.

But we must also make provision for ourselves alone, in case we can not induce the world to agree to an international recognition of bimet-

allism; for some, who are familiar with this subject, do not think that there is any hope of an international agreement, on account of the policy heretofore pursued by the creditor nations of Europe. For instance, the New York Financial Review for 1885 has the following:

The nations of Europe are making the attempt to contract the medium of the world's exchanges, by forcing commerce on, to a single gold basis, and thereby rob it of one-half the currency it formerly used and needed.

And while I think that the creditor nations are now beginning to see that they can not so contract the medium of payments, and thus increase the value of their claims against debtor nations, yet at the same time it behooves the United States, as a debtor nation, to do what it can to keep the circulation of the world from contraction by the demonetization of one of the money metals, and therefore we must see what we can do single-handed to sustain silver, as well as gold, within our own territory. For there is no doubt, that the doctrine of Alexander Hamilton's report on the Mint in 1791 is just as applicable now as then. As between gold and silver, Hamilton proposed that—

No preference should be given to either, because in attaching the unit to either, the office of the other as money would be destroyed; it would become mere merchandise, thereby diminishing the quantity of circulating medium, and impairing the utility of one of the metals.

And in order to make proper calculations, let us consider the condition of our currency at present.

In the first place, owing to the redemption of United States bonds, some of which secured the notes of national banks, the volume of national-bank circulation has been reduced $40,000,000 in four years, and of this reduction over twenty millions was in one year—from 1884 to 1885.

But this is not all. On November 1, 1882, the gold in the United States was, in Treasury and in banks, $260,455,297, and on November 1, 1885, it was $335,251,499, an increase of gold in the Treasury and in bank reserves of about $75,000,000.

In the hands of the people, there was in November, 1882, gold to the amount of $306,650,159; and in November, 1885, the amount of $251,476,288, a decrease in gold in active circulation of $55,000,000. In the same period the silver in the hands of the people increased from $80,912,634 on November 1, 1882, to $107,914,611 on November 1, 1885—an increase of twenty-seven millions. And the paper circulation fell from $548,828,288, in the hands of the people in 1882, to $470,401,878 in 1885. Thus we have from 1882 to 1885 the following contraction of our circulating medium:

Gold, decrease	$55,000,000
Paper, decrease	78,000,000
Total decrease	133,000,000
Deduct increase in silver	27,000,000
Balance	106,000,000

We therefore have a net decrease of our circulation, of over one hundred millions in three years. This has caused reduced prices, stagnation in business, strikes of the laboring classes, and general distress. And it is significant, that while our population is steadily increasing, and our circulation is steadily diminishing, about eighty-six millions of silver dollars remain as a surplus in the Treasury, and the country refuses to absorb that surplus, though needing money all the time. The reason of this strange state of affairs is, that there is really no appropriate place provided for silver dollars in our currency. Its proper sphere is usurped by the one-dollar and two-dollar greenbacks, which, as I have before stated, are redeemable only in amounts of fifty dollars and upward, and are practically paper representatives of gold, and not of silver.

There is also the one-dollar gold piece, but that has no circulation or coinage of consequence. So inconvenient is it in size, that the most extreme monometallist, if tendered his choice between a gold dollar and a silver dollar, would select the silver dollar as more convenient for currency; and the small quantity of gold one-dollar pieces now coined is used mainly for trinkets and purposes of ornamentation. The three-dollar and two-and-a-half-dollar gold pieces are not numerous, but there are enough of them in circulation to occupy quite an appreciable place in our currency. Where, then, is there a place for the standard silver dollar? We have shown that under five dollars the paper one-dollar and two-dollar greenbacks have a large circulation. It is now about $47,000,000, although largely diminished in the last two years. The Congress has authorized the issue of silver certificates, but only in denominations of $10 and upward, instead of issuing them in denominations of $1, $2, and $5, where they would be just as convenient, and equally as popular as greenbacks. If this were done, and the one-dollar and two-dollar greenbacks were called in, and the amount reissued in larger denominations, say of $5 and above, I am satisfied that all the surplus silver dollars in the Treasury would be represented in circulation by such silver certificates in less than twelve months.

Another anomalous condition of our currency, is in refusing redemption to greenbacks in amounts less than $50, and only redeeming them at New York. A single greenback should be as readily convertible into coin as a large number of them; and they should be redeemable at convenient points. Another use for silver dollars would be found by making greenbacks thus redeemable in sums under $50 in silver or silver certificates, at the option of the person offering the greenbacks for redemption; it would make no difference to the Government, since the silver certificate is simply the paper representative of actual dollars in the Treasury, held there for the owner of the certificate.

In this way there would be no surplus of silver dollars in the Treasury; and it is well to remember in this connection that it is mostly in the minor transactions of buying and selling that actual money is used, since larger purchases are usually paid for in checks or bills of exchange; so that in placing the silver certificates in the arena of small retail business, from which they have been studiously excluded, we will utilize our entire coinage of the white metal. This can be done by simply removing the present restriction, which limits the issue of silver certificates to denominations of $10 and upward.

LEGISLATION PROPOSED.

Mr. Speaker, let me state in conclusion, at the expense of repetition, what I conceive to be the proper legislation for this period. Instead of providing for the immediate resumption of free coinage, we should provide for resumption at a time when the civilized nations shall have agreed upon a ratio and upon a plan of free coinage. In the mean time, we ought to suspend the coinage of the silver dollar in the interest of the silver dollar itself; not because it is worth but 80 cents, for, as I have said, I do not subscribe to that doctrine; but because we have enough silver for the purposes of circulation at present.

I think our supply of silver stands in the same position as the stock of goods on the shelf of a merchant. When he has goods enough for the purposes of traffic, he does not decry and disparage the goods, because he does not sell them immediately, but he tries to get them out among his customers; and while he is trying to get them out, and has a full stock, he is not ordering any more. For the reason that we have enough silver for our purposes at home, and have no other field for it, I say, suspend the coinage at least for a time. I would suspend it for a definite time, say for the period of one or two years; and I would at the same time provide means for circulating the $86,000,000 we now have, unused in the Treasury. In order to do this let us remove from circulation every one and two dollar bill that is now circulating in this country. Without contracting the greenback currency, I would put it all in denominations of $5 or upward. I would issue silver certificates in denominations of one and two dollars, to take the place of these one and two dollar greenbacks. I would take away the $50 limit from the greenback, and make it convertible at all of the fiscal offices of the Government into silver certificates in any sum. I would go further and make these silver certificates, backed by the coin in the Treasury, dollar for dollar, legal tender in the same manner as the silver dollar is legal tender; in the same manner as the Bank of Hamburg in Germany in olden time passed its paper money; in the same manner as the Bank of England paper and the Bank of France paper circulate to-day. I would also make gold certificates legal tender.

Mr. Speaker, this is really not making anything but the coin legal tender. As two merchants, in order to transfer goods, transfer the warehouse receipts, showing that certain commodities have been deposited, so these notes would be the warehouse receipts of the legal-tender coin, which any one could go and claim from the Government on demand, the Government being its custodian.

And the people will save enough to build all of the vaults necessary to hold that money, in the saving of the abrasion of the currency in common use. It has been estimated that, in the course of a hundred years, silver coin in circulation loses 10 per cent. of its value by abrasion; and the Director of the Mint, I understand, has informed one of the committees of this House, that the money saved from the wear and tear of the silver in circulation will build, twice over, the vaults necessary for the Government to hold the coin, and put the silver certificates out in the hands of the people.

By the use of these means, there would be no difficulty in circulating the entire eighty-six millions in the Treasury, by the time the suspension would terminate.

During that period, the President could call upon the nations to confer again, and agree upon a ratio for bimetallism. And then, when that ratio is established by international consent, I would have free coinage of gold and silver according to that ratio. As we have seen, the time is approaching, when the nations of the world will be ready to entertain this proposition. And in our own country the convention of the American Bankers' Association, held at Chicago in September last, expressed a similar readiness in the resolution adopted by it, as follows:

Resolved, That it is the sense of this convention that the coinage of silver dollars under the compulsory law of 1878 is detrimental to the best interests of the people and dangerous to the welfare of the Government, and that the law should be immediately suspended, and remain inoperative until an international agreement with leading commercial nations shall give substantial assurance as to the future relations of gold and silver as money.

If, therefore, we can not agree as a legislative body, either to immediate free coinage of silver on the one hand, as urged by the supporters of this bill, or to absolute suspension of the compulsory coinage of two millions' worth of silver per month, as others contend, let us compromise by suspending until we can place in circulation the silver dollars already coined, and make another attempt at international agreement, results which, in my judgment, can be attained in two years by prompt and decisive action.

Could this be attained, a great advance would be made in the interest of our commerce at home, and our traffic with the other nations of the world; credit and confidence would be restored; and financial distress would give place to plenty and prosperity.

All essential legislation tending to such a consummation can be easily enacted, by amending the bill now under discussion, in the manner I have suggested, or in such other way, in a similar spirit, as the combined wisdom of this House may determine, if the representatives of diverse views would meet each other half way, in a spirit of mutual concession for the common good.

Rivers and Harbors.

REMARKS

OF

HON. WILLIAM L. WILSON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 6, 1886.

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. WILSON said:

Mr. CHAIRMAN: It is inevitable that a bill like this should be subject to criticism. It is perhaps hardly to be expected that any committee, no matter how careful and prudent, can prepare a general river and harbor bill for so large a country as the United States that will not contain some items that may be subject to just criticism. The area of our country is so immense, its seaboards are so extensive, and its interior water ways are so numerous as almost to defy exact knowledge on the part of any member of this House; but I believe that the annual river and harbor bill is one that ought generally to pass; that it contemplates improvements and expenditures that are in the main judicious and necessary, and that much of the criticism indulged in by the press of some sections of the country, and echoed in the debates on this floor, is unfounded and uninformed.

To provide as extensively as possible without wasteful expenditure abundant facilities for transportation, in the cheapest form in which transportation can exist, along our great water ways and even our smaller rivers, is to confer a boon on the great mass of the people of this country, who are engaged in producing its wealth and in the buying or selling of its products. Not only does the improvement and opening to commerce of water ways afford these facilities of transportation, but, by its competition with the railroad lines of the country, it regulates and lessens the charges for freight and traffic upon them.

It is a great mistake to suppose, as certain gentlemen have contended in the course of this debate, and notably the gentleman from Iowa [Mr. HEPBURN], that although the amounts appropriated in such a bill may be expended within the limits of individual States, such expenditures are entirely or chiefly for the benefit of the States within which they are made. I will take no other illustrations of the error of this argument than two appropriations in this bill for rivers in my own State. The $121,000 proposed to be expended in completing the slack-water navigation of the Monongahela River, although expended within the limits of West Virginia, furnishes the sole link now missing in a stretch of more than a hundred miles of navigation on that river, scarcely more than a dozen of which are in West Virginia.

While it provides an outlet for the productions of the particular regions in which the Government works are constructed, thus aiding immediately in their development, it also and especially furnishes a highway for the trade between the country bordering on the upper Monongahela and the lower sections of the river to and fro as far as the city of Pittsburgh, and thence down the Ohio River, thus bringing into existence and stimulating mutual exchange of productions and mutual traffic, the benefits of which extend to several States.

Even in a greater degree is this true of the amount expended for the Great Kanawha River. While the locks and dams which have been placed upon that stream have during their construction given temporary employment to labor in West Virginia and have developed a line of magnificent collieries along that river, these improvements have also provided an outlet for the products of those mines and permanently cheapened coal to the dwellers along the Ohio and the Mississippi, and the few hundreds of thousands of dollars expended in this work, which, according to the gentleman from Iowa, is local, have thus extended their benefits to many surrounding States.

What is true of the Monongahela and of the Kanawha is also true of other rivers and even of some of the so-called insignificant streams, appropriations for which have called forth ridicule and opposition in these debates and in the public press. Any system of expenditure by the Government which comes into conflict with the interests of great railroad corporations, and with their control and monopoly of the carrying trade of the country, by providing cheap and accessible competing lines, naturally provokes an opposition which has no difficulty in finding vigorous expression for itself in the press of great cities on the Eastern seaboard. This opposition, masking itself in virtuous protests against waste of the people's money and what it calls a scheme of log-rolling and an organized raid upon the Treasury, deceives many as to the real motive which prompts much of its outcry. The public is taught to believe that the appropriations contained in this bill and in similar bills are made upon the recommendation or by the scheming intrigue of members of this House; whereas it is a fact, that every intelligent man ought to know, that no dollar is recommended for expenditure in such a bill until competent officers of the Engineer Corps of the Army have made the necessary surveys and reported in favor of the expenditure, and until that report has been approved by the Chief of Engineers and transmitted to the House with the recommendation of the Secretary of War.

But, sir, I will not pursue this subject any further, and, indeed, I have made these remarks, not so much because there is any need to make them as because I desire to have read and printed in the RECORD, in connection with what I have said, a letter from a gentleman whom I am proud to call my friend and neighbor, a native and citizen of my own State and immediate neighborhood, whose ability to deal with these questions no one will dispute, and whose moderation of statement is only exceeded by the unsurpassed ability and unquestioned probity which he has long brought to the service of the Government. His letter was not one volunteered by himself, but was called forth by my personal request, as will appear from its tenor.

UNITED STATES ENGINEER OFFICE,
Baltimore, Md., April 17, 1886.

MY DEAR SIR: I have just read in the RECORD the speech of Mr. WILLIS with the appended report of the Committee on Rivers and Harbors which I have no doubt he wrote, and it certainly seems to me that his views are those of a man of ability and uprightness who has studied his subject, knows what he is talking and writing about, and does both well. If I had the pleasure of knowing Mr. WILLIS I would say so to him.

The truth is a river and harbor bill of that size is not unreasonably large for such a country as ours, considering its immense extent, its rapid development, and other circumstances. Though the sum, considered by itself without regard to its object, seems a large one, it is actually small in view of real needs, and appears almost insignificant in comparison with the expenditures of other nations, much of whose wealth and power come from the effects of just such works of internal and coast improvement as such expenditures have allowed.

The river and harbor bill is usually the subject of much criticism in the newspapers, but most of this originates with the great dailies of New York city. That great State, an empire in itself, has a comparatively small water front, and consequently very few of the so-called "mud puddles," &c., of which we hear so much, but of which there are really so few. Years ago she built the great Erie Canal, which, by the way, has not only paid for itself, but has poured millions more into the treasury of the State. This great artificial water way she has from East to West. Then the Hudson River, a continuation of the Erie Canal and running from north to south, feeds her great heart on the ocean. This river has been made by nature one of the grandest in the world for navigable uses, and can be kept so at comparatively small expense. With these and other great advantages she is in a position to be comparatively independent of the general Treasury, though she never shows unwillingness to take what she can get for Hell Gate, &c.

But the point I am coming to is this, that the smaller and weaker States are unable to spend money on internal improvements as New York has done and would do again if the United States ceased making such appropriations. Shall the United States give up appropriating for rivers and harbors and throw such work on the States? Take, for example, the case of the Great Kanawha in West Virginia, a short river of 100 miles in length, and entirely in one State—a weak one financially. The benefits of the improvements already effected there by the United States, even in their incomplete state, are felt all over the States through which the Ohio and Mississippi and their tributaries flow, by cheapening the price of fuel and regulating freight charges on railways, while at the same time the development of the coal interests in the Kanawha Valley has been great and locally very valuable. The improvement of this short river in one weak State is therefore an object of national importance and should not be left to West Virginia to pay for.

The opposition of the great railways to the river and harbor bills is also voiced in the newspapers which they control in New York city and elsewhere. They would blot out the Erie Canal and the Hudson River and many others if they could.

Even the old Chesapeake and Ohio Canal, if it were kept out of the hands of those who make it a part of the machinery of politics of the lowest kind and were managed on business principles, would be a valuable property and pay well commercially and financially. Experience with it demonstrates that.

If river and harbor bills be analyzed, it will be found that the percentage of improper (if I may use such a qualifying word) items is very small. No bill, on any subject, is going to be perfect while men are legislators and so many diverse interests must be considered, if any legislation whatever is to be had.

I feel sure there is no money appropriated that goes more directly and honestly and economically to the objects for which it was intended. Our friends the civil engineers are many of them anxious to take a hand in the management of these rivers and harbors. This has always been the case in times of stagnation of their usual business, as now. Some, very few I believe, have other and personal and corrupt motives in their wish to "turn out" the Corps of Engineers. For my part, I heartily desire to see the best talent in the country available in the service of the country. While saying this I would wish the following consideratiods to be not lost sight of:

No body of men in this country have so great an experience as the Corps of Engineers in the work of improving rivers and harbors, and among no people has so much been accomplished in that direction in the same time and at so small an expenditure of money. No body of men were ever connected with a greater variety of important public works in the past fifty years in any country, and none have acquitted themselves with greater ability, zeal, and faithfulness. Many millions of public money have passed through their hands, and the universal testimony is that it has been honestly and judiciously spent.

Every great nation of continental Europe has a corps of engineers supervising its great national works, and these men are obtained by selection from special schools and gain their experience by practice, exactly as is the case in this country.

If the great works of this country be taken from the control of the Corps of

Engineers, to whose shall they be given? The management of such works can not be properly arranged otherwise than according to some system; certainly not by a method of scramble among even competent engineers, nor by political or a worse influence.

The graduates of technological schools may be, and in some cases are, well prepared in theory, but education by experience is more important than theory and very few of such graduates now have experience with rivers, harbors, lighthouses, &c. Their attention has been mainly directed to building railroads, bridges, works for municipalities, manufacturing corporations, &c., and to architecture, the more lucrative branches of the profession, from which officers of the Engineer Corps are mostly excluded.

Shall we drop the improvement of rivers and harbors as a work of the United States? The railroads would probably like to see that policy adopted to a very great extent. Shall it be turned over to the States? This is the fundamental question.

If the United States continues to work on rivers and harbors, shall such work be restricted to the great ones? If not, where will you draw the line? And when you have drawn your line, excluding perhaps the larger number, where are you going to get your votes for the money? These are practical points which probably have not occurred to some.

Shall we go to such a system as prevails in the Treasury Department as to the construction of public buildings, such as custom-houses, post-offices, &c.? That is a purely civil system. Is it any better than the military so far as the latter has touched rivers, &c.? Certainly it is no more popular with the civil class of engineers directly concerned, but who do not run it. I mean the architects of ability who can make more money outside. They sneer at it.

The honest truth is that the greatest engineers and architects of this and other countries are not willing to be tied down to the routine which must prevail in the machinery of a great government, no matter whether it be republican or monarchial. They can make a great deal more money and reputation in working for corporations, municipalities, and individuals than they possibly can in the government service.

Then there are those of the second grade, who are very willing to be in the government service while otherwise disengaged, but want to get away when they can do better elsewhere and until they are again out of a job.

Then there is another class, who are not fit and never can be for principals. They must be assistants all the time, either for want of knowledge or ability or discretion. My plan, if the present one be dropped, would be to have an organized body to have charge of Government works. What titles they should have I care not.

In addition I would have a board composed of men of the highest ability in the country who would be willing to serve for such salaries as the United States would pay, to be selected by the President or the proper Cabinet officer; this board having the right to call in as consulting experts any distinguished specialists and pay them the usual rates; he board to formulate plans without going into minute details; when the plan in any case is made, the board to submit its report with estimate in full for the information of Congress.

If Congress approves, then the execution to be turned over to the organized body referred to above. Boards and commissions are poor executive machines.

You once asked me to give you some notes on rivers and harbors. Behold the result. I might write at much greater length, but spare you.

Respectfully and truly yours.

WM. P. CRAIGHILL.

Hon. W. L. WILSON,
House of Representatives, Washington, D. C.

Forked Deer River.

SPEECH

OF

HON. PRESLEY T. GLASS,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 22, 1886,

On the amendment to the river and harbor bill (H. R. 7480) proposed by himself, to appropriate $10,000 for improving the North Forked Deer from Dyersburg to the junction of the South Forked Deer.

Mr. GLASS said:

Mr. CHAIRMAN: The South Fork, though larger than the North Fork, and capable of being made navigable a greater distance, has not in fact furnished more than one-third of the business that has gone out to the Mississippi River. As many as three boats have at times been in the North Fork during one season, running to Memphis and Saint Louis. The North Fork traverses one of the best agricultural districts in West Tennessee, and much of the country is yet covered with forests of the finest timber, walnut, oak, ash, hickory, and cypress. The walnut is chiefly shipped in the log, and the others are converted into staves (which are generally exported to France) or sawed into lumber at Dyersburg.

These articles can not bear high rates for transportation without consuming the profits. And then, the railroad increases its tariff of freights so soon as navigation is suspended by low water. An appropriation that will be sufficient to clear the line of the river of logs, stumps, and other artificial obstructions will increase the navigable period of this river and enable the great bulk of these heavy articles to go out, to the great benefit of the country. One or more of the finest saw mills in the State have been in operation for many years in Dyersburg, the head of the proposed improvement, and also several large flouring mills turning out a high grade of patent flour, and much of this seeks a market through this river. The chambers of commerce of Memphis and Saint Louis each have asked for this appropriation and have urged upon Congress to make it. Their demand is a just one and should be granted.

Contested Election—Hurd vs. Romeis.

SPEECH

OF

HON. HENRY G. TURNER,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 14, 1886.

The House having under consideration the contested-election case of Hurd vs. Romeis—

Mr. TURNER said:

Mr. SPEAKER: In his great speech on the motion made to expel John Wilkes from the House of Commons, Mr. Grenville said that he proposed "to execute an office higher than any that the king could bestow, the honorable and noble office of speaking the truth and of doing impartial justice." I trust, sir, that it will not be regarded as presumption in me if I too should endeavor to choose that better part today. But I can re-enforce my courage with a more appropriate example of independence, because it is both American and democratic.

During the last Congress there was pending in the House the contested-election case of Wallace against McKinley from the State of Ohio. The contestant in this case, then, in defiance of party clamor, exerted his best efforts and his great abilities to maintain on this floor a Republican colleague against a Democratic contestant from his own State. And on that occasion, as now, he had the aid and co-operation of the gentleman from Kentucky [Mr. ROBERTSON]. Those who vainly opposed the contestant in that case exhibited courage rather than judicial propriety. The chief adversary of that contestant was the great man who has just stamped his foot upon the same arena in his own behalf. *Ex pede Herculem!* I give the phrase back to the gentleman from Kentucky.

Mr. Speaker, we are engaged in the performance of the highest function devolving upon the House under the Constitution. It is our constitutional duty to act as judges in the determination of election cases. What would gentlemen here think who sit in this high court as judges if a man should appeal to them to decide this case according to private beliefs or arbitrary opinions? I propose, Mr. Speaker, so far as in me lies, to lay down the higher and better rule, that these cases shall be tried upon the facts alleged and proven according to law and the course of our proceedings.

You know, Mr. Speaker, that when this Congress first assembled it was my wish to avoid the responsibility imposed by the rules upon the members of the Committee on Elections. For some reason, I trust not dishonorable to me, certainly not to the Speaker, I was again assigned to that committee. I feel, sir, that if I should fail to do my duty in this case I should dishonor both myself and the House.

How does this case stand? The contestant himself, and those who support him in his contest, have put his case upon two precincts, Precinct B of ward 8, in the city of Toledo, and Kelly's Island. In considering these questions, I shall take it for granted that members have heard the statements of fact on both sides and have a fair conception of the testimony.

The gentleman from Kentucky [Mr. BRECKINRIDGE], who so recently addressed the House in behalf the contestant, "after a most careful examination" of the case, admitted that if each fact forming a ground of contest be taken up by itself and isolated, "it would not be sufficient to base a verdict upon." And he ascribed the difference of opinion which exists between the majority and the minority of the committee to the fact that the majority looked at the facts in detail, while the minority looked at them as a whole. And he proceeded to state his conclusion based upon a reading of "all the papers, taken as a whole and concatenated as a series." But the contestant, who followed the gentleman from Kentucky in this discussion, did not rely on some of the matters on which that gentleman seemed to depend. Mr. Hurd did not even allude to the fact that one of the judges of election at Precinct B of the eighth ward of Toledo did not reside within the precinct; and yet the gentleman from Kentucky laid large stress upon that circumstance. The statute of Ohio did not then require that the judges of election in the city of Toledo should reside in the precinct. We have no right to supplement that statute.

Another link in the chain on which the gentleman from Kentucky dwelt with so much emphasis was the fact that the two clerks of that precinct belonged to the same party. And yet the contestant himself in presenting his case seems to have forgotten this circumstance. The reason for the omission is obvious. The law of Ohio requires that the two clerks of election shall be of opposite politics. But the law also provides that in case of the failure of one of these clerks to act the bystanders have the right to fill the vacancy; and in that way both the clerks of the election may, under the law, have belonged to the same party. Two links are therefore stricken from the "concatenated series" on which my friend based his conclusions. Two parts of the whole on which he relied disappear on examination.

I have not the time to expose the effect of Mr. Hurd's imagination upon details; but I will pursue briefly the material facts on which he bases his impeachment of the return from Precinct B, eighth ward. After the polls had closed the judges spread the tickets upon the table and counted them, to ascertain if the number of ballots would correspond with the number of names on the poll-list. The gentleman says that was wrong. I think so, too. But I venture the statement that in half the precincts of Ohio during that same election there were other and similar departures from the strict observance of the letter of the statute. I affirm that similar departures, more or less important, occur quite frequently at half the election precincts in the United States. Who that has stood around the polls has not observed these little irregularities to which I advert? But who cares for them if at the same time every bystander can see that there, in the presence of the appointed agents of the law, under the public view, with both parties as witnesses, there is absolute and perfect security of the ballots? In that case, who cares about the mere "leather and prunella" of the law?

If you establish the rule for which the contestant contends uncertainty will infect all popular elections. What a facility it offers to rascality! If a mere irregularity without fraud can invalidate an election, how easy it will be to find the pretext. If honest inadvertence or an innocent and harmless mistake, or an accidental omission, not affecting the result, shall defeat or reverse an election, the resources of fraud will be infinitely multiplied. All the cases, whether decided by the courts or by parliamentary bodies, denounce such a doctrine.

Let it not be forgotten that there is no evidence of corruption at this precinct, and not even a suspicion of it can be entertained.

Shall we exclude the return from this precinct and thus substitute one will for that of the tenth Congressional district of Ohio? The only parallel for such a course can be found, not in the Congressional or judicial precedents which have been set by another party which shall be nameless [laughter], but in the contrivances and pretexts by which the returning boards of that party appropriated the Presidency ten years ago. Shall we denounce that infamy on the stump and embalm it in our practice?

It is said also that there is uncertainty in this return, and it is upon that ground that the honorable contestant largely stakes his case. I ask where is the uncertainty? When you undertake to impeach official evidence for uncertainty you ought to do it by evidence which in itself is not uncertain or obscure. No witness swears that the preliminary counts were absolutely accurate, yet all the contention on the other side assumes that that was the case. Ignorant and unlettered men, sitting down to a hasty scrambling count of votes, some to be counted for one party, some for another, and some for a third, with a long list of candidates for State and county offices, and occasional scratching, is it not conceivable, is it not the charitable and the reasonable supposition, that those judges of election, differing as they did with each other in each result, simply made a mistake in the count?

Mr. Speaker, the whole truth of this matter, in my judgment, is that these unlettered men became confused in the count. It is probable that their last count, taken under the official regulations, was correct. But if there is uncertainty here, the evidence affords a measure of this uncertainty. Suppose you take the entire claim of the contestant, ranging if you please from 7 votes too many to 5 votes too few, as compared with the poll-list. This uncertainty involves only 12 votes. Can this contestant do more than claim on this view of the evidence that these 12 votes be apportioned between the candidates according to their relative number of votes in that precinct? But go further and deduct all of them from the majority of the sitting member; the final result is not affected.

In order to make the ballots returned equal to the number of names on the poll-list, or nearly so, the judges added two votes to each of the two leading candidates. This was an illegal device, but it was innocent and did not alter the majority. Each of these judges was sworn as to these facts, and then each of them was asked, "Did you not sign a false return?" Well, these judges, under the categorical examination to which they were subjected, answered in the affirmative, and here arises all this clamor about the falseness of this return. But the evidence of the witnesses discloses all the facts.

The contestant, however, after putting the judges on the stand to impeach the return, says that they are not competent to support it! The analogy of the law of judicial findings would seem to allow the judges to support their return, but not to impeach it. The judges were honest; the clerks were honest. The public, the great tribunal that is at last to determine this issue, stood by. There is not one particle of evidence to attaint the fairness of a single man concerned in that count.

The contestant alleges "general bribery" against this precinct, and founds the charge upon the testimony of one Simon Gerstmann. The character, conduct, and credibility of Gerstmann have already been sufficiently discussed. This man says he went to Toledo some weeks before the election in the employ of the Republican party, and by conversations with strangers whom he met in the Polish and German quarter found "all for Hurd;" that he gave this information to Elkins, chairman of the Republican committee, and advised him that the sentiment for Mr. Hurd could be changed by the use of money; that Elkins refused to send the money by Gerstmann, but said it would be sent through the regular channels; that a few weeks later the witness revisited the same quarter of Toledo and found all for Romeis, and Gerstmann added: "From the general conversations with Warnke and others living in that neighborhood, there was no doubt in my mind that money and other materials were furnished to defeat Mr. Hurd in that precinct." And, "Had it not been for the use of money and other considerations used in the political machinery Hurd would certainly have carried the precinct." This evidence, even if it came from a credible source, consists of hearsay and conclusions and inferences drawn by the witness from the hearsay and from his own view of political morality. Such is the proof of the charge of "general bribery!" Not a dollar was shown to have been sent to the district, and it did not appear that any man received or paid out a dollar of the money. Such is the foundation for much of the eloquence expended on this case!

But it is further urged upon the testimony of another witness that Henry Gates, the vice-president of a Republican club in the precinct, paid nineteen ticket peddlers on the night of the election at a saloon from $3 to $10 apiece for their services. But the witness further said that all he knew about this matter was derived from what Gates said after the election!

The contestant demands the rejection of the return from Kelly's Island on account of intimidation of his employés by a Republican, Norman Kelly. No evidence was taken to show whether these employés were Democrats or Republicans, free-traders or protectionists. It was not shown that any one of these employés failed to vote as he pleased. No effort was made to prove how any of these employés actually voted except one, and he swore that he voted the Democratic ticket.

But let us take out of the record a sample of the evidence on this branch of the case.

A witness named Bristol was examined by Mr. Hurd himself, and testified as follows:

Q. Were you familiar and did you meet frequently the men engaged in his employment?

A. I was familiar with them, and I met them frequently every day.

Q. You may state what, if anything, the men employed by Mr. Kelly said to you that Mr. Kelly had said or done to them to influence their vote at the Congressional election held in October last.

A. He had told them that they should not vote for Mr. Hurd, or ought not to vote for Mr Hurd. The men told me this. I did not hear Mr. Kelly say this.

Q. You may state what he said to the men.

A. The men told me that Mr. Kelly said to them that they ought not to vote for Mr. Hurd, because he was a free-trader, and that free trade would ruin his business.

Another witness (Alford) was sworn to prove what Keliy said several months after the election about what he had said to his men before the election!

But taking the hearsay as true, and taking what Kelly himself said as a witness for the sitting member, but stripping off the coloring which eloquence has added, Kelly's statements to his men constituted argugument rather than attempted intimidation.

This branch of the case deserves no further notice.

In the last Congress, Mr. Hurd against a Democratic contestant contended for the admissibility of hearsay evidence, limited to the declaration of voters as to how they voted, made after the election. On a review of all the American cases, the House refused to sanction that doctrine, and by an overwhelming vote awarded the seat to the contestant, Mr. Wallace. On this case Mr. Hurd insists upon unlimited hearsay supplemented by the principle of presumption. It is a short step from bad evidence to no evidence at all. I appeal to lawyers and to that noble system of judicial precedents known as the common law. I ask any gentleman present whether he would risk any right of a client on such testimony? What court would allow a witness to swear what a third person told him? It would amount to an abolition of the oath by which evidence is guarded and sanctioned, and a denial of the great privilege of cross-examination.

But the English election cases have been cited in suppport of hearsay and presumption. Let us examine the character of these precedents. Lest I might be suspected of exaggeration, I beg leave to read a brief statement from May's Constitutional History of England:

Scandalous as were the electoral abuses which law and custom formerly permitted, the conduct of the House of Commons in the trial of election petitions was more scandalous still. Boroughs were bought and sold; electors were notoriously bribed by wholesale and retail; returning officers were partial and corrupt. But, in defiance of all justice and decency, the majority of the House of Commons connived at these practices when committed by their own party; and only condemned them when their political opponents were put upon their trial. *Dat veniam corvis, vexat censura columbas.*

The Commons having for the sake of their own independence insisted upon an exclusive jurisdiction in matter of elections were not ashamed to prostitute it to party. They were charged with a grave trust and abused it. They assumed a judicial office and dishonored it.

Mr. Speaker, the British cases belong to the necrology of the law; their proper place is the graveyard. They are the mummies of legal literature, preserved perhaps under Providence to repel us by a hideous aspect and a bad smell. [Laughter.]

But as a matter of justice to the British people it ought to be stated that an important element in their decision of bribery cases has been strangely overlooked.

The North Durham case, to which the contestant has referred, decided in the year 1874, turned largely upon charges of bribery and corruption. Now in 1841, the Parliament on the motion of Lord John

Russell passed an act which distinctly directs the admission of hearsay evidence in such cases. (See chapter 57 of 5 Vict.) That statute not having been adopted in this country, the decisions based upon it can not apply to the determination of this case. And the fact that Parliament deemed it necessary to pass an act admitting evidence of this character is proof positive that the practice was to the contrary prior to the passage of the act.

But on the curious doctrine of presumption we are referred to the case of Donnelly *vs.* Washburn. That case was reported to the House with a seeming commendation of that principle; but it was on examination by the House recommitted to the committee, and never had the sanction of the House. This authority evaporates on exposure to the air.

The contestant, pursuing this doctrine of presumption, has cited also the case of Platt *vs.* Goode. If I have not misread that case, the report stated that over six hundred men had been specially employed at the Norfolk navy-yard and made to vote against Mr. Goode. It was also stated that during the campaign the commandant of the navy-yard furnished to Mr. Platt's colored friends a steamboat, a brass cannon, and a brass band. This executive interference with a Congressional election was the ground of the decision in that case. It was a noble theme for the indignant eloquence of the gentleman from Virginia [Mr. TUCKER] during the debate.

The SPEAKER. The time of the gentleman has expired.

Mr. TURNER. I had five minutes in addition.

The SPEAKER. The Chair has allowed the gentleman those five minutes.

Mr. TURNER resumed his seat amid loud applause.

Mississippi River Improvement—Cotton, Sugar, and Wheat.

SPEECH

OF

HON. J. FLOYD KING,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 6, 1886,

On the bill (H. R. 7480) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. KING said:

Mr. CHAIRMAN: British East India's competition in the wheat, cotton, and sugar markets of the world is enormously increased by the rapid improvements of its water ways and construction of its railroads under the patronage of the Government of Great Britain.

According to British Official Reports, the export of the East India cotton increased from 332,255,728 pounds in the year 1879 to 691,049,376 pounds in 1883, an increase of over 358,000,000 pounds, or more than 100 per cent. in four years, or an average of upward of 25 per cent. per year increase.

The export of British East India wheat, according to the same authority, increased from 95,000 bushels in 1874 to something over 43,000,000 bushels in 1885. The exports of 1884 and 1885 amounted to 84,600,000 bushels, resulting in a loss to our farmers of over $80,000,000, and of nearly 4,000,000 tons of freight to our water routes and railways.

In 1883 we exported 106,385,000 bushels of wheat at $1.12 per bushel. In 1885 our export of wheat was reduced by competition with British East India wheat to 84,500,000 bushels at 87 cents per bushel.

The shipment of wheat from San Francisco for the six months ending December 31, 1884, was 12,447,000 bushels; for the corresponding months of 1885 only 5,850,000 bushels.

Our shipments of wheat to Great Britain during the last five months of the year 1884 were, stated in round numbers, 11,900,000 bushels; for the corresponding months of 1885, 4,500,000; showing a decrease of 7,400,000. During the same months the shipment of East India wheat to Great Britain amounted to 6,833,000 in 1884, and to 8,867,000 in 1885; showing an increase of 2,034,000.

The exports of British East India sugar was increased from 41,000,000 pounds in 1879 to 200,000,000 in 1884, the last year named being an increase of 159,000,000 pounds over the export of 1879.

These enormous exports of cotton, wheat, and sugar from British East India are only limited by lack of transportation to the seaboard, an obstacle that is rapidly disappearing by the improvements in the river, canal, and rail transportation routes by the British Government.

The British East Indian "ryot," or farm laborer, the worst oppressed and most degraded of all human beings, lives on rice and millit seed, goes almost entirely without clothing all the year round, and works for about three "annas," or 8 or 9 cents per day.

It is estimated that there are 150,000 square miles of undeveloped East Indian sugar, wheat, cotton, and rice lands yet to be put under cultivation.

Upward of $400,000,000 have been expended in improving the water routes and building railroads from the cotton, wheat, rice, and sugar-producing regions of British East India to the seaboard since the year 1880. The earnings of the same in 1883 and 1884 amounted to $92,441,280.

There are remedies for all evils. The difficulties presented by British competition in the markets of the world will be removed when our producing interests are properly guarded by Congress. The chief cause of the stagnation of our cotton, wheat, rice, sugar, and other industries is the neglect of our water-transportation routes. There is another cause, beyond all question, that should be removed, and I shall call the attention of the House to it at the proper time; but the improvement of water-transportation routes to our seaboard demands immediate attention.

In previous remarks during the discussion of this bill on this floor I have quoted facts that are incontrovertible, and that show the benefits of water transportation, and at that time I quoted the following startling figures from the remarks of Hon. Mark H. Dunnell, delegate from the Saint Paul convention, which was held in September last, before the Committee on Rivers and Harbors. I wish to call the attention of our Western friends particularly to this; it but foreshadows the result were the improvements on the Mississippi River alone carried to a final and successful consummation:

During the season of navigation of the Mississipi River the rate from Saint Louis to Liverpool, by rail to New York and by river to New Orleans has been as follows for the past three years:

1883.	Via railroad to New York, per bushel	23 to 29
	Via river to New Orleans, per bushel	17 to 23
	Difference in favor of the river route	6
1884.	Via rail to New York, per bushel	15 to 29
	Via river to New Orleans, per bushel	11 to 20
	Difference in favor of the river route	4 to 9
1885.	Via rail to New York, per bushel	14 to 27
	Via river to New Orleans, per bushel	13 to 13
	Difference in favor of the river route	1 to 14

And this, it must be borne in mind, is done on a river which between the points mentioned, on account of numerous bars and bad channels, is not navigable for large boats during several months in the year.

In relation to the improvement effected by the jetties built by Eads at the mouth of the river, I quote from Mr. Converse, late president of the New Orleans Chamber of Commerce, who appeared before your River and Harbor Committee on the occasion above referred to. He states what might be called eight facts, each and all of which deserve the earnest consideration of this House. I quote him as follows:

Before the jetties, the depth of water through the passes did not exceed 16½ feet under the most favorable conditions. Now 30 feet may be found, and a narrowest bottom width of 20 feet.

Before the jetties, the foreign steamship arrivals in 1873 numbered 83, with an aggregate tonnage of 107,000 tons; in 1883 they numbered 402, with an aggregate tonnage of 653,000 tons.

Before the jetties, a vessel of 1,500 or 2,000 tons capacity was above the average in arrivals. Now vessels of 5,000 tons capacity are loaded at New Orleans.

Before the jetties, vessels were loaded to not over 14 feet of draught. Now vessels loaded to 26½ and 27 feet pass out to the sea.

Before the jetties, skillful pilotage and management were of no avail, for the channels were ever changing. Now, where a vessel is kept within the jetty channel, detentions are unknown.

Before the jetties, the towage on vessels was from $1.25 to $1.50 per ton. Now it can and has been had for 50 cents a ton, and a proportionate reduction in the rates of insurance on vessels and cargoes has also been made.

Before the jetties, the exports of grain were 5,750,000 bushels in a year. Now they are 14,250,000. The total exports were valued at $68,000,000. Now they amount to $94,000,000, an increase of 50 per cent.

Before the jetties, foreign freights were 18 to 24 cents per bushel. Now it is from 8 to 12 cents; and right here I will state that although there has been a reduction to some slight extent in the rates of river transportation, it is not nearly proportionate to the reduction in ocean freights, because, from the improved outlet to the sea, the largest of steamers can come and go at will, while upon the rivers the need of improved navigation prevents it.

This, Mr. Chairman, is the result of removing one bar and thereby opening the mouth of the Mississippi. What must be the result if we remove all the bars between Saint Louis and New Orleans and open the river to continuous and safe navigation the year round?

In this connection I will read the following telegram to the New York Times, dated Berlin, 11th ultimo:

The German River Shipping Association reports that within the last ten years the shipping of goods has doubled on the Rhine, tripled on the Elbe, near Hamburg, and quadrupled on the Oder, near Stettin.

These rivers have been improved under the supervision of the ablest engineers, civil and military, of Europe, and on a scale unknown on this side of the Atlantic.

With reference to the possible value of such work, I beg to quote to the committee an extract from the report of Hon. John Bigelow, delegated by the Chamber of Commerce of New York on the Panama Canal:

All of the estimates of the traffic that have been hazarded, even those made by experts, whether selected by our own and European Governments or by the canal company, must at best be largely conjectural.

I do not propose to add to their number, though I will venture to signalize the curious and remarkable fact, that the product of any new facility of trans-

portation, whether of passengers, merchandise, or intelligence, by rail, by steamships, by telegraph, or by telephone, has increased in a ratio far transcending the expectation of its most sanguine projectors.

The Suez Canal yielded a revenue from its transit tolls of less than $900,000 the first year of its operation. In ten years it yielded eight times that sum, and is now yielding an annual income of more than $12,000,000.

Now, Mr. Chairman, I have endeavored to show the possibilities of the Mississippi River as one of the streams the improvement of which is proposed in this bill. It has been shown before the Committee on Rivers and Harbors—and I hold in my hand the evidence—that the effect on freight by this river on the products of the West in grain alone results in a saving to the producers of more than twenty-one million dollars annually. The report, by the gentleman from Illinois [Mr. THOMAS], of the select committee appointed by the Forty-seventh Congress to investigate the improvements of the Mississippi River, shows that these improvements as proposed by the commission will cost not exceeding $50,000,000.

The plans proposed by the commission are indorsed almost unanimously by all the distinguished engineers who have had them under consideration; wherever they have been allowed anything like a fair trial they have proven successful. This is admitted by all who have examined the matter sufficiently to reach a correct conclusion. I think in the above I have given to every candid mind a satisfactory answer to the questions propounded by the gentleman from Maine [Mr. REED] in his speech on this subject made some days ago, and which, as I remember them, are about as follows: What is the value of this work? How much will it cost, and what are the merits of the plans proposed for its successful development? In what I have stated there is sufficient to satisfy any reasonable mind on these points. If he or this committee wish more I can and will most cordially supply it.

In conclusion, Mr. Chairman, I will say that the great question to the whole West is the improvement of the Mississippi River. If we are legislating to promote hostile interests it will be well to defeat the bill now before us.

If, on the other hand, we have the interests of our country at heart, we shall pass it without material amendment.

Physical Effects of Alcohol and Narcotics.

SPEECH
OF
HON. SETH L. MILLIKEN,
OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 17, 1886,

On the bill (S. 1405) to provide for the study of the nature of alcoholic drinks and narcotics and of their effects upon the human system, in connection with the several divisions of the subject of physiology and hygiene, by the pupils in the public schools of the Territories and of the District of Columbia, and in the Military and Naval Academies, and Indian and colored schools in the Territories of the United States.

Mr. MILLIKEN said:

Mr. SPEAKER: I desire to say that this bill meets with my cordial and unqualified approval.

There may be, indeed there are, we know, differences of opinion upon many of the methods of dealing with intemperance, and good men and women in all parts of the world have earnestly and anxiously considered and reflected upon it, and suggested their different ways of arresting or at least decreasing it. Many laws have been enacted and enforced with more or less success, and certainly public sentiment upon the subject has improved wonderfully within my memory.

In my own State the sale of intoxicants has been driven out of all the country towns by the prohibitory law, and by the same measure it has been very sensibly decreased in the cities. Temperance organizations have also done a great work. Drunkenness, which was a common thing in my boyhood in Maine, is now the rare exception. Where I could once stand in the country and see a dozen teams pass with a jug of rum on each cart and many of the drivers pretty full of what had been the contents, now you may watch for a year and see not one drunken man nor one jug of intoxicating liquor.

But whatever differences of opinion may exist as to particular measures, I can not see how any intelligent lover of his race can object to the passage of this bill. It seeks to teach the deleterious effects of intoxicating liquors in the schools which are within the jurisdiction of the General Government.

When it is remembered that but a few years since, before the good work of the Law and Order League, fifteen thousand children were reported to be frequenters of liquor saloons in Boston alone, there can be no doubt that this bill begins in the right place. If the children are started along in life in the right way by proper and intelligent teaching, the men will take care of themselves.

I sincerely hope the bill will pass.

Physical Effects of Alcohol and Narcotics.

SPEECH
OF
HON. JAMES O'DONNELL,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 17, 1886,

On the bill (S. 1405) to provide for the study of the nature of alcoholic drinks and narcotics and of their effects upon the human system, in connection with the several divisions of the subject of physiology and hygiene, by the pupils in the public schools of the Territories and of the District of Columbia, and in the Military and Naval Academies and Indian and colored schools in the Territories of the United States.

Mr. O'DONNELL said:

Mr. SPEAKER: Since the beginning of the present session of the Forty-ninth Congress there have been presented to this House petitions signed by at least eighty-seven thousand persons "asking the enactment of a law requiring scientific temperance instruction in the public schools of the District of Columbia, in the Territories, and in the Military and Naval Academies, the Indian and colored schools supported wholly or in part by money from the national Treasury." The design is to have taught in the schools mentioned among other studies the effect of narcotics and alcohol on the human system. Of the petitioners, I find they are among the leading citizens of the localities where they reside. In the names appended to the requests I notice there are 5,747 clergymen of all denominations, 3,264 physicians, 3,574 attorneys at law, 9,553 teachers in colleges and schools, 34,674 business men, 10,616 officers of temperance societies; 5,790 were by votes of audiences at religious and other gatherings, while thousands in the District of Columbia and the Territories unite with the people of the States in the prayer for the passage of such a righteous measure. Seventy-seven thousand of the names above enumerated have come to this House through the organization of the women of the country known as the department of scientific temperance instruction of the Women's National Christian Temperance Union—a band of the noble women of our land who are striving to elevate humanity and promote temperance.

Added to the number, I reckon that ten thousand of our people have forwarded petitions directly to the members here, who have promptly presented the same. The Senate has received nearly as many as the above aggregate, and it is a safe computation to say that there have been sent from the people for both branches of Congress during the past five months petitions in favor of the bill just taken up bearing the names of more than 154,000 of our population. These petitions have come from every State in the Union, and it is hoped the prayer of the people of all sections of the nation will be heeded. I have here one of the petitions and repeat a few of the signatures. It comes from Boston, and is signed by such eminent men as President Elliott of Harvard College, Oliver Wendell Holmes, John Boyle O'Reilly, Phillips Brooks, Edward Everett Hale, and others prominent in all the walks of life. Added to this array of names, the American Medical Association, the oldest, largest, and most conservative body of physicians in America, embracing those most eminent in the profession, at its last meeting passed with great unanimity a resolution requesting and urging Congress to enact this bill into a law. We have all these petitions to consider in favor of the measure, and not one name is sent here averse to the act—not a solitary one! Shall we give ear to the voice of the people?

The Senate of the United States gave the bill its sanction by a unanimous vote, and I trust the representatives of the people will speedily concur. In the several States nearly two million men and women petitioned their Legislatures to give them laws like the one now before the House, and in response seventeen States and one Territory have written on their statute-books beneficent enactments similar to the measure now under discussion. Embraced in the States mentioned is nearly one-half of our population. The effect of the laws is most satisfactory in all of the Commonwealths enumerated.

A majority of the Committee on Education have reported in favor of this bill. In deference to the wishes of the people, and believing such knowledge as is by this bill provided to be taught to the youth of the land leads to good citizenship and educates the coming generations in the way of sobriety and industry, the appeal is made for the approval of the House. Edmund Burke declared "Education is the chief defense of nations," and education like this will defend our people from an invasion of woe, poverty, crime, and distress. This bill is free from partisanship. Its design is simply to check an evil by imparting a knowledge of the danger which menaces the young and their usefulness as citizens. This, I think, the great English poet wrote of, three centuries ago, when he said:

Ignorance is the curse of God, knowledge the wing wherewith we fly to Heaven.

Every member of this House has reason to know the wish of his con-

stituency on this question and is prepared to vote thereon. The people have made known their wishes by the great right of petition. Medical men who know the evil effects of intemperance; the clergy who teach morals; educational bodies, and instructors in schools, all have asked the Congress of the nation to enact this bill into law. For these reasons, and many others, I ask that the bill do pass. Let us afford the child in all schools in sections under Government control the opportunity to learn of the danger, that he may thereby by choice shun it—set his feet on the right path, and then trust to the early teachings and innate desire to do right to guide him through life.

The people of the United States are becoming alarmed at the increase of intemperance and seek the means to check the evil. This is in the nature of a preventive. Many citizens are looking for methods to suppress the danger. If you educate the young to the effects of intoxicants, they will influence those older in the way that leads to sober lives. With this you have prosperity and sobriety, two adjuncts that create a citizenship that honors the Republic.

I append as part of my remarks a portion of the report of the Committee on Education, which I had the honor to submit to this House on the 29th of April:

Mr. O'DONNELL, from the Committee on Education, submitted the following report, to accompany bill S. 1405:

The Committee on Education, to whom were referred the bill (H. R. 3496) to provide for the study of physiology and hygiene with reference to the effect of the use of intoxicating, narcotic, and poisonous substances upon life, health, and welfare, by the pupils in the public schools in the Territories and in the District of Columbia, in the Military and Naval Academies, and Indian and colored schools supported in whole or in part from the Federal Treasury, and also the bill passed by the Senate (S. 1405) bearing nearly the same title, submit the following report:

The committee have had the two bills under consideration, and a majority of said committee have ordered that the Senate bill (S. 1405) be reported to this body with the recommendation that the House concur in its passage, and that H. R. 3496 be indefinitely postponed.

Practically the same statute hereby recommended was in active operation in the States of New York, Pennsylvania, Massachusetts, Michigan, Wisconsin, Kansas, Nebraska, Nevada, Oregon, Maine, Rhode Island, New Hampshire, Vermont, and Alabama. While these bills have been under consideration by this committee three other States and one Territory have passed corresponding laws, namely, Iowa, Connecticut, Maryland, and Washington Territory, making seventeen States and one Territory whose statute-books contain provisions for instruction in the schools thereof as to the effect of alcohol and narcotics on the human system.

In those States where the laws pertaining to this object are in force their effect is most salutary. The purpose of the bill is to afford scientific knowledge of the effects of intoxicants and narcotics upon the human system, thereby encouraging sobriety among those who will in a few years be the citizens of the country. Such laws lead to progress, and serve to check a threatening evil to humanity and the general welfare. In the interest of industry, prosperity, and good citizenship is the measure commended. It invades no right of self-government, and applies to those schools sustained by the nation and in sections under the control of Congress.

The measure has the further merit of involving no political significance, but appeals to the very foundations on which all admit that popular government rests—the intelligence of the people. It is difficult to see how any objection can be raised to such a statute, except by those who fear to have the next generation educated in its public schools as to a subject universally recognized to be of the most vital importance to individual health and social security.

Temperance Education.

"It is a remedy peaceable, philosophical, radical, far-reaching. It trenches on no man's rights, proscribes no man's business, confiscates no man's property, dictates no man's habits, restricts no man's liberty. It appeals only to the power of truth."

SPEECH

OF

HON. BYRON M. CUTCHEON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 17, 1886,

On the bill (S. 1405) to provide for the study of the nature of alcoholic drinks and narcotics and of their effects upon the human system in connection with the several divisions of the subject of physiology and hygiene, by the pupils in the public schools of the Territories and of the District of Columbia, and in the Military and Naval Academies, and Indian and colored schools in the Territories of the United States—

Mr. CUTCHEON said:

Mr. SPEAKER: In the early days of the present session I had the honor to introduce in this House bill No. 3496, being substantially the same as the Senate bill now under consideration.

It is now three years since the State of Michigan, which I have the honor to represent in part upon this floor, by an almost unanimous vote of its Legislature, placed a similar act upon its statute-book.

At that time Vermont alone had taken a similar step. To-day seventeen States and one Territory have such laws, and still others have them under consideration. Since I introduced the bill into this House the States of Maryland, Alabama, and Iowa have joined the column, which I trust is soon to include every State and Territory of this Union. This bill provides—

That the nature of alcoholic drinks and narcotics, and special instruction as to their effects upon the human system, in connection with the several divisions of the subject of physiology and hygiene, shall be included in the branches of study taught in the common or public schools, and in the Military and Naval Schools, and shall be studied and taught as thoroughly and in the same manner as other like required branches are in said schools, by the use of text-books in the hands of pupils where other branches are thus studied in said schools, and by all pupils in all said schools throughout the Territories, in the Military and Naval Academies of the United States, and in the District of Columbia, and in all Indian and colored schools in the Territories of the United States.

SEC. 2. That it shall be the duty of the proper officers in control of any school described in the foregoing section to enforce the provisions of this act; and any such officer, school director, committee, superintendent, or teacher who shall refuse or neglect to comply with the requirements of this act, or shall neglect or fail to make proper provisions for the instruction required and in the manner specified by the first section of this act, for all pupils in each and every school under his jurisdiction, shall be removed from office, and the vacancy filled as in other cases.

SEC. 3. That no certificate shall be granted to any person to teach in the public schools of the District of Columbia or Territories, after the 1st day of January, A. D. 1888, who has not passed a satisfactory examination in physiology and hygiene, with special reference to the nature and the effects of alcoholic drinks and other narcotics upon the human system.

More than half of all the people of the United States now live under laws of a similar nature.

They embody the great new movement in the temperance reform carried forward under the auspices of the Christian women of the land.

This movement is thoroughly philosophical in its fundamental idea, which is that in a "government of the people" the individual should be self-controlled, or at least capable of self-control. Education makes and marks the difference between the savage and the civilian. Knowledge is the foundation of self-control.

The old maxim says that "right wrongs no man." So I say that light wrongs no man. Truth wrongs no man. It controls no man, but it helps each man to control himself. There is and there can be no question of the terrible evil of intemperance. All thinking men are agreed that it is the greatest social evil of the age. It is an evil that most vitally concerns the State in many ways.

1. It degrades the individual citizen and unfits him for the duties and responsibilities of citizenship.
2. It is the most prolific cause of lawlessness, pauperism, and crime.
3. It is the great destroyer of national wealth.
4. It is the most common and the most dangerous agent for the corruption of the elective franchise.

There is no side of free government that it does not assail. It poisons the fountains of political power; it multiplies the burdens of taxation; it diminishes the wage-fund of labor below the line of decent living; it dwarfs the power of production to an alarming extent; it corrupts the franchise, and it threatens the future of the Republic by perverting and depraving the rising generation.

But a few days ago General Master Workman Powderley, the head of the Knights of Labor in this country, called upon the members of that order to join him in a crusade against this great evil. If the money that is now spent by the workingmen of America for drink were turned into homes and home comforts, into books and newspapers, a new day would dawn upon them; competence would take the place of poverty; comfort would supplant want; happy homes would crowd out the grog-shop, which is now the breeding-place of socialism and anarchy, of riot and ravage.

I join most emphatically in what Master Workman Powderley says in his circular:

The firmest link in the chain of oppression is the one I forge when I drown manhood and reason in drink. No man can rob me of the brain my God has given me unless I am a party to the theft. If I drink to drown grief, I bring grief to wife, child, and sorrowing friends. I add not one iota of the sum of human happiness when I invite oblivion over the rim of a glass. If one moment's forgetfulness or inattention to duty while drunk brings defeat to the least of labor's plans, a lifetime of attention to duty alone can repair the loss. I promise never again to put myself in such a position. If every member of the Knights of Labor would only pass a resolution to boycott strong drink so far as he is concerned for five years, and would pledge his word to study the labor question from its different standpoints, we would then have an invincible host arrayed on the side of justice.

If only the Knights of Labor will heed and obey the appeal of their chief they will do more to elevate the condition of the workingman than all the strikes and boycotts that have been or can be inaugurated.

As I have said, the evils of intemperance are great, manifold, and alarming. What does science declare in regard to them? I do not now refer to the declarations of professional temperance advocates, or to the opinions of those who may be suspected of overzeal.

The American Medical Association, which embodies the sum of the scientific medical knowledge of America, at their national meeting in June, 1882, deliberately declared as follows:

Resolved (1), That in view of the alarming prevalence and ill effects of intemperance, with which none are so familiar as members of the medical profession, and which have called forth from eminent English physicians the voice of warning to the people of Great Britain concerning the use of alcoholic beverages, we, the members of the medical profession of the United States, unite in the declaration that we believe alcohol should be classed with other powerful drugs, and that when prescribed medicinally it should be done with conscientious caution and a sense of great responsibility.

Resolved (2), That we are of the opinion that the use of alcoholic liquors as a beverage is productive of a large amount of physical and mental disease, that

it entails diseased appetites and an enfeebled constitution upon the offspring, that it is the cause of a large percentage of the crime and pauperism in our cities and country.

Resolved (3), That we should welcome any change in public sentiment that would confine the uses of liquors to the uses of science, art, and medicine.

This is the voice of no temperance fanatic; it is the deliberate judgment of the conservative and scientific medical profession of America.

A. B. Palmer, LL. D., for more than thirty years a distinguished member of the Medical Faculty of Michigan University, and an author of great eminence, in a learned paper recently read before the Michigan State Medical Society, said of alcohol and its effects, speaking for the medical profession:

We said the alcohol taken was oxidized in the lungs, and that increased heat and other forms of force were thus produced. We find it is not thus oxidized, or if at all, in so small a quantity that its effect is ordinarily much more than counterbalanced by the diminution of the oxidation of other hydro-carbons which it produces; so that under its influence heat and the other forms of force are lessened.

We thought it increased muscular strength, and it was taken to aid men in their work. We find that it diminishes muscular power, both for immediate action and with reference to endurance.

We thought as it often makes one feel stronger, that this was evidence that one is stronger. We now know that this feeling is deceptive, and is not even presumptive evidence of increased strength. We see that the drunken man while boasting of his strength falls to the ground.

We said it was a direct heart exciter. We now know it is a direct heart depressor.

We said, and nearly all the text-books still say, it is a direct cardiac stimulant. We know from most conclusive experiments it is a direct cardiac paralyzant.

We thought, and we may sometimes still think, it makes us witty. We know from observation it makes men silly.

We thought it brightened the intellect and might make men wiser. We find that in the long run, at least, it dulls the intellect and makes men foolish.

Wine has been called the "milk of age," and we thought it supported advanced life. We know that the aged live longer and retain their powers better without its use.

As a medicine, or prophylactic measure, we thought it protected against epidemic diseases. We now know it invites attacks.

We thought it prevented and even cured consumption. We know it is the most frequent cause of at least one form of that disease—fibroid phthisis.

We thought, moderately used, it was good for many things. Those who have given most careful attention to the subject believe it is good for very few things.

Dr. Parker, one of the most eminent men who have written on this subject, has said:

When alcohol does not produce insanity, or idiocy, or epilepsy, it weakens the conscience, it impairs the will, it makes the individual the creature of impulse and not of reason.

Here you get material for mobs and riots, for almshouses and prisons. Weak consciences and impaired wills are hardly the characteristics of good citizens. But this is not all.

Dr. Parker further says:

"The hereditary influence of alcohol is not confined to the propagation of drunkards only; it produces insanity, idiocy, epilepsy, and other affections of the brain and nervous system, not only on the transgressor himself, but on his children and his children's children."

Such is the disease. What shall be the remedy? The great central root of intemperance is ignorance. The remedy must be more light.

Dr. Palmer, as quoted above, has enumerated some of the popular delusions in regard to alcohol, whether taken in moderation or immoderately.

While many of the forms of alcoholic drinks are believed by multitudes to be harmless beverages, science declares alcohol in all its forms to be a powerful and dangerous drug, all the more dangerous because of its delusive and insidious character.

This bill is the echo of God's primordial decree, "Let there be light!" It is the pleading of the millions of the children of our land, beseeching that they may not be sent naked, without shield or armor, into the battle of life to contend against odds not only with the open and disclosed enemy but also with those that lie in ambush and assail them in disguise. It is the appeal of hundreds of thousands of the noblest and purest women of the land in behalf of their homes, their offspring, their altars, and their firesides. It is the plea of the home, the church, and the school combined that if our tender ones and our helpless ones must run the gauntlet of the army of alcohol they may at least be forewarned and upon guard against the lurking danger.

In form this bill affects and applies only to the District of Columbia and the places under the exclusive jurisdiction of the United States; but in principle and in moral effect it is as broad as the nation.

Its passage will send a thrill of joy and a tide of blessing from ocean to ocean, from the great lakes to the Gulf, and from the Everglades of Florida to the waters of Puget Sound. It is a remedy peaceable, philosophical, radical, far-reaching. It trenches on no man's rights, proscribes no man's business, confiscates no man's property, dictates no man's habits, restricts no man's liberty. It appeals only to the power of truth upon man's free choice. It will be as silent and as beneficent in its operation as the dew and the sunshine of spring. It will come with balm for none, with blessing for all. We who to-day record our votes for this bill may not live to see its matured fruits. The world will move on much the same as before, but it will move upon a constantly ascending plane until it shall come at length, perhaps long after we are gone, into a clearer light, into a brighter hope, into a nobler, cleaner, and more beneficent mode of living.

We have it in our power here and now to confer untold blessings upon the future of our country, for which millions now unborn shall rise up and call us blessed. Can we neglect so grand an opportunity, so imperative a duty?

Oleomargarine.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE SENATE OF THE UNITED STATES,

Wednesday, May 26, 1886,

On the bill (H. R. 8328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. OATES said:

Mr. SPEAKER: I think that this is one of the most objectionable bills I have ever seen under consideration in this House. It is defined in its title as "A bill defining butter; also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine." It imposes a tax of $600 on manufacturers, on wholesale dealers $480, and on retail dealers $48. In addition, the eighth section imposes a tax of 10 cents per pound on oleomargarine, to be paid by the manufacturer. It also contains many harsh provisions, including fine, imprisonment, forfeiture, and confiscation for its enforcement. Section 8 of Article I of the Constitution gives Congress the power "to lay and collect taxes, duties, imposts, and excises."

The bill under consideration is therefore within the letter of the Constitution; but when we see that the Constitution also declares the purposes for which taxes may be collected, to wit, "to pay the debts and provide for the common defense and general welfare of the United States," coupled with the notorious fact that there is no need for an increase of revenue—that there is a surplus in the Treasury—it proves that this bill is not within the spirit of the Constitution, but violative of it. It is full of hypocrisy and false pretense in purporting on its face to be a bill to raise revenue, when in fact its purpose is not to raise revenue but to break down and destroy one branch of industry to foster and build up another. A man has the same right to make butter out of tallow as another has to make butter from milk. The consumer takes his choice. State laws can deal with deceit in the sale of either.

What right has Congress to prohibit the raising of sorghum or the making of glucose, beet, and maple sugar? Such a law would greatly benefit those who are engaged in making sugar from the sugar-cane, because it would increase the price. Such partiality in legislation, being unjust, breeds discontent among the people. Congress should never take sides nor discriminate against any American industry in favor of its domestic rival. Discriminations by Congress in favor of the industries of our own people against foreign competitors are familiar to every reader of our statutes, but discrimination as between rival industries of our own people is a new and vicious departure.

Will any one contend for a moment that Congress has the power to prohibit by law citizens of Virginia from raising tobacco, or the people of Illinois from producing wheat or corn, or those of South Carolina from raising rice, or Alabamians from growing cotton? No man of ordinary intelligence will claim that such a power is vested in Congress.

This bill is an attempt to do by indirection that which can not be done directly and fairly. It is said that the proposed law is a necessary measure of protection to the farmers of the country. Who does not know that scarcely one-tenth of the farmers of the United States make butter for sale in any considerable quantity?

The dairymen are the people who are clamoring for the enactment of such a law. If it were what on its face it purports to be—a bill to raise revenue—why not extend it to butter made from milk or cream as well as oleomargarine? The former is more in demand than the latter and would yield a much greater revenue, and then your taxation would fall mainly on the rich or those people who are able to indulge in the luxury of genuine high-priced butter. But, sir, this bill reverses that rule and imposes all the taxation on the manufactured and cheaper substitute which can be bought at a price the poor laboring people can pay and obtain it.

Is it not to the interest of the toiling millions of poor men that food products should be as abundant and cheap as possible? If this bill becomes a law it drives out of the country all manufactured substitutes for butter and greatly enhances the price of that commodity. This is just what the dairymen want. It would put more money in their pockets by making the consumer pay an increased price for his butter. They wish to tax out of existence oleomargarine, which is getting to be a lively competitor with Jersey butter for popular favor.

This is the most extreme and unjust protective measure I have ever seen, and yet gentlemen whom I have heard on this floor denounce a protective tariff as legalized robbery are to-day advocating this protection *per se* measure with great persistency. I suppose that they are protectionists or free-traders according to whose ox is gored. It is not only a highly protective measure against home competition—a rival domestic industry—which would make all the dairymen as rich as the highest tariff duties on manufactures have made those engaged therein but this bill is sumptuary and undemocratic in principle.

If, sir, as a free American citizen I choose to buy and eat a butter manufactured principally of tallow or lard rather than butter made from the milk of cows in the usual way, that is my right and my business, and the Committee on Agriculture have no right to object.

Nor is it any concern of theirs whether my butter is clean or nasty; that is my business and not theirs. But by this bill they and the dairymen deny to me my right to eat oleomargarine upon my bread if I prefer it, and assume to sit in judgment on my appetite and require me to eat my bread dry or spread Jersey butter on it at 50 cents to $1 per pound.

That, sir, does not comport with my democracy. I object to these oleomargarine and butterine statesmen sitting in judgment upon the tastes, appetites, and liberties of the people.

We have arraigned the Republican party before the country for class legislation and legalizing monopolies, yet here is a Democratic committee recommending to a Democratic House a bill exclusively for the benefit of the dairymen as a class. It, sir, is violative of every sound principle of American government.

In this House we have a report from one Democratic committee recommending a reduction of taxation to the extent of $25,000,000 annually on the ground that a greater amount of revenue is collected than the Government needs. Here is the report of another Democratic committee of the same House devising ways and means of raising more revenue. How incongruous and inconsistent? The explanation is that the butterine bill to raise revenue is a fraud—it keeps within the letter of the Constitution but violates its spirit. It would, therefore, be a most dangerous precedent, and if adopted will at no distant day return to plague its inventors.

Mr. Chairman, I am sorry that our system of internal taxes, which was from necessity established during the war, can not at present be dispensed with. It never was a popular method of raising revenue. Instead of progressing towards its extinction the bill before the House is a proposition to enlarge and extend a system which Jefferson denominated an infernal one.

The following article from the Ohio Farmer puts the case so clearly that I will publish it as a part of my remarks:

One man in this country has the same right to make butter out of tallow or lard that another has to make it out of cream. He can not be deprived of that right without destroying the principle of equality on which our Government rests. If one man may choose his own vocation and forbid others from choosing theirs, where does he get the power so to do? The secret is worth knowing. The making of butter out of tallow or lard is as honorable as to make it of cream. In each case the material comes from a domestic animal that is eaten by civilized man, and is worked by men who must work to live. The dairyman assumes that his process is the only lawful one, and that all others should be legislated out of existence. He has tried to do this through State laws, but courts have held those laws void. He will meet the same fate at Washington unless he does a little cool, unselfish thinking. He must learn that farming is merely one form of production, that all producers are laborers, and that all laborers are equal before the law. Applied to his case this means that if the Revenue Department takes control of the tallow-butter business it should take control also of the cream-butter business; that if one process should pay a license fee and a tax, the other process should do the same.

There is another aspect of the case which the dairyman does not think of, but which the public is thinking a good deal about in these days. The consumers of bogus butter buy it, pay for it with their own money, eat it, and say nothing. All the fuss and complaint comes from the dairyman. He not only assumes that his neighbors have no right to make butter out of tallow or lard, but he asumes that the public have no right to buy and eat what they wish. And he is about to appeal to law in aid of his assumption. It is this disregard by one citizen of the rights of another that is to-day plunging the country into an abyss of anarchy. The American dairyman is thoughtlessly seeking to tear away one of the foundation stones of republican government. The rank injustice of the act consists in this: That the supreme law-making power of the country, an engine that is owned in common by all the people, and should be exercised only in the common interest, is to be set in motion in the interest of a few and against the many. The protective tariff man would suppress the foreign producer in order that he and his employés may put the domestic consumers just where they want them. The protective dairyman goes one step further and would suppress his neighbor, the domestic producer of butter (of a certain kind), in order that he may put the domestic butter consumer just where he wants him.

The Knight of Labor goes one step further still. Quick to profit by the example set by other protective men and associations, he would suppress his fellow-workman who is a non-union man, and thus put his employer and the consumer just where he wants them. But with this difference: The tariff man and the dairyman work out their plans through laws passed in their own interest. The Knight of Labor, caring nothing for the sham talk about protection to American industry, or the sanctity of the cream-butter making process, instead of going to Washington, gets a club and goes straight to his employer's shop and there keeps other men from working, drives thousands of fellow-workmen into idleness, and until the employer will hire such men only and at such wages only as the Knight of Labor dictates, makes the law for himself. The dairyman uses the law, the Knight of Labor a club, to accomplish his selfish purpose.

Can a farmer afford to set an example for such tyranny? Dairymen are apparently losing ground, just as myriads of other men have lost ground and been displaced by new processes and later inventions. A great part of the railway capital of the country has become absolutely worthless because of the great number of new railroads that have been built. Canal-boats and stages disappeared before the locomotive. Sperm and lard oil gave way to petroleum. The Suez Canal put out of commission one-third of the merchant marine of Europe, and to-day electricity and natural gas are ruining coal property and driving tens of thousands of coal miners to seek new means of living.

The dairyman is only having his share of the burden of advancing civilization. I have said above that he is apparently losing ground. I believe his loss is only apparent. If imitations of butter are properly branded he need have no fear that the sweet, pure article that comes unadulterated from nature's living fount will be displaced by that which is manufactured.

The following report from the Judiciary Committee on this subject is itself a full answer to the bill:

Mr. TUCKER, from the Committee on the Judiciary, submitted the following report, to accompany bills H. R. 4809, 4171, 4172, and 1054.

The Committee on the Judiciary, to whom have been referred House bills 4809, 4171, 4172, and 1054, ask leave to report:

The questions submitted by these bills to this committee are of great importance, and involve the fundamental principles of the Constitution.

For our purpose the evil consequences to the regular producer of butter or any other article by the permission of a product by the spurious competitor, and even the results to health of the people, may be conceded. The contention is not as to the existence of the disease, but what is the remedy, and by what authority is it to be applied?

Your committee do not think that the evil complained of can find its remedy from what Congress can do, except as hereafter stated. The legislation, if proper, must be sought from the States.

No grant of power to Congress in express terms or by fair inference from express grant can be found which would authorize any law by Congress to prevent the production of anything by a person in a State of the Union. Congress may have some power over production in the District of Columbia, or where its power of exclusive legislation extends, or in the Territories. But the power to forbid the production of butter, or wheat, or tobacco in a State will scarcely be asserted by any one.

Questions which concern the production of the soil or otherwise, the health and well-being of the people of the State, belong to that large class which, for want of a better name, has been termed the police power.

The powers of Congress refer to the foreign relations of the State to their relations *inter se*, and do not pass within the confines of that interior life which constitutes the being and the civilization of a commonwealth. These are subjects for State legislation. A stranger to these local interests and internal concerns, under our system, must not intermeddle with them.

The evil to result from the exercise of the power as to oleomargarine is not seen by one who looks only to the extermination of the unwholesome product, but dairymen would readily perceive it if the power were directed against the production of butter. The question, then, of power is the primary one.

The concession will be made by most constitutional lawyers that Congress can not directly forbid the production of this or any other article in the State. But there are two modes in which it is supposed that Congress may operate on such a product; these methods are indirect.

First it is said that Congress may act upon it through the power to regulate commerce; and second, that as it may tax any article, it may tax oleomargarine, and so heavily as to put a stop to its production. Let us examine these in their order:

First. The power to regulate commerce is one of the most valuable and important of all those granted to Congress. It had two prominent objects: affirmatively, to give to the Federal Legislature the control of foreign and interstate commerce; and negatively, to take it from the States. The use of it by the States, under the confederation, put restrictions on trade and intercourse, and created inequalities between the States, which it was believed the Federal Government would not do if the power were vested in Congress.

It is an interesting phase of this discussion, whether the purpose to deny to the States this important power was coupled with a purpose to give to Congress the power to do all that is intended to be denied to the States. For example, it is clear that a State may not prohibit the transit or admission of the ordinary products of another State through or into its territory. But does it follow that Congress may do so? May not the absence of right in the State to do so rest upon another clause of the Constitution which gives equivalent privileges and immunities in every State to citizens of every other with its own citizens?

Your committee are not aware that it has ever been asserted for the power to regulate commerce that it involved a power to prohibit the free transportation of the products of each State through and into every other; and it could hardly have been within the minds of the framers of the Constitution to give to Congress the power to do so, when history shows that the purpose of giving the power to Congress and taking it from the States was to prevent the very result which this construction of the clause would involve and bring about. Be this as it may, no such power under this clause has been heretofore claimed, and has, in regard to the interstate slave trade, been denied by the *dicta* of eminent judges. (Groves *vs.* Slaughter, 15 Peters, 449.)

It may be within the meaning of this clause to require such needful regulations as to articles transported from State to State as will conserve the safety and well-being of the transportation, but the right to say what articles shall and what shall not be the subject of commerce is not included in the regulation of the commerce in such articles. The transportation of the article is the commerce in that article; the regulation of that transportation does not touch the right to transport the article under the regulation. Freedom as to the articles to be transported is reserved to the citizen; its transportation, as to mode, &c., is subject to the regulation of Congress.

And this is the more clear because the judicial decisions have never impinged upon the power of each State to control the right of its citizens as to food, clothing, &c., under what is called its police powers, and the right of Congress to enact anything like sumptuary laws for the States is nowhere granted, was expressly refused by the convention (3 Mad. Papers, 1369, 1370), and has never been seriously claimed in this first century of our constitutional history.

Your committee therefore do not think that Congress can, as a regulation of commerce, forbid or restrain the free transportation of any article from one State into another. It can regulate its transportation for its safety and for the safety of other articles or persons transported in the same or annexed vehicles provided for their carriage.

The question remains whether, under a regulation of commerce, a duty or tax may be laid upon it. Clearly not, when carried from place to place within a State, for that is not interstate commerce in the article. But how when carried from one State to another?

Regulations of commerce and revenue are wholly distinct in constitutional language. The first clause of Article I, section 8, gives the revenue power to Congress. The third clause of the same gives the regulation of commerce to Congress. In Article I, section 9, clause 6, the phrase "regulation of commerce or revenue," is used, thus emphasizing the distinction. In the convention, at one time, the revenue power was left to be exercised by a majority vote of Congress, the regulation of commerce by a two-thirds vote.

These facts, and the preconstitutional and revolutionary assertion of this distinction, leave no reason to doubt that it was never intended that Congress should lay any tax or duty on the transport of an article from one State to another. Nothing in the debates of the Federal convention, nor in those of the States ratifying the Constitution, nor in the Federalist, gives any shadow of claim to this power, and such a construction of the clause has never been asserted in any act of Congress or in any serious proposition to that effect.

Your committee therefore conclude that under the power to regulate commerce no power to forbid, restrain, or tax any product of industry is conferred on Congress.

Second. It remains to inquire whether oleomargarine or any other product may be subjected to an internal-revenue tax.

If the power to lay taxes (Const. U. S., Art. I, secs. 8 and 9) involves the power in Congress to select any article for excise or other tax, as seems to be now settled by the practice of the Government (and no doubt properly so settled), then the right to tax oleomargarine is undoubted.

But your committee are constrained to add that this is a revenue power. The right "to lay" is conjoined with that "to collect taxes," and the right to lay and collect is conjoined with the purpose "to pay the debts and provide for the common defense and general welfare." The power is conferred in order to the duty imposed on Congress. It is a trust power, and becomes a right only when

used for the purpose in view. The tax is the means to the end, and is only legitimate and rightful when needful for the end.

To use the tax when needless for revenue merely to strike down a product or an industry is to abuse a constitutional trust; and while the power may be conferred, the right to use it in such case can not be asserted. All power under our system is trust power; to use it for the trust makes it a rightful power; to use it *diverso intuitu* is wrongful perversion and abuse of power, and is contrary to the Constitution. In other words, as Congress can not forbid the production of an article in a State by direct legislation, it can not use a power conferred for another purpose to destroy and prevent such production. To do by indirect means what it could not do by direct legislation would be an unworthy evasion of constitutional limitations, which can not be sanctioned by an enlightened construction of the Constitution.

It is true that in such case the judicial power may not be able to declare such taxation void, because the judge dare not look into the intents of the legislator's breast, but the legislator who so abuses his trust and wrongfully misuses power can not avoid responsibility to his own conscience, bound as it is to support the Constitution; for by personal introspection he will find his motive not to be a tax for revenue to the Government, but a tax as a means of destruction to the product subjected to it; that is, tax used as an instrument of destruction and not as a means of revenue.

Your committee therefore think that Congress may lay the tax, if it be needed for revenue, but does it against right if only to restrain and destroy the use and sale of the article in question.

Your committee will now proceed to consider these various bills in detail.

Bill H. R. 4809 is broad in its terms and makes it unlawful and a misdemeanor for any person or corporation to make or sell any adulterations or imitations of food anywhere, and punishes it by fine and imprisonment. If this were passed all the industries engaged in food production in every State would be subject to the absolute power of Congress. This claims the direct power for Congress to permit or prevent production, to allow or to destroy it, and to regulate all sales and transfers of any such product in a State. Unless your committee have greatly erred in the views presented this bill is clearly unconstitutional.

Bill H. R. 4172 limits the power to the District of Columbia, forts, &c., and to the Territories, and while not forbidding production or sale, requires notice of the nature of the article to be labeled upon it. This bill does not conflict with the Constitution, as exclusive legislative power is vested in Congress over these places, except the Territories, and the power to govern these last is fully recognized as in Congress. Your committee, however, do not recommend its passage. The policy of this legislation is more proper for other committees, and is hardly within the jurisdiction of this committee except upon the inquiry as to power to pass it.

The same general remarks apply to H. R. 4171. The question of power is settled as to places by the considerations applied to H. R. 4172. But the bill is indefinite in the description of the offenses, and dangerous in the powers conferred on the so-called sanitary board, and the effect given to their reports. The bill should be carefully restrained in its operations, the offenses accurately defined, and the reports of the said board be allowed no such effect against the property, liberty, or other rights of the citizen. The policy of this bill is not proper for the consideration of this committee, and should be referred to some other.

Bill H. R. 1054 is liable to the objection that it, under the apparent purposes to regulate interstate commerce, forbids the commerce between the States in certain articles. It strikes at the articles, and does not regulate commerce in them. It is not a regulation of commerce, but a destruction of all commerce in certain condemned articles.

Its other provisions for enforcing the law and defining the offenses are not satisfactory, but these are more proper for the consideration of some other committee of the House.

Your committee therefore report back bills H. R. 4809, 4171, 4172, and 1054 with a recommendation that they do lie on the table.

Oleomargarine.

SPEECH

OF

HON. JOSEPH LYMAN,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 26, 1886,

On the bill (H. R. 8328) defining butter, also imposing a tax on and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. LYMAN said:

Mr. SPEAKER: I am in favor of the pending amendment to make the license tax for manufacturers of oleomargarine $200 instead of $600 per annum, and at the proper time I shall support amendments reducing the license tax for wholesale dealers to $100 per annum instead of $480, as provided in the bill, and the license tax for retail dealers to $25 per annum instead of $48. In my judgment also, 3 cents per pound is a sufficient tax upon the product. I believe those figures will accomplish that which ought to be the purpose of this legislation, and will not work the injury to one class of our citizens, to whom I shall presently refer, which the figures fixed in the bill might do.

Much has been said during this discussion upon the power of the Congress of the United States, under the Constitution, to enact the proposed legislation now pending. I have no trouble or doubt upon that question. A country of the vast territorial extent of ours, inhabited by fifty millions of intelligent, enterprising, and progressive people, can not be hemmed in and throttled by a Constitution which might have been entirely adequate to the wants of a country bounded by the Alleghanies upon the West, and the Atlantic upon the East. The fathers no doubt anticipated something of the state of facts with which we stand face to face to-day, and hence, in my judgment, gave us a Constitution so broad, and, if you please, so uncertain and ambiguous in its terms, that it is capable of being so construed as to meet every want of our people, and provide a remedy for every evil which can be met by human agency. The day, in my opinion, is at hand when our courts and our people and their representatives will no longer tolerate the narrow and constrained construction of the Constitution which deprives us of power to preserve our institutions, but will demand that it be so construed as to give to our General Government power to do anything and everything necessary for its own preservation, and for the welfare and happiness of the people, unless the particular act contemplated shall be expressly prohibited. This conclusion is the inevitable result of the logic of the events occurring in this country during the twenty-five years just past.

The underlying and main object of the bill is to raise the necessary revenues for the support of the Government. That Congress has the right to do this, and to tax certain articles and products and to leave others untaxed, is well established. But we are told that the revenues are not needed, that we have an overflowing treasury. Whatever may have been the fact in that regard one year ago, after fifteen months rule of the party now in power it is not true. The present Secretary of the Treasury, the financial head of the Government, says in his last report that on the 30th day of June, 1887, there will be a deficit in the Treasury of over twenty-four millions of dollars. This estimate is based upon the revenues and expenditures of the past year. The present Congress has already enacted such legislation as will double that deficit, and it also threatens to reduce the revenues in a much larger proportion. So that we shall need the revenue to be derived from this bill, especially if the party now in power is to remain at the helm.

I do not believe that we should endeavor, by legislation of this nature, to prevent the manufacture and sale of the products, by the terms of this bill, called oleomargarine. I do not believe that in and of themselves they are improper articles of food, or that they are necessarily deleterious to health; but I do believe that we should, if possible, enact such laws as will compel the manufacturers and dealers therein to sell them for what they really are, as oleomargarine and not as butter. When this object shall have been attained, and the demands of our Treasury for revenues shall have been met, we should, in my judgment, call a halt, and go no farther.

There are three classes of people whose interests are to be affected by this legislation, and which interests are equally entitled to our consideration. And here let me say that I am a protectionist. There is no gentleman on the floor of this House more earnestly and uncompromisingly so. I represent here, in part, the farmers of Iowa. They, too, believe firmly in the protection of American labor and of American industries, and in a home market for their surplus products. They ever have been and they ever will be for the promotion of these great ends, and will march shoulder to shoulder with representatives of all other American interests and industries, whether they be the wool interests of Ohio, the iron interests of Pennsylvania and Georgia, the cotton-manufacturing interests of New England, or any other interest of any locality in America. Wherever American labor and American industry of any kind need protection and defense there you will find Iowa Republicans. We are protectionists from principle, because we believe it the wisest and safest policy for our whole people, without regard to local interests merely. I am not going, and the people whom I represent do not desire me so to do, to part company with my venerable and esteemed friend, the gentleman from Pennsylvania [Mr. KELLEY], on this question. But, in my judgment, this whole question is foreign to the question now before us. There is no question here of protecting American labor against the pauper labor of Europe, and no question of protecting the product of American labor against the products of the pauper labor of foreign lands.

I have said there are three classes of people to be affected by this bill:

First. The dairy interests. This is an American industry.

Second. The oleomargarine interest. This is also an American industry.

Third. The consumers of the products of both, the American people.

Neither one of these two industrial pursuits should be unduly protected as against the other. The consumers of the product of both should, however, be protected against imposition and fraud. Oleomargarine should not be sold as butter. But if it is not deleterious to health, when properly manufactured, and the very large and constantly increasing number of people, who are inadequately paid for their labor, and who in order to support and educate their families must have cheap clothing and cheap food, and all other people, knowing what they are buying, desire to purchase and eat oleomargarine, I want them to have an opportunity to buy it, and to buy it at the cheapest possible rates.

That class of people to which I have just alluded is constantly increasing in the United States. In the early days of the Republic, when the people were generally engaged in agricultural pursuits, the farmer raised out of the ground the material out of which the good housewife wove the homespun garments which clothed him and his family. He produced by cultivation of the soil nearly all they ate. Now it is different. The noise of the manufactory is heard on every side. The country is a network of railroads. The earth is honeycombed by the miners' labors. All the employés of these great enterprises are not producers, but are consumers. They are generally inadequately paid for their labor, and too often very, very inadequately paid. In order to

support and educate their families they must have cheap food, and if the proper manufacture of oleomargarine aids them in this, Congress has no right to arbitrarily deprive them of it. I do not mean that we shall permit a fraud to be practiced upon them by permitting this product to be sold as butter, which it is not, but that after deriving such revenue therefrom as the necessities of the Government may require we should make the taxes on it just as low as will secure the identification of the product and prevent deception and fraud. For these reasons, briefly stated, I am in favor of the main features of this bill, and am also in favor of the proposed and suggested amendments to the same, believing that the wants of the revenue will be met thereby, and that all other legitimate objects will be accomplished, fraud and deception prevented, and the rights of no class of American citizens be unduly infringed upon.

Oleomargarine.

SPEECH

OF

HON. FRANK C. BUNNELL,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 26, 1886,

On the bill (H. R. 8328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine.

Mr. BUNNELL said:

Mr. CHAIRMAN: Representing as I do one of the largest agricultural districts of Pennsylvania, I feel it my duty to say a word against this growing abomination which seeks to destroy the legitimate dairy interests of this country. By the destruction of this useful industry you have but begun the downfall of the whole system of agriculture. The prices asked by manufacturers and dealers in fertilizers to feed our lands places them beyond our reach. Thus we are compelled to keep our farms well stocked with domestic animals to keep our lands in a state of productiveness. Without this means of sustaining them they will become poor indeed and the impoverished farmers will be obliged to move off and seek other employment.

Where to-day may be seen luxuriant grasses and rich grain fields and beautiful herds of cattle pasturing on the hillsides you will be obliged to view a spectacle of shameful contrast, such as poor fences, dilapidated farm buildings, barren soil, and a class of our most industrious, and intelligent citizens reduced to poverty.

During all these years of protection to other industries the farmer has contributed to their support uncomplainingly by paying increased prices for his machinery and most articles of his consumption. And he would not appear before this Congress to-day asking redress for his grievances were he not confronted with organized capital seeking in true monopoly style to encompass his financial ruin. Unscrupulous manufacturers are occupying his markets with a cunningly devised counterfeit on his productions, so indispensable to all the people alike of this country.

The national debt would sink into insignificance compared to the depreciation in value of our farms and herds of cattle if this injustice be permitted to continue. Already this loss is to be computed by hundreds of millions of dollars, and we have but fairly started on the downward path provided for us by these soulless, counterfeiting, stomach-defiling manufacturers of spurious butter.

Legalizing unlimited counterfeiting of our coins by the Government for the same period of time would scarcely be more disastrous to this country and certainly no more criminal to the farmer.

The provisions of this bill, if unreasonable in any particular, is in favor of the dealer in mysterious butter which becomes so delicious under the professional manipulations of talented chemists and the beautiful Annarian names bestowed upon the production. However, the facts show that about all this carefully prepared, useful, angelic friend, as is claimed, of the laboring men is thrust before us as just plain, honest creamery butter.

From the evidence produced before the Committee on Agriculture it is shown that in its greatest purity of manufacture the cost is from 7 to 8 cents per pound. With the 10 cents proposed tax to be added, the honest dairymen are still placed at a disadvantage of at least 5 cents per pound, the one an honest production, the other a counterfeit. The arguments and petitions of these manufacturers, who count their profits by the hundreds of thousand dollars annually on this product of high art, poses it before us as the laboring man's friend and that it is demanded by reason of its cheapness.

This is a piece of effrontery that the laboring men of my section will characterize as unblushing assumption. We are all laboring men in Northern Pennsylvania, and when the powerful firm of Armour & Co. and others condescend to sympathise with us by giving us this dressing for our bread at from 100 to 300 per cent. advance on its cost we desire it understood, and distinctly so, that their benefactions are savored with suspicions and the benefactors are unappreciated.

Think of it! What consistency! No doubt they might be induced to furnish us with clothing and other necessaries at a like profit; but no danger—our people are better judges of all wool and a yard wide than of oleomargarine.

This nefarious business has only prospered when sailing under the flag of deception, just as a counterfeit coin peregrinates until discovered and exposed.

I believe in protecting every industry in this land, and I deny that this tax is to be a burdensome one if this article is as useful and necessary as the opponents of this bill claim it to be. The price to the consumer will be no more. It will only reduce a profit akin to theft to one still five times greater than any farmer realizes on his hard labor. Let it be sold for what it is, giving it a coloring distinct of its own, so that he who runs may read. Paint it sky-blue, pink, or any color that it may not lose its identity; then if the people pray for it and the children cry for it you will find me, Mr. Chairman, among the first to vote for a measure to relieve it of its burdensome tax. The farmer has made his appeal honestly and modestly, but I assure you it is earnestly. He does not petition you for a grant or a subsidy. He only asks of us to protect him in a free field of competition; this done, he will continue his labors—unremunerative though they may be, it will be without complaint.

He did not call upon this Congress until his grievances became unbearable. Nor will he be turned away from these Halls unheeded. Every member of this House is now familiar with this subject, and I trust the appeal made by these honest men asking for honest rights and just recognition may receive the protection so justly demanded. I am amazed when I listen to the arguments of gentlemen who claim they can not support this bill on the ground that it is protection to one industry at the expense or destruction of another. Here let me say that I heartily agree with them if it be an industry. But when a business depends on fraud of the most deceptive character for success, well knowing this counterfeit is to be passed on the innocent consumer for the genuine, is it not quite time this legislative body provides a punishment for an offense so great against the rights of our citizens? Good morals require it and the health of our people demands it.

Business of Committee on Pacific Railroads.

SPEECH

OF

HON. JAMES D. RICHARDSON,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 17, 1886,

The House having under consideration the following resolution—

Resolved, That Saturday the 5th and Tuesday the 8th days of June, 1886, immediately after the morning hours, be set apart for the consideration of measures reported from the Committee on Pacific Railroads, not to interfere with revenue or general appropriation bills, nor with prior orders, nor with the consideration of reports from the Committee on the Public Lands under the special order; and if the consideration of such business be displaced, then the next days not previously set apart shall be devoted to the consideration of the same until it shall be disposed of, or until two days shall have been consumed, subject to the above-mentioned interference—

Mr. RICHARDSON said:

Mr. SPEAKER: I have been directed by the Committee on Pacific Railroads to ask the House to adopt the resolution which has just been read. This resolution, as you will perceive, sets apart two days to be devoted to the consideration of measures of public importance pertaining to the system of Pacific railroads which have been reported from that committee. These measures, sir, are not of private or local interest, but measures in which the whole country is interested——

Mr. RANDALL. Will the gentleman be kind enough to indicate them?

Mr. RICHARDSON. It will give me pleasure to do so.

"JOINT RESOLUTION AUTHORIZING AN INVESTIGATION OF BOOKS, ACCOUNTS, AND METHODS OF PACIFIC RAILROADS."

One of the measures which we will ask the House to consider will be the House joint resolution 170, introduced by myself, the object of which is to authorize the Secretary of the Interior to appoint experts whose duty it shall be to investigate the books and accounts and methods of the Pacific railroads which have received aid in bonds and land grants from the Government.

The purpose of this investigation is to ascertain whether these roads have observed all the obligations imposed upon them by the laws under which they received such aid, or which have been since passed in reference thereto.

In view, sir, of the vast interest the Government has in these railroads, and its liability for them, it is of the utmost importance that Congress and the country shall know whether or not said obligations have been and are being disregarded by the companies.

It is well known that the indebtedness of these roads to the Government, growing out of bonds issued in their aid, amounts now to almost a fabulous sum. I will here insert a table showing the indebtedness of these roads:

Name of railway.	Principal outstanding.	Interest accrued and not yet paid by United States, due July 1, 1885.	Interest paid by United States.	Interest repaid by companies to credit of bond and interest account.		Balance of interest paid by United States.
				By transportation services.	By cash, 5 per cent. of net earnings.	
Central Pacific	$25,885,120	$776,553 60	$25,782,216 07	$5,134,185 31	$648,271 96	$19,999,758 80
Western Pacific	1,970,560	59,116 80	1,845,599 34	9,367 00	.....	1,836,232 34
Union Pacific	27,236,512	817,095 36	27,409,136 49	10,647,579 36	283,162 99	16,478,394 14
Kansas Pacific	6,303,000	189,090 00	6,696,603 09	3,284,294 23	.....	3,412,308 86
Central Branch Union Pacific	1,600,000	48,000 00	1,693,808 26	219,746 48	6,926 91	1,467,134 87
Sioux City and Pacific	1,628,320	48,849 60	1,610,846 29	178,659 68	.....	1,432,186 61
Total	64,623,512	1,938,705 36	65,038,209 54	19,473,832 06	938,361 86	44,626,015 62

This table is from the public-debt statement and report of Commissioner of Railroads, 1885, page 3, and shows that the total of the debt now amounts to $109,249,527.62.

It is also known that under the act of Congress commonly called the Thurman act, passed May 7, 1878, these roads are compelled to pay into the Treasury, as a sinking fund to protect the Government in its liability for them, 25 per cent. of their net earnings. These railroads operate not only their main lines, which have received aid from the Government, but they also operate largely branch lines and other lines which have not been subsidized by the Government. Under the Thurman act the Government is only entitled to receive its 25 per cent. of net earnings out of the assets of the roads on the aided or subsidized portions thereof. This being true, it is to the interest of the roads to have their books so kept as to show the earnings upon the unaided portions or branches thereof rather than from the aided portions, it being seen that the Government receives no benefit whatever from the income of those roads on the portions and lines which have not received aid from the Government.

From a very careful investigation of their accounts before the passage of the Thurman act and since its passage, I have no hesitancy in saying that the Government is year by year, and every year, being robbed by these gigantic corporations, simply by their system of keeping their books. In other words, it is not believed that their books show properly their net earnings on the aided or subsidized portions of the roads.

To my mind there is no question that by their system of book-keeping there have been large diversions of the net earnings of the aided roads to less productive unaided branches and other wrongful and improper purposes. I do not doubt that this investigation will show that their reports have been falsified, their receipts cut down, and that in the most improved methods of book-keeping and stating accounts the Government has been robbed and swindled. I feel quite sure that the investigation will show that discriminations have been and are being made in both passenger and freight rates in favor of the unaided as against the aided roads. This fact is made manifest upon the examination of their accounts and books, because they show that the receipts from the portions of the roads which have been aided and upon which the Government lien rests are declining every year, while upon the several branch roads and unaided lines, not subject to the lien, the earnings are increasing. This is notably so since the passage of the Thurman act. I, for one, do not believe that upon an honest and fair statement of their accounts such a result will be shown.

It is impossible for your Committee on Pacific Railroads, or any other committee of this House, to make the investigation which will be necessary to develop all the facts incident to this investigation. Erroneous reports are to be examined, improper settlements reviewed, their accounts for years overhauled, to the end that they may be required to contribute to the Government what is justly and properly due from them. Only the most efficient and competent experts can make such an examination.

It was believed by Congress when the Thurman act was passed that 25 per cent. of the net earnings of those railroads, if properly accounted for to the Government, would provide a sinking fund which would eventually relieve their indebtedness and save the Government in its liability for them. This would probably have been true if the net earnings were properly shown in their books and their reports and the 25 per cent. properly accounted for. It is a fact well known, also, that this per cent. as shown upon their books and in their annual reports, falls far short in any such calculation at this time. This indebtedness, instead of being diminished, is annually being increased, so that by the time of its maturity, in 1898, it will have grown so large that it will be impossible for these corporations to discharge it, and thus the Government will be forced to take charge of these roads, and will suffer irreparable injury. After what I have stated the necessity for the contemplated investigation must be apparent to all. But I desire to close my remarks on this question by inserting here a letter furnished me by the Department of the Interior to show specifically that the aided roads have not been receiving their fair proportion of earnings of the roads:

DEPARTMENT OF THE INTERIOR,
OFFICE OF COMMISSIONER OF RAILROADS,
Washington, D. C., April 12, 1886.

SIR: In answer to your inquiry I have the honor to state that I made a special examination during July and August, last summer, of the accounts of the Kansas Division, Union Pacific Railway Company (formerly the Kansas Pacific Railway Company), in order to determine whether the aided road had been receiving its fair proportion of the earnings of the line from Kansas City to Denver, such earnings having been heretofore apportioned to the aided an unaided parts respectively upon a mileage basis. Owing to the great amount of labor involved I could examine the accounts for but six months, from January 1 to June 30, 1885, with the following result:

By charging each portion of road with the earnings from business confined exclusively to it, and crediting it with such part of the expenses as could be definitely located thereon, then apportioning the remaining earnings and expenses to each part on well-established basis of railroad accounting, it found the net earnings of the aided road increased 57.44 per cent. or $272,731.19, making an increased payment to the Government, at 5 per cent. of net earnings of $13,636.55, or an estimated increase for the year of $38,663.46.

Very respectfully,

THOS. J. WALKER, *Clerk.*

Hon. G. A. JENKS,
Assistant Secretary.

This letter, sir, only shows the result on one of the branch lines, or unaided lines. There are not less than twenty-nine of these branches. The loss to the Government, as shown in this one case, is $38,663.46 in one year's time. If the same proportion of loss is kept up on all the branches and unaided lines—there being twenty-nine branches—it will be seen that the amount thus lost is not less than $1,100,000 each year. Run this through a number of years and it will be seen that by this one method the Government is being outrageously robbed. This is, however, only one of the measures reported from the committee, and to which we will invite the attention of the House on the days we have asked to have set apart.

"ADJUSTMENT AND PAYMENT OF INDEBTEDNESS OF PACIFIC RAILROADS."

The next measure is House bill 8318, which provides for an adjustment of the entire indebtedness of all the Pacific railroads. Under the law and contract at present existing the indebtedness of these roads will mature in 1898, and for the payment thereof the companies are making no adequate provision. At the present rate of increase, by the date of maturity of this indebtedness it will amount to not less than $130,000,000. The object proposed in the bill is to set forth a plan or method whereby the Government shall be secured the certain payment of all the money it has advanced to the Pacific railroads, and that there shall be an immediate commencement of payments by them. These payments are to be in semi-annual installments.

To do this upon a strictly business basis and not overburden the roads nor give them an excuse to tax unduly the people who are compelled to use their lines, it will be necessary to grant them an extension of time, although they will be required to begin payment at once, more than eleven years before the debt is due; and by the maturity of the debt in 1898 they will have paid over $41,000,000 of the indebtedness.

The Commissioners of Railroads for several years past have recommended a change in the law applicable to these roads. General Joseph E. Johnston, the present Commissioner, in his report to this Congress, uses this language:

It is therefore suggested that it might be alike advantageous to the Government and to the Pacific Railroad companies to substitute for the present law one fixing an annual or semi-annual payment by the companies concerned, which should extinguish their debts to the Government in a reasonable time.

I now beg leave to have read as a portion of my remarks an extract from the report of the Committee on Pacific Railroads made to accompany this bill.

The Clerk read as follows:

For a practical solution of this question the committee offers the accompanying bill. The scope of it is to find the total amount, principal and interest, that shall have been paid for each one of these companies on their subsidy bonds by the United States at their maturity. From this amount deduct all payments on

bond and interest account that shall have been paid by each company respectively up to the 1st day of October, 1886. Also find the actual value of the amounts in the sinking fund belonging to each company having one on a day to be fixed by agreement between the Secretary of the Treasury and the president of the company interested. Compute interest on that value at the rate of 3 per cent. per annum from that fixed day until the average date of maturity of the subsidy bonds, and subtract the amount of this sinking fund and interest from the amount of debt and interest chargeable against the company interested in the same.

Compute interest on the remainder of the debt and interest, after making these deductions, at the rate of 3½ per cent. per annum until such a date as will be the average date of one hundred and forty equal semi-annual payments. Add this interest to the remainder of debt and interest aforesaid, and divide the sum so found into one hundred and forty equal parts, each company to pay the first of these equal installments on the 1st of April, 1887, and another even payment every six months thereafter until the whole one hundred and forty shall have been paid.

This table gives an illustration of the result of such computation, with part of the amounts used, estimated.

Union Pacific Railway Company (including Kansas Pacific).

Principal of subsidy bonds		$33,539,512 00
Interest on same to maturity, thirty years, at 6 per cent		60,371,121 60
Total debt		93,910,633 60
From which deduct:		
Amount in bond and interest account March 1, 1886	$14,596,478 44	
Estimated increase from March 1 to October 1, 1886	532,600 18	
Amount in sinking fund March 1, 1886	6,210,365,53	
Estimated increase from March 1 to October 1, 1886	409,484 23	
Interest on $6,679,849.79 in sinking fund October 1, 1886, to average maturity of subsidy bonds, July 1, 1897	2,154,251 53	
		23,953,179 96
Remainder of debt and interest		69,957,453 64
Interest on same to October 1, 1921, twenty-four years and three months, at 3½ per cent		56,548,931 48
Total		126,506,385 12
Divided into 140 installments		903,617 03
Annual payment		1,807,234 06
Present worth		52,897,885 55
Discount		17,059,568 09

Central Pacific Railroad (including Western Pacific).

Principal of subsidy bonds		$27,855,680 00
Interest on same to maturity, 30 years, at 6 per cent		50,140,224 00
Total debt		77,995,904 00
From which deduct:		
Bond and interest account to March 1, 1886	$5,919,321 63	
Estimate from March 1, 1886 to October 1, 1886	276,798 61	
Sinking-fund account to March 1, 1886	3,225,609 55	
Estimate from March 1, 1886, to October 1, 1886	245,426 79	
Interest on $1,471,036.34 in sinking fund from October 1, 1886, to October 1, 1897, 11 years, at 3 per cent	1,145,442 00	
		10,812,598 60
Remainder of debt and interest		67,183,305 40
Interest on same to October 1, 1921, twenty-four years, at 3½ per cent		53,746,644 32
Total		120,929,949 72
Divided into 140 installments		863,785 35
Annual payment		1,727,570 70
Present worth		50,513,763 46

Central Branch Union Pacific Railroad.

[Average maturity of subsidy bonds, September 1, 1896.]

Principal of subsidy bonds		$1,600,000 00
Interest to maturity, thirty years, at 6 per cent		2,880,000 00
Total		4,480,000 00
From which deduct:		
Bond and interest account to March 1, 1886	$255,504 00	
Estimate from March 1, 1886, to October 1, 1886	12,000 00	
		267,504 00
Remainder of debt and interest		4,212,496 00
Interest on same to October 1, 1921		3,640,289 00
Total		7,852,785 00
Divided into 140 installments		56,091 00
Annual installments		112,182 00
Present worth		3,246,625 05

Sioux City and Pacific Railroad.

[Average maturity of subsidy bonds, January 1, 1898.]

Principal of subsidy bonds		$1,628,320 00
Interest to maturity, thirty years, at 6 per cent		2,930,976 00
Total		4,559,296 00
From which deduct:		
Bond and interest account to March 1, 1886	$198,034 07	
Estimate from March 1, 1886, to October 1, 1886	8,000 00	
		206,034 07
Remainder of debt and interest		4,353,261 93
Interest on same to October 1, 1921, at 3½ per cent		3,382,484 51
Total		7,735,746 44
Divided into 140 installments		55,255 33
Annual payment		110,510 66
Present worth		3,254,775 27

From these tables we have an approximate total annual from the companies of $3,757,496.

The period of extension for payment of the last installment is fifty-nine years beyond the date of maturity of the subsidy bonds, or an average extension of the whole debt of about twenty-four years beyond the date when the debt becomes due under existing law.

In consideration of the extension of time thus granted, all the earnings of the road by Government transportation upon any roads owned, leased, or operated by the company shall be applied to the payment of the current maturing installments, and no money shall be paid by the Government for transportation or service of any kind over the aided or non-aided roads until the installment next maturing shall be fully paid.

It extends the statutory lien and security now subsisting over all roads now owned or operated, or hereafter acquired, no matter where situated, by the companies, including telegraph lines, franchises, rolling stock, and property of every kind and description, to remain as security for the installments until all are paid, embracing over 3,500 miles of road, not now held as security by the Government.

The Union Pacific owns 407.33 miles of road and controls 2,687.08 miles of road, which is not covered by the present Government lien, and which, it is proposed by this act, shall become subject to the Government's lien for the payment of the debt, and the Government transportation over the same applied upon the installments of indebtedness every six months.

* * * * * * *

As an asset to some extent, also, available toward the payment of its indebtedness the company had on December 31, 1885, unsold lands to the amount of 7,446,585.82 acres, the estimated value of which was $11,281,468.30.

In addition to the 865.66 miles of the aided portion of road owned by the Central Pacific, that company owns 393.94 miles of road, and operates under leases 400.26 miles.

The value of these properties the committee can not state. This company holds 2,271,872 acres of land patented by the United States, which, at the low value of $2.50 per acre, should bring over $5,000,000, and it also owns lands and water front in San Francisco, Oakland, and Sacramento, valued at $7,750,000.

These assets of the two principal debtor companies are stated to show, not so much the substantial increase of security the Government will receive, as the probable ability of the companies to comply with the terms of the proposed plan of payment of their debts to the Government, and the strong motive they will have to promptly meet their obligations. But the amount of additional security furnished by any company accepting this act is not of great importance, because of the provision therein by which, eleven years before its debt becomes due, the company consents that the whole of its indebtedness to the Government shall become due and payable, upon default for six months upon any of the semi-annual installments which it agrees to pay. There is also another provision which will be mentioned a few lines further on, that ought to be considered in this connection. It is found in the tenth section of the bill.

It also requires that the company accepting the provisions of this bill shall also accept the provisions of the Thurman act, voluntarily yielding all questions of the constitutionality of said act, and to furnish, at the time of their acceptance, and as a part thereof, a complete schedule of the branch roads, bonds, stocks, and securities, and all property whatsoever which is to become subject to the additional lien of the Government.

It permits any of the companies to extend the payment or refund any balance of its first mortgage debt which it can not pay at maturity at a rate of interest not exceeding 4 per cent. per annum, and if any company shall neglect to provide for the payment of such debt or any part thereof or interest thereon, so that there is danger of foreclosure of the same by the holder of the same, the Secretary of the Treasury may pay off such paramount lien, by direction of the President, and the United States be subrogated to all right pertaining to the same, and the Secretary of the Treasury may then declare the whole debt of the company to the Government to be due within twelve months after default to repay the Government.

It prevents the payment of dividends until each company shall have paid its matured indebtedness upon its first-mortgage bonds, and also upon the Government installments. It guards the rights of the United States in the property now belonging to any of the companies, or hereafter to be acquired by them, and preserves all the powers of Congress over them which have existed in the acts concerning them, as well as the right to alter, amend, or repeal the same, and to alter, amend, or repeal this act.

The railroads and telegraph lines are required at all times to be at the service of the Government at rates as low as the lowest accorded to any individual for like service. The provisions of former enactments on this subject are fully sustained in this bill.

In order that the companies shall partake of the benefits of the proposed plan, they must accept the same under their corporate seals within three months after its passage.

The purpose of the extension proposed is to bring the semi-annual payments sufficiently within the ability of the companies to render such payments entirely certain, and it can not, in our opinion, be of any vital consequence to the Government whether the debt be paid in sixty or seventy years, so long as its ultimate payment can be certainly secured.

The necessity of this extension further appears from the fact that the first-mortgage bonds of equal amount with the subsidy bonds mature at the same time, and these bonds having under the act of 1864 priority of lien over the Government, which stands in the relation of only a second-lien creditor, must be paid before the Government can obtain anything, and such payment would so strain the resources of the companies that if no extension be given the probabilities are that the foreclosure of the first-mortgage bonds would extinguish the debt of the Government, unless it is prepared to pay for the Central Branch Union Pacific $1,600,000; for the Union Pacific, including the Kansas Pacific, $33,532,000; for the Sioux City and Pacific, $1,628,320; and for the Central Pacific, $27,741,000, to cover the debt with interest of the mortgage which has priority over the Government.

In the event of any one of the companies failing to accept the provisions of the plan of extension the Thurman sinking-fund act remains in full force and effect as to such aided road. The provisions of that act are extended thus conditionally to the three lines not hitherto embraced thereunder, with the percentage increased from 25 to 40 per cent. If the Thurman sinking-fund act thus remains in force by the neglect of any of the companies to accept the plan heretofore described, then the Secretary of the Treasury is given enlarged power in the investment of the sinking fund belonging to such company.

The Attorney-General is required to cause the provisions of this act to be enforced.

Your committee therefore recommend the passage of the accompanying bill.

"BILL TO REQUIRE NORTHERN PACIFIC RAILROAD TO PAY FEES FOR SURVEYING, SELECTING, AND CONVEYING ITS LAND GRANT."

Mr. RICHARDSON. The next measure which the committee will ask the House to consider is bill No. 3752, which is an act requiring the Northern Pacific Railroad Company to pay the costs of surveying,

selecting, and conveying the lands granted to this railroad. The necessity for this law is apparent and I trust it will not be questioned when I present the facts in the case as they exist and are known to the committee charged with the investigation of the affairs pertaining to the system of Pacific railroads.

The surprise should be, Mr. Speaker, that Congress has not long ago taken hold of this question, and forced this road and the other Pacific roads to make these payments. They are all guilty alike in this particular. But as reprehensible as their conduct has been, and as little deserving as they are of favor at the hands of Congress, the committee in dealing with them in this case have not proposed to put upon them any penalty for their past misdeeds. As I will show, the only object is to require them to comply with the letter of the law. The object is to require them to pay the mere pittance, comparatively speaking, of cost of surveying and conveying to them, or to their assignees, lands given them as a subsidy by the Government of the United States.

To get directly to the question involved in this bill, let me say that by an act approved on the 2d day of July, 1864, Congress chartered the Northern Pacific Railroad Company, by which said company was authorized to construct a road from Lake Superior to Puget Sound, on the Pacific coast, by the northern route, and made a munificent grant of land to aid in this construction. The terms of this grant and its conditions were much the same as the original grant of 1862 to the Union Pacific Company and its branches.

I say, Mr. Speaker, that a munificent grant of land was voted this road to aid in its construction. And so it was a munificent grant, amounting to about 46,947,200 acres, much of it as fine, fertile, and productive as any land on the habitable globe. This grant of land was almost equal in area to the States of Tennessee and Kentucky combined.

In this connection I quote section 20 of the act of Congress of July 2, 1864, chartering said road, in these words:

And be it further enacted, That the better to accomplish the object of this act, namely, to promote the public interest and welfare by the construction of said railroad and telegraph line, and keeping the same in working order, and to secure to the Government at all times, but particularly in time of war, the use and benefits of the same for postal, military, and other purposes, Congress may at any time, having due regard for the rights of said Northern Pacific Railroad Company, add to, alter, amend, or repeal this act.

In 1870 it became necessary that the lands or some portions of them within the limit of the grant to the Northern Pacific Railroad Company should be surveyed. Congress, with the unstinted liberality characteristic of that body in those days of prodigality, and with a kindness for which that corporation has utterly failed to manifest the slightest appreciation, voted an appropriation to make the surveys of the gift or subsidy to it. Not being satisfied with the enormous grants these roads received from the Government, it became necessary for the Government in bestowing the gift to pay the expenses of the survey of the lands given. Like the poor pauper perishing for bread, when a kind benefactor gave him corn he declined to accept it unless the donor would pay for its shelling and milling. Congress voted this money, but before doing so, on the 15th day of July, 1870, added this proviso:

That before any land granted to said company by the United States shall be conveyed to any party entitled thereto under any of the acts incorporating or relating to said company, there shall first be paid into the Treasury of the United States the cost of surveying, selecting, and conveying the same by the company or party in interest.

Here, Mr. Speaker, I beg to call attention to the difference in the language used in this proviso or amendment to the charter of the Northern Pacific Company, and the amendment of like character, and for similar objects to the Union Pacific Company and others of the Pacific system of roads. The proviso under consideration, as you see, stops with the words "costs of surveying, selecting, and conveying the same by the company or party in interest."

In the amendment to the charter of the Union Pacific and the other companies these additional words are found, "As the titles shall be required by the company." It may not be out of place for me to say that those roads having the advantage, as they deem it, of those words in the amendment insist that thereby they can not be called upon to take patents to their lands under the grants to them until "the titles are required by the company," and they are taking good care not to "require the titles" in fee-simple to such lands. Their defense is that until they take out the patents to their lands they will not be forced to pay the million of dollars advanced by the Government for them. They say they are not bound to take the patents until they require the titles. The decline to require the titles, and thus they say they will pay the Government not a dollar of this large sum, most of which has been due for twelve or fifteen years, having been paid out by the United States long since for them and their benefit.

Some of these companies, with what seemed to me an effrontery unparalleled, admitted to the committee through their attorneys while investigating this question that in all probability the companies would not require their titles to their lands in a hundred years, and perhaps longer.

But, sir, while the Union Pacific and the other roads of the system have the so-called benefit of the words in their amendments that they shall pay these costs "as the titles to their lands shall be required by the companies," I wish to emphasize the fact that these words do not appear anywhere in the charter of the Northern Pacific Railroad Company. This road has no such technical and flimsy defense, even as against this most reasonable demand of the Government against it. Its charter reads simply that before any land granted to it shall be conveyed to it, or any party entitled thereto, the costs of surveying, selecting, and conveying the same shall be paid to the United States. This, sir, to an ordinary mind would seem to be sufficient protection to the Government, and so it would be if this corporation was disposed to act with common fairness. A decent respect to that which is right and proper the framers of that law doubtless thought would lead these companies when they had earned the lands granted them to apply for and receive the patents therefor. Such would be the ordinary dealings between man and man, and such, I submit, was reasonably to be expected. We find, however, that with wicked ingenuity they dodge behind technical words in the law to evade responsibilities, or, as in this case, in the absence of a technicality even, the law is shamelessly defied. In this connection I wish to read the statement furnished me by the honorable the Commissioner of the Land Office for the purpose of showing to the House how much land the Northern Pacific Company is entitled to patent under the act incorporating it and the amount it will be required to pay into the Treasury of the United States for surveying, selecting, and conveying the same. It is as follows:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., March 11, 1886.

SIR: In accordance with your verbal request of the 6th instant, for information concerning the grant to the Northern Pacific Railroad in connection with printed report No. 607, House of Representatives, Forty-ninth Congress, first session (herewith returned), I have to state that I am unable to furnish an accurate statement of the amount of land contained in the grant or even to approximately estimate that amount.

The estimates heretofore made are as follows:

	Acres.
Estimated area of the grant	46,947,200
Estimated area surveyed	21,732,542
Estimated area unsurveyed	25,214,658
Number of acres selected	11,057,824
Number of acres patented	746,390

Cost paid for surveying 381,470 acres, $17,024.32.
Estimated cost of lands surveyed (less 381,470 acres), $640,532.
Estimated cost of lands unsurveyed, $756,439.

Very respectfully,

S. M. STOCKSLAGER,
Acting Commissioner.

Hon. J. D. RICHARDSON,
House of Representatives.

In publishing this statement I wish to emphasize the facts shown therein. Nearly one-half of the enormous grant to this road has been surveyed, to wit, 21,732,542 acres. More than one-half of this land has been selected, to wit, 11,057,824 acres, while the company has had patents issued for only 746,390 acres. The estimated cost of surveying, selecting, and conveying the lands which have already been surveyed is the sum of $640,532, while the estimated cost of surveying, selecting, and conveying the unsurveyed portion of the subsidy will be $756,439. If they had "required the titles" to the land selected, which they ought to have done, they would have already paid into the United States Treasury the sum of $640,532. They have not taken patents for this land, however, but have only taken patents for 746,390 acres and have only paid the insignificant sum of $17,024.32.

It is not claimed that these figures are exactly correct, but they show at least the approximate result, and may be taken as substantially accurate.

If, sir, there was nothing else in this bill but a provision demanding reimbursement to the United States Treasury for the amount paid out for this company in surveying these lands, and for what will have to be paid out hereafter, there would be ample reason for its passage by this Congress. But there is much more than this involved. So long as the title to this subsidy is left to the United States, and no patents taken out by these companies, just so long do these lands escape all taxation, State, county, and municipal. The roads may sell them off as they have done; may mortgage them for millions of dollars as they have done, and get the money for them; may build up cities, villages, and towns upon them as they have done; may convert them into farms and sell them on ten years' credit with yearly payments as has been done; may receive the proceeds from such sales as they are yearly doing, and deposit same in their own treasuries or the pockets of their stockholders free from any percentage thereon to the Government under any law, and yet pay not one dollar of taxes thereon.

Fruitless efforts have been made by the people along the lines of these roads to compel these vast corporations to pay their just and fair proportion of taxes on their lands; to make their contributions to build up school-houses, court-houses, and other public buildings, and in short to do that which all good citizens who desire protection and benefits from a government cheerfully do, make contribution to its Treasury, that the ends of government may be subserved, and the laws executed; but they are uniformly met with the answer "You can not tax our lands. The titles thereto are in the Government of the United States, and no tax can be levied thereon."

In the efforts to collect the taxes, litigations have followed, but always with the same result. In a very late case, the Supreme Court of the United States held that the "lands granted to the Northern Pacific Railroad Company in Dakota, are not subject to taxation, until the cost of surveying and selecting them has been paid into the Treasury of the United States by the company, although the road has been built before the levy of the tax." (See Northern Pacific Railroad Company vs. Rockne, county treasurer, &c., decided December 7, 1885, being an appeal from the supreme court of the Territory of Dakota.)

So long, then, as the patents to these lands have not issued out of the United States, so long as something is left to be done by the company before it has a complete title to the lands, they can not be taxed by the States and Territories; because, if you granted the power to tax you granted the power to take away and destroy the lien upon the land retained by the United States, for protection against the costs paid by the Government for surveying, selecting, and conveying the lands.

The Supreme Court have held that if the patents were issued, whether the costs were paid or not, the lands were taxable, because then the legal title would be in the company. It was also held that if the company had done everything it was required to do, to demand a title, then its land would be taxable, although the patent was not out of the Government, because it had a complete equity in the land. But inasmuch as the company had not paid the cost of survey, to give to the States and Territories the right to tax would give them the power to destroy the lien that the United States had elected to reserve to reimburse them for the advances they had made for the company.

It is apparent, therefore, sir, that as regards this vast domain, this immense grant of over 46,000,000 acres of land given to this corporation, it holds the land, it controls it, mortgages it, sells it, exercises indeed all the rights of ownership, and yet escapes the burden of taxation that falls upon every other species of property owned by every other individual in this broad land. These lands lie adjacent to other lands, owned by poor people, actual residents, who pay taxes regularly for State and county purposes. The company may sell its land to an actual settler, who takes possession, and improves the land, lives on it and enjoys it, but he pays no taxes, because his title is in the Government, the patent never having issued. He has only a bond for title, but this is eminently satisfactory to him, for the Government is a good trustee to hold his title, and by such a device he escapes all taxes.

It is known that these lands have been and are being sold by these companies on ten years' credit to actual settlers, giving them only bonds for title, and for these ten years they are to escape all taxation. And even at the end of the ten years, unless a change comes over the dreams of the companies, they will not then perfect their titles to the land by paying the expenses mentioned, but will go on and on as stated indefinitely. These purchasers may not be willing to risk simply a bond for title from the railroad, and may require a deed in fee-simple, which they could do, but their lands, nevertheless, would not be taxable, because the patent had not issued taking the title out of the Government.

These things are not right, Mr. Speaker, and this Congress should not hesitate one moment to give us a hearing and pass this bill, and thereby remedy the evil.

Complaints are being made by the States and Territories through which this road runs of the great injustice thus tolerated and permitted by the United States. They are just complaints. These States and Territories have the right to appeal to Congress for relief. It can only come through Congress. This is a plain business proposition, and as business men we should meet it. There is no effort to excite the prejudices of members against this corporation. Congress in delaying the action asked here only prevents the States from exercising the sovereign right to tax property within their territorial limits. This is not an effort to take the lands from this company, but I do say, sir, that the United States Government has shown this and the other companies favor enough, and should not now grant them the additional favor of preventing their lands from being taxed to the great injury and embarrassment of the States and Territories.

The Northern Pacific Railroad Company has offered no kind of excuse or justification for its failure to pay these costs. It has no excuse. I do not overlook the fact that benefits have resulted to our common country from the building of these roads. It is conceded that much of the territory traversed by them was not long ago considered a great desert, which has since their advent been made to blossom as the rose; that before their construction much of it was—

> A solitude of vast extent untouched
> By hand or art; where Nature sowed herself
> And reaped her crops.

But, sir, the Government has done enough for them; it has done its part; let them now be required to do their part by the public which still has some rights left they are bound to respect. The remedy, sir, is found, in my opinion, in the bill mentioned.

By reason of the technicality of our land laws the bill is a long one and may be called technical. We believe, however, it affords the remedy for the evils I have set forth, and out of which the complaints have arisen. An examination of the bill will show that it provides that within ninety days from the passage of this act, or within sixty days after the filing in the respective land offices in the districts where the lands lie of plats of the townships embracing the lands, the company is required to select the lands it is entitled to and to pay the costs of surveying and conveying these lands. There can be but little trouble in making such selection. The plats will be filed in the public offices; they will contain a survey of all the lands within the limits of the grant, and it can not be difficult for the company to go into those offices and select the sections to which it is entitled under the law.

If the company, for any reason, refuses to discharge that duty then the act provides that it shall be the duty of the Secretary of the Interior to notify the company of the amount of land it is entitled to patent under the laws, and of the amount it is required to pay into the Treasury of the United States for the cost of selecting, surveying, and conveying the same, and if the company does not, within sixty days thereafter, pay such sum into the Treasury it shall be the duty of the Attorney-General to institute suit in a circuit court of the United States having jurisdiction of the question to compel the company to pay the Government the amount found due from the company. The suit or suits thus instituted should be brought against the lands of the company to enforce the lien thereon for the costs. The Government has no lien upon the lands except for these costs; so when they are paid the company will own the lands free from any lien of the United States.

The other feature of the remedy proposed by the bill is that, pending any litigation with the company, it is provided that as soon as the lands shall be surveyed by the Government, and the table which I have hereinbefore submitted shows that nearly 22,000,000 acres of the grant have been surveyed, they may be taxed by the States and Territories in which they lie, notwithstanding the patent may not be issued from the Government. By the provisions of the bill the United States Government will surrender for the time being that principle of sovereignty in it which exempts the lands from taxes while it holds the title, and concedes the right to the States and Territories to tax the lands.

The lien of the United States, however, for these costs fixed now by the retention of the titles to the land, shall be and remain a first lien thereon, and the purchaser at any tax-sale of the lands will only get a patent from the United States by paying to it the costs of survey and selection of the particular tracts he buys.

In this way the lands will be taxed by the States, Territories, counties, and municipalities, and the collection of the taxes may be enforced on the land, but the title thereto at such sales will be taken by the purchaser subject to the lien of the United States for these costs and will get no title until he pays the Government these costs, that is, the costs on the tract he buys.

CONCLUSION.

Other measures may be, and probably will be, called up for consideration, but the three I have mentioned are the leading ones. They are of sufficient importance to demand the attention of this House. Congress is voting away large amounts of money out of the Treasury in payment of pensions, and in various other ways. Let us turn our attention to measures which will bring some into the Treasury to meet this heavy drain upon it, particularly when we are compelling gigantic corporations which have plundered and robbed the people for years to make the contribution.

It is time we were moving in all these matters of so much interest to the country. These railroads should be held to a strict account. Their history from their inception shows a long chapter of colossal plundering. One of them, the Union Pacific Company, was built by an organization called the Credit Mobilier, which was but another name for the Pacific Railroad ring, as has been openly charged by a distinguished gentleman who is now the president of one of the companies. He said that according to the facts developed before a committee of Congress its frauds and evasions of the provisions of its charter; its issue of vast amounts of stock, without the payment of any money thereon; its bribery of a Government director to certify to the completion of a section of the road in advance of its completion; its bribery of Congressmen in order to secure the passage of the act of 1864 giving it land and bonds; its tortuous methods for the purpose of concealing its frauds, and by which a great many were successfully concealed, fully justified in the opinion of the committee the abrogation of the charter of the company. He said further that history does not furnish a similar example of bad faith, avarice, and turpitude. There should be no discriminations in favor of railway corporations, but, like all persons in this country, they should be required to respect and obey the law.

I trust that the resolution under consideration will be adopted, that these important measures may all receive prompt consideration by this House, and that before the adjournment of this Congress they may become laws. I will not have time to mention in detail the other measures we will ask to have considered. The magnitude of the questions involved in the measures I have already mentioned and discussed, the urgent necessity for the Government to obtain the relief they will give if passed and become laws, will, I trust, be sufficient apology from me for the time I have consumed in addressing the House.

The Public Revenues are a Public Trust—No Subsidies.

SPEECH

OF

HON. JAMES M. RIGGS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 20, 1886.

On the Senate amendments to the bill (H. R. 5887) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1887.

Mr. RIGGS said:

Mr. CHAIRMAN: In further discussing the sixth Senate amendment to this bill I may, necessarily, to some extent, repeat portions of what I have said before, but, so far as possible, I desire and intend to avoid repetition.

The first question I want to consider is, whether the amount of money—$800,000—mentioned in the amendment if paid out during the next fiscal year for carrying our foreign mails to the countries enumerated in the amendment will constitute only adequate pay for the service rendered by the steamships, or whether it will in reality constitute a subsidy to the steamship companies.

The total cost of carrying the whole of our foreign mails on the seas in the fiscal year 1885 was $331,903.33. The estimates for this service for the ensuing fiscal year as first made, printed in the Department reports and submitted to Congress, put the sum necessary to be appropriated at $350,000 in the event we should pay steamships of American register the same rates they received in 1885, and $425,000 if we should conclude to pay them full sea and inland postage, which is the highest compensation that can be given under existing law.

The following is the estimate mentioned:

The following amounts are estimated as required to be appropriated for the foreign-mail service for the fiscal year ending June 30, 1887:

"For the transportation of mails, including railway transit across the Isthmus of Panama, calculated at the rate heretofore paid for said service, $350,000."

If it should be decided to pay to vessels of United States register, for the transportation of mails to foreign countries, the whole amount of the postage collected on the mails conveyed (calculated at the Postal Union rates of postage, namely, 5 cents per ½ ounce, or $1.60 per pound, of letters and post-cards, and 1 cent per 2 ounces, or 8 cents per pound, of other articles), the above estimate for "the transportation of mails," &c., would be increased from $350,000 to $425,000."

A revision of the above estimate, made by the Department after the departmental reports had been forwarded to Congress and printed, convinced a majority of the House that $375,000 would be sufficient to pay American steamships the full amount of sea and inland postage, and sea postage to all other vessels carrying our foreign mails. And, therefore, in the bill as reported by the House committee and as it passed this body provision was made for the latter sum. The Senate added the sum of $800,000 by the amendment now under discussion, making a total of $1,175,000.

The amendment, however, provides that this additional sum may be expended only for carrying such of our foreign mails as may go to Brazil; the republics of Mexico, Central, and South America; the Sandwich, West India, and Windward Islands; New Caledonia, New Zealand, and the Australian colonies; China and Japan; and, further, that it shall only be paid for carrying such of our foreign mails to these countries as may be carried in American built and registered steamships.

In order to determine whether or not the expenditure during the next fiscal year of such a sum of money for carrying that portion of our foreign mails to the countries named in the amendment which may go in American-built and registered steamships would or would not amount to a subsidy it is necessary to ascertain as nearly as possible what it would be worth to carry them.

I am in favor of giving fair, adequate pay for all services rendered to our Government. We are amply able to pay a fair price for all we get, and nothing less than that can be right. If, upon business principles, it is really worth $800,000, then we ought to concur in the amendment and provide that sum of money for the purpose contemplated. But if it is not worth that sum, then the payment thereof to the steamship companies would be a subsidy to the extent of the excess over the actual worth of the services.

As already stated, the cost of carrying the whole of our sea-going foreign mails in the fiscal year 1885 was $331,903.33—nearly $43,000 less than the sum provided in the bill as it passed the House, and nearly $843,000 less than will be provided if this Senate amendment shall be adopted. Either we paid a shamefully low price in 1885, or the advocates of this amendment propose to pay more than the services can be worth in the next fiscal year.

It is contended in argument that the fact that nearly all our American steamships refused to carry our mails after the compulsory feature of our statutes was repealed is evidence that the pay was not enough. For, say the advocates of this amendment, the American steamship-owners are, at least, ordinarily shrewd business men, and own and operate their vessels for the purpose of making money, and if the pay was adequate they would not have refused to carry the mails and thereby lost a service which was paying an adequate compensation. The inference drawn is not necessarily correct. By recurring to the history of our postal affairs we find that once before there was an attempt to force the Government into paying more for carrying our foreign mails than the Post-Office authorities or Congress deemed reasonable.

In 1862 Cornelius Vanderbilt, who was a large owner of American steamships, proposed to have more for carrying our foreign mails than the service was worth or not carry them. Supposing he had the power in his own hands, he notified the Post-Office Department that after the 21st of March, 1862, he would not take the South Pacific, or any other of our foreign mails. Thereupon the Postmaster-General asked Congress to provide by law for compelling our own common carriers on the ocean to take our mails, the result of which was the enactment of what have been known in this debate as "the compulsory" provisions of our statutes, the repeal of which took effect on the 1st of April last year. Those provisions of our statutes passed both Houses of Congress without opposition, and remained in force twenty-one years without serious question.

This is evidence to my mind that steamship owners, when they think they have the advantage, may ask more for a service than it is worth, and may even refuse a fairly paid service for the purpose of compelling payment of more than fair compensation.

We have heretofore paid and are now paying sailing vessels and steamships of foreign register the international rates of sea postage, which amount to about 1½ cents per letter and about 4½ cents per pound for newspapers. That is what we paid in 1885 to those vessels, and in most instances the same rates to steamships of American register. Since our American steamships refused to carry our mails last year the Department has been obtaining their carriage at those rates. And the present arrangements for carrying them seem to be satisfactory to our people, excepting the steamship owners and their friends. The cost of having them carried during the ensuing fiscal year, considering the relative quantities carried, will not be greater than it was in 1885. Now, looking at the carriage of our foreign mails only, and as a mere business proposition, if we can have the service performed next year for $375,000 will not the payment of $800,000 more than that be a subsidy to just that extent?

But for the purpose of determining further whether the sum proposed by this amendment will amount to a subsidy, I want to compare the freight rates and parcels-dispatch rates charged by American steamships with what the Government offers to pay them for carrying our foreign mails. The Department has offered them sea and inland postage for letters which amounts to $1.60 a pound, and 8 cents a pound for newspapers. By the bill as it passed the House we made provision for such payment. The Senate proposes to increase the provision more than threefold, giving the whole increase to American steamships plying between the ports of the United States and certain enumerated foreign countries. Let us compare the pay at sea and inland postage, provided for by the House, with freight and parcels-dispatch rates.

During this discussion I have already said:

I remember the gentleman from Michigan on a former occasion said to the House—I came near saying curtly; he said it bluntly at all events—that those of us who chose to compare the money paid for carrying the United States mails with the amount paid for the parcels-dispatch and for freights could have no argument with him; and yet notwithstanding his longer experience, notwithstanding the confidence with which he has made his statement, I am disposed to make a comparison of that very character. I do not intend to weary anybody else, or myself, with a long detail of figures here. It is sufficient for my purpose and for the purpose of this argument to state general results which the official figures will bear out.

You may take the "Red D" line, the United States and Brazil line, or any other line of steamers, take all of the lines, compare the rates paid on each by the Postmaster-General, or which he has offered to pay, and which they refused, with the rates paid for carrying freights, and it will be found that the Postmaster-General offered these American steamships, if they would carry our mails to such countries as they were sailing to (and impose upon them no other conditions than those that were imposed by the conditions of their ordinary traffic)—he offered them a rate that would pay them from forty to nearly one hundred times the amount that they were getting for carrying freight.

He offered them a rate which would pay them an average of four times as much for carrying the mails as they were receiving for carrying an equal weight of parcels at their dispatch rates. Now, is it fair to compare these payments? I think it is if we consider the duties and responsibilities, the labor and the expense attaching to parcel packages and freight and those attaching to the mails.

What duty is imposed on a steamship carrying the United States mails that is not imposed on that steamship in carrying parcels at its dispatch rates? What responsibility is imposed that is not imposed in carrying parcels? What expense is imposed that is not imposed in carrying parcels? The gentleman from Michigan [Mr. BURROWS], alluding I think to the United States and Brazil line, called attention to the fact that the steamship company is bound before its steamship leaves the port of New York to send to the post-office there and get the mails. He alluded to that fact in a way which impressed me as if he spoke of it because he believed that fact entitled that company to 50 cents per nautical mile for carrying the mails. What does it really cost them? Eight dollars and fifty cents; that is the amount as appears from their own statement signed by their own manager. Their round trip is about 10,000 miles, and the mileage at 50 cents per nautical mile would be over $5,000 a trip. Is the outlay in the port of New York in sending for the mails and putting them on board a warrant for such a sum? It is an item, of course. If they pay out $8.50 they should have it repaid, and should be compensated fairly for carrying the mail.

But what duty do they perform in carrying the mails? They send to the post-office and get the mails; they are put up in closed bags; they convey them on

board and lock them up in a small room 8 feet each way. That is the end of the attention the mails have until they reach the port of destination in South America. And then they were bound when they carried our mails to put these mails ashore as speedily as was practicable and deliver them to the postal authorities at the port of destination. That is the attention the mails have.

Now take the expense at one port of destination. At Pernambuco the United States and Brazil Company say they expend $30.80 on one trip in putting the mails ashore. I do not know whether they do or not. I sometimes doubt it, for the reason that other portions of the statement will not bear close inspection and analysis. But suppose they do expend $8.40 at New York and $30.80 at Pernambuco, these payments furnish no warrant for paying 50 cents a nautical mile, amounting to $5,000 a round trip, for carrying the mails.

They ought to get back the money they pay out and a fair amount for carrying the mails. But when they have put the mails on board, receiving them in closed pouches, locked them up in a small room, put them ashore at the port of destination, and delivered them to the postal authorities, then their duties are performed. Now, what is their duty as to parcels carried at their dispatch rates for which they get not one-fourth of what the Postmaster-General offered them, sea and inland postage, for carrying the mails? They receive them I suppose at some office in New York city and convey them to their vessels; they take just as good care of them as they do of the mails. They are sent at higher rates because the senders attach some special value to them; just as in our own country we send parcels by express and pay higher rates than freight rates because some special value attaches to the parcel. They take as good care of them as they do of the mails. At the port of destination they deliver them to some office just as they deliver the mails at the post-office. And so far as duty is concerned and so far as responsibility is concerned, the duties and responsibilities attaching to the carriage of these parcels are as great as those attaching to the carriage of the mails; and greater, because at least in some sense they become insurers of the parcels, while they are not insurers of the mail. Nobody ever heard of an attempt to hold a steamship company or the master or the owner of a vessel responsible for the loss of a mail or any injury to it. Such a thing has never occurred.

With regard to freights, of course most of the freights, except the highest class, are stowed in the hold of the vessel. They do not occupy as valuable space as the mails or the parcels carried; but the Postmaster-General offered to pay this special sum, one hundred times as much as they carry freights for. Is not that enough?

I reiterate these statements, and desire to re-enforce them by figures taken from official sources.

During the latest fiscal year for which we have reports (1885) the Pacific mail line from San Francisco to the Hawaiian Islands, New Caledonia, and the Australian colonies employed three ships, made thirteen round trips, and carried 95,374 pounds of our foreign mails. The sea and inland postage on this amount of mail would have amounted to $41,018.65. Paid for at parcels-dispatch rates it would have yielded $9,536.80; at freight rates, $762.84. The mail pay on a given weight of mail during that fiscal year on this line, at sea and inland postage, would have amounted to nearly sixty times the pay at freight rates, and to more than four times the pay at parcels-express rates. It is proper to state that only one vessel of that line was of American register, and only that one could have received the full sea and inland postage. But the figures given illustrate the point I seek to make. However, let us take one vessel of that line; suppose that one of American register carried an average quantity of our foreign mails, and the figures would be as follows for each trip made by it during the year:

Pounds of mail, per trip	7,336
Sea and inland postage, per trip	$3,155 28
Parcels-express rates, per trip	733 60
Freight rates, per trip	58 68

On the same company's line from San Francisco to Panama for the same year the figures are as follows:

Pounds of mail carried during year	14,000
Pay at sea and inland postage	$3,496 18
Pay at parcels-dispatch rates	1,002 55
Pay at freight rates	71 69

Here is an instance where the mail paid for at the full sea and inland rate would have cost for its carriage $3,496.18, while the carriage of the same weight of freight would have cost only $71.69. Yet we are curtly told we can not have an argument if we seek to make these comparisons. On this line the figures per trip are as follows:

Pounds of mail, per trip	573
Pay at sea and inland postage, per trip	$140 20
Pay at parcels-dispatch rates, per trip	40 12
Pay at freight rates, per trip	2 86

On the line from New York to Colon (same company) the figures are:

Pounds of mail carried during year	110,169
Pay at sea and inland postage	$19,662 49
Pay at parcels-dispatch rates	7,712 10
Pay at freight rates	411 40

On this route the average figures per trip are as follows:

Average pounds of mail, per trip	2,899
Average pay at sea and inland postage, per trip	$517 43
Average pay at parcels-dispatch rates, per trip	202 97
Average pay at freight rates, per trip	10 85

The same company's line from San Francisco to Yokohama, Hong-Kong, and to United States consul at Shanghai:

Pounds of mail carried during year	37,584
Pay at sea and inland postage	$10,125 72
Pay at parcels-dispatch rates	3,758 40
Pay at freight rates	226 08

The figures per trip are as follows:

Average pounds of mail per trip	2,088
Average pay at sea and inland postage	$562 54
Average pay at parcels-dispatch rates	208 80
Average pay at freight rates	12 56

On the New York, Havana, and Mexican Mail Steamship Company's ships, from New York to Cuba, Porto Rico, St. Thomas, and Mexico, the following are the figures:

Pounds of mail carried during year	49,682
Pay at sea and inland postage	$11,932 00
Pay at parcels-dispatch rates	3,229 40
Pay at freight rates	129 00

And the following are the figures per trip:

Average pounds mail per trip	993
Average pay, per trip, at sea and inland postage	$238 64
Average pay, per trip, at parcels-dispatch rates	64 58
Average pay, per trip, at freight rates	2 58

Red D line, New York to Venezuela and Curaçao:

Pounds of mail carried during year	16,723
Pay at sea and inland postage	$3,942 86
Pay at parcels-dispatch rates	1,555 01
Pay at freight rates	58 34

The trip figures are as follows:

Average pounds mail per trip	494
Average pay at sea and inland postage	$115 01
Average pay at parcels-dispatch rates	33 93
Average pay at freight rates	1 74

Steamer San Pablo, of the Occidental and Oriental line, the only one of that line's steamers which is of American register:

Pounds of mail carried during year	7,441
Pay at sea and inland postage	$1,793 88
Pay at parcels-dispatch rates	744 00
Pay at freight rates	44 65

The following figures show the trip results:

Average pounds of mail, per trip	1,488
Average pay at sea and inland postage	$394 77
Average pay at parcels-dispatch rates	148 80
Average pay at freight rates	8 93

New York and Cuba mail line, Cuba, &c.:

Pounds of mail carried during year	29,306
Pay at sea and inland postage	$8,039 33
Pay at parcels-dispatch rates	1,007 77
Pay at freight rates	71 71

The following are the trip figures on this line:

Average pounds of mail, per trip	413
Average pay at sea and inland postage	$113 23
Average pay at parcels-dispatch rates	28 87
Average pay at freight rates	1 01

United States and Brazil Mail Steamship line, from New York to Brazil, &c.:

Pounds of mail carried during year	27,536
Pay at sea and inland postage	$5,791 93
Pay at parcels-dispatch rates	1,789 84
Pay at freight rates	151 45

The following are the trip figures:

Average pounds of mail, per trip	2,118
Average pay at sea and inland postage	$445 53
Average pay at parcels-dispatch rates	137 68
Average pay at freight rates	11 65

Clyde line to Hayti, San Domingo, and Turk's Island:

Pounds of mail carried during year	7,897
Pay at sea and inland postage	$1,462 17
Pay at parcels-dispatch rates	552 64
Pay at freight rates	27 54

The trip figures are as follows:

Average pounds of mail, per trip	464
Average pay at sea and inland postage	$86 01
Average pay at parcels-dispatch rates	32 52
Average pay at freight rates	1 62

American Steamship Company, from Philadelphia to Queenstown:

Pounds of mail carried during year	5,003
Pay at sea and inland postage	$1,636 85
Pay at parcel-dispatch rates	162 45
Pay at freight rates	13 43

The following are the trip figures:

Average pounds of mail, per trip	263
Average pay at sea and inland postage	$86 15
Average pay at parcels-dispatch rates	8 55
Average pay at freight rates	75

These are all the steamship lines, making regular sailings, that were entitled, under the law, to receive full sea and inland postage in the fiscal year 1885, and there are no other lines making regular sailings now that are entitled to that pay. An examination of the foregoing figures, taken from official sources, will disclose that the sea and inland postage will pay for carrying the mails from a little less than forty times to more than a hundred times as much as is charged for carrying the same quantity of freight. And yet it is proposed to expend hundreds of thousands of dollars more than we are expending now, under the pretense of paying for carrying our mails to certain enumerated countries.

Now, I put the question, does justice to these steamship companies demand the payment of more than we have offered and provided for? I think not; and I further think that the payment of the $800,000 provided in the Senate amendment to them will, if made, amount to giving them a gratuity out of the public Treasury.

In this discussion some of the friends of the amendment have compared the pay of the star-route service, railroad service, and steamboat service with the pay of steamships.

Emphasis is placed upon the statement that in 1885 we paid for the star-route service $5,576,218, while for the same year we paid $331,903.33 for our whole foreign mail service, including what was paid to foreign vessels, which was much the larger portion of the outlay. Nothing is said, however, about the fact that the star-route carriers perform a greater amount of service both in quantity of mail and in miles of travel.

Our attention has been called, also, to the fact that in 1885 we paid for our railroad service $13,735,204, and this sum has been compared with what is denominated the insignificant amount paid for carrying our sea mails, but care is exercised not to say anything about the fact that in weight of mails and miles traveled the railroad service is enormously greater than the ocean mail service.

We are also called on to consider the fact that we paid, in the same year, $511,669 for steamboat mail service, and a smaller sum for ocean service, but the different and more burdensome conditions imposed on steamboats are not mentioned.

With reference to the star-route service the fact should not be forgotten that in nearly every instance the person carrying the mails is invited by the Government to put upon the route the means and labor necessary to carry them, and no other kind of carriage is connected therewith, neither can it be, from which the carrier might derive some compensation and thereby cheapen the cost to the Government. It is different with steamships. The Government did not invite their owners to put them on the high seas for the sole purpose of carrying foreign mails, but they put them there for the purpose of carrying freights, passengers, and whatever they could secure for carriage at remunerative rates. Being there, as common carriers, it is not unreasonable to ask that they carry our mails for fair pay.

As to the steamboats which carry inland and coastwise mails a fair comparison would note the fact that they must depart on schedule time and make schedule time on each trip, and that they are liable to fines and deductions if they fail either to depart or arrive on time. They can not wait for freight or passengers, but when schedule time arrives for the departure of the mails they must go, even if wholly without cargo. This is in no sense true of the ocean steamships. They arrange their own schedules and change them at pleasure. On the voyage they make such speed as they choose. They may wait as long as they please for cargo and choose their own rate of travel.

As we are asked to provide for paying these steamships by the mile, regardless of the great or small quantity of mails carried, it will not be unfair to reduce to mileage the pay of the other three branches of the mail-carrying service for the purposes of comparison. The following table, prepared by the Superintendent of Foreign Mails, exhibits the comparison on the mileage basis:

Comparative statement showing the average amount paid per mile during the fiscal year ended June 30, 1885, for the transportation of United States mails by railway, star routes, steamboats, and coastwise service, American steamship service to foreign ports; and average amount paid to the eight principal American lines of steamships, and the amount that would have been paid if the American steamships had received the sea and inland postage on the mails conveyed.

Service.	Number of miles traveled.	Total compensation.	Rate per mile.
			Cents.
Railways	151,912,140	$16,627,983 00	10.95
Star routes	83,027,321	5,414,804 00	6.52
Steamboats and coastwise service	3,540,607	563,002 00	15.9
American steamships to foreign ports—outward—sea postage	1,024,126	46,223 09	4.5
If paid sea and inland postage			11.9
American steamships, eight principal lines—outward—sea postage	810,829	43,492 48	5.3
If paid sea and inland postage			14.4

From which it appears that the railways received in 1885 nearly 11 cents per mile; star-route carriers received an average of a little over 6½ cents per mile; the steamboat and coastwise service nearly 16 cents per mile, while the steamships, at the rate provided for them by the House, would have received nearly 12 cents per mile. This applies only to the eight principal American lines, there being no other pretending to make anything like regular sailings.

So, if we pay them sea and inland postage, which is proposed by the opponents of the Senate amendment, they will receive more per mile than the railroads, notwithstanding the fact that railroad transportation is universally more costly than water transportation. They will receive nearly twice as much per mile as is paid to the star-route carriers, and about two-thirds as much per mile as steamboats doing inland and coastwise carriage, and being compelled to sail and arrive on schedule time, cargo or no cargo.

The mails carried on the star routes and inland and coastwise steamboats are not weighed, so we can not compare them with the steamships by the pay per pound, but railway and ocean mails are weighed, and the comparison on the basis of pay per pound may be made between the railroads and the steamships. The following table represents the cost per pound on nine of our railroad routes, and also across the continent, from New York city to San Francisco:

Cost per pound for transportation of mail matter on nine railroad routes.

Route.	Terminal.	Distance.	Pay per annum.	Average daily weight.	Cost per pound one way.
		Miles.		*Pounds.*	
6011	New York to Buffalo	442	$981,223 26	99,901	$0.0217
7004	New York to Philadelphia	90.89	181,771 81	136,401	.00425
8001	Philadelphia to Pittsburgh	352.9	484,795 71	91,679	.0168
21002	Pittsburgh to Chicago	468	195,431 51	23,003	.0271
21005	Buffalo to Chicago	540.20	610,943 70	69,142	.0282
23007	Chicago to Burlington, Iowa	206	193,071 60	54,621	.0112
27005	Burlington to Union Pacific transfer.	291	179,268 00	37,031	.0154
34001	Union Pacific transfer to Ogden.	1,034.08	447,438 15	23,990	.0595
46001	San Francisco to Ogden	834.03	319,642 86	18,754	.0544

Cost per pound from New York to San Francisco, via Buffalo $0.1904
Cost per pound from New York to San Francisco, via Pittsburgh 0.1886

And the following statement, showing average price per pound for conveyance of foreign mails, except the transatlantic, at sea and inland postage (5 cents per half ounce of letters and 1 cent per 2 ounces of prints), during the fiscal year ended June 30, 1885, exhibits the pay to steamships carrying mails to the countries named in the Senate amendment:

	Cents.
West Indian, Mexican, Central and South American service	17.7
Brazil service	19.7
Trans-Pacific service	22.8

These tables were prepared, the first at the railway mail office, the second at the foreign mail office, and may be relied on as correct. I do not propose now to comment on all the items they contain. They speak for themselves, but not in favor of higher ocean mail pay.

On railroad route 34001, a distance of 1,034 miles, the pay per pound in 1885 was within a small fraction of 6 cents. This route is more than one-third the length of the average distance traveled by the steamships carrying our foreign mails to the West Indian, Mexican, Central and South American countries, but it receives only a very small fraction over one-third the pay per pound.

The cost per pound across the continent by rail, about 3,000 miles, is, in round figures, 19 cents. The pay for the Brazilian service, at sea and inland postage, by steamship, amounts to a little over 19 cents per pound. These are interesting facts when we remember that a railroad built and equipped to carry a certain weight costs incomparably more than steamships built and equipped to carry the same weight the same distance. In one instance, the road-bed must be provided and maintained at enormous cost. In the other instance, Providence has furnished and maintains the road-bed. In short, water transportation is cheaper, the world over, than railway transportation.

None of these comparisons indicate that more than sea and inland postage is due to steamships for carrying our foreign mails. On the contrary all of them show that a greater rate of pay would be more than adequate. Our experience in the past shows that we can have all our foreign mail service by sea performed during the ensuing fiscal year for the sum of $375,000 and pay all our American steamships full sea and inland postage.

The President in his annual message to Congress says this is adequate pay. This is his language:

> The rate of sea and inland postage, which was proffered under another statute, clearly appears to be a fair compensation for the desired service, being three times the price necessary to secure transportation by other vessels upon any route, and much beyond the charges made to private persons for services not less burdensome.

And the Postmaster-General is also clearly of the same opinion. In his annual report he says:

> The general conclusion seems sustained by the facts that, except special circumstances should require a greater, the rate of sea postage is remunerative for the service of carrying the mails.
>
> The statute authorizes the entire sea and inland postage to be paid to American steamships, although but sea postage may be allowed to foreign vessels—a proof of the legislative judgment that the latter rate is sufficiently remunerative to command the service, as the fact is.
>
> This statute appeared to afford power to make abundant compensation for all the service necessary until the next session of Congress.
>
> The accompanying tables, prepared in the foreign-mails office, show that this would have yielded to the following American companies, on the basis of last year's business, respectively:
>
> To the Pacific Mail Steamship Company, on its New York and Colon line, $19,275.82, as against $7,501.78 at sea postage, and $7,679.49 at its parcels-dispatch rates, and $411.40 at its freight rates, for nearly 55 tons of total mail; an average of $507.26 per trip for 2,899 pounds of matter, which it would have carried for $10.82 at freight rates and $202.09 at parcels-dispatch rates.

On its San Francisco and Panama line, $3,406.18 for about 7 tons, against $1,228.44 at sea postage, $71.69 at freight, and $1,002.55 at parcels-dispatch rates.

On its San Francisco and Yokohama line, $10,125.80 for less than 19 tons, against $3,506.64 at sea postage, $226.34 at freight rates, and $3,758.40 at parcels-dispatch rates.

On its Australian line, $41,013.65 for about 48 tons, against $13,565.29 at the special rates paid heretofore, $762.93 at freight rates, and $9,537.40 at parcels-dispatch rates; an average per trip of $3,155.28 for 7,336 pounds, nearly fifty-four times its freight rates, over four times its parcels-dispatch prices, and a better average price per trip than the average paid across the Atlantic by $2,503.92.

To the Venezuelan Red D line, $3,942.86 for about 8 tons of mail, against $1,392.95 at sea postage, $58.34 at its freight rates, and $1,155.01 at its parcels-dispatch rates.

To the New York and Cuba line, $5,203.43 for about 12 tons, against $2,271.94 at sea postage, $61.63 at freight rates, and $1,548.17 at its parcels-dispatch rates.

To the New York, Havana and Mexican line, $11,932.11 for about 25 tons, against $4,134.13 at sea postage, $129.17 at freight rates, and $3,229.33 at parcels-dispatch rates.

These facts seem to prove that the total sea and inland postage is an abundant recompense for the proposed service; and, without further recapitulation, reference to the tables will show the amounts to the other lines a proportionate compensation. If this be correct judgment no more could be rightfully expended of the appropriation unless other objects were to be sought than the care of the postal service.

For years the law has limited the Post-Office Department to not exceeding sea and inland postage to American steamships, showing the legislative judgment for a long period of time to have been that such pay is adequate in all cases. The facts and figures show it to be adequate. The President says it is adequate. The Postmaster-General, who has given the matter much thoughtful consideration, says it is adequate. For many years we have had, and are now having, our foreign mails carried in an expeditious and satisfactory manner for less than sea and inland postage.

Then why provide $800,000 more and limit its expenditure to our steamships sailing to the countries named in the amendment? Mr. Chairman, only about 8 per cent. of our foreign mails in 1885 went to those countries. Over 91 per cent. of it was transatlantic and went to countries not named therein. The proportions will be about the same next year. We will secure the carriage of the 91 per cent. to transatlantic countries for about $300,000—probably for a little less than that sum. Then is it necessary to provide $800,000 to pay for the carriage of only a little over 8 per cent.? All the facts, fully examined and candidly considered, show that sea and inland postage would furnish fair and adequate pay to American steamships for carrying our foreign mails, and for that the bill provides, without the $800,000 sought to be appropriated by the Senate amendment.

This being true, and it seems to me there is no answer to the facts I have mentioned, what shall we call the proposition contained in the Senate amendment? It is simply a proposition to pay subsidies to our steamship companies under pretense of paying compensation for carrying mails. It appears to me there is no escape from this conclusion. The more candid friends of the amendment frankly say it is a proposition to pay subsidies. Having determined that the amendment is merely a provision for paying subsidies, the next question I want to consider is whether it is right and desirable to adopt such a policy?

I do not think it is ever right to take money from the public Treasury and pay it to a private individual for nothing. To do so is to violate one of the fundamental principles of our law. If the Government, through its law-making power, may take $800,000 of the people's money and give it to the millionaires who own American steamships as a mere gratuity, then it may take ten times that sum, or any other amount, and thus the means of the many who contribute to the Treasury may all be taken and given to the few. It is not a correct principle to pay gratuities. The Government should pay fairly for what it gets; it should give nothing as a subsidy.

Those friends of the amendment who are frank enough to admit that it is a subsidy scheme justify it and insist the policy is desirable on the ground that it will build up our languishing carrying trade and enlarge our commerce, especially with the South American countries. Will it do this? I insist it will not to any degree that will justify us in entering on such a policy—a policy which when once adopted will be difficult to abandon, because when those possessing great wealth once intrench themselves in the national Treasury they usually find the means of maintaining their vantage-ground, at least until the wrong becomes so palpable and enormous that public sentiment absolutely revolts and drives them out.

But how can the payment of subsidies secure to us the sale to South American countries of our products, especially our manufactured products? How can such a policy enable our manufacturers to compete in South America with those of Europe?

The gentlemen who support this amendment are the same gentlemen who support the protective policy. They tell us that protection by means of a high tariff, often amounting to a prohibition on imports, is absolutely essential to the welfare of this country, and it has usually been assigned as a reason that we can not compete in our home markets with the manufactures of Great Britain, Germany, and other European countries.

How many times has it been asserted on this floor that a reduction of our tariff taxes will close our factories, because they can not compete with the cheaply-made goods of our transatlantic neighbors? The protection theory grew out of and is based on the fact that other people can manufacture most of the articles we manufacture cheaper than we can. Now, if our manufacturers can not sell their products at home, at their own shop-doors, in competition with other nations who must pay the expense of transporting their goods across the ocean, how can it be expected that our same manufacturers will transport the same manufactured products 3,000 miles to Venezuela, or 5,000 miles to Brazil, and there compete with the products of other countries?

To take money from the people's Treasury and put it into the coffers of the American steamship-owners will not reduce the cost of making cutlery in Connecticut, or cotton goods in Massachusetts, or earthenware in New Jersey. To pay subsidies to the steamships can not by possibility render the cost of manufacturing cheaper in this country. And whether we do or do not secure a trade with the Central and South American countries depends on whether we can furnish them what they want at as cheap or cheaper rates than others.

When we can furnish them as cheap as others we may expect to secure a fair portion of their custom; when we can supply them cheaper than others we may expect, if we choose, to monopolize their custom. It is a question of price. And upon this point I want to quote from the testimony given before the commission we recently sent to Central and South America. Mr. W. G. Boulton, one of the owners of the Red D line of steamships engaged in the trade to Venezuela, whose firm has had an experience of forty years, speaking of the South American trade, said:

> The question of foreign trade is one of price, and if in this country they can not obtain manufactured articles at the same prices that they can obtain them in Europe, very naturally this country will not obtain the trade.

And again, in speaking of the Europeans and the fact that we must compete with them if we get South American trade, he says:

> You have got to compete with these people, you have got to put the prices down to compete with the Manchester prices for the dry goods, or you can not get the trade.

This gentleman is one of those to be benefited by the payment of the proposed subsidy, and his firm has taken a deep interest in the success of the proposed amendment. His testimony on this point is really against his personal interest, and therefore is deserving of more consideration.

Not a great while ago our State Department sent instructions to some of our consuls and consular agents in Europe asking them to furnish information relative to the shipping interests of France, Germany, Great Britain, and Italy, with a view of profiting by the experience of those nations. The consular officers made reports, and Worthington C. Ford, chief of the bureau of statistics in the State Department, prepared a report upon the matter based on the reports of those officers. His report and the reports of the consular officers have been transmitted to this House, and may be found in Executive Document 172. The present Secretary of State, who has long served his country with distinction, accompanied that document with a letter of transmission, which is as follows:

> I have the honor to transmit herewith the replies of consular officers of the United States in France, Germany, Great Britain, and Italy to a circular prepared in this Department relative to the shipping interests of these nations.
>
> This subject has of late assumed great importance through the efforts of certain of the leading commercial nations of Europe to stimulate by direct and indirect aid their mercantile marine, and thus to give it an energy which was considered unattainable without such aid. France, Germany, and Italy are paying bounties in various forms, with a view to stimulating the construction of vessels, to encouraging their navigation, and to placing their shipping in a more favorable position for securing a larger share in the carrying trade of the world than they would under natural conditions and with free competition obtain.
>
> Had this policy been confined to a single nation, that nation might have derived some benefit; though the conclusions reached in Mr. Ford's report would seem to show that in France, where liberal bounties for the construction and navigation of vessels have been paid since 1881, the results have in no respect fulfilled the expectations of those who favored the policy. But when other nations enter the list and meet privilege with privilege and bounty with bounty, no advantage is gained, and the conditions of competition are changed. That nation which bids highest, which grants bounties and subsidies most liberally, holds the position of vantage, but only until other nations are willing to pay the same. Whatever advantages France has secured in the last four years will, in a measure, be neutralized by the bounty policy of Germany and Italy. This policy may lead to the construction of a certain amount of new tonnage, but it is an open question whether there is a legitimate demand for this additional tonnage.
>
> The indications are at present that there is a carrying capacity in excess of the world's needs; and if this is a fact every ton constructed beyond what is required to repair loss and waste is only so much the more added to the dead weight of surplus tonnage, which, to be profitable, must depend upon the bounty of Government, and this bounty is nothing more than a tax imposed upon productive industry for the benefit of an unnecessary and therefore unprofitable industry. The returns upon such a costly policy as the bounty system of France are small, and are due entirely to artificial conditions. Judging by the experience of the past these conditions must be continued to insure a maintenance to the shipping they have stimulated into existence.
>
> To a nation possessed of large commercial interests, the bounties of other nations may give an advantage in the form of cheaper rates of freight—the result of increased competition. It may well be doubted whether it will be politic to sacrifice this advantage and impose an additional burden upon productive industry by the adoption of a system of bounties.
>
> Respectfully submitted.
>
> T. F. BAYARD.
>
> DEPARTMENT OF STATE, *April* 9, 1886.

From which it appears his judgment is against the payment of subsidies. That judgment, considering his long experience in public af-

fairs and his distinguished ability, ought to have weight, at any rate on this side of the House.

Being the head of the State Department, and one of the official advisers of the President, it is not improper to conclude the Chief Executive is also against the policy. At least the President is opposed to paying subsidies to steamships, through the Post-Office Department, under the pretense of paying for carrying the mails.

The Post-Office appropriation bill for the current fiscal year has a provision in it, placed there by a Senate amendment, concurred in by the House at the last moment to prevent an extra session, under which the Postmaster-General was authorized to pay American steamships $400,000 for carrying mails, which the President regarded as a subsidy and to which he was opposed. In his message to Congress he alluded to the failure of the Postmaster-General to expend that sum of money, and among other things said:

Whatever may be thought of the policy of subsidizing any line of public conveyance or travel, I am satisfied that it should not be done under cover of an expenditure incident to the administration of a Department, nor should there be any uncertainty as to the recipients of the subsidy, or any discretion left to an executive officer as to its distribution. If such gifts of the public money are to be made for the purpose of aiding any enterprise, in the supposed interest of the public, I can not but think that the amount to be paid, and the beneficiary, might better be determined by Congress than in any other way.

He calls that provision to pay $400,000 "a subsidy," "a gift," and opposes such a policy, especially when carried out through the Post-Office Department under the pretense of paying for carrying the foreign mails.

That the Postmaster-General was opposed to such a policy is sufficiently established by the fact that, exercising the discretion vested in him by the law, he refused to expend the $400,000 placed at his disposal. The whole Executive Department of the Government is evidently opposed to such a scheme. And we have here the spectacle of a Republican Senate attempting to force on a Democratic administration a policy to which it is thoroughly opposed. The question is, will this Democratic House permit such a thing?

And now I want to return to the consular reports and to the report of Mr. Ford.

Mr. Sutton, our consular agent at the port of St. Nazaire, in France, where subsidies have been paid both to ship-builders and ship-owners for some years, says in his report:

The general opinion on the bounty question is that it has failed to produce the effect of serving the shipping trade, and has only resulted in creating a few large steamship companies, who have monopolized the whole of the carrying trade to the exclusion of sailing vessels.

Here we are officially informed that in France, where subsidies have been paid, the policy is a failure. The example of that country has been cited and often commended to us by the friends of the subsidy policy on this floor. I commend to them the above official information as to the results of that policy in France, where it has been in operation for several years.

I also commend to them the official statement of Mr. Roosevelt, our consul at Bordeaux. He says:

At the present time the shipping interests of the direction can be best described by the evidence unanimously given by the owners of ship-yards; they say "it is deplorable." The results of the ship-building for two years past have been literally nil. Out of a half-dozen or more yards only one remains that can be said to be on its legs.

Shipping matters proper, that is, the navigation of vessels, does not present a much brighter prospect. The companies declare that their dividends at times are trifling, often merely nominal. Now, whether this condition exists for the reason that a similar state of things exists in nearly all of the principal nations, such undoubtedly being the reports, can not and need not be determined here. At all events, it is true, and that in spite of the existence of a considerable aid advanced directly by the General Government, both to ship-building and private or public lines of vessels.

And also the following official statements of Consul Dufais, of Havre:

Of the ocean-going steamships belonging to this port thirty-eight are now laid up for want of profitable business. Twelve sailing vessels belonging to Marseilles, fifteen under the Italian flag and twelve of Austrian nationality, are likewise tied up in this port awaiting the return of more prosperous times.

* * * * * * *

So, then, for the last two years there has been very little ship-building in France, and at the present time there is almost nothing doing. The four large boats building for the Transatlantic Company, above-mentioned, and costing about 8,000,000 of francs, or over $1,500,000, apiece, had to be constructed on account of their contract with the government to carry the mails with the requisite speed, not because they were wanted in the trade.

In regard to the dividends, it can only be said that the lines of ships which were called into existence by reason of this bounty law are paying nothing; most of them are in a state of bankruptcy, in liquidation, or going into liquidation. Those lines that have been subsidized by government, though being lines which had already an established business and doing the regular trade, are paying either no dividends or only small ones.

Here it appears that in France where liberal subsidies are paid many ships are lying idle in their harbors, and ship-owning is unprofitable. Will it be wise for us to follow the example of that nation and by giving away the public revenues in large sums stimulate the building of ships simply to have them tied up in harbor or run without profit?

The French law inaugurating the bounty or subsidy policy, which has been so often and so earnestly commended to our consideration in the course of this discussion, went into effect in 1881. Prior to that subsidies were not paid. The subsidy policy of Germany, whose example has also been cited on the other side of the House, has not yet gone into effect, and heretofore no subsidies have been paid by that government.

Bearing these facts in mind, the following from the report of Mr. Ford relative to the shipping interests of Germany, France, and Italy is interesting and significant:

The number and tonnage of steam vessels were as follows:

Year.	France.		Germany.		Italy.	
	No.	Tons.	No.	Tons.	No.	Tons.
1873	516	185,165	253	167,633	133	48,573
1874	522	194,556	299	189,998	138	52,370
1875	537	205,420	319	183,569	141	57,147
1876	546	218,549	318	180,946	142	57,881
1877	565	230,804	376	183,379	151	58,319
1878	588	245,808	351	179,662	152	63,020
1879	599	255,959	374	196,343	151	72,666
1880	652	277,789	414	215,758	158	77,050
1881	735	311,779	458	251,648	176	93,698
1882	832	416,228	515	311,204	192	104,719
1883	895	467,488	603	374,699	201	107,452
1884	938	511,072	650	413,943	215	122,297

This table is very instructive as showing the continued increase of steam shipping throughout the entire period, bounty or no bounty. In only a single year in Italy was there a set-back, in 1879, when the number of ships was decreased by one, while the tonnage was increased by more than 9,600 tons; and in Germany, for a series of years, the tonnage decreased or fluctuated, to recover, however, and advance in later years. It also raises the question wherein was the need of subsidies for French shipping. In the period of 1873-'80 the number of steam vessels increased in France 136, or 26.3 per cent.; in Germany, 161, or 63.6 per cent.; and in Italy, 25, or 18.8 per cent. The advantage thus appears to lie with Germany. The tonnage shows a different result. In France it increased 92,594 tons, or 50 per cent.; in Germany, 48,125 tons, or 28.7 per cent.; and in Italy, 28,477 tons, or 58.6 per cent. While Italy shows the highest relative increase, it can not be compared with that of France. So that in the eight years prior to 1880 the French shipping was increased much faster in its most valuable branch, steam vessels, than either of its continental competitors.

The years 1880-'83 show still more remarkable results. The number of steam vessels in France increased 243, or 37.3 per cent.; in Germany, 189, or 45 6 per cent.; and in Italy, 43, or 27.2 per cent. The tonnage increased during the same period, in France, 189,729 tons, or 68.7 per cent.; in Germany, 158,941 tons, or 73.6 per cent.; and in Italy, 30,402 tons, or 39.4 per cent. The increase in Germany, where no bounties were paid, was relatively greater both in number and tonnage of vessels than in France, where large bounties were in force after 1881.

And so it appears that during the period France has been paying liberal bounties the shipping interests of Germany have been more prosperous, although no bounties were paid thereto. No doubt the growth of those interests in Germany were natural and demanded by the trade, while in France an artificial activity in those interests, produced by the stimulus of subsidies, induced the construction or purchase of more vessels than were needed for her commerce, and resulted in ships lying idle or running without profit.

It appears, too, that the carrying trade of France increased more rapidly before 1880, when their subsidy law was enacted, than it did afterward. Mr. Ford makes a comparison between Germany and France during the period from 1873 to 1883, and says:

The tendency has been the same in either case, and the showing is largely in favor of France, but not since the bounty system was inaugurated. The French carrying trade increased more rapidly before 1880 than after 1880, even allowing for the longer interval; and the German, while falling away in the previous years, more than regained what it had lost and increased at a higher rate than did the French.

After collating the facts and figures furnished by the consular officers and carefully reviewing the whole matter, Mr. Ford concludes his report as follows:

The bounties have succeeded in infusing life into neither ship-building nor ship navigation. France finds it cheaper to have her iron vessels built in Great Britain and a large share of her wooden ships in other countries. The lines of ships that were called into being through the liberal offers of the government are represented as being in a state of bankruptcy, and existing lines that participate in the bounties are either paying no dividends or very small amounts. The exports of France, reflecting as they did the slight reaction which ensued in 1879, have since declined and are still declining in value, and the decrease can not be explained by a fall in the prices of commodities, but rather by an absolute decrease in the foreign commerce of the nation. In fact, it may be asserted that the bounty policy of France, intended to bridge over a temporary depression, has aggravated the situation, and has proved itself to be a source of mischief and not of cure.

Now, in the light of all this, will a Democratic House concur in the amendment and thereby inaugurate a policy which has not been availing abroad, and to which the Democratic administration is opposed? Until it be accomplished I will not believe that this House will do such a preposterous thing.

But, Mr. Chairman, some of the advocates of the subsidy policy have contended that if the amendment be adopted the whole matter will be left in the discretion of a Democratic Postmaster-General so far as making contracts and expending the money are concerned; that he may make contracts with the steamships and expend the money, or he may not, at his discretion. Nobody ought to be deceived by this contention. If the amendment be concurred in by the House, the Postmaster-General will have little or no discretion in the matter, and it was not intended he should have any.

It has, in my judgment, been written carefully, with the design of depriving him of his discretion.

As already mentioned, the Post-Office appropriation bill for the current year contained a provision, inserted by the Senate, and reluctantly concurred in by the House during the very last hours of the Forty-eighth Congress, under which the Postmaster-General was authorized

to pay American steamships $400,000 for carrying our foreign mails this year. The provision is as follows:

Office of Superintendent of Foreign Mails: For transportation of foreign mails, including transit across the Isthmus of Panama, $400,000; and the Postmaster-General is hereby authorized to enter into contracts for the transportation of any part of said foreign mails, after legal advertisement, with the lowest responsible bidder, at a rate not exceeding 50 cents a nautical mile on the trip each way actually traveled between the terminal points: *Provided*, That the mails so contracted shall be carried on American steamships, and that the aggregate of such contracts shall not exceed one-half of the sum hereby appropriated.

That provision was clearly directory and vested the Postmaster-General with a discretion. He exercised his discretion, no doubt honestly, and declined to pay out the money. And for doing so the steamship men, through marine and shipping journals and through a partisan press, have earnestly and persistently denounced him. He has been severely criticised and satirized on the floor of this House for exercising his best judgment, according to law. The language of the provision, it seems to me, could not be fairly construed otherwise than as merely directory. But if any doubt existed when looking at the words alone, none could remain after looking into the debates which occurred in the Senate and House when that provision was under consideration.

In the Senate on the 23d of February, 1885, Mr. PLUMB said:

I am willing to say to the Postmaster-General, and one not of my political faith, "I will give you discretion for this year," because this amendment of the Senator from Maine only applies to this year. * * * I am willing to say to the incoming Democratic Postmaster-General or to any Postmaster-General, * * * "you shall during these twelve months exercise a reasonable discretion as to what is proper for the service to be rendered."

And in the same body, on the same day, Mr. SAULSBURY said:

In reference to the merits of this proposition of amendment, the Senator from Maine simply proposes to vest in the Postmaster-General discretion to enter into contracts to pay the owners of American ships for carrying foreign mails such amount as he may deem proper.

In the House, on the 3d of March, 1885, Mr. TOWNSHEND, who had the bill in charge, said:

But, sir, we are met by the argument by gentlemen that as we have put the domestic mail service upon the basis of compensation for service rendered, and have intrusted to the Postmaster-General the discretionary power of making such contracts as he may in his judgment deem necessary for the interest of the public, that we could also, with equal safety, intrust to him the power to make contracts for mail service to foreign countries. * * * Why, if you allow the Postmaster-General to exercise discretion in making contracts for the coastwise and inland steamboat service, should there be any great apprehension of abuse of power in allowing him to exercise equal discretion in making contracts for carrying mails to foreign countries?

By these gentlemen the discussion was directed, in part, to the propriety of vesting the Postmaster-General with the discretion of making such contracts as were provided in the clause which I have quoted, there being no question, apparently, in the mind of any one as to the point that the power to be conferred was merely a discretionary one.

In the House on the 10th of February, 1885, Mr. DINGLEY, speaking of the same provision, said:

It is to be observed that there is nothing in the measure proposed which requires the Postmaster-General to pay a single dollar to an American line of steamers. He may invite proposals for carrying the mails by American steamers to any country that he regards it proper to do so, and when he has received bids for this service he may reject any and all proposals which in his judgment it is not for the public interest to accept. If he can not obtain a proposal satisfactory to him he may send our mails by foreign competing steamers or by way of England. The absolute discretion vested in him in the foreign as in the domestic mail service, limited, however, in the case of the foreign service to the maximum sum of 50 cents per mile and the aggregate of $800,000, would make the Postmaster-General master of the situation in the case of the adoption of the measure proposed.

And on the 3d of March, in the House, Mr. HOPE, who led the discussion in favor of the proposition, expressly declared that it conferred discretionary power on the head of the Department. In the course of his remarks the following colloquy occurred:

Mr. HOPE. This bill simply says that the incoming Democratic Postmaster-General may make such contracts with American vessels for carrying our foreign mails as he may now make with our coastwise vessels for carrying the mails on the coast.

Mr. BINGHAM. For one year only?

Mr. HOPE. For one year only.

Mr. MORSE. Will the gentleman let me ask him a question?

Mr. HOPE. Certainly.

Mr. MORSE. Does this apply to any particular line in this country?

Mr. HOPE. Certainly not.

Mr. MORSE. Then it is entirely optional with the Postmaster-General to use the appropriation or not as he may see proper.

Mr. HOPE. Every dollar of it is left subject to his judgment. If he does not think that the service demands that a contract should be made with any vessel or any route he need not make it.

And, instead of my friend from Indiana arraigning Democrats here for voting on this thing, I say to you, when you vote against this proposition you vote a lack of confidence in your own Postmaster-General, which does not come with good grace from you.

All this leaves no shadow of doubt that, under the provision I have quoted from the bill for the current year, discretion was vested in the Postmaster-General to pay the money to the steamship-owners or refuse to pay it, as he deemed best. Congress appropriated $800,000 for the foreign-mail service, providing that not more than one-half of it should be paid to American steamships, and said to the Postmaster-General: "Take this money and pay it over to the steamships if in your judgment you think it wise and best; if you think otherwise do otherwise." He exercised the discretion vested in him, consulting the interests of the foreign postal service and of the whole people, instead of the private interests of the American steamship-owners; and, as I have already said, has been roundly abused for doing it, both in the partisan newspapers and on this floor. On the 27th of March this year the gentleman from Michigan [Mr. BURROWS] speaking of this matter said:

It is known to the country and conceded by all that this provision of the law remains unexecuted, and the will of Congress in this regard is entirely nullified. The law seems plain. There is nothing in it obscure or mysterious; but the Postmaster-General in this instance, in order to nullify the law, goes outside of its plain provisions to find reasons for making it a dead letter. Read the law and it seems easy of comprehension. What does it require? First, a contract with American steamships for carrying any portion of the foreign mails; second, after legal advertisement; third, to the lowest responsible bidder; fourth, at a rate not exceeding 50 cents a nautical mile each way actually traveled; and, fifth, $400,000 is hereby appropriated to carry out contracts so made. Is there anything obscure in this statute? Certainly nothing. And yet no portion of this law has been executed. Nay, more, the Postmaster-General has never taken a step in the direction of its execution.

* * * * * *

But suppose Congress should determine, as it did at its last session, to pay more for carrying the mails than for carrying hides. Is the Postmaster-General in that event to be heard to say, "I will not execute this law, because in my judgment it is paying too much." The question is two preposterous for debate. It seems to me that matter is no part of the business of the Postmaster-General; it is none of his concern. Congress determines the rate of compensation to be paid for this service; and when it determined to let this service to the lowest responsible bidder at a rate not exceeding 50 cents per nautical mile, it was the business of the Postmaster-General to at least make an effort to execute that law, instead of refusing to take any steps toward its execution, and then offering to Congress so trifling an apology.

How true it is sometimes that man—

Drest in a little brief authority,
* * * * *
Plays such fantastic tricks before high heaven
As make the angels weep.

Mr. Chairman, I have not called attention to this matter for the purpose of making a defense of the Postmaster-General. In his annual report he has presented the subject fully, and has in an unanswerable manner shown that the discretion vested in him was properly and wisely exercised—exercised in the interests of economy and therefore in the interests of the people.

In doing this he had the approval of the President. The latter officer so states in his annual message in the following unequivocal words:

It was decided, with my approbation, after a sufficient examination, to be inexpedient for the Post-Office Department to contract for carrying our foreign mails under the additional authority given by the last Congress.

But I called attention to this branch of the subject for the purpose of putting a question and if possible finding a correct answer to it. The owners of American steamships tested the discretion of the Postmaster-General under the provision for the present year, and have abused him all over the country and in this House because he did not ignore the right and exercise that discretion solely in their private interests. Are those same men anxious to test his discretion again? Having once done so and found him opposed to paying the people's revenue to a few steamship owners as a gratuity, why should they desire to repeat the experiment? Merely for amusement?

It is not amusement they are seeking. They are after the contents of the Treasury, and will be satisfied with nothing less than a goodly portion thereof. Mr. A. Foster Higgins, of New York, one of the leading advocates of the subsidy schemes of the steamship owners, and who has recently been before a committee of this House and made an argument in favor of the same, at a recent meeting held in Boston for the consideration of our shipping interests, in a speech, says:

We want subsidies, and there should be no quibbling over it.

Other speakers at the same meeting expressed the same sentiments. It is evident they are not merely seeking an opportunity to repeat the experiment of testing the Postmaster-General's discretion again on the subsidy question. That is not what they want. They want cash, and a liberal supply of it. The gentleman from Michigan [Mr. BURROWS], in a question he puts in the quotation I have already made from one of his speeches, sounds the keynote of their song:

But suppose Congress should determine, as it did at its last session, to pay more for carrying the mails than for carrying hides. Is the Postmaster-General in that event to be heard to say, "I will not execute this law, because, in my judgment, it is paying too much."

It is plain what answer the gentleman and the American steamship owners would give to his question had they the full power to furnish the answer. Very quickly and unmistakably they would say, "No, he shall not again have the discretion in this matter which was vested in him under the bill for the current year." And in the adroitly drawn Senate amendment, now under discussion, that answer has been embodied. The amendment is so framed as to deprive the Postmaster-General of all choice and vest the whole discretion in the steamship owners. They do not understand that any discretion will be left to him if this amendment becomes law; and I fully agree with them on that point. The first clause of the amendment reads as follows:

For the transportation of foreign mails by American built and registered steamships, to secure the greater frequency and regularity in dispatch, and a greater speed in the carriage of such mails to Brazil; the Republics of Mexico, Central and South America; the Sandwich, West India, and Windward Islands; New Caledonia, New Zealand, and the Australian colonies; China and Japan, $800,000; and the Postmaster-General is authorized to make, after due advertisement for proposals, such contract or contracts with the owners of such American steamships for a term of not less than three years nor more than five years, and at a rate of compensation not exceeding 50 cents a nautical mile on the trip each

way actually traveled between the terminal points, in the most direct and feasible sailing course between the terminal points, as shall be found expedient and desirable to secure the ends above set forth.

This clause, I grant, is directory only, and if left standing alone would vest the Postmaster-General with the same discretion which he had under the provision in the bill for the current year, except that he would be confined, in the event he chose to expend the money, to American steamships running from our country to those countries specifically named. But the author of the amendment did not propose to leave it in that condition, and added the following clause:

And if he shall be unable to make such contracts for any of such respective services, he shall, so far as possible, cause the mails of the United States to be carried to and from said places, respectively, in the best and most expeditious manner practicable, in American vessels, and for a reasonable compensation, not exceeding the rate aforementioned.

This deprives the Postmaster-General of all discretion. That, in my judgment, will be the effect if it becomes the law. And I have no doubt that was the intention of those who originated it.

Under the first clause he is "authorized" to advertise, receive bids, and make contracts. That is directory, vesting the executive officer with a discretionary power. But the latter clause says to him if you can not make contracts under the previous clause, then you "shall" cause the mails to be carried in American vessels, so far as possible, for compensation not exceeding the rate aforementioned. Now, who has discretion under this clause?

The steamship companies, by concert of action, may refuse to bid when the Department advertises for proposals under the first clause, and then the second clause says to the head of the Department, You "shall" cause these mails to be carried on American vessels if possible to be done for not exceeding 50 cents a nautical mile each way for every trip. This latter clause is mandatory, and if no bids should be made when advertised for under the first clause then the Postmaster-General would be bound to apply to the steamship companies under the latter clause and employ them to carry the mails at their own price, not exceeding 50 cents a nautical mile. Is there any escape from this conclusion? It seems to me there is none. I believe the construction I have placed upon the amendment is the correct one and the result inevitable.

Will it be wise for us to place the Post-Office Department in the power of the steamship companies? If it be suggested that there is no danger of any combination among the owners of American steamships it is a sufficient answer to call attention to the fact that every day combinations are being made, "poolings" effected among the great corporations and monopolies which do our carrying trade. They combine, "pool their issues," as against the people generally, and why will they not do so as against the Government if so good and profitable opportunity occurs as would be afforded by enacting this amendment into law.

Why, one of these very steamship companies, the most powerful one, which would receive about one-half of the sum provided by this amendment if it were paid out at 50 cents a mile, has a pooling arrangement now with the Union Pacific Railroad Company, made for the purpose of keeping up the rates of freight and passenger tariffs, and under which the railway company pays the steamship company a round sum each year not to do certain classes of carrying trade. The railway company calls it a subsidy, and is expecting trouble with the Government on account of the arrangement.

The directors of the company in their last annual report, speaking of the subject, say:

The attention of the Government directors of the company has also repeatedly been drawn to this arrangement, and it was, and is, understood by them and approved as a business necessity. It is an arrangement in no way unusual between lines of water and land transportation. At a reasonable, sustained rate of fares and freight both passengers and merchandise would invariably take the land route. Nevertheless, it was in the power of the water route at any time to so demoralize the business by competitive rates as to make it valueless to all concerned in it. Under these circumstances one of two courses only was possible. The parties concerned in the traffic could either enter upon an endless competitive warfare, ruinous to themselves and destructive to the business interests of the country—such as during the past season has taken place between the West Shore Railroad Company and the New York Central and Hudson River Railroad Company, or such as the transcontinental routes themselves have more recently been involved in—or they could meet and agree upon a division of traffic. If such a contest as that suggested were entered upon it would practically result in the destruction and consequent withdrawal from the traffic of one of the parties to it or in an amicable division. That either party to the traffic would be compelled to withdraw from it wholly was improbable.

The railroad companies certainly could not cease to operate their roads. They might operate them at a loss, or at best without profit—taking the through business at rates which would be out of the question for local business, thus causing the worst form of discrimination to exist—or they could withdraw entirely from through business, allowing it to go by water. But it was to do the transcontinental business that the Pacific roads were built, and it was not possible for them to submit to be driven out of it by a rival water line. On the other hand, that the steamship company would withdraw from the business was most improbable, as their through traffic was but an incident to their local traffic—the profits derived from which last would not in their case be affected by a discriminating rate on through traffic sufficiently low to demoralize all transcontinental rates. Under these circumstances, after incurring large losses through competition, the several companies interested—that is, the Union Pacific Railroad Company, the Central Pacific Railroad Company, and the Pacific Mail Steamship Company—met together in 1877, and through their representatives agreed upon a plan of adjustment. A certain portion of the business, roughly calculated at about 10 per cent. of the whole, was allowed to the steamship company. The proportion was satisfactory to it. The value of this tenth part of the business thus set off to the steamship company was then estimated in money, and called a "subsidy." It was nothing more than the usual well-understood division of competitive traffic, the amount allotted to one party being commuted into cash payments.

The railway company has "subsidized" this steamship company, and now the Government is asked to do likewise to the extent of hundreds of thousands annually. If we do so we will have an interesting spectacle. In the first instance the Government subsidized the railway company by giving it millions of acres of the public domain. It is asked to subsidize the Pacific Mail Steamship Company by paying it large annual sums of money to enable it to transport the people's merchandise cheaply, as is alleged; and if the Government does so, then the subsidized railway company will subsidize the subsidized steamship company in consideration that the latter will not carry the peoples' merchandise at all and leave the railway without competition. No doubt that kind of a complex subsidy would be eminently satisfactory and advantageous to the millionaires who own the stock of the steamship company, but it would be nothing less than a gross outrage on the people of this country. Is it unfair to suppose that those who will enter into such a combination as above shown will, if the Senate amendment prevails, combine and force the Postmaster-General to pay their own price, not exceeding 50 cents a mile, for carrying the mails?

In my judgment, just so sure as the amendment becomes law that will be the result.

There is a little item of Congressional history which indicates the length to which this steamship company will go when seeking to appropriate the contents of the Federal Treasury. A few years ago an attempt was made to secure the passage of a steamship-subsidy law, and it having afterward leaked out that this same company had probably employed improper means in prosecuting the scheme here, an investigation was ordered by the House of the Forty-fourth Congress. Hon. John A. Kasson made the report of the results of the investigation, from which I quote the following:

The results of the evidence are, that about $900,000 was disbursed upon the allegation that it was used in aid of the passage of the act now under investigation; that about $565,000 appears to have been paid to the exclusive use of persons having no official connection with such legislation; and that the disposition of the remaining $335,000 remains in doubt upon the evidence presented, but without any testimony showing that it was a reward paid to any person at that time a member of either House of Congress; and that the uncertainty attending the disposition of this latter sum is owing to the refusal of William S. King to testify the truth, and to the failure or refusal of John G. Schumaker to present all the facts to which the committee believe it was in his power to give.

* * * * * * *

The enormous evil attending the existence of an unregulated lobby with license to appear before committees and urge measures upon members upon fraudulent pretense that they are acting for the public interests when they are privately retained by interested parties, calls for further legislation. The committee deem it necessary for the protection of Congress against future transactions as discreditable as those they have now brought under review, that a law should be passed requiring every person appearing and advocating measures for a private interest to appear in his true capacity as a retained attorney or agent.

Nine hundred thousand dollars paid by this company in one attempt to get into the public Treasury! Are such people peculiarly the proper objects of munificent governmental bounty? It is idle to tell me that those who will expend money thus in an attempt to secure legislation enabling them to appropriate the public revenues will not combine, if given the power, and compel the Postmaster-General to submit to their will. That is what they hope to accomplish by this amendment. I am opposed to it. I am opposed to all subsidy schemes. The public revenues are a public trust. They should be carefully guarded and expended only for the good of the public. They are raised largely by taxing the necessaries of life. They should not be given away. I do not believe a Democratic House, pledged to economy and reform, will concur in this amendment, and thereby stultify itself and wrong the people.

Physical Effects of Alcohol and Narcotics.

SPEECH

OF

HON. JACOB H. GALLINGER,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 17, 1886.

On the bill (S. 1405) to provide for the study of the nature of alcoholic drinks and narcotics and of their effects upon the human system, in connection with the several divisions of the subject of physiology and hygiene, by the pupils in the public schools of the Territories and of the District of Columbia, and in the Military and Naval Academies and Indian and colored schools in the Territories of the United States.

Mr. GALLINGER said:

Mr. SPEAKER: The welfare of our nation is inseparably connected with the intelligence of the people, and the chief dangers to our Government are in consequence of illiteracy and its concomitant vices. The future progress of the Republic largely depends upon the proper edu-

cation of the children of the present generation. But it will not do to simply educate the intellectual faculties. The heart and the conscience need careful watching. An individual may graduate at the head of his class in Greek and Latin and mathematics and yet be wholly ignorant of the grand truths of physiology and hygiene. The brilliancy of his intellect may even seem to obscure his ideas of right and wrong, and while shining as an orator or a teacher he may ignorantly or blindly pursue paths or indulge habits that inevitably will compass his ruin. Almost every page of history is marked with examples of this kind, while our own observation emphasizes the truthfulness of the assertion. Intemperance has clouded many of the grandest minds this country has produced, and sent thousands of the noblest intellects to premature if not dishonored graves. It is a record of sorrow and sadness that no tongue can adequately portray, and a picture so dark and gloomy that no words can properly paint it.

The bill before the House is one that proposes to provide for the study of the nature and effects upon the human system of alcoholic drinks and narcotics in the public schools of the Territories and the District of Columbia, and in the Military and Naval Academies, and Indian and colored schools in the Territories of the United States. It is substantially the same measure that has already been incorporated into law by seventeen States and one Territory of the United States, including the great States of New York, Pennsylvania, Massachusetts, Alabama, Michigan, and Kansas. Among the first to adopt the measure was my own State, and the results thus far are entirely satisfactory, as is evidenced by the numerously signed petitions that have come from the most influential classes of her citizens, praying for the enactment of this law by Congress. It proposes to teach the youth the facts as to alcohol and narcotics, and then if they sin it will be the result of willfulness or weakness rather than ignorance. What more salutary law could Congress possibly enact, and why should there be any opposition to it on this floor? It is for the benefit of our children, for their future happiness and prosperity. It is designed to lessen the deadly record of seventy-five thousand victims annually that alcohol now claims. It is legislation in the direction of good government, of pure homes, of better lives, and of less pauperism and crime. Surely no one will say that these results are not of the highest possible importance to the country.

The physical evils of intemperance alone is a theme of the greatest magnitude. At every step the victim is found. Seventy-five thousand times each year the ranks of the people of this country are invaded by this enemy, and a life terminated. What a record is this! And yet the strange infatuation of drink keeps up the list of victims to the maximum point. Time will not allow me to call the endless array of facts and figures which condemn and brand alcohol as man's worst enemy, and I will content myself with a few citations.

In all epidemics it has been found that intemperance strongly predisposes to disease. Of 1,615 cases received into cholera hospitals in the epidemic of 1832, 1,023 were decidedly intemperate, a proportion of nearly two-thirds; of the remainder, 482 were intemperate; and of 110 cases it was not known whether they were intemperate or not; it is probable that a portion were. Both in the epidemic of 1832 and in that of 1849, the cholera in New York first appeared and was more fatal in the locality known as the "Five Points"—a locality where filth, intemperance, and degradation go hand in hand.

Last summer, during the intense heat, a dispatch from New York to the Boston papers contained an item headed "A Terrible Record," which read as follows:

> The fatal cases by sunstroke or prostration by the heat since last Wednesday, when the weather first became so intensely hot, so far as reported to the authorities up to last night, number one hundred and forty-five. Of these probably two-thirds or four-fifths were men or women either drunkards or habitual drinkers of strong liquors or beer.

During an epidemic of cholera in the city of Albany, when only one in twenty-five hundred of teetotalers was seized by the disease, one in sixty of the general population perished.

A German authority (the Volksfreund) states that out of nine hundred persons who died at Rotterdam from cholera, only three were abstainers. In Newcastle, England, the cholera struck down one drinker in fifty-six, but only one of six hundred and twenty-five abstainers from alcoholic beverages.

In 1853, Dr. Cartwright, of New Orleans, wrote thus to the Boston Medical and Surgical Journal:

> The yellow fever came down like a storm upon this devoted city, with eleven hundred and twenty-seven dram-shops in one of the four parts into which it has been divided. It is not the citizen proper, but the foreigners, with mistaken notions about the climate and country, who are the chief supporters of these haunts of intemperance. About five thousand of them died before the epidemic touched a single citizen or sober man, so far as I can get at the facts.

Tables prepared by Dr. Edward Jarvis, from the record of investigations of Mr. Nelson, actuary of the Medical, Invalid, and General Life Insurance Company of London, are as follows:

Among beer drinkers, 4.597 per cent. annually died; among spirit drinkers, 5.995 per cent. annually died; among mixed drinkers, 6.194 per cent annually died; while of the general population, which included both temperate and intemperate, less than 2½ per cent. died yearly.

Assuming that ten persons of the general population die between the following periods of life, the death of the intemperate during the same period is as follows: Between 15 and 20 years, 18 intemperate to 10 general population; between 20 and 30 years, 51 to 10; between 30 and 40 years, 42 to 10; between 40 and 50 years, 41 to 10; between 50 and 60 years, 29 to 10.

A temperate person's chance of living is at 20, 44.2 years—if intemperate, 15.6 years; at 30, 36.5 years—if intemperate, 13.8 years; at 40, 28.8 years—if intemperate, 11.6 years; at 50, 21.25 years—if intemperate, 10.8 years; at 60, 14.28—if intemperate, 8.9 years.

These startling facts, gleaned from reliable sources, tell the whole story of the debilitating effects of alcohol, and disprove every claim that has ever been made that it gives tone and strength to the body.

Let us inquire a little further what scientific observers say about this agent.

In the year 1876, in the city of Philadelphia, a world's congress of physicians was held, in which body were many of the most eminent medical men of both Europe and America.

Among other things the question of the effects of alcohol upon the human system was considered, and this congress of scientific men solemnly declared that alcohol is a poison; that its place is upon the shelf of the apothecary or in the office of the physician, and that even as a medicine it should be used with great caution and by experienced hands.

The celebrated Dr. Carpenter, the highest English authority on human physiology, indorses a certificate, signed by more than two thousand of the physicians of England, including the court physicians and metropolitan surgeons, who may fairly be said to represent the voice of the medical faculty of the British Empire, one paragraph of which is this:

> We, the undersigned, are of the opinion that a very large proportion of human misery, including poverty, disease, and crime, is induced by the use of alcoholic or fermented liquors as beverages.

And following the example of their English brethren, one hundred and twenty-five of the physicians of New York city and Brooklyn made declaration as follows:

1. In view of the alarming prevalence and ill effects of intemperance, with which none are so familiar as members of the medical profession, and which have called forth from eminent English physicians the voice of warning to the people of Great Britain concerning the use of alcoholic beverages, we, the undersigned, members of the medical profession of New York and vicinity, unite in the declaration that we believe alcohol should be classed with other powerful drugs; that when prescribed medicinally it should be with conscientious caution and a sense of grave responsibility.

2. We are of opinion that the use of alcoholic liquor as a beverage is productive of a large amount of physical disease; that it entails diseased appetites upon offspring; and that it is the cause of a large percentage of the crime and pauperism of our cities and country.

3. We would welcome any judicious and effective legislation—State and national—which should seek to confine the traffic in alcohol to the legitimate purposes of medical and other sciences, art, and mechanism.

There is no higher medical authority in the world upon this subject than Dr. Willard Parker, of New York, who says:

> What is alcohol? The answer is, a poison. It is so regarded by the best writers and teachers on toxicology. Like arsenic, corrosive sublimate, and prussic acid, when introduced into the system it is capable of destroying life without acting mechanically, and it induces a general disease as well marked as fever, small-pox, or lead poison.

And agxin he says:

> Alcohol is the one evil genius, and is killing the race of men. Stay the ravages of this one poison, alcohol, that king of poisons, the mightiest weapon of the devil, and the millennium will soon dawn.

Professor Youmans, of New York, the distinguished chemist, says:

> It is evident that, so far from being the conservator of health, alcohol is an active and powerful cause of disease, interfering with the respiration, the circulation, and the nutrition.

Dr. Richardson, one of the most eminent living English physicians, says:

> This chemical substance, alcohol, an artificial product, devised by man for his purposes, is neither a food nor a drink suitable to his natural demands. Its influence is an infinitesimal advantage by the side of an infinity of evil for which there is no compensation and no human cure.

And, again, after making a long series of scientific researches, to determine the true nature of alcohol, this same distinguished physician gives this testimony:

> I find it to be an agent that gives no strength, that reduces the tone of the blood-vessels and heart, that reduces the nervous power, that builds up no tissues, and can be of no use to me or any other animal as a substance for food. On that side of the question my mind is made up, that this agent, in the most moderate quantity, is perfectly useless for any of the conditions of life to which men are subjected, except under the most exceptional conditions, which none but close observers can declare.

Similar declarations from scientific men could be multiplied almost *ad infinitum*, but further testimony is unnecessary. It matters not what men try to make themselves believe on this question of alcoholic drinks, science strips from it the flimsy covering of pretense and prejudice, and stamps alcohol as a substance detrimental to health and dangerous to

human life, emphatically declaring that every man who uses intoxicants habitually as a beverage inevitably undergoes a process of slow poisoning. The intent is not suicidal, but the result is the same. Alcohol ought to be shunned by all; and when our children learn thoroughly the grand truths of physiological science it will soon be consigned to the laboratory and the pharmacy, where it legitimately and properly belongs.

This bill is in the direction of securing that result. It is urged by the Woman's Christian Temperance Union, that non-partisan temperance organization that has already done so much for the interests of all classes of our citizens by directing State and national attention to the evils of intemperance. It is good and healthy legislation. If passed it will make happier homes, better citizens, and healthier men and women. I trust it may pass, as it did in the Senate, by a unanimous vote.

Oleomargarine.

SPEECH

OF

HON. J. RANDOLPH TUCKER,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 3, 1886,

On the bill (H. R. 6328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine.

Mr. TUCKER said:

Mr. CHAIRMAN: It is not my purpose to repeat what I said a few days ago on this bill; but as some criticism has been made upon the constitutional views then presented it seems proper to support them by authority.

It seems that some gentlemen supposed they were ancient and worn out, and had been condemned by the conflict of arms and more modern and approved methods for interpreting the Constitution. In fact they were regarded as a part of the creed of the State-rights school of thinkers, which had been buried in the grave of the dead confederacy.

Let me assure gentlemen that this is not so. I have long ago, and in the most public manner, declared that I concur, as a lawyer, in the sententious formulation of the relations of the Union to the States composing it, by Chief-Justice Chase, in Texas *vs.* White, 7 Wallace, 701:

The Constitution in all its provisions looks to an indissoluble Union composed of indestructible States. (Page 725.)

But the Chief-Justice declared in the same case, that "the separate and independent autonomy to the States," not only was not lost "through their Union under the Constitution," but "that the preservation of the States and the maintenance of their governments are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National Government."

In Lane County *vs.* Oregon (7 Wall., 76), the same court by Chief-Justice Chase maintained "the independent authority of the States;" and he added with clear emphasis, that "to them nearly the whole charge of interior regulation is committed or left; to them and to the people all powers not expressly delegated to the National Government are reserved."

In Collector *vs.* Day (11 Wall., 113), the same court decided that the power of Congress to lay and collect taxes could not be exercised by laying a tax on the salary of a State judge; that this Government could not touch his salary, because it would abridge the absolute right of a State to use all means in its discretion for its own government without any interference with them by Congress.

In the Slaughter-house cases (16 Wall., 36), Mr. Justice Miller, after speaking of the danger of disunion having given occasion for the late amendments of the Constitution, says:

But however pervading this sentiment, and however it may have contributed to the adoption of the amendments we have been considering, we do not see in those amendments any purpose to destroy the main features of the general system. Under the pressure of all the excited feeling growing out of the war, our statesmen have still believed that the existence of the States with powers for domestic and local government, including the regulation of civil rights, the rights of persons and property, was essential to the perfect working of our complex form of government, though they have thought proper to impose additional limitations on the States and to confer additional power on that of the nation.

But whatever fluctuations may be seen in the history of public opinion on this subject * * * this court * * * has always held with a steady and even hand the balance between State and Federal power," &c.

And in Bradwell *vs.* State (16 Wall., 130), the power of the State to prescribe its own conditions for attorneys practicing in its courts was established.

In United States *vs.* Cruikshanks (92 United States Reports, 542), decided in 1875, Chief-Justice Waite, speaking for the whole court, said:

The Government of the United States is one of delegated powers alone. Its authority is limited and defined by the Constitution. All powers not granted to it by that instrument are reserved to the States or the people. No rights can be acquired under the Constitution or laws of the United States except such as the Government of the United States has the authority to grant or secure. All that can not be so granted or secured are left under the protection of the States.

These clear judicial statements are all that I insist on in the views I take of this bill. I claim no more of right and power for the States than find sanction in the language of the Supreme Court since the war and in their discussion of the new amendments.

The police power of the States extends to all those regulations of the interior affairs and business of the people of the State, and which relate "to the protection of the lives, health, and property of the citizens, and to the preservation of good order and the public morals." I quote the language of the court, per Justice Bradley, in Beer Company *vs.* Massachusetts, decided in 1877 (97 United States Reports, 25), and I quote his further words as to the power of the Legislature to divest itself of this duty:

The Legislature can not by any contract divest itself of the power to provide for these objects. They belong emphatically to that class of objects which demand the application of the maxim *salus populi suprema est lex;* and they are to be obtained and provided for by such appropriate means as the legislative discretion may devise. That discretion can no more be bargained away than the power itself. (Boyd *vs.* Abraham, 94 U. S., 45.)

In the license-tax cases (5 Wallace, 462) the court had said:

But very different considerations apply to the internal commerce or domestic trade of the States. Over this commerce and trade Congress has no power of regulation nor any direct control. This power belongs exclusively to the States. No interference by Congress with the business of citizens transacted within a State is warranted by the Constitution, except such as is strictly incidental to the exercise of powers clearly granted to the Legislature. The power to authorize a business within a State is plainly repugnant to the exclusive power of the State over the same subject. It is true that the power of Congress to tax is a very extensive power. It is given in the Constitution with only one exception and only two qualifications. Congress can not tax exports, and it must impose direct taxes by the rule of apportionment and indirect taxes by the rule of uniformity. Thus limited, and thus only, it reaches every subject, and may be exercised at discretion. But it reaches only existing subjects. Congress can not authorize a trade or business within a State in order to tax it.—Pages 470-1.

In the last sentence is language very pertinent to the question before the House: "Congress can not authorize a trade or business within a State in order to tax it." The court having decided that a trade licensed by Congress in order to tax it may be forbidden by the State, we may well ask: Can Congress prohibit such trade or business when the State allows it? And if not, as is clear, can it tax in order to forbid what the State allows, when it can not license what the State forbids?

The case of Bartemyer *vs.* Iowa (18 Wallace, 129), is to the same effect.

The reserved power of a State to tax even the instruments and vehicles of interstate and foreign commerce has been distinctly recognized by the Supreme Court in the late case of Wiggins Ferry *vs.* East Saint Louis (107 United States Reports, 365), referring to many prior cases which furnish precedents for the judgment.

But the great and leading case of Gibbons *vs.* Ogden (9 Wheat., 1) is especially cited and relied on, and the language of Chief-Justice Marshall is substantially quoted by the court. But I quote the whole passage. Chief-Justice Marshall is speaking of the unquestioned power of the States to pass inspection laws, and maintains that this is reserved to the State under the police power, and is not a regulation of commerce by the State. He says (9 Wheat., 203):

But the inspection laws are said to be regulations of commerce, and are certainly recognized in the Constitution as being passed in the exercise of a power remaining with the States.

That inspection laws may have a remote and considerable influence on commerce will not be denied; but that a power to regulate commerce is the source from which the right to pass them is derived can not be admitted. The object of inspection laws is to improve the quality of articles produced by the labor of a country; to fit them for exportation or, it may be, for domestic use.

They act upon the subject before it becomes an article of foreign commerce, or of commerce among the States, and prepare it for that purpose. They form a portion of that immense mass of legislation which embraces everything within the territory of a State, not surrendered to the General Government, and which can be most advantageously exercised by the States themselves. Inspection laws, quarantine laws, health laws of every description, as well as laws for regulating the internal commerce of a State and those which respect turnpike roads, ferries, &c., are component parts of this mass. No direct general power over these objects is granted to Congress, and, consequently, they remain subject to State legislation. (Pages 202, 203.)

This "immense mass of legislation" of which Chief-Justice Marshall spoke in 1824, and which is quoted by the Supreme Court in 1882, belongs to the States as "not surrendered to the General Government." This is all I claim for them; not as one of the straightest sect of our political creed, but as conceded by every Chief-Justice, including Marshall, Taney, Chase, and Waite, and the courts over which they presided.

But I take higher ground.

The question at issue has been expressly decided.

In United States *vs.* Dewitt (9 Wallace, 41) this case was presented. The internal-revenue law of 1867 made it a misdemeanor to mix for sale or to sell certain oils, because explosive. The defendant in error was prosecuted under it. The case was certified to the Supreme Court.

Chief-Justice Chase said:

The questions certified resolve themselves into this: Has Congress power under the Constitution to prohibit trade within the limits of a State?

He then says:

Standing by itself, it is plainly a regulation of police.

He then adds—

As a police regulation, relating exclusively to the internal trade of the States, it can only have effect where the legislative authority of Congress excludes, territorially, all State legislation, as, for example, in the District of Columbia, within State limits, it can have no Constitutional operation. This has been so frequently declared by this court, results so obviously from the terms of the Constitution, and has been so fully explained and supported on former occasions that we think it unnecessary to enter again upon the discussion. (Page 45.)

This case definitely decides that Congress can not forbid any trade or business or punish any act done in conducting it within a State. Can it forbid the manufacture or sale of oleomargarine or punish such act? I do not ask can it be done upon strict construction methods, but would not the Supreme Court declare such legislation void and unconstitutional, as it did in regard to explosive oils?

In 1878 the case of Patterson vs. Kentucky, 97 U. S. Rep., 501, was decided.

A patentee of an invention under the act of Congress was selling his illuminating oils in Kentucky against the law of that State. He was prosecuted, tried, and convicted in the State court. He brought his writ of error to the Supreme Court, claiming that the State had no power to punish him for using what under an act of Congress he had obtained letters patent for.

Mr. Justice Harlan, speaking for the whole court, affirmed the judgment. His opinion is full, and he cites the cases to which I have already referred, and others.

After saying that the letters patent do give the patentee the right to make and sell his invention, he says:

But obviously this right is not granted or secured without reference to the general powers which the several States of the Union unquestionably possess over their purely domestic affairs, whether of internal commerce or of police. "In the American constitutional system," says Mr. Cooley, "the power to establish the ordinary regulations of police has been left with the individual States, and can not be assumed by the National Government." (Cooley Const. Lim., 574.) While it is confessedly difficult to mark the precise boundaries of that power or to indicate by any general rule the exact limitations which the States must observe in its exercise, the existence of such a power in the States has been uniformly recognized in this court. (Gibbons vs. Ogden, 9 Wheaton, 1, and other cases.)

It is embraced in what Mr. Chief-Justice Marshall (in Gibbons vs. Ogden) calls that immense mass of legislation "which can be most advantageously exercised by the States, and over which the national authorities can not assume supervision or control. * * * By the settled doctrines in this court the police power extends at least to the protection of the lives, the health, and the property of the community against the injuries exercised by any citizen of his own rights. State legislation, strictly and legitimately for police purposes, does not in the sense of the Constitution necessarily intrench upon any authority which has been confided, expressly or by implication, to the National Government. The Kentucky statute under examination manifestly belongs to that class of legislation. It is in the best sense a mere police regulation, deemed essential for the protection of the lives and property of citizens. * * * Whether the policy thus pursued by the statute is wise or unwise, it is not the province of the national authorities to determine. That belongs to each State under its own sense of duty, and in view of the provisions of its own constitution, its action, in those respects, is beyond the corrective power of this court. That the statute of 1874 is a police regulation within the meaning of the authorities, is clear from our decision (in United States vs. Dewitt, 9 Wall., 41)."

* * * * * * *

The court in a subsequent part of the opinion shows how even in cases under the commerce of the country, foreign and interstate, the State may even destroy an imported bale of goods if infected, citing Gilman vs. Philadelphia (3 Wallace, 713), and may prevent paupers and others likely to be chargeable from coming into the State and cattle with diseases contagious, &c., citing Railroad vs. Husen (95 U. S. R., 465).

Mr. Justice Harlan then says:

This court "has nevertheless, with marked distinctness and uniformity, recognized the necessity, growing out of the fundamental conditions of civil society, of upholding State police regulations which were enacted in good faith, and had appropriate and direct connection with that protection to life, health, and property which each State owes to her citizens."

The language of Mr. Justice Strong, in R. R. Co. vs. Husen, 95 U. S. Rep., 465, fully sustains the views of Mr. Justice Harlan.

Here then are two cases as to explosive oils. The court decides in one that Congress can not, and in the other that the State can, forbid making and selling such oils, because such power is among the immense mass of police regulations reserved to the States and never surrendered to Congress.

On this ground I stand. I take and hold it under the sanction of the Supreme Court in decisions from the time of my birth unto this day. Who shall drive me from it by the taunt that it is obsolete, and that as a relic of the State rights of the ante-bellum era it has been condemned and must be rejected? Originating with Marshall, it stands as the accepted interpretation of the Constitution by the present court, of whose members but one is known to be of that political party to which I belong, and not one of that Southern sect of political thinkers whose presence seems to excite the suspicion and dread of certain gentlemen in this House.

It is settled by the cases I have cited that the lives, health, business, and interior affairs of each State belong to that immense mass of legislation, under the name of police regulations, reserved to the States, and which the Supreme Court declares can not be touched by the power of Congress, by any direct law aimed at them. Congress can not forbid or punish the manufacture or sale of explosive oils. The States may do so; Congress can not. If not, the same principle applies to oleomargarine. No one can deny this proposition.

But it is said Congress can lay and collect a tax upon it. I do not deny it.

But for what purpose was this power delegated to Congress? Under the articles of confederation Congress could not tax anything. It had revenues derived from the States, which could alone tax the people. It had express power with its revenue to provide for the common defense and general welfare. (Articles of confederation, article 8.) But it could lay no tax.

The Constitution of 1789 gave Congress a revenue derived from its own taxation, and not dependent on the States. The tax power was confided to it to give it an independent source of revenue. It is a trust power, conferred for a trust purpose—a trust power conferred to tax for the trust purpose of obtaining revenue to carry on the Government and to execute the functions for which it was created.

Now, the proposition I maintain is this: As Congress has no power given to it to regulate or control the police affairs of a State; as it has no power to suppress or punish the manufacture or sale of oleomargarine; as in fact this power is unquestionably reserved to each State, can Congress, unable to assail this reserved power directly, use the tax power confided to it for revenue purposes to suppress and punish the making and sale of oleomargarine when it needs no revenue, or lay the tax so high that it will bring no revenue but only suppress the product?

Can Congress rightfully use a power given for one purpose, which the Constitution allows, in order to accomplish a purpose which the Constitution forbids? Can it destroy by indirect means what it dare not touch by direct power? Is not such an act a fraud on the power, in legal phrase? Is it a constitutional use of a delegated power? Is it not as gross a violation of the Constitution to exercise a power for a purpose forbidden by the Constitution, as to usurp a power never delegated? The latter is bold defiance of the fundamental law; the former is an insidious, insincere, and fraudulent evasion of constitutional duty to achieve a forbidden object. It attains a prohibited end under a false pretense.

Upon this point I cite the authority of Mr. Cooley, who says (Principles of Constitutional Law, page 57):

Constitutionally a tax can have no other basis than the raising of revenue for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful. A tax on imports, therefore, the purpose of which is not to raise a revenue but to discourage and indirectly prohibit some particular import for the benefit of some home manufacture may well be questioned as being merely colorable, and therefore not warranted by constitutional principles.

But it is said, as Congress can constitutionally lay the tax, can the courts declare the law void? I doubt if it can do so, for the court can not look into the heart of the legislator and discover his purpose. If it could do so, I believe it would decide the law unconstitutional and void.

But the legislator may, by introspection, discern his own purpose. And if he may evade the judicial scruting by this ingenious device, he can not avoid the judgment of his own conscience, to which he is amenable, and under whose condemnation he must rest.

The question then comes up, do we need the revenue from the tax imposed by this bill? If we do not, can the conclusion be avoided that the tax is laid to destroy and punish the making and sale of oleomargarine and not to raise revenue?

If I could *bona fide* vote for this tax in order to raise needed revenue I would feel justified in doing so under constitutional sanction. But if my purpose is to strike down this business, and seeing I can not do so without an invasion of a clearly reserved right of the States I should use the tax to destroy the product and not to make it bring revenue, I should feel I had violated the Constitution by a disingenuous method which could not delude others nor successfully quiet my conscientious reproaches.

We do not need the revenue. The following table will show it, approximately, for the next year:

Revenue from customs duties		$190,000,000
Revenue from internal-revenue taxes		115,000,000
Revenue from miscellaneous sources		30,000,000
Total revenue for next year		335,000,000
Against this we have—		
Ordinary expenditures	$160,000,000	
Interest on public debt	45,000,000	
Pensions	80,000,000	
		285,000,000
Leaving for sinking fund, &c		50,000,000

The only effect of more revenue is to tempt us to prodigality in expenditure and to an increase of our power as additional outlets for profuse extravagance.

But it was said by some one, if we tax oleomargarine we can repeal the tobacco tax. And yet when that proposition was made the friends of this bill voted down the repeal.

Again, it is said that the tax power is used for other purposes than revenue, upon the authority of Judge Story and other learned writers. This is a misconception of their meaning. I concede that Congress,

as all other political bodies having the tax power, may among the infinite variety of taxable subjects discriminate as to those which a wise public policy indicates as best fitted to bear the burdens. Between luxuries and necessaries, between articles owned or consumed by all and those owned or consumed by a few, between useful and useless, healthful and hurtful objects, we may discriminate, when we need revenue, and come to lay a tax to raise it. But no author of legal merit has ever said that when we do not need revenue at all we have the right to tax a man merely to reform his life or to suppress his business. The power to tax sleeps until the need for revenue awakes it to action; and when it acts, it may wisely discriminate, as already shown.

The case of Veazie Bank *vs.* Fenno (8 Wallace) is cited in the committee's report and was called to my attention the other day by the question of the gentleman from Michigan [Mr. BURROWS].

It has nothing to do with this case. In that case the court said that Congress had power and was in duty bound to provide a uniform currency for the people; and that in order to do so it could prohibit the circulation of the notes of State banks; and if it could prohibit entirely it could in part, and, if so, as it could legally tax such notes under the tax power, it could lay the tax so as to raise revenue and partially suppress the notes. In that case, therefore, Congress had power to suppress wholly, independently of its power to tax. The greater power includes the less, and therefore with the greater power to suppress entirely, Congress could use its tax power to suppress in part.

How different is this case. Congress not only has no power to suppress oleomargarine entirely, but is forbidden to touch it at all. If it aims to suppress entirely, it really must lay so high a tax as to defeat revenue; and thus accomplish fully the object the Constitution prohibits it from attempting. But I have larger objections to the policy of this measure:

First. It aids one of two competitors in the business of the country by destroying the other. Such a power is not only unwarranted by the Federal Constitution, but is of doubtful validity under any free system of government. If the Legislature may aid A by destroying B; may put up one man, class, or industry and put down another, such a government is despotic and will become a tyranny, and the people can not be free.

Second. It increases the range of the inquisitorial and domiciliary authority of the internal-revenue machinery. The objection to the system is not so much to the subjects of its taxation as to the methods by which it is watched and guarded and collected. Instead of decreasing this system the advocates of this bill increase it and refuse to take tobacco and fruit brandy from its grasp. Friends of dairy farmers tax the rival of the dairy product but burden the product of the plantation and of the orchard with taxes collected under the espionage of spies and informers and armed bands of the Department.

Third. But a greater objection to this system is to be made:

It is liable to great inequality in the distribution of the burdens of taxation. I hope I may explain this briefly.

The Constitution has two forms of internal taxation. It seemed to provide that direct taxes (which is one form of this internal system) should be proportioned to the ability to pay. These were apportioned between the States according to population, and it was supposed that wealth would be proportioned to population. This has sadly turned out to be a mistake. Thus Rhode Island under the direct tax would pay one-fifth of what Virginia would pay, and yet Rhode Island has nearly as much assessed values as Virginia, I think.

The other form, however, is or may be made much more unequal. The power to tax any article of property, or any business, gives Congress the power to lay all its taxation on any one section or State. Congress may tax sugar from the cane and exempt that from the beet. It might select cotton, or rice, or tobacco (it has done this, and tobacco in twenty years has paid over $600,000,000 of taxes), or corn, or wheat, or hemp, or special fabrics of the loom, &c.

In other words, when the eager competition of producers in different sections or in any community see that Congress may be induced to take sides, as in this case, this precedent will be the beginning of what will have no end in the perpetuity of this invidious and partial legislation, with the pernicious machinery of the Internal Revenue Department, whose most efficient agents are espionage and an official inquisition into all the privacies of domestic life and personal enterprise.

The internal taxes, which are unequal, take a new start to-day, and are fastening themselves forever on the policy of the Government.

Fourth. But there is one other evil result, which does more than any thing I have seen in my public service to overthrow the equilibrium of the Constitution and destroy all fences between the Federal authority and the reserved powers of the States.

I have shown that this bill invades by indirection a reserved authority of the States. The State permits under its unquestioned reserved power the making and sale of oleomargarine, cane sugar, tobacco, and the like. Congress claims power by this bill to suppress what the State allows—to suppress, without direct power and only by the fraudulent use of the tax power, what the State has undoubted right to foster and support. Its power to defend the product, shielded by express authority of the Constitution, is invaded and taken away not by bold usurpation, but by the stealthy, insidious, and fraudulent device of perverting a trust power vested in it for revenue into a weapon aimed at State autonomy. And thus Congress will in time absorb that immense mass of legislation which Judge Marshall said was unquestionably reserved to the States, and consolidate the police power of all the States under one central domination. Does not every man see, can any man fail to see, that this bill opens up the invasion of the police power of the States at the instance of any interest in the country, by the use of this tax power in Congress, and that the end will be that all police power being centralized here will be executed by the machinery of the Internal Revenue Department? Pass this bill, and you have a precedent which will soon result in breaking down all the defenses which have barred the State reserve of power from the usurping tendency of the Federal Government.

And why should you grasp for more power? Greedy of acquisition, of authority, Congress has so filled its calendar that it does only a tithe of its work, and even that not well, for lack of time. Do not amplify your jurisdiction. Limit it strictly by the boundaries of the Constitution, and you will do your legitimate work better by leaving to the States what is theirs to do and what they can better do than you. Cease debates on butter and oleomargarine. Leave that to States and cities and towns, and rise to the higher realms of political thought, in which we may frame a policy to place the imperial destiny of this Republic of republics upon the safe and sure pathway leading to its true glory, in securing the peace and happiness, the liberty and progress of all the people of all the Commonwealths of the American Union.

Nothing, that this bill can promise to its advocates here or in the country, can in any degree compensate the people for the pernicious and dangerous principles it contains, the results of which must be disastrous to our system of government and to our free institutions.

Temperance Education.

SPEECH

OF

HON. WILLIAM WALLACE BROWN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 17, 1886.

On the bill (S. 1405) to provide for the study of the nature of alcoholic drinks and narcotics and of their effects upon the human system in connection with the several divisions of the subject of physiology and hygiene, by the pupils in the public schools of the Territories and of the District of Columbia, and in the Military and Naval Academies, and Indian and colored schools in the Territories of the United States.

Mr. BROWN, of Pennsylvania, said:

Mr. SPEAKER: I rejoice in the opportunity to vote for this bill, which authorizes education in the dangers of alcoholic drinks. Long before the effects we hope from it can with reason be expected, I pray that the Republic may be rid of it forever as a beverage. Nevertheless, this is a step in the right direction, and it would be criminal in this Congress not to pass this bill. We are told that we delude ourselves when we build our expectations upon so frail a foundation. Where can we so rationally begin temperance work, or even the work of prohibition, as among those who are in the coming time to wield the destinies of the Republic?

Hundreds of thousands of dollars yearly are expended to reclaim bondsmen to rum. Why not spend something to keep men out of bondage? Its evils upon our country and our age are incalculable. All ages and conditions are of its victims. The lowly and the exalted are alike subject to its resistless sway. It sits like a specter of evil with the judge upon the bench, and it haunts the legislators in the several States of the Union and in the National Congress. To-day its merciless clutch holds in brutal bondage some of the brightest minds in the national House of Representatives, and its toils are upon Senators well on their way to the ditch and the mad-house! It is the beginning of all riots, and without it anarchists would go forth on their diabolical doings desolate and alone. But by its free use they kindle the passions and nurse the revenge of the unfortunate, the thriftless, and the vagrant until, with honor blunted and patriotism debauched, they are fit companions of the senseless socialists and the fiendish anarchist. The hags who manufacture bombs, and the wretches who kill with them, whether on the streets or in our homes, are all, all alike fed and frenzied by this demon alcohol!

With my friend from Michigan [Mr. CUTCHEON] I indorse with emphasis what Master Workman Powderley, at the head of the Knights of Labor, has so eloquently said in relation to the use of strong drink:

The firmest link in the chain of oppression is the one I forge when I drown manhood and reason in drink. No man can rob me of the brain my God has given me unless I am a party to the theft. If I drink to drown grief, I bring

grief to wife, child, and sorrowing friends. I add not one iota of the sum of human happiness when I invite oblivion over the rim of a glass. If one moment's forgetfulness or inattention to duty while drunk brings defeat to the least of labor's plans, a lifetime of attention to duty alone can repair the loss. I promise never again to put myself in such a position. If every member of the Knights of Labor would only pass a resolution to boycott strong drink so far as he is concerned for five years, and would pledge his word to study the labor question from its different standpoints, we would then have an invincible host arrayed on the side of justice.

No man can calculate the percentage of crimes that this common enemy has inflicted upon our race, for the reason that they are visited from father to son, from generation to generation. But he who does not see its ravages strewn on every hand as he moves in society must be making his journey through life either blindfolded or without capacity to comprehend. Two years ago in this House the honorable gentleman from Wisconsin [Mr. PRICE] made the assertion that "99 per cent. of the woes and ills of society come from patronizing the saloons." No matter whether his figures are too high or too low it remains fearfully and wonderfully true that its whole career is written in blood, and its victims have filled the earth with woes unutterable.

I hail with delight all intelligent and all rational effort that society and legislators may devise to dethrone the monster and destroy its power. Seventeen States of the Union have already passed laws like unto this. By its provisions the District of Columbia and the great Territories are to educate their children upon this subject. When all the States and all the Territories shall teach their children what this enemy is and what it has done, we may with reasonable confidence assert that "the coming man will not drink wine."

Oleomargarine.

SPEECH
OF
HON. BENJAMIN T. FREDERICK,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 26, 1886.

On the bill (H. R. 8328) defining butter, also imposing a tax on and regulating the manufacture, sale, importation, and exportation of oleomargarine.

Mr. FREDERICK said:

Mr. SPEAKER: I submit to this body that I do not believe a man in it will say that any man or company of men who use such insulting and abusive expressions regarding any class of people, much less of the mothers, wives, and daughters of our farmers, are deserving of any consideration, and I think their business as well as they should be driven out of existence. Mr. Speaker, I refer to the pamphlets sent out in the interest of oleo and butterine, in which many insulting things are implied of the dairy people; such as, "The oleo men are putting cow's hairs in their butterine in order to make it more closely resemble the real dairy butter."

But, Mr. Speaker, that to which I more particularly refer is contained in a pamphlet entitled "Higher wages and cheaper food: Honest words to honest men." It reads, "Beecher on butter," and is as follows:

> Oh, for a reformation in the dairy! While old farmers hunt good breeds of cows, we hope young farmers will find a breed of wives who shall know that there is such a virtue as cleanliness. The practice of rolling butter in linen cloth is not good. In warm weather it sticks, and in all weather butter takes a peculiar taste from the cloth. Besides, though we believe in saving old shirts, we don't like the economy of tearing them up for butter rags. At any rate, it behooves us to know out of whose undergarments we are eating, for, we suppose, even cannibals have a choice of what men they shall eat."—*New York Grocers' Advocate.*

Mr. Speaker, I was raised on a farm and this is an insult to my mother, my sisters, and every lady in the land. The insinuation that any lady would take dirty shirts or any article of dirty underclothing to roll butter in is an insult to decency; and, Mr. Speaker, I would suggest that the Mr. Beecher, whoever he may be—surely can not be Henry Ward Beecher—be sent as a missionary to the Cannibal Islands, where baked missionary is the principal article of food, and thereby get rid of him as well as of the cannibals. But, sir, I fear the result! In the ballad of a mad dog, the man recovered from the bite, the dog it was that died!

Mr. Speaker, there is cleanliness in the use of a man's tongue as well as in the use of butter-cloths. And I here reiterate that men who use such insulting and uncalled-for expressions about the best people of our land are not too good to impose any kind of impure food on an unsuspecting people so long as it is a paying business to them, and the sooner they and their business are wiped out of existence the better it will be for the country. If any one will read Asmodeus, or the Devil on Two Sticks, they will find a fair illustration of this fraud and attempt at the centralization of capital against the producers and laboring classes.

Oleomargarine.

SPEECH
OF
HON. EDWARD W. SEYMOUR,
OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 26, 1886,

On the bill (H. R. 8328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine.

Mr. SEYMOUR said:

Mr. SPEAKER: Any proposition which promises to be of practical benefit to the farmers of this country commands my interest. If it contravenes no principle of constitutional law and is not unjust to other legitimate industries it secures my support. The farmers, notwithstanding their numbers and the vast importance of their calling, are so modest in their demands and so little practiced in those arts by which other industries secure legislation favorable to themselves that there is a natural desire to aid them. If I did not believe the bill under consideration to be constitutional I would not yield to that natural desire.

The argument against its constitutionality is that, inasmuch as we have no right to raise revenues except to meet the necessary expenditures of the Government, and such expenditures do not require this additional revenue in order to meet them, therefore the proposed tax would be unconstitutional. The argument is not sound.

It is necessary to raise a certain revenue to meet govern
penses. Every man has a right of choice as to the articles upon which this tax shall be placed to raise such revenue. If I desire to put among the articles to be taxed for that revenue the articles enumerated in this bill, in order, among other things, to hasten the day when the tax may be diminished on wholesome food and necessary clothing, who shall question my constitutional right to do so?

If this proposition to tax oleomargarine had been reported from the Committee on Ways and Means in a bill which at the same time proposed to reduced the tax on some other article an equivalent amount, would any one have claimed the action to be unconstitutional? Does it affect the constitutional question that this bill takes only one of those steps and leaves the other to be taken hereafter when the opportunity occurs upon the tariff bill before the House?

If I propose (as I certainly do) to vote for measures calculated to reduce our revenues raised by taxation to the limits of our necessary expenses, and to raise that necessary revenue so far as may be by taxing luxuries and harmful commodities instead of the every-day necessities of life, who shall object? And am I to be defeated in that laudable object because I can not accomplish both purposes by a single vote and upon one bill? The fact that under our present tariff laws we do not need the revenue which this bill would produce does not make it unconstitutional with those who do not mean, so far as their votes are concerned, to permit those laws to remain as they are, and who propose to reduce taxation and to raise what is needed from articles which can best bear it.

As an original question no one would doubt the right of Congress under the Constitution to tax oleomargarine for the purpose of raising constitutional revenues. If it could have been originally taxed, so it may now be substituted as an object of taxation for some other article upon which revenue is now raised, and I, who desire such substitution, may consistently with a strict construction of the Constitution vote for it. While not caring to argue the general questions involved, I have desired to say thus much upon the constitutional question, because, as already intimated, if I considered the bill unconstitutional I would not vote for it, desirable as I believe is the end to be attained by its passage.

It has been strongly urged by gentlemen who admit the constitutionality of the bill that its provisions are impolitic; that they savor of class legislation and aim to destroy a competitive industry. Such arguments would have force if they were relevant, but they are based upon an entire misunderstanding of the bill, namely, that the bill taxes the product of the articles mentioned in section 2 independent of their being "made in imitation or semblance of butter, or calculated or intended to be sold as butter or for butter." Such is not the fact. Nothing is "oleomargarine" within the meaning of the bill except mixtures made in imitation or semblance of butter, or calculated or intended to be sold as butter or for butter.

One may freely make, buy, or sell compounds of oleo, oleomargarine oil, lardine, suine, offal fat, cotton-seed oil, and neutral so long as they are plainly marked with the names of the articles composing the mixture. It is the fraud, the sham which would sell them for butter, that the bill antagonizes.

Since when, Mr. Speaker, was the manufacture of a deleterious and offensive article and the palming it off on the unsuspecting purchaser under false colors dignified by Congressional recognition as an "industry"—a legitimate, competitive industry, with rights to be respected and claims to be regarded?

It is said that this measure will be a precedent for future taxation of articles against whose manufacture and sale none of the arguments exist which are admitted to exist in respect to the article taxed by this bill. It is sufficient answer to such an argument to say that it is illogical to argue from a good action that it will prove a precedent for a bad one; and Congress must be trusted, and surely may be trusted, not to enact laws for the purpose of taxing out of existence any legitimate industry. Regard for the Constitution and for what is certainly the sentiment of the American people would prevent such an exercise of power. There is no danger whatever in that direction.

There are other points involved in this discussion which have been so fully argued that it would be inexcusable to repeat them. The absolute vileness of many of the compounds sold as butter and so successfully colored and scented as to deceive buyers has been fully demonstrated. If there are any who prefer such compounds to pure butter they ought to be willing to have them marked, as of the compounds which compose them, so that those who prefer pure butter may not get something else by mistake. And it is not fear lest the Constitution should be infringed half as much as it is hatred of the entire system of internal-revenue taxation, with its taxation on the manufacture of spirituous liquors and tobacco, that furnishes the real motive of the opposition.

Land Grants in New Mexico, Arizona, and Colorado.

SPEECH

OF

HON. WILLIAM M. SPRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 11, 1886.

The House being in Committee of the Whole on the state of the Union, having under consideration the bill (H. R. 2851) to provide for ascertaining and settling private land claims in the Territories of New Mexico and Arizona and the State of Colorado—

Mr. SPRINGER said:

Mr. CHAIRMAN: This bill, in brief, provides for the appointment of a commission of three persons by the President of the United States, by and with the advice and consent of the Senate, to serve for four years, for the purpose of adjudicating Mexican and Spanish land grants in the Territories of New Mexico and Arizona and that part of the State of Colorado derived from the Republic of Mexico.

These claims, aggregating an immense amount of acres of the public domain, should have been settled long ago. In 1851 Congress provided a commission for the settlement of such claims in the State of California, and that commission performed its duty, cases were all disposed of in the courts, and, in general, titles were quieted, and the prosperity of that State was assured. But in the Territories of Arizona and New Mexico, and that part of the State of Colorado ceded to us by Mexico, these titles have never been quieted. Lands thus claimed have been surveyed in some instances, and in other cases large portions of such land have been patented by the United States to persons who had no title to them.

The Commissioner of the General Land Office, in his last report, states there are now pending before Congress ninety-six claims to lands in the Territories of New Mexico and Arizona, covering an alleged estimated area of 8,500,000 acres. These claims have never been examined carefully by the General Land Office, some have been partially examined; and it is due to the claimants, it is due to the Government, it is due to the people of these Territories, that these claims should be finally adjudicated and the titles permanently quieted.

If gentlemen could see before them a map of the Territory of New Mexico they would observe many red spots, which mark the claims already presented to the Interior Department of the Government, covering nearly one-quarter of the area of that vast Territory.

Most of these lands are withheld from settlement and the titles are now in dispute. Villages and towns have been located on them, and yet the people in many instances are uncertain as to whether they own a foot of the land or not.

Mr. MCADOO. Will the gentleman permit me to ask him a question?

Mr. SPRINGER. Certainly.

Mr. MCADOO. Is it not a fact that large cattle syndicates have taken possession of a large portion of this land?

Mr. SPRINGER. The gentleman from New Jersey asks me whether large cattle syndicates have not taken possession of much of this land. Cattle syndicates, sheep syndicates, and syndicates of capitalists generally have obtained possession of a great many of these grants. There is a pressing necessity for action on the part of Congress in this matter. I call the attention of the committee to the report of the Commissioner of the General Land Office in regard to many of these cases. One in particular, where a patent has been already issued, deserves the attention of the people. It is known as the Maxwell grant, which Secretary of the Interior Cox thought could not under any construction of the grant exceed 96,000 acres, but which was afterward patented for 1,700,000 acres. The patents for that land are now held by a Dutch or Holland syndicate known as the Maxwell Land Grant Company. Suits have already been instituted in Colorado to set aside those patents so far as they cover land in that State. Commissioner Sparks, of the General Land Office, in his annual report for the year 1885, thus refers to this grant:

> In July last I submitted to you the result of my investigation of the proceedings of this office by which the notorious "Maxwell" or Beaubin and Miranda grant in New Mexico and Colorado was patented in 1879 for upward of 1,700,000 acres, when, if the grant had possessed any original validity, the quantity legally claimable under it could not have exceeded 96,000 acres, and this quantity only was patentable by the effect of Congressional confirmation. It was so found by Mr. Secretary Cox in 1869, and his judgment had not been reversed when upon a forced assumption of the applicability of a judicial decision in another case and a tortuous construction of a general letter of advice from a succeeding Secretary, this office resurrected the extinguished claim for excessive quantity and passed it to patent without written decision, "and without opportunity being afforded adverse parties or protestants to appeal to the Secretary or invoke his supervisory judgment;" and this in the face of "a large number of letters, complaints, petitions, protests, and charges" which have been transmitted to this office and Department from citizens of New Mexico, "alleging fraud in the location and boundaries of this claim, its extension far beyond any original claim or possession by the grantees, the invasion of settlement and mining rights, and of the rights of native inhabitants and Indian occupants."
>
> The files of the office groan with pitiful appeals of settlers to be protected against fraudulent surveys of private land claims, which appear generally to have received no more attention than to be buried in the tomb of official archives. Recent memorialists, praying legal intervention to save their homes and property from seizure under a patent issued in 1881 for nearly 1,000,000 acres to the claimants of the Sangre de Cristo grant in Colorado, which, if existent and valid, was restricted by the laws of Mexico to one-tenth the quantity conveyed by this office, say upon a recital of frauds and injuries alleged that "against these wrongs petitions time and again have been filed, directed to the honorable Secretary of the Interior, all of which might as well have been directed or consigned to a fiery furnace."

Commissioner Sparks, in the same report, calls attention to the Cañon de Chama grant, in New Mexico, which when originally presented was for a single square league of land. This was shown by the plats then exhibited. The claim was purchased from the original owner, and through the skillful manipulations of land-grabbers it has grown in size until it has reached the magnificent proportions of more than 100 square leagues, or 472,736 acres, and is fortified by a survey showing the identical boundaries. The Committee of this House on Private Land Claims of the Forty-seventh Congress (Republican) reported this case for confirmation at the last-named area, and I well remember when it was considered in Committee of the Whole and defeated. It is still pending, however, and nothing short of a judicial determination will ever place a final quietus upon it. I presume the entire area thus claimed is withheld from settlement under the homestead and preemption laws.

Since Commissioner Sparks assumed the office he now holds he has rendered an adverse decision on the claim of Gervacio Nolan for 575,000 acres of land in New Mexico. Congress had expressly provided in 1870 that but one of two grants which he claimed should be confirmed, and he was allowed to make his selection, which he did, "in full satisfaction of all further claims and demands against the United States." Having obtained one grant upon these terms, it was reasonable to presume that his claim was finally settled. But not so. He turned up again as a claimant in the General Land Office for the other grant. In 1880 the General Land Office so far recognized this last claim as to order a survey thereof, which was made, and the plats filed. The survey as then made embraced 575,000 acres, or twelve times the legal quantity, if the grant had ever had any validity. The lands embraced in this survey were withdrawn from settlement under the general land laws, and the whole area reported for confirmation. Mr. Sparks set aside the survey and decided that the land belonged to the United States, and opened it to actual settlers.

Mr. Sparks, in the report already referred to, thus sums up the action of his predecessors in reference to a few of the Spanish and Mexican land grants in New Mexico:

> The New Mexico claim of Francis Martinez under the colonization laws, which limited grants to the maximum of 48,000 acres, was surveyed for 594,515.55 acres, and patented in 1881. A similar grant to E. W. Eaton was surveyed and patented in 1880 for 81,032.67 acres. A similar claim was surveyed and patented to Antonio Sandoval in 1877 for 60,117.39.
>
> The claim of John Scolley, also in New Mexico, was surveyed for 108,507.64 acres and the land reserved. Congress confirmed the grant according to its terms for five leagues, or 22,193.40 acres, but the larger area still remains in reservation.
>
> A New Mexico grant said to have been made to Salvador Gonzales, in 1742, of "a spot of land to enable him to plant a cornfield for the support of his family" has been surveyed for 103,959.31 acres, and land reserved. An amended survey has been filed reducing this amount to 23,661 acres, and the claim is now pending before Congress.
>
> The Anton Leroux grant in New Mexico, surveyed for 126,024.50 acres and the land reserved, has been examined by this office and the survey found to be excessive to the amount of more than 100,000 acres.
>
> The B. M. Montaya grant in New Mexico, limited to 48,000 acres under the colonization laws, is surveyed for 151,056.97 acres and the land reserved. Claim before Congress.
>
> The Sedillo grant in New Mexico, of the same character and limitation, is surveyed for 88,079.78 acres and the land reserved. Claim before Congress.
>
> The Arroyo de San Lorenzo grant in New Mexico, same limitation, is surveyed for 130,000 acres and the land reserved. Claim before Congress.
>
> The Estancia grant in New Mexico (Nolan No. 3), also restricted under the

colonization act to 48,000 acres, is surveyed for 415,026.56 acres and the land reserved. Claim before Congress.

In 1768 Ignacio Chaves and others (New Mexico) petitioned for a tract "which will have on each side one league and a half, more or less." This would make a tract of 2¼ superficial leagues, or a little less than 10,000 English acres. The claim has been surveyed for 243,036.43 acres and the land reserved. Pending before Congress.

The foregoing and other cases cited are mentioned as examples merely exhibiting the general situation.

There is no data upon which to estimate the number of claims that may yet be presented.

A gigantic scheme for stealing several million acres of land in Arizona is thus exposed by the Commissioner of the General Land Office:

The inhabitants of Southern Central Arizona have for the past two or three years been threatened by the assertion of the existence of an enormous grant alleged to have been made in 1758 to one Peralta, embracing a region of country 49 by 150 miles in extent, or a larger area than the combined States of Connecticut and Rhode Island, the location of which was laid in the most populous and valuable portion of the Territory. An extensive correspondence touching this alleged grant was entered into during my predecessor's incumbency of this office between the Governments of the United States, Mexico, and Spain, resulting in the following letter addressed by me to the surveyor-general:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., May 2, 1885.

SIR: I am in receipt by reference from the honorable Secretary of the Interior of your letter of March 27, 1885, stating that certain papers have been filed in your office in the matter of an alleged grant to one Peralta, claimed to embrace a region of country 49 by 150 miles in extent, aggregating 4,000,000 acres of land, inclusive of the city of Phœnix, the towns of Florence, Globe, and Silver King, the major part of the counties of Maricopa, Pinal, and Graham, a large portion of the White Mountain, and the San Carlos Indian reservation, and that said alleged grant also purports to carry all minerals.

You transmit a list of papers filed, the most material of which purport as follows:

(1) Decree of Ferdinand VI (King of Spain) recommend grant.

(2) Copies of the report of the royal tribunal of the Inquisition of the grant to Peralta by the viceroy in 1758, and of the statement of Peralta as to location of grant.

(3) Petition of Peralta to King Carlos III, praying confirmation of the grant.

(4) Order of King Carlos III confirming grant.

You state that although from one and one-half year's study you are familiar with every detail of this alleged grant, you are not in possession of corroborative proofs or evidence thereof.

Thorough search has been made under the direction of the Government of the Republic of Mexico, at the instance of this Government, and no record of this grant, nor of any of the various and minute proceedings required by the laws of Spain and the Indies, connected with the making of such grants, has been discovered.

You are further advised that this Department has received from the Department of State official information communicated by the Spanish Government through the American legation at Madrid that a careful search has been made by the director of the archives, and that the "so-called 'Peralta Grant' does not exist in those archives."

The royal grants of Spain were made with great solemnity of form and record. It is impossible that a grant should have been "recommended" by one sovereign, reported by the most august tribunal of the nation, and confirmed by the kingly deed of another sovereign and no record of these high and important acts of state appear in the archives of the Spanish Government.

The evidence that no such record exists is sufficient evidence that no such grant was made.

The essential foundation of a recognizable claim under the laws of Spain and the treaties and laws of the United States does not appear in this case. It is my opinion that the futile work in which you have been engaged for a year and a half in the direction of investigating an alleged claim which, from your own statement of its uncorroborated character, had not been placed before you in a condition to be entitled to consideration, should forthwith be discontinued. The only effect of your action and proceedings has been to needlessly alarm citizens in lawful and peaceful possession of homes and property upon the soil, to threaten with insecurity private titles in towns and cities, to imperil valuable mining interests, and to intimidate settlements upon public lands.

Very respectfully,

WM. A. J. SPARKS, *Commissioner.*

ROYAL A. JOHNSON, Esq.,
Surveyor-General, Tucson, Ariz.

I presume, Mr. Speaker, we shall hear no more of this Peralta claim, at least while Commissioner Sparks is in office. I could, if time would permit, refer to very many more of these fraudulent claims. Many of them have received the sanction of Congress or the Interior Department under former administrations. It is high time that Congress was adopting some measure of relief. The pending bill will secure a judicial investigation of the facts involved in all alleged land grants in the Territories of New Mexico and Arizona and in the State of Colorado. I rely upon the President to appoint three able and incorruptible judges to constitute this commission. They will have a responsible and important duty to perform. They should be learned in the law and of adamantine integrity. The land-grabbers will use all their efforts to deceive, to defraud, and mislead. It will require time, patience, and great labor to thoroughly consider and determine all the questions which will be raised.

The growth and prosperity of New Mexico are now greatly retarded on account of the uncertainty of land titles and the conflicting claims arising under pretended grants from the Republic of Mexico and from Spain. The commission provided in this bill can alone hear and determine all these questions, and finally quiet all titles. When the titles are quieted, permanent improvements will be made and business prosperity will speedily follow. We owe it to the people of those Territories to pass this bill at once. It is a measure of relief too long delayed already.

The labors to be performed by the commission are such that the Departments and Congress can not perform them and do justice to all concerned. A careful investigation in the vicinity of the grants will often be required in order to determine the real boundaries of grants as originally intended.

The courts now organized in the Territories have now more business than they can transact. We can not expect them to properly consider the immense amount of business which will devolve upon this commission. It will require four or five years of constant labor on the part of the commission to pass upon all the claims that will be presented.

Delay in finally settling the questions involved is delay in advancing the material prosperity of the people interested. In many places business is at a standstill, enterprises are suspended, and general apathy prevails, owing to the fact that the titles are in dispute. This bill furnishes the most speedy and satisfactory means yet devised for an honest judicial determination of every doubtful question and finally quieting all disputed titles. I have no doubt President Cleveland will appoint an honest and able commission. If I had any doubts on this question I would hesitate about conferring this power upon him. He has proven equal to every other trust, and I shall rely upon him to properly execute this.

I hope the bill will pass, and I assure the committee that its beneficial results will far exceed the cost of its execution.

Pending the remarks of Mr. SPRINGER his time expired and the following proceedings were had:

The CHAIRMAN. The gentleman's time has expired.

Mr. SPRINGER. I ask leave of the committee to print the remainder of my remarks on this bill.

The CHAIRMAN. The Chair hears no objection and it is so ordered.

Mr. SPRINGER. The gentleman from Kentucky [Mr. HALSELL] also desires the same privilege. And I ask unanimous consent that all gentlemen who desire to do so may print remarks in the RECORD on this bill.

The CHAIRMAN. The Chair hears no objection, and it is ordered accordingly.

Oleomargarine.

SPEECH

OF

HON. ORMSBY B. THOMAS,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 3, 1886,

On the bill (H. R. 8328) defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine.

Mr. THOMAS, of Wisconsin, said:

Mr. CHAIRMAN: The persistent opposition to this bill by the minority of the committee has greatly astonished me. Having carefully examined the provisions of the bill I am in favor of it. The various objections that are offered appear to me to be susceptible of an answer. The objection that has been so often urged here that this is the use of the taxing power for the unjust destruction of one industry for the benefit of another has no force whatever with me, for the reason that the articles and substances of which oleomargarine is composed, as shown by the report of the Committee on Agriculture, are of a poisonous and deleterious character, and, when so made, is such an exact imitation of butter as not to be distinguished therefrom by taste or in any ordinary way, and that by this means a great fraud is imposed upon the people, a fraud which scatters disease and death. This is the same kind of industry as is the manufacture of bombs and explosives for the anarchists, or as would be the building of piratical ships to prey upon the commerce of the high seas. If it can be lawfully done by Congress, this fraud, this deceit, should be controlled. This brings me to consider the constitutional objection which is so persistently made. It is not pretended that Congress has not the power to impose a tax upon oleomargarine the same as it has the power to impose a tax upon whisky and tobacco, but the argument is that we do not need the revenue to be derived from the tax, and that the taxing power is used not for raising money to support the Government, but for the suppression of the manufacture of oleomargarine. I answer that no gentleman has the right to assume that this is the position of those who vote for this bill.

There is great necessity for the revenue which will be realized by the passage of this law. The present revenues of the Government are insufficient to meet the wants of the nation if the appropriations are made that should be for the pensioning of our soldiers, the building up of our Navy, the erection of proper coast defenses, together with the ordinary and ever-increasing expenses of the Government. This act is constitutional upon its face, and I deny the right of those who oppose this bill to say that those who support it are not seeking to obtain a revenue in the manner provided by the Constitution. This disposes of that objection, as I do not believe any one will deny the right of Congress to in good faith put a tax upon this article. When gentlemen abandon the constitutional argument they appeal to us in behalf of the poor man, saying that he will be injured and oppressed by being deprived of cheap butter. The argument is in my judgment an insult—yes, the greatest insult that could be offered to an American citizen. Is it to be believed

that any man would purchase an article of food for his family knowing that it contains the germs of disease and death? If this be so, why do these manufacturers of oleomargarine make it so that it is intentionally and fraudulently sold as real butter? There is nothing whatever that is used as food that should not be as pure and as healthy for the poor man as for the rich man, and such an argument as that shall not deter me from voting for this bill.

I can readily see that those who are engaged in the manufacture of the article taxed by this bill, and who are said to be making yearly untold millions, will be greatly injured if they are by law obliged to brand and mark this spurious butter in such a way as that no one shall be deceived thereby, and I can readily see that those who furnish vast quantities of cotton-seed oil to be used in the manufacture of oleomargarine may be affected by the provisions of this bill, but, sir, in my judgment all this furnishes no reason for opposition to this measure. The farmers of this land should be protected against this fraud, and the consumers of butter should be protected against this fraud. By the terms and provisions of this bill the manufacturers of oleomargarine may go on uninterrupted by any of the provisions of this bill, without tax and without restraint, if they will drop the fraud and make an article that does not look like butter and that is not sold as butter; in other words, make an article that does not falsely pretend to be butter. I see no hardship in this, but on the other hand I see in the provisions of this bill vast good; and as we have the constitutional power to levy this tax I am in favor of putting it high enough to insure the protection of the people against this fraud and to insure the successful carrying out of the law, for no higher duty can devolve upon us than to protect the people against a deception that has surreptitiously crawled into every household to taint the blood and corrupt and destroy the health of the people.

Butter vs. Oleomargarine.

The first farmer was the first man, and all historic nobility rests on possession and use of land.—EMERSON.

SPEECH

OF

HON. ISAAC S. STRUBLE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 26, 1886,

The House being in Committee of the Whole, and having under consideration the bill (H. R. 8328) defining butter, also imposing a tax on and regulating the manufacture, sale, importation, and exportation of oleomargarine—

Mr. STRUBLE said:

Mr. CHAIRMAN: I am not now nor have I ever since becoming a member of Congress been ambitious to participate to any considerable extent in the current debates of this House; and at this time, when it is apparent that the friends of the pending measure desire to obtain a vote at the earliest possible moment—in which desire I heartily concur—I would content myself with simply voting as my judgment approves, were it not that this proposed legislation so vitally concerns the people of the entire State of Iowa, a very considerable part of which State and people I have the honor to represent upon this floor. But, sir, I am free to confess that I can not remain quiet and not offer a word indicative of my solicitude for the interests of the people who have twice honored me with their suffrages.

The importance of maintaining our agriculture in a healthy and prosperous condition no one will for a moment question. If more than our own observation and experience were necessary to confirm this statement, a reference to history and the opinions of learned men who in generations past have written on the subject would abundantly supply requisite proof of the correctness of my statement. From the earliest times until the present all nations, ancient and modern, have given to agriculture the place of honor among the employments of men. The prosperity of agriculture was a matter of great solicitude to the ancients. Among the Egyptians, husbandmen were held in great esteem and laws passed for their encouragement and protection.

The first care of the Persian princes was bestowed upon the cultivators of the soil. The satraps whose provinces were best cultivated received the largest share of royal favor; and officers were appointed by the Crown to inspect and report upon the agricultural industries. It is related by Xenophon that Cyrus the younger informed himself whether the private gardens of his subjects were well kept and yielded abundantly, and that he rewarded the industrious and skillful cultivator and punished the sloth of those who allowed their vineyards to be unproductive.

Gelon of Syracuse, who flourished in the fifth century before Christ, "animated the husbandmen by his presence and delighted in appearing sometimes at their head."

His intention, says Plutarch, was to make the country rich and fruitful and to inure his subjects to toil, and by that means preserve them from a thousand disorders which inevitably follow a soft and indolent life.

Rollins, in his excellent ancient history, declares:

The culture of lands will be an inexhaustible fund of wealth in all countries where this profitable calling is encouraged by maxims of state policy.

Xenophon represents agriculture as the employment of all others the most worthy of man, the most ancient, and the most suitable to his nature; as the most common nurse of all ages and conditions of life; as the source of health, strength, plenty, riches, and a thousand sober delights and honest pleasures; as the mistress and school of sobriety, temperance, justice, religion, and, in a word, of all kinds of virtue both civil and military.

One of the ablest of American statesmen—Alexander Hamilton—in his report on manufactures, submitted to the House of Representatives December 5, 1791, paid the following merited tribute to agriculture:

It ought readily to be conceded that the cultivation of the earth, as the primary and most certain source of national supply; as the immediate and chief source of subsistence to man; as the principal source of those materials which constitute the nutriment of other kinds of labor; as including a state most favorable to the freedom and independence of the human mind—one, perhaps, most conducive to the multiplication of the human species—has intrinsically a strong claim to pre-eminence over every other kind of industry.

Citations from other eminent authors and writers bearing similar testimony to the supreme importance of agriculture might be multiplied, but they would be superfluous both in this presence and that of our intelligent constituency. As in all ages, so at this time agriculture forms the basis of wealth and national power; and the member of Congress who gives but a hasty and impatient consideration to the subject—in whatsoever form it may be presented—fails, in my humble judgment, in the exercise of an intelligent and comprehensive statesmanship.

GROWTH OF IOWA; AGRICULTURE THE CAUSE.

Mr. Chairman, it has been but forty years since the State of Iowa, with a population of only 81,000, became, by the determined action of her people and the consent of Congress, a member of the Federal Union.

The great prairies stretching away westward from the Father of Waters were but sparsely settled. There were no large cities within her territory in 1846; no railroads and no commerce compared with that which exists in Iowa to-day.

But what a marvelous change has taken place. Instead of 81,000 people there are now nearly 2,000,000. Numerous large cities and thousands of thriving towns and villages dot the surface of the whole State. Excellently equipped and prosperous railroads run into or through every county. A glance at the latest map of the State discloses a vast system, a complete network of railroads fully accommodating the people and bearing their now immense commerce to the markets of the world, and I venture the assertion without fear of successful contradiction that no more intelligent, happy, and prosperous people can be found in any State of the Union.

What has made Iowa the proud and prosperous State she is to-day? What occupation have her people followed during these years since her admission to the sisterhood of States?

Generally speaking, every occupation known to Western civilization, but in a particular sense agriculture—raising wheat, oats, corn, barley, potatoes, hogs, cattle, and horses; making butter, gathering and selling eggs, fattening their hogs and cattle—this employment, in which nearly one-half of her people are engaged, or directly dependent upon, has been the main cause of the growth and development of the State.

Mr. Chairman, although but fourteen years a resident of Northwest Iowa, I can say that I have myself witnessed throughout nearly one-fifth of the total area of the State that wonderful transformation which has converted vast stretches of uninhabited prairie into the homes of two hundred thousand American citizens.

The cause of it all, as I have indicated, is nothing new in the history of the world; but it is the same old story, no romance about it, but the plain and simple narrative of the success and value of agriculture, the purest, most independent, and health-giving employment in the world, the foundation of our nation's greatness and the pledge of its perpetuity. And right here let me say that during the last few years, and especially prior to the considerable manufacture of oleomargarine and butterine, hundreds of creameries were built and operated until, as is the case with not a few, competition with the false and unnatural imitations of butter has compelled them to close.

Those still in operation must soon, unless relief is speedily afforded, either close up entirely or conduct their business at a loss. This means surrender to the power of a vile compound, the production of which is carried on by city capitalists who have never sustained any other relation to agriculture than that of speculators upon its generous bounty.

IMPORTANCE OF THE DAIRY INTERESTS OF IOWA.

To convey an impression of the importance of the dairy interests in Iowa, let me say that in 1880, according to the census, there were in that State 854,187 head of milch cows, since which time the number has increased to 992,313; the production of milk in 1880 was 15,965,612 gallons; of butter, 55,481,958 pounds, and of cheese 1,075,988 pounds.

At fair prices and at the above rate of production these two articles (butter and cheese) would realize to the people of that State nearly $12,000,000, with an increase annually in proportion to the increase of milch cows.

The manufacture of oleomargarine and butterine has not only threatened damage to the butter and dairy interests of that and all Western States, but it has already resulted in serious loss; and it is now perfectly apparent that, unless this or some other remedial measure is speedily passed by Congress, irreparable damage will certainly be entailed upon interests which, in my judgment, deserve the special care of State and National Legislatures.

Mr. Chairman, the centuries bear testimony to the supreme importance of agriculture. No nation can prosper without it. No employment can safely be exalted above it. The country not possessing the necessary area adapted to successful cultivation of the soil must devote itself specially to such pursuits of commerce as will enable it to command food products at a minimum. England presents the most conspicuous illustration of this fact in the curtailed agricultural possibilities existing within the moderate limits of her home territory; and therefore, well knowing that extended agriculture at home, with her limited country and deplorable land system, was impossible, her statesmen were compelled to adopt a policy whereby the want could be supplied.

CONTRAST IN THE AGRICULTURAL SITUATIONS OF ENGLAND AND THE UNITED STATES.

We know that England has for centuries, and up to a comparatively recent date, persistently and effectually maintained the protective principle, until her manufacturing industries have become so prosperous that no nation can compete with her. Having thus attained commercial supremacy, she has strengthened her position by the policy of subsidizing her ships, having expended for that purpose in the last forty years $200,000,000; so that she is now able, notwithstanding her local territorial disadvantage, to preserve the enviable position she has long maintained among the nations of the world.

Our situation as an American nation is entirely different from that of England. We have a vast area of territory, and, with the exception of Alaska, included within an unbroken territorial unit. This immense area is so diversified that a large part of it is admirably adapted to successful cultivation and stock-raising, while the inexhaustible mineral resources and almost innumerable rivers and streams afford unsurpassed advantages for mining and manufacturing; and, with our facilities for cheap transportation by rail and water, we possess all the conditions necessary to the successful and permanent employments of civilization.

If it be true that during past ages agriculture has had the first place among all industries; if it is fundamental in the true system of political economy; if no nation can be great and enjoy continued prosperity without either having within her borders adequate arable lands to sustain her population, or being able to command their products at low prices, the conclusion is irresistible that, among the many employments in which our large and increasing population is engaged, none more deserves and demands the encouragement and assistance of legislation than the employment of the agriculturist.

For such reasons as I have already suggested, and others that might be enumerated, I do not see how any member of this body can refuse his support to the measure before us.

But, sir, we are charged with a solemn duty toward the bill on account of another and, I think, weighty consideration, which should not be overlooked.

From an early day in our national life it has been our unbroken policy to encourage settlement upon the public lands; and by the adoption of liberal land laws we have induced not only native but large numbers of foreign-born citizens to enter upon, improve, and cultivate the soil.

As the years have passed, realizing the sure and rapid growth in our manufactures and the extension and expansion of our internal commerce, those controlling national legislation have had a wise appreciation of the value of rural pursuits; and so, by the pre-emption law enacted by a Democratic Congress and the homestead and timber-culture acts passed when the Republican party was in power, a marvelous increase of farm and stock lands has been developed; and thus in the progress of that development manufactures, commerce, and agriculture have been intimately associated and have sustained, as they must in all great countries, that relation of interdependence which so greatly contributes to public good.

Now, as it appears to me with these facts in mind, it is not only unwise upon purely economic grounds but it is unfair as a matter of honest dealing either to permit or encourage any encroachment upon the legitimate field of agriculture; and in fairness to our agricultural classes I think competition which involves imitation of any of their products should not be allowed, if it can be rightfully prevented. If imitation of butter by the use of elements alien to its natural production is permitted without restraint, it can not be predicted what next, in the line of imitation will follow, nor how soon other products will find themselves confronted by a protected, patented semblance, the result of some new discovery, aided by enterprising capital; and, if these damaging aggressions upon the old and stable province of the farmer are permitted, it may not be long until he finds his occupation so seriously crippled that he can not do more than eke out a meager existence in its pursuit; and so I say, let us "hold fast that which is good," and protect our farmers in that domain of industry in which our land laws have incited and encouraged them to engage.

GROWTH AND RELATIVE IMPORTANCE OF AGRICULTURE IN THE UNITED STATES AS SHOWN BY THE LAST CENSUS.

I trust it will not be trespassing too much upon the time and patience of the House if I consider briefly the growth and magnitude of agriculture in this country and its relative importance.

Referring to the census of 1880 we find the following facts:

Capital invested in manufactures	$2,790,272,606
Value of manufactured product	5,369,579,191
Production of gold and silver	74,490,620
Capital invested in railroads	5,425,722,560
Total	13,660,064,977
Value of farms, including land, fences, and buildings	10,197,096,776
Value of farming implements and machinery in use on farms	406,520,055
Value of live-stock on farms	1,500,464,609
Value of farm products for 1879	2,213,402,564
	14,317,484,004

Nearly a million dollars more than the combined capital invested in manufactures and railroads together with the combined product of manufactures and the mines.

In 1880 the number of milch-cows in the United States was 12,443,120; the number of gallons of milk produced was 530,129,755; the number of pounds of butter made was 777,250,287; the number of pounds of cheese made was 27,272,489.

The rapid growth which the agricultural interests of the country have experienced is shown by the following statement:

The number of acres in farms has increased from 293,560,614 in 1850 to 536,081,835 in 1880. The assessed valuation has risen from $3,271,575,426 in 1850 to $10,197,096,776 in 1880.

The value of farm implements in use (on farms) has risen from $151,587,638 in 1850 to $406,520,055 in 1880.

The product of Indian corn has risen from 592,071,104 bushels in 1850 to 1,754,591,676 bushels in 1880; oats, from 146,584,179 bushels in 1850 to 407,858,999 bushels in 1880; wheat, from 100,485,944 bushels in 1850 to 459,483,137 bushels in 1880; barley, from 5,167,015 bushels in 1850 to 43,997,495 bushels in 1880.

Mr. Chairman, comment upon these statistics is unnecessary. They sustain and confirm my strongest statements relative to the importance of the farm and its multiplied products.

PAST IMMUNITY OF AGRICULTURE FROM THE ENCROACHMENTS OF OTHER PURSUITS.

Our farming classes have well understood the relation which their pursuit has ever sustained to other industries and to the general welfare; they have understood that their productions occupied a position in the world's commerce not subject to serious intrusion or encroachments by those engaged in other callings; and, until within a comparatively recent time, no device or ingenuity of man has been able, by the use of means in whole or in part foreign to legitimate agriculture, to invade the domain of the farmer and stock-raiser. His productions have had their well-defined place in the commerce of the world; they have been clearly identified, and their relation to the wants and necessities of those engaged in other vocations has been duly appreciated by all thoughtful and intelligent people.

The wheat, corn, oats, potatoes, hogs, horses, and cattle of the farmer and stock-raiser have constituted articles of consumption and use not susceptible of imitation, and statistics plainly show that butter has occupied a place as clearly defined as that of any of the numerous farm staples. And who that has ever lived upon the farm, or that has had intimate acquaintance with the productions of those engaged thereon and the processes of exchange constantly going on between farmers and trades-people, can for a moment fail to appreciate the importance to every farmer of preserving the domain so long by common consent assigned to him?

I now wish to call the attention of members to the practice of the prudent, thrifty wife of the farmer in regard to the exchange of butter and eggs for the numerous articles needed in the conduct of her household duties and the care and comfort of her family. Thousands of farmers are comparatively poor. The usual periods at which they realize on their heavier and more valuable products do not occur at frequent intervals, and in the mean time many small articles from grocers and merchants must be purchased. The necessary money is not always at hand. To obtain these little necessaries for the table, for the children, and for herself, the wife of the farmer devotes many hours of hard work to milking the cows, caring for and churning the milk, and working and perfecting the golden butter.

At the end of the week, with her butter and eggs, she drives to the nearest village or city and there exchanges them for the commodities she could not otherwise obtain without money or the incurrence of debt.

This may seem a trifling reference, a fact beneath the dignity of dis-

cussion in a body like this; but, sir, the time has come when a blow is not only falling upon the more wealthy farmers and the men engaged in conducting creameries in various parts of the land, but upon every poor farmer, his wife and children; and I know by experience and observation that, to permit the growth of such fraud and deception as this oleomargarine business, is to permit serious injustice and continuing hardship to rest upon every one of the poorer farmers and their families; and I, for one, am unwilling that this shall be accomplished if, acting within constitutional limitations, it can be prevented. For centuries the farmer has been secure in the enjoyment of his undisputed right to utilize the milk product of the cow as he might see proper.

Until within a few years past he was as secure in his butter product from unnatural imitation as in the meat product of his hogs and cattle. But a new era has dawned.

ORIGIN AND INCREASE OF BUTTER IMITATIONS; EXTENT TO WHICH THEY ARE SUPPLANTING OUR FOREIGN BUTTER MARKET.

From one of the crowded countries of the Old World, and during a period of distressing war, emanated a revelation by which certain elements and chemicals entirely disconnected from and foreign to butter might by compounding be made to resemble the genuine article. During the Franco-Prussian war a Frenchman by the name of H. Mége, having his attention called to the question of a substitute for butter, devoted himself to the consideration of certain chemical elements and fatty substances with a view to inventing a compound which should be manufactured and sold as such substitute.

Success crowned his efforts and a patent was obtained in France; and in 1878 he was granted letters patent by the Government of the United States. The ingredients of his invention were enumerated as follows: "Fats of all animals reduced by novel methods; oleomargarine mixed with milk, combined with bicarbonate of soda, and pepsin from prepared cows' udders, coloring matter added, and churned." Quite a respectable dish compared with later "improvements."

That discovery—the child of war, or, as was so aptly put during the debate by the gentleman from Illinois [Mr. HOPKINS], "the war measure of the inventive Frenchman"—justified for the time being, perhaps, has, together with the numerous "attachments" supplemented by the ingenious and irrepressible "Yankee" by way of other patents, become a sword in the hands of enterprising, unscrupulous capitalists with which to slaughter the innocent and unoffending. As a result of these discoveries, coupled with other causes, the vast farms and dairy interests of this country are to-day trembling upon the verge of ruin.

Sir, I am forever opposed to permitting any foreign war measure, however modified by men of inventive genius in our own land, to destroy any of the heretofore well-defined products of the farm.

We are having, and are liable to have in the future, sufficient trouble with such foreign elements as the Mosts, Spieses, Fieldens, Schawbs, and others, such as are now engaged in fomenting incendiary and murderous sentiments among the people, without permitting a Frenchman's ingenuity, aided by selfish American schemers, to "dynamite" the entire butter industry of the country.

I insist it is quite time that legislative war be declared against this "alien enemy;" and I am in favor, through the agency of this bill, of giving the French plan of butter-making such a blow as will at least discourage others than those now engaged in its manufacture from embarking therein.

A glance at the extent of the manufacture of butter imitations: Exact statistics as to the quantity manufactured seem unattainable. The Committee on Agriculture, who reported this bill, after most careful investigation, estimate the annual output of all factories in this country at 200,000,000 pounds. This may be too large an estimate; say the quantity does not exceed 150,000,000 pounds; yet that is one-fifth the total production of butter in 1880.

Let it be remembered that the purpose of the men who have engaged in this business is to imitate our old and reliable commodity, table butter; and, if necessary for their success, to utterly annihilate every creamery and dairy in the country.

In truth, Mr. Chairman, the average money-making American in his mad rush for wealth is hardened to all tender sentiments; and this furious ambition, so prevalent among our people, is leading to wreck and ruin thousands of our men, who but for it would shine as examples of good citizenship.

That those now engaged in manufacturing oleomargarine are accumulating fortunes rapidly there can be no doubt. If their product in alleged perfect imitation of butter, can be made, as has been shown, at 6 to 7 cents per pound; and if sold at the price of good butter, as it is, two things become at once apparent: the large profit to the manufacturer and his destructive power against the makers of good butter, which can not now be profitably produced ready for transit to market for less than 15 cents per pound. What a field for rapid accumulation of wealth, and what temptation to overcome any and every obstacle in order to attain it!

Before leaving the subject of the quantity of oleomargarine manufactured I beg to call attention to some statistics bearing upon exportations of butter, oleomargarine, &c., during the past ten years. The following table is interesting, as showing how oleomargarine is rapidly and effectually destroying the foreign trade of our farmers and those operating creameries:

Table showing the value of butter, cheese, and oleomargarine exported from the United States from 1875 to 1885.

[Compiled from the quarterly report Chief of Bureau of Labor Statistics for the three months ending September 30, 1885, page 204.]

Year.	Butter.	Cheese.	Oleomargarine.
1875	$1,506,296	$13,659,603	
1876	1,109,496	12,270,083	$70,483
1877	4,424,616	12,700,627	595,335
1878	3,931,822	14,103,529	203,280
1879	5,421,205	12,579,968	1,394,068
1880	6,690,687	12,171,720	2,599,025
1881	6,256,024	16,380,248	3,815,560
1882	2,864,570	14,058,975	3,015,892
1883	2,290,665	11,134,526	4,544,919
1884	3,750,771	11,663,713	4,842,362
1885	3,643,646	10,444,409	4,451,632

It will be seen from this table that in 1875 we exported $1,506,000 worth of butter, and up to 1880 the exportation of that article increased, the value of that year's exportation being $6,690,000; but in 1885 we exported only $3,643,000 worth of the same commodity. Certainly an alarming decrease.

Our first exportation of oleomargarine was in 1876, in which year the value of the export was $70,000; but, as will be seen from the table to which I have called attention, the exportation has increased from year to year until in 1885 it amounted to $4,450,000. The final result of such a decrease in the shipments of butter and the continued increase of the exportation of oleomargarine is apparent to the most casual observer.

Mr. BROWNE, of Indiana. Was that $4,450,000 worth of exportation shipped as oleomargarine or as butter?

Mr. STRUBLE. No matter how shipped, the evident purpose of the shipper was to supply a demand for butter.

Mr. BROWNE, of Indiana. How then does it happen to be noted in the statistics as oleomargarine? [Laughter.]

Mr. STRUBLE. I presume the shipper was required to state the character of the goods shipped; but that does not in the least militate against my assertion that the shipments were intended to, and did, meet a demand for genuine butter.

Mr. Chairman, the men engaged in manufacturing and vending oleomargarine have not failed to present their side of this controversy, as members of the House well know. They have told us, through their circulars, of the purity and delicious quality of the compound, made in part of offensive substances and poisonous chemicals. They have enlarged upon the capital and men engaged in its manufacture, the cheapness of the product, and hence the injustice to the poor of a policy that would deny them so cheap an article, at the same time well knowing that in all the markets the vendors of oleomargarine have offered the same, not by its own name but always, unless prohibited by the terms of strict penal statutes, as butter. They have urged consideration of the enhanced price of cattle and hogs for slaughter and use in that business. And in a late circular, of date May 10, 1886, purporting to be issued by the Chicago Live Stock Exchange, one of the points made is in the following language:

> In this market prime fat cattle are worth at least $2 per head more than they would bring if the manufacture of these desirable articles of food were prohibited or burdened with unjust taxation and the materials now used in their manufacture were thus to be used in other channels.

That the price of fat cattle and hogs is a little higher by reason of this manufacture I will not controvert; it should be so; but the thousands of men and women engaged in butter-making on the farm and in the dairy are not all nor nearly all engaged in fattening cattle; and while they are interested in the price of fat cattle and hogs, they are also interested in their cows and the butter and cheese produced therefrom, and they know that the slight benefits resulting by reason of any real or imaginary advance in fat hogs and cattle are many times overbalanced by the immense loss in the decline of the value of milch cows and butter; and, sir, when the enhanced price of fat cattle is urged as an argument in favor of continuing the unrestricted manufacture of oleomargarine, it should be borne in mind that for years past men in no way connected with the farm—capitalists possessing money made at other vocations, men of leisure anxious to further increase their gains, and in many instances not particular as to methods—have been swarming the plains of Texas, the Indian Territory, Wyoming, Montana, and other States and Territories, with herds of cattle, in great measure supplying the home and foreign market, and to that extent encroaching upon the domain of the actual farmer.

Sir, from a recent careful examination into facts connected with the Indian Territory, I estimate that within her borders can be found not less than five hundred thousand cattle, owned by men who have invested their money in that business for speculation. This number is but a small portion of the vast aggregate to be found scattered over the

great plains of the West. And when it is remembered that these cattle are raised at but a nominal cost, and that neither they nor the capital invested in them are assessed for taxes, it will be seen that the cattle syndicates are on hand ready and anxious to receive any direct or indirect profits arising from the oleomargarine industry; and that they are the parties who are, in the main, benefited by this alleged increased value to fat cattle, by reason of the utilization of their fats in the manufacture of oleomargarine.

DECLINE IN VALUATION OF MILCH COWS AND DAIRY PRODUCTS.

Finally, upon the point of loss to the farmers by reason of the decline in the value of milch cows and dairy products in the State of Iowa alone, let me quote from the remarks on this bill made by my colleague [Mr. FREDERICK] on the 25th instant. I have no doubt of the correctness of his statements. He said:

Iowa has 2,613,063 head of cattle, of which 992,313 are cows, which have decreased in valuation in the last two years $10 per head, amounting to $9,923,130, on account of the manufacture of oleomargarine and butterine. A gentleman from Fort Dodge, Iowa, told me a few days ago that one year ago he bought cows for dairy at an average price of $36 per head; this year he again bought for the same purpose at an average price of $26 per head, showing an actual decrease of $10 per head. These are startling facts, and all on account of the fraud perpetrated by the manufacturers and dealers in the imitation of the dairy product. The dairy industry in the State, amounting to $13,797,327, has depreciated at least 20 per cent., amounting to $2,759,465; this, together with the depreciation in the price of cows, amounts to the fabulous sum of $12,682,595.

In view of these and other startling facts it is high time the friends of farmers and of the entire agricultural interests of the country should awake to the needs of the hour. We can not and must not contemplate an attack upon any lawful industry, even though it may come in direct competitition with the usual and natural products of the farm; but here is a case of fraud and deceit so administered as to threaten the overthrow of a long established and most honorable employment, and against this unnatural and deceitful occupation I have no hesitancy in declaring my hostility.

CONSIDERATION OF THE BILL FROM A PROTECTIVE STANDPOINT; APPEALS FROM EASTERN PROTECTIONISTS.

In view of the imminent peril to our butter interests, I further declare that, even if the very tenable objection to the manufacture and consumption of oleomargarine on the ground of detriment to health did not obtain—as it does—I am in favor of this bill from the standpoint of a protectionist; and, while regret must be experienced that such an occasion has arisen, for one I am grateful that the policy of American legislation in the interests of the entire people of the country has established a principle which can now, in a time of serious need, be invoked for the alleviation if not absolute protection of our agricultural communities.

Sir, ever since the protective principle was established as the settled policy of this country, gentlemen advocating that policy have not failed to appeal to the representatives in Congress from agricultural States to assist them in maintaining that principle against that other and, as I think, suicidal policy of free trade. They have maintained that, by protecting American labor and capital, not only the prosperity of manufacturing localities would thereby be attained, but that of the whole country as well; that, as a result of successful manufacture, large populations dependent upon agriculture for food and clothing would be built up and maintained in a healthy condition of consumption; and that these populations would demand, and be able to pay for, all the varied products of the farm and garden; and thus there would be generally diffused throughout the land the blessings of a system calculated to promote in large measure the general good; and, by so doing, afford striking illustration of the wisdom of that wise constitutional provision giving Congress the power to legislate for the general welfare of all the people.

Readers of our legislative history well know how, to a very considerable extent, the representatives from agricultural sections of the country have, through all these years, stood loyally by the protective policy, and that, too, when it was perfectly apparent that the immediate and direct benefits resulting from the policy accrued to the manufacturers, and the more remote and indirect, yet not less certain, to the farmers, and I firmly believe and assert in this presence as my earnest conviction that, if the protectionists of the East in this critical time with the farmers, stand loyally by the interests of the latter and accord to them the direct protection they now so much need—not from the avaricious foreigners only, but from the greedy, grasping, and insatiable money-makers within our own borders—they may be assured that the law of reciprocity will not be forgotten by the representatives of those who now ask for assistance.

The record of the discussion had upon this bill discloses that not all of the members from the protection States of the East are favorable to its passage; and, notwithstanding reference by my colleague [Mr. HENDERSON, of Iowa] has been made to the attitude of the eminent and venerable gentleman from Pennsylvania [Mr. KELLEY], I desire to express my regret that such as the latter and his equally venerable and distinguished colleague [Mr. CURTIN] are not able to see that this measure is in the interests of so large and important a number of the people of the United States that they could well support it, without being justly liable to the criticism either of voting to protect one meritorious industry as against another or of supporting a measure calculated to add to the cost of food products. Gentlemen representing manufacturing and laboring constituencies are perfectly justified in considering carefully and earnestly every measure bearing upon the question of cheap and wholesome foods. No one ought to interpose any objection to such a course, when the foods affected by proposed legislation are wholesome and not made and sold in fraud of an article of general use and when they have a well-known and clearly defined place in the established commerce of the world.

Will it be contended at this period of our history that the laboring men in manufacturing and commercial centers can not afford to buy, to an extent reasonable and necessary to comfort, the legitimate products of the farm—that they can not afford to buy a wholesome quality of genuine butter, and hence should be permitted to buy any substitute which may be had at lower prices than the genuine article? If these queries be answered in the affirmative, what becomes of the claim of the protectionists who so vehemently maintain that their economic principle, thoroughly carried out, begets conditions of consumption upon which the farmer may safely rely for a reasonably profitable disposition of his products.

Is the much-vaunted protection, then, a failure? Can it not be relied upon to supply a healthy demand for the commodities of agriculture? Must we concede that articles of food, cheaper than those which are the natural output of the farm and constituting a fraud upon the honest product, are necessary in order that laboring men may comfortably subsist? Mr. Chairman, I am not yet ready to give assent to such propositions. Rather let it be maintained that, if the manufacturers and capitalists will content themselves with adequate profits; if laboring men will devote themselves to toil with persistency and faithfulness, as they generally do; and if they are also willing to exemplify prudence, sobriety, and economy, all of them may and will be able to command a comfortable livelihood; and commanding that, will have the means with which to buy from the farmer and merchant a portion of every good and wholesome thing essential to comfortable existence.

Before passing from this reference to the position of the distinguished gentlemen from Pennsylvania just mentioned, Messrs. KELLEY and CURTIN, I take pleasure in calling attention to the candid and statesmanlike words of Mr. HISCOCK, of New York, Messrs. BAYNE and SCOTT, of Pennsylvania, and other Eastern protectionists, whose names are equally worthy of mention.

As a representative of a district the great majority of whose people are directly and deeply concerned in butter and dairy interests, I thank all these gentlemen for their outspoken and able utterances. The farmers of Iowa will not soon forget their friends in this Congress, and it is a satisfaction to me to know that among those standing firmly and loyally by their interests is a considerable number of the ablest and most persistent advocates of protection.

CONSTITUTIONALITY OF THE PROPOSED LEGISLATION.

I now desire to discuss, briefly, the constitutionality of the proposed legislation. Its constitutionality is clear upon at least three grounds:

1. The taxing power of the Federal Government.
2. The police power of that Government.
3. Jurisdiction of Congress over interstate commerce.

Hilliard on Taxation, section 85, says:

The taxing power is an essential attribute of sovereignty, and can only be abridged by positive legal enactment clearly expressed. (State *vs.* Newark, 2 Dutcher (N. J.), 519; Debolt *vs.* Ohio, 1 Ohio St., 563.)

The Supreme Court in McCulloch *vs.* Maryland, 4 Wheat., 428, used this language:

It is admitted that the power of taxing the people and their property is essential to the very existence of the Government and may be legitimately exercised * * * to the utmost extent to which the Government may choose to carry it. * * * The people give to their Government a right of taxing themselves and their property; and as the exigencies of Government can not be limited, they prescribe no limits to the exercise of this right, resting confidently on the interest of the legislator, and on the influence of the constituents over their Representatives, to guard them against abuse.

Desty, in his work on taxation, says:

One purpose of taxation sometimes is to discourage a business, and perhaps to put it out of existence; and it is taxed without any idea of protection attending the burden. This has been avowedly the case in some Federal taxes (Veazie Bank *vs.* Fenno, 8 Wall., 533). The taxes have nevertheless been sustained.

The case of Veazie Bank *vs.* Fenno, cited by Mr. Desty, was decided in 1869. An act of July 13, 1866, imposing a tax of 10 per cent. on all notes paid out by any State bank after August 1, 1866, and intended to act as a prohibition of such issuance, was held by the Supreme Court to be constitutional.

The court made use of this language:

The tax can not be held invalid for being so excessive as to indicate a purpose to destroy the franchise of the State banks.

Justice Woodbury, delivering the opinion of the court in Pierce *et al. vs.* New Hampshire (5 Wheat., 608), said:

But I go further on this point than some of the court, and wish to meet the case in front, and in its worst bearings. If, as in the view of some, these license laws were really in the nature of partial or entire prohibitions to sell certain articles, as being dangerous to public health and morals, it does not seem to me that their conflict with the Constitution would by any means be clear. Taking for granted that the real design in passing them is the avowed one (prohibition)

they would appear entirely defensible as a matter of right, though prohibiting sales.

Justice Story, in his work on the Constitution, book 1, pages 677, 678, says:

Nothing is more clear from the history of commercial nations than the fact that the taxing power is often, very often, applied for other purposes than revenue. It is often applied as a virtual prohibition; sometimes to banish a noxious article of consumption; sometimes as a suppression of particular employments.

Chief-Justice Marshall, in McCulloch *vs.* Maryland, before mentioned, says:

That the power to tax involves the power to destroy is a proposition not to be denied.

Alexander Hamilton, in his masterly essay upon manufactures, under the head "Prohibition of rival articles, or duties equivalent to prohibition," says:

This is another and an efficacious means of encouraging national manufactures. Of duties equivalent to prohibitions there are examples in the laws of the United States, and there are other cases to which the principle may be advantageously extended.

Under the taxing power there is no limit as to the amount which may be charged. It often happens in certain avocations that the power to tax is used in aid of the police power, either by devoting the fund to the payment of the police power, or by making the tax so high as to be in its nature prohibitory.—*Durock's Appeal*, 62 Pa. St., 391.

Having considered briefly the extent of the taxing power of the Government, I wish to speak of its police power. And before entering upon a discussion of the general police powers of government, I desire to refer to the argument made during this debate by the gentleman from Georgia [Mr. HAMMOND].

Referring to Cooley's Constitutional Limitations, he attempted to show that the National Government has delegated all its police power to the several States. I do not agree with the honorable gentleman, but claim that in matters of foreign or interstate commerce the Federal Government can exercise full police powers. I quote also from the same distinguished author, at page 586:

Congress may establish police regulations as well as the States, confining their operation to the subjects over which it is given control by the Constitution. But, as the general police power can better be exercised under the supervision of the local authority, * * * the regulations which are made by Congress do not often exclude the establishment of others by the State.

The olice power delegated to the States was only intended to apply to matters of mere local concern, as is indicated by the court in Pierce *et al. vs.* New Hampshire, before cited:

The police power of the States was reserved to the States, but such police power extends to articles only which do not belong to foreign commerce or to commerce among the States.

Can it be claimed, upon reasonable grounds, that the manufacture and sale of oleomargarine throughout the United States is simply a local interest, affecting only the several States individually? Certainly not. It is an industry affecting interstate commerce. If the bogus butter manufactured in Armour's Chicago slaughter-pens were not sold outside of Illinois, and if none of the stuff were brought into the State from other States, its manufacture and sale within the limits of that State might properly be considered as wholly within the police jurisdiction of Illinois, and not a matter over which Congress could legislate. But the condition is contrary to fact. Oleomargarine is shipped from Chicago to all parts of the country; and, for anything there is to hinder, is shipped from different sections to Chicago.

Can the State of Illinois regulate this? Can she say to the honorable gentleman from Chicago [Mr. DUNHAM], "You must not ship this deleterious hog grease to the gentleman from New York [Mr. BEACH], lest you make him sick and thus the American Congress be deprived of the benefit of his timely objections?" Can she say to the gentleman from Philadelphia [Mr. KELLEY], "We will have no more of your brotherly love sham butter?" The State of Illinois possesses no such authority. She could properly prohibit the manufacture within her borders of any article she saw fit to prohibit; but she could not prevent her markets from being flooded by the same articles manufactured in other States, except as I shall state further on.

Mr. Story says, on page 227, volume 1, of his Constitutions:

It is obvious that it (the power of taxation) is an incident of sovereignty and is coextensive with that to which it is an incident. All subjects over which the sovereign power of a State extends are objects of taxation; but those over which it does not extend are, upon the soundest principle, exempt from taxation. The sovereignty of a State extends to everything which exists by its own authority or is introduced by its permission.

Does the sale and exchange of oleomargarine or any other product, between the different States through the usual channels of interstate commerce, derive their authority from, or are they introduced by, the permission of the individual States? Let Mr. Story answer:

Those powers are not given by the people of a single State. They are given by the people of the United States to a Government whose laws, made in pursuance of the Constitution, are declared to be supreme. Consequently the people of a single State can not confer a sovereignty which will extend over them.

Where then would be the remedy of Illinois against this obnoxious importation? The regulation of commerce between the different States is expressly prohibited to the States by the Federal Constitution:

No State shall, without the consent of Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and all such laws shall be subject to the revision and control of Congress.

This wise prohibition was designed to prevent the conflict of interests which would certainly arise between the different States were they allowed this latitude in legislative authority. And not only is this right denied to the State, it is expressly reserved to the Federal Government:

The Congress shall have power—

3. To regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

Here is the remedy for Illinois. Here is the police power which must be exercised in order to make her own regulations of any effect against importation from other States.

True, Illinois has the right to prohibit the importation of any articles declared by her laws to be deleterious to public health or against good morals, because such articles, in that they are held by her to be deleterious and pernicious, concern her most vitally, and are not considered within the purview of "commerce among the States," as contemplated in Pierce and others *vs.* New Hampshire, before cited. Under such circumstances the police power of a State is, of course, able to prohibit the importation of oleomargarine; but the lack of uniformity which would exist between the different States, in their views of this product, would make the exercise of the police power of the General Government much more efficacious than the exercise of that power on the part of the State.

On the other hand, if the product is viewed simply as a subject of interstate commerce and it is not declared by the State to be deleterious, the State of Illinois, in the illustration before used, has no remedy in herself.

This power of the Federal Government is constantly acknowledged; and, in a short time, will be acknowledged on this floor, in the discussions upon the interstate-commerce bill. Whenever this power has been appropriated by the States, the Supreme Court has, without exception, decided that such action was an unwarranted assumption of power residing exclusively in the Federal Government. The case of Gibbon *vs.* Ogden, 9 Wheat., 1, is a leading one upon this point.

Mr. Desty says again:

The appropriate regulation of the use of property is not a "taking it," within the meaning of the Constitution (R. R. *vs.* Richmond, 96 U. S., 521). So occupations requiring special regulation are subject to the police power (Cincinnati *vs.* Bryson, 15 Ohio, 625; Nightengale's case, 11 Pick., 168), as the sale of inflammable materials (U. S. *vs.* DeWitt, 9 Wall., 41). So the Legislature may prohibit a dangerous business (Kirby *vs.* Pa. R. R. Co., 76 Pa. St., 506; People *vs.* Hawley, 3 Mich., 330), as the sale of opium (State *vs.* Ah Chew, 16 Nev., 50); or may regulate the sale of any commodity the use of which would be detrimental to the morals of the people (State *vs.* Gurney, 37 Me., 156). And a penalty prescribed for the sale of dangerous articles is a constitutional exercise of the police power (State *vs.* Burgoyne, 7 La., 173).

Justice McLean, in the license case of Thurlow *vs.* Commonwealth of Massachusetts, says:

The acknowledged police power of a State extends often to the destruction of property. A nuisance may be abated. Everything prejudicial to the health or morals of a city may be removed.

Merchandise from a port when a contagious disease prevails, being liable to communicate the disease, may be excluded and, in extreme cases, it may be thrown into the sea.

This comes in direct conflict with the regulations of commerce, and yet no one doubts the power. It is a power essential to self-preservation and exists, necessarily, in every organized community. It is indeed the law of nature, and is possessed by man in his individual capacity.

Individuals, in the enjoyment of their own rights, must be careful not to injure the rights of others. These exceptions are always implied in commercial regulations, when the General Government is admitted to have the exclusive power.

Certainly whatever discriminations are made in taxation ought to be in the direction of making the heaviest burdens fall upon those things which are obnoxious to the public interests. (Youngblood *vs.* Sexton, 32 Mich., 426.)

Walker's Science of Wealth adds this to Adam Smith's four cardinal rules of taxation:

V. The heaviest taxes should be imposed on those commodities the consumption of which is especially prejudicial to the interests of the people.

Thus we see that both the taxing and police powers of the Federal Government are broad enough to cover this proposed legislation, while as a regulation of interstate commerce it is within the national authority, being at the same time denied to and impossible of accomplishment by the States individually.

It may be argued by the friends of oleomargarine that, if their industry can be thus taxed in order to protect the dairy interests, the sorghum interests of the Northwest can be taxed to protect the sugar-cane of Louisiana. I can see no point to the comparison. As well might it be said that the maple sugar of Vermont and New Hampshire trenches upon the rights of the Louisiana industry as to hold that sorghum in any way infringes upon the rightful domain of sugar made from the Louisiana cane. Maple sugar and sorghum are not imitations of the Louisiana sirup. They are not compounded of a minimum amount of the latter article added for the sake of flavoring, and a maximum amount of an apothecary's stock, put together in some mysterious way, to take the place of the genuine article in the markets, but not designed for nor capable of supplying the food qualities of the Southern cane. Maple sirup, sorghum, and sugar cane are independent food products, neither infringing upon the others any more than wheat infringes upon corn. In their simplest manufactured state, without the addition of any foreign article or the skillful manipulations of the chemist, they are fundamentally, wholly, and independently articles of food without addition, subtraction, or adulteration.

How absurd, then, to compare either of these products with a com-

pounded article acknowledged to be mainly composed of ingredients which are not food products, or those of an inferior, deleterious, and nauseating kind—refuse and offal—which have served their purpose and been relegated, by the decent sense of mankind, to the dung-heap.

Mr. Chairman, I have extended my remarks to a greater length than may have been necessary; but my apology, if any were due, would be the plea that I stand here as the representative of two hundred thousand people whose interests in all matters touching propositions of national legislation I am, for a brief time, under my solemn oath of office to subserve.

Oklahoma.

What political development lies before the Indians of the Indian Territory it is impossible to foresee; but one thing is evident, *the idea of maintaining permanently an imperium in imperio, such as now exists, must*, in some respects, *be abandoned*. The idea of Indian nationality is fast melting away, and the more intelligent Indians are themselves awaking to that fact. In a word, the Indians in the Indian Territory must sooner or later break up their tribal relations, take their lands in severalty, and to all intents and purposes become citizens of the United States, and be amenable to its laws, as well as enjoy all of its high and distinguished privileges. When that is done they will be prepared to dispose of the surplus lands they may own to the best advantage to themselves, and in a spirit *pro bono publico*.—*Hon. J. D. C. Atkins.*

SPEECH

OF

HON. ISAAC S. STRUBLE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 3, 1886.

The House being in Committee of the Whole on the state of the Union for debate on the bill (H. R. 7217) to provide for the organization of the Territory of Oklahoma, and for other purposes—

Mr. STRUBLE said:

Mr. CHAIRMAN: The bill now under consideration is indeed one of the most important measures that have been before this Congress. It is a measure that merits the most careful consideration at our hands. There are very serious questions involved, some of which have been suggested by the gentleman from Louisiana [Mr. KING] who has preceded me, questions in reference to the obligations of the Government, not only with respect to treaties with the Indians but in relation to our whole Indian policy, questions not only regarding the Indian policy but concerning the interests of thousands of the people of this country who are still without homes, and who are desirous of availing themselves of the advantages of our liberal and beneficent land system.

Sir, as I look at this Indian Territory and contemplate its present condition, I think the American people are to be congratulated that there exists to-day but one such Territory to plague and baffle the legislators of the present and reflect upon and measurably impeach the wisdom and foresight of the statesmen of the past.

I maintain, sir, that the present anomalous condition of this Territory is a complete assurance that the statesmen of the earlier days entertained a very inadequate conception of the future growth of this country.

It is evident that at the time the policy of settling Indians on territory west of the Mississippi was first projected it was not thought possible, and could hardly have been foreseen by even our wisest statesmen, that the vast plains of the far-away West would ever become, as now, the permanent homes of millions of prosperous and happy citizens of the Republic; that the barren plains of the great American desert would become the garden of the New World. Nevertheless, I can not refrain from expressing my astonishment that the able legislators, who not only laid the foundations of our present Indian policy but assisted in carrying the same into effect, should have so legislated in relation to any of the aboriginees of this country that the time would ever come, when in the very heart of the Republic there would be found an empire capable of sustaining millions of people yet reserved for the exclusive occupancy of outlaws, cowboys, cattle, and about fifty thousand Indians.

And, sir, I am still more astonished that our past legislators should have allowed a system to grow up under which this remnant of Indians can claim, as they do most persistently, exclusive ownership to such a vast domain; and not only this, but these Indians confront the American Congress and people with the assumption that henceforth and forever they are to constitute a body of people wholly independent of all power and control of the great Government which, over every other foot of soil within its territorial boundaries, is supreme; and they assert that, by virtue of most solemn treaty stipulations, this Government—not only as to such lands as they have never ceded back to the United States but as to every foot included within the limits of the Indian Territory—can never include either themselves or any of these lands within the jurisdiction of any State or Territory.

The Government, influenced by the urgent requests of the Indians, no doubt firmly believed that by securing their removal to a country more adapted to their wants and tastes, and not liable (as was then thought) to the encroachments of civilization, the unhappy conflicts between civilization and barbarism, which had disturbed the peace of the States, would never be repeated; but it does seem that the importance of asserting and maintaining the supremacy of the Federal authority, both political and judical, over every foot of our national domain should have been uppermost in the minds of those who were shaping the destinies of this nation.

But time will not permit of an extended reference to the history of our Indian policy.

What is the situation with which the majority of the House Committee on Territories recommend that Congress shall deal?

This bill presents for our consideration the question whether a serious and persistent attempt, by amicable arrangement, shall be made to secure for the use of any and all citizens of the land who may be desirous of seeking homes so much of the present Indian Territory as lies west of that portion now in actual occupancy by the "five civilized tribes," regard being had and provision being made for the smaller tribes now occupying the Territory by virtue of executive orders.

I beg leave to incorporate the bill, at this point, in my remarks:

Be it enacted, &c., That all that part of the United States included within the following limits, except such portions thereof as are hereinafter expressly exempted from the operations of this act, to wit: Bounded on the west by the State of Texas and the Territory of New Mexico; on the north by the State of Colorado and the State of Kansas; on the east by the State of Missouri and the State of Arkansas; and on the south by the State of Texas, comprising what is known as the Indian Territory and the Public Land strip, is created into a temporary government by the name of the Territory of Oklahoma: *Provided*, That nothing in this act shall be construed to impair the rights of persons or property or to impair any patent to lands now pertaining to the Indians in said Territory under the laws and treaties of the United States, or to include any territory occupied by any Indian tribe to which title has been conveyed by patent from the United States, without the consent of said tribe, or any territory which by treaty or agreement with any Indian tribe is not, without the consent of said tribe, to be included within the territorial limits or jurisdiction of any State or Territory; but all such territory shall be excepted out of the boundaries and constitute no part of the Territory of Oklahoma until said tribes shall signify their assent to the President of the United States to be included in the said Territory of Oklahoma, except for judicial purposes as provided herein, or to affect the authority of the Government of the United States to make any regulation or enact any law respecting such Indians, their lands, property, or other rights, which it would have been competent to make or enact if this act had never passed.

SEC. 2. That there shall be a governor, secretary, Legislative Assembly, supreme court, attorney, and marshal for said Territory, who shall be appointed and selected under the provisions of title 23, chapter 1, of the Revised Statutes of the United States, relating to the government of all the Territories. The provisions of said title shall have the same force and effect in the Territory of Oklahoma as in other Territories of the United States: *Provided*, That the Legislative Assembly and Delegate to the House of Representatives shall not be elected until the President shall order: *Provided further*, That no person shall be entitled to vote at the first election, or to be elected to any office, who has not been a *bona fide* resident of said Territory for sixty days previous to said election: *And provided further*, That the council in said Territory shall consist of thirteen members, and the house of representatives shall consist of twenty-six members, which may be increased to thirty-nine.

SEC. 3. That the Constitution and all laws of the United States which are not locally inapplicable shall have the same force and effect in said Territory of Oklahoma as elsewhere in the United States: *Provided*, That nothing in this act shall be construed to interfere with the local governments of any of the Indian tribes which may now be provided for by the laws and treaties of the United States, or which may exist in conformity thereto: *And provided further*, That the supreme court of the Territory shall fix the times and places, within the limits of the area occupied by the five civilized tribes, at which courts shall be held; and the jurisdiction of the courts held therein shall embrace all causes of action, crimes, and offenses arising in the Indian Territory heretofore cognizable in the United States courts of the western district of Arkansas, in the district of Kansas, and the northern district of Texas; and all laws heretofore passed granting jurisdiction to said United States courts within the Indian Territory are hereby repealed; but cases now pending shall be prosecuted to their final disposition therein, the same as if this act had not been passed.

SEC. 4. That the section of country lying between the States of Kansas, Colorado, and Texas, known as the Public Land strip, is hereby declared to be a part of the public domain of the United States, and shall be opened to settlement under the operation of the homestead laws only: *Provided*, That the sixteenth and thirty-sixth sections of said lands shall be reserved for school purposes.

SEC. 5. That whenever the Creek and Seminole tribes of Indians shall signify their assent to the provisions of this section, in legal manner, to the commission provided for in this act, and the President has issued his proclamation fixing the time as provided herein, the unoccupied lands ceded to the United States by said tribes under the treaties of June 14, 1866, and March 21, 1866, shall be opened to settlement, except the sixteenth and thirty-sixth sections, which shall be reserved for school purposes, and shall be disposed of to actual settlers only, in quantities not to exceed 160 acres, in square form, to each settler, at the price of $1.25 per acre. All persons who are heads of families or over twenty-one years of age, and who are citizens of the United States, or who have declared their intentions to become such, shall be entitled to become actual settlers on such lands. An accurate account shall be kept by the Secretary of the Interior of the money received as proceeds of the sale of said lands. The commission hereinafter created by this act is hereby authorized to confer with the Creeks and Seminoles to determine whether said Indians are entitled to any further compensation for said unoccupied lands. If said commission shall agree that further compensation should be paid said Indians, they may fix the amount of such additional compensation, not to exceed the sum of $1.25 per acre, less the cost of sale and amounts heretofore paid said tribes in the purchase of said lands, and any additional sum agreed upon by said commission to be paid said tribes for said lands, as provided herein, shall be placed to the credit of such tribes on the books of the Treasury.

SEC. 6. That whenever the Cherokee tribe of Indians shall signify their assent to the provisions of this section, in legal manner, to the commission provided for in this act, and the President has issued his proclamation fixing the time as herein provided, the unoccupied portion of the lands west of 96° of longitude, agreed to be ceded to the United States by the said tribe of Indians by the treaty concluded July 19, 1866, shall be opened to settlement, excepting the sixteenth and thirty-sixth sections, which shall be reserved for school purposes,

and shall be disposed of to actual settlers only, in quantities not to exceed 160 acres, in square form, to each settler, at the price of $1.25 per acre. All persons who are heads of families or over twenty-one years of age, and who are citizens of the United States, or who have declared their intention to become such, shall be entitled to become actual settlers on said lands. An accurate account shall be kept by the Secretary of the Interior of the money received as proceeds of sale of said lands, and said money shall be placed to the credit of the Cherokee Indian tribe on the books of the Treasury, after deducting the cost of sale by the United States, and the amount heretofore appropriated and paid to the Cherokee tribe as part compensation for said unoccupied lands: *Provided*, That nothing in this act shall be construed to authorize any person to enter upon or occupy any of the lands mentioned in this or the preceding section, for the purpose of settlement or otherwise, until after the Indian tribes mentioned and the commissioners herein authorized have concluded an agreement to that effect as provided herein, and laid the same before the President of the United States, who is thereupon authorized to issue his proclamation declaring such relinquished lands open to settlement, and fixing the time from and after which such lands may be taken. Any person who may enter upon any part of such lands contrary to the provisions of this act, and prior to the time fixed in the President's proclamation, shall not be permitted to make any entry upon such lands or lay any claim thereto; and satisfactory proof shall be required by the Commissioner of the General Land Office to the effect that this provision has not been violated by the claimant to any of such lands. Any person violating the provisions of this section shall hereafter be ineligible to take any homestead or make any entry of lands in said Territory of Oklahoma.

SEC. 7. That the President may, at such times as he may deem it necessary, direct a land-office to be opened in the Territory of Oklahoma, and may nominate and, by and with the advice and consent of the Senate, appoint the usual officers to conduct the business of said land office; and the Commissioner of the General Land Office shall, when directed by the President, cause the various portions of said lands to be properly surveyed and subdivided, where the same has not already been done. It is hereby made the duty of the Commissioner of the General Land Office to carefully examine each claim taken under the provisions of this act before issuing a patent to the claimant; and if it shall appear that said claim was not taken in good faith, he shall refuse a patent, and declare all prior proceedings before had in such case to be null and void; and all persons settling on said lands under the provisions of this act shall be required to maintain a continuous personal residence of five years before obtaining title thereto, agreeably to the provisions of the homestead laws; but payments for said lands may be made in installments, under such rules and regulations as may be prescribed by the Secretary of the Interior.

SEC. 8. That the President of the United States is hereby authorized and directed to nominate and, by and with the advice and consent of the Senate, appoint a commission to be composed of five persons, whose duty it shall be to enter into negotiations with the several Indian tribes within the limits of Oklahoma Territory, for the purpose of procuring the assignment of lands in severalty and the purchase by the United States of the relinquished and unoccupied lands. The powers and duties of said commission shall, under the direction of the President, extend to all matters relating to the settlement of the Indians on other lands or reservations than those now occupied by them, and to their education, civilization, and citizenship. The commission is authorized to enter into such agreements with the Indian tribes as it may deem necessary to accomplish the purposes of this act, and to submit the same, through the President, for the action of Congress. The compensation of the members of said commission shall be at the rate of $3,000 per annum, and not more than three of whom shall be members of one political party. They shall also be allowed, in addition thereto, their actual necessary traveling expenses, stationery, and postage. They shall have power to appoint a secretary, who shall receive an annual compensation of $1,800, and such allowances for traveling expenses as he may actually incur.

SEC. 9. That it shall be unlawful for any person, for himself or any company, association, or corporation, to directly or indirectly procure any persons to settle upon any lands opened to settlement by this act, with a view to their afterward acquiring title to said lands from said occupants; and the parties to such fraudulent settlement shall severally be guilty of a misdemeanor, and shall be punished, upon indictment, by imprisonment not exceeding twelve months, or by fine not exceeding $1,000, or by both such fine and imprisonment, in the discretion of the court.

SEC. 10. That all leases of lands belonging to the United States or held in common by any of the Indian tribes within the Territory of Oklahoma, as organized by this act, including the Cherokee strip west of the ninety-sixth degree of longitude, whether controlled by persons, corporations, or others, except such leases as are held for the purpose of cultivating the soil strictly for farming purposes, are hereby declared void and contrary to public policy; and it is hereby made the duty of the President, immediately after the passage of this act, to cause the lessees of said lands, or persons illegally occupying the same, to be removed from said lands.

SEC. 11. That the act of Congress approved July 27, 1866, which incorporated the Atlantic and Pacific Railroad Company, and the act of Congress approved July 25, 1866, granting lands to the State of Kansas to aid in the construction of the Kansas and Neosho Valley Railroad and its extension to Red River, and an act of Congress granting lands to the State of Kansas to aid in the construction of the Southern Branch of the Union Pacific Railway, and a telegraph, from Fort Riley, Kans., to Fort Smith, Ark., approved July 26, 1866, or any other acts of Congress so far as they relate to lands granted in said Indian Territory and the Public Land strip, except for the right of way and necessary stations, as now provided for by law, are hereby repealed; and any or all right to said lands is hereby forfeited to the United States; and no railroad company now organized, or hereafter to be organized, shall ever acquire any lands to aid in the construction of its road, or in consequence of any railroad already constructed, either from the United States, or from any Indian tribe, or from any Territorial government or State Legislature within the limits of said Indian Territory.

The following amendments were recommended by the committee:

In section 11, line 14, after the word "stations," insert "as far as said roads may now be completed."

At the end of the bill add the following amendment:

"SEC. 12. That neither the Legislative Assembly of said Territory nor any county, township, town, or city therein shall have power to create or contract any indebtedness for any work of public improvement, or in aid of any railroad constructed or to be constructed, nor to subscribe for or purchase any shares of stock in any railroad company or corporation."

NATURAL RESOURCES OF THE INDIAN TERRITORY AND PUBLIC-LAND STRIP.

Here, in the very center of the Republic, surrounded on all sides by a teeming and prosperous civilization, lies a territory which, including the Public Land strip, is larger than any State east of the eastern line of that territory, except the single State of Minnesota; a vast and beautiful tract of prairie and timber country, well watered by creeks and rivers, with a climate unsurpassed, a soil possessed of all the qualities for successful agriculture and stock-raising; with inexhaustible beds of coal, salt, and other minerals; with abundant water-power and navigable rivers bordering and running into the Territory—in short, a land possessing all the elements for a great and prosperous commonwealth.

Sir, one of the peculiarities attending the opposition to this bill is the persistency with which those who favor the indefinite continuance of the present state of barbarism in the Indian Territory attempt to convince this body that that country is a sandy, worthless expanse, hardly capable of sustaining its present scanty population of Indians, cattlemen, and outlaws.

Travelers are daily passing through that country, and their reports only confirm what is known throughout the West—that the Indian Territory is the garden of the western part of the Mississippi Valley.

Hon. J. D. C. Atkins, Superintendent of Indian Affairs, has spent several weeks in that Territory, going all through it and making a careful investigation of its resources, and his statements upon the subject confirm in every particular the general opinion of the wonderful productiveness and natural wealth of that region. Here is the testimony which he gives upon page 9 of his report for 1885:

The Indian Territory has an area of about 64,222 square miles, or about 41,102,280 acres. It is situated between the Arkansas (Red) River and the thirty-seventh degree of north latitude, and nearly in the center of the United States east and west. Its climate is delightful and its resources almost unbounded. While there are some poor lands within its limits, yet taken as a whole it is hardly excelled in its natural resources by any other portion of the United States of the same extent. Its soil is adapted to the raising of all the cereals, and cotton is cultivated with profit in some portions of the Territory, and its grazing resources and adaptability to raising stock are unexcelled. It has an abundance of water, with timber in different portions in limited quantities, while an abundance of coal of good quality is found.

The resources of the Public Land strip, or No Man's Land, as it is frequently called, and which our opponents are disposed to hold up to ridicule as an insignificant, sandy cactus patch, is thus described by a reliable party in the Chicago Inter Ocean:

I have been all over Pennsylvania, Ohio, and Indiana, much of Illinois and Kansas, and in deference to truth must say I have never seen so fine and compact a body of farm land as in No Man's Land. It is covered with buffalo grass of the very best quality. There is little or no sand excepting along the bluffs of the Beaver or North Canadian River, and these are confined to the eastern part. There is also some sand along the river bottom adjoining the Indian Territory. Farther up the bottoms are as fine lands as can be found, and are from 1 to 3 miles wide. There is not a particle of saline efflorescence on any of the high-lands, but in the bottoms of the eastern part there is some, but not more than is found on many streams in Kansas. Two-thirds of the bottom lands are of the best grade. There are very few cacti and yuccas to be found in the country—less than in Southern Kansas. The country is being rapidly taken, and will all be settled upon in the near future. Cattle-men, who have occupied this magnificent domain for years, now spread false reports in regard to it to keep settlers out, but it will all be taken within a year. Several towns have been laid out in it.

TOTAL AREA OF INDIAN TERRITORY AND PUBIC-LAND STRIP.

There are embraced within the limits of the Indian Territory and the Public Land strip 44,774,920 acres. This would afford 160 acres each to 279,843 families. Allowing four persons to a family, we find that the Indian Territory would support a purely agricultural population of 1,119,372; but so far we have made no calculations upon the town population, which would doubtless nearly double that of the rural districts.

The census of 1880 shows that in the States of Iowa, Nebraska, Kansas, Missouri, and Texas about 60 per cent. of the population were engaged in agriculture, and it is probable that Oklahoma would have about the same proportion. Therefore two million five hundred thousand is a moderate estimate of the number of people which the Indian Territory is capable of supporting, basing our calculation upon the density of population in other States of the West.

AREA OF LANDS WEST OF FIVE CIVILIZED TRIBES.

I wish now to call attention briefly and somewhat in detail to that part of the Territory west of the five civilized tribes, that portion which can, under the provisions of this bill, be made available to the occupancy of white people.

First. Let me refer to Oklahoma proper, containing 1,887,800 acres, an area two and one-half times that of Rhode Island. If divided into farms of 160 acres each, there will be 11,798 farms; and, estimating four persons to a farm, that famous country alone would support an agricultural population of 47,192, or a general population of 100,600. No Indian has had the right to occupy or settle on any of these 1,887,800 fertile acres since the Creeks and Seminoles, in 1866, sold that country to the United States. No Indian ever claimed an acre of that land; and to-day it is entirely overrun, as I shall prove further on, by the cattle of non-resident corporations.

Second. The Choctaw and Chickasaw "leased lands," as they are called, together with the land to the north of the Canadian River and occupied by the Cheyennes and Arapahoes, the whole situated in the southwest part of the Indian Territory and comprising over 8,000,000 acres, an area ten times the size of Rhode Island, and as large as the combined area of Massachusetts and Connecticut. Upon the same basis of calculation as I used in connection with Oklahoma, that country would divide into 50,000 farms, with a farming population of 200,000 and a general population of over 400,000. It is now occupied solely by about 6,000 blanket Indians (half of whom are there only during ex-

ecutive pleasure). This magnificent stretch of country was bought of the Choctaws and Chickasaws in 1866.

Third. The country held under executive order by 527 Tonkawas, Iowas, and Kickapoos, and embracing 534,884 acres, which would make 3,343 farms of 160 acres each.

Fourth. The Cherokee outlet of 6,022,844 acres, or 37,642 160-acre farms, supporting 150,000 farmers, or a general population of 400,000. This fertile tract, larger than the State of New Jersey and larger than seven Rhode Islands, is fenced in with wire fences by about one hundred different cattle companies, some of them controlled by foreign capitalists. Neither Indians nor whites, except cowboys and traders, are allowed to settle upon those lands.

Fifth. The Public-Land strip or "panhandle" of 3,672,640 acres. This area, upon our former calculations, would make 22,954 160-acre farms and support a farming population of 91,000, or a general population of 200,000. Over this tract of country there is no government nor court jurisdiction. Every man is a law unto himself. Here the criminal is safe from the demands of justice, for no officer of any court has any right to arrest men there.

There are no Indians in Oklahoma, the Cherokee Outlet, or the Public Land Strip. Thus it will be seen that the half of the Indian Territory, over which this bill proposes to extend the benefits of a civilized government, is in the possession of cattle-men, fugitives from justice, and only about 7,000 Indians, supported by the Government, and mostly wearing citizens' clothes, though generally denominated "blanket" Indians.

Now, Mr. Chairman, I think it is high time that something be done to change the anomalous condition of affairs in this Territory. And, while this bill proposes throughout to recognize every treaty obligation by which this Government is bound, while it not only proposes to do that but to send a commission to examine carefully into all the questions relating to the rights of these Indians in order that equity and justice may be done, yet I insist that it is the duty of this Congress to provide the means, and the duty of this administration to see that those means are carried into execution, by which these vast plains of excellent land may be opened to the occupancy of the poor people of this country. We all know very well that every vocation in life is crowded. All the fields of labor are occupied. We are aware of the distress that has prevailed, and now prevails, throughout all of our labor avocations.

In the face of this gigantic labor problem which now confronts us, it seems to me that one of the wisest things that can be done to bring relief to these laboring people, crowded and oppressed as they are, is to open to them this desirable public domain that they may go in, occupy and possess the land, establish homes, rear their children, and surround themselves as quickly as may be with the influences of the same civilization which is now enjoyed throughout the Western States—but a few years ago as wild as this territory of which I am now speaking.

NEEDLESS SURPLUS OF LANDS HELD BY THE INDIANS.

I now wish to call the attention of the committee to a table which I have prepared, giving the population, acreage, and per capita holdings of the different Indian tribes in the Indian Territory, together with the surplus land remaining in each reservation, after allowing each Indian, man, woman, and child, 160 acres:

Name of tribe.	Population.	Acreage of reservation.	Acreage per capita.	Acreage required by Indians, allowing them 160 acres for family of four.	Surplus.
Cherokee	23,000	5,031,351	218½	920,000	4,111,351
Creek	14,000	3,040,495	217½	560,000	2,480,495
Seminole	3,000	375,000	125	120,000	255,000
Choctaw	18,000	6,688,000	371½	720,000	5,968,000
Chickasaw	6,000	4,650,935	775⅔	240,000	4,410,935
Quapaw	52	56,685	1,095	2,080	54,615

* No Indians.

Several minor tribes are not mentioned in these tables.

These statistics of population are probably greatly exaggerated, besides embracing several thousand "white Indians" and white laborers who work for the Indians, and 6,000 manumitted slaves. Robert L. Owen, United States Indian agent at Union agency, Muscogee, Ind. T., in his report for 1885, estimates that there are among the five civilized tribes alone 5,000 white Indian citizens and 17,000 farm laborers. John Q. Tufts, United States Indian agent at same place, for the year preceding (1884) reports that there were at the date of his report 16,000 white laborers among these five tribes.

Not only do these estimates embrace a large number of mixed breeds (and it should be borne in mind that any one who can prove the slightest trace of Indian blood is reckoned an Indian by the Indians themselves and the agents) and white citizens, by adoption or marriage, and white laborers residing in the Territory upon Indian permits, but the census returns are "stuffed" to make the aggregate number appear larger than it really is. An illustration of this is shown in the case of the Cheyennes and Arapahoes.

For several years exaggerated returns of the number of these Indians have been forwarded to the General Government by those who are interested in receiving and handling supplies for a larger number than really exists; but when General Sheridan, in August last, made an official count of those two tribes they fell below previous reports about 40 per cent. The count of General Sheridan is embodied in the annual report of the Commissioner of Indian Affairs, from which we have compiled this table; but General Sheridan not having made an "official count" of any other tribes than these two, it is to be presumed that the estimates for the population of those other tribes are from 25 to 40 per cent. too large.

Not only are these returns exaggerated, but the Indians are decreasing in numbers, as is evidenced by the reports of different Indian agents.

Mr. Tufts, before quoted, under date of August 29, 1884, writes:

The number of full-blood Indians is decreasing, while the increased number of mixed-bloods and the adopted white and colored citizens make the population about the same from year to year.

The number of whites is increasing. The cause of this increase is, that the work done in the country is by whites and not by Indians. The mixed-bloods will work some, but the full-bloods hardly ever. Under the laws of the country a citizen is entitled to all the land he may have improved. An arrangement is easily made with a white man who will make a farm for an Indian and give him a portion of the crop for the use of his name, and after a few years give him possession of the farm. Thus it is that more farms mean more white men. The number of whites within this agency, who are laborers for Indians, employés of railroad companies, licensed traders, pleasure seekers, travelers, and intruders, must be about 35,000, or half the number of Indians.

Sir, what a startling monopoly in land do these figures reveal! Such a showing is enough to make a board of railroad directors turn pale with envy. No wonder the Indians are satisfied with their condition.

Thankfulness to the great Manitou should fill their impecunious souls as they contemplate their proud position of the richest landed aristocracy in the world.

General Sheridan in his annual report says on the subject:

The Indians are the richest people in this country as communities. Their reservations include some of the best land, and if divided among the heads of families each family would have thousands of acres. If I may be permitted to suggest, I would recommend that each family be given and located on the 320 acres now provided for them by law in case of actual settlement. The Government should then condemn all the balance of each reservation, buy it in at $1.25 per acre, and with the proceeds purchase Government bonds, to be held in trust by the Interior Department, only giving to the Indians each year the interest on the bonds for their support. Let this money, if you please, be disbursed the same as the money appropriated each year by Congress. * * * It would be their own money, and take the question of annual appropriations for them out of Congress.

Take the Cheyenne and Arapaho Indians as an example. They have nearly 4,300,000 acres; 200,000 would settle them in severalty, and the 4,100,000 remaining, if purchased by the Government in the manner described, would yield an annual interest sufficient for their support.

The same plan could be extended to cover most of the Indian reservations in the country.

I only propose that the Government should buy these land for simplicity and safety. Settlers and speculators would buy them and take them at the average of $1.25 per acre. Some of them are now worth eight or ten dollars per acre. In this way the Indians would have perpetual security in the principal until Congress chooses to give it to them to be used as they may see fit. The Government would lose nothing, and the Indians would only be getting the value of their property safely invested. The Indians are not poor; they are only incompetent at the present time to take care of their own property, and therefore require looking after. The treaties we have made with them might interfere with the condemnation and purchase of these lands by the Government, but Congress could easily devise some means of overcoming this difficulty.

This monopoly of lands by the Indians has not resulted in good, even incidentally, to any one except cattle syndicates and outlaws, who have grown fat upon the rich pickings which the Indians could not appropriate, but which they were unwilling to share with, or dispose of to, the honest, but homeless and starving poor of their less favored pale-face brethren.

Mr. Chairman, I should consider myself guilty of the most glaring inconsistency if, after taking the strong grounds which I have in favor of the forfeiture of all unearned railroad land grants, I should be blind to the evils arising from this vast alien appropriation of land in the Indian Territory.

Sir, when I entered upon the study of this question I confess to have entertained something of the old idea, taught us in our youth and now rehashed for our maturer minds by the agents of the cattle syndicates and honest but sometimes misguided philanthropists, that the Indians have ever been the victims of the greedy white men; that Uncle Sam has always ruled poor Lo with a rod of iron; but a closer intimacy with

facts, as they are recorded in the files of our Indian Office, has somewhat changed my views on this subject.

Some of these facts were very startling and suggestive to me; and I beg leave to call the attention of the committee to some tables which I have prepared and which bear upon this subject. Notwithstanding the surplus of 28,578,990 acres, as shown in the table before mentioned, which these Indians hold either by qualified fee or during sufferance of the President, and for which they do not and can not have any use, we are paying all these tribes, except the Cherokees, Peorias, Ottawas, Wyandottes, Tonkawas, and Wichitas, an immense aggregate sum of money in temporary and perpetual annuities.

INDIAN ANNUITIES.

Table showing perpetual and temporary annuities to various Indian tribes.

Tribe.	Perpetual annuity.	Temporary annuity.
Creek	$69,968 40	$4,710 00
Seminole	28,500 00	3,032 89
Chickasaw	3,000 00	.....
Quapaw	.....	2,060 00
Shawnee	5,000 00	.....
Senecas	.....	1,060 00
Osage	18,456 00	.....
Kansas	10,000 00	.....
Pawnee	30,000 00	.....
Sac and Fox	60,000 00	.....
Pottawatomie	20,647 65	5,000 00
Ponca	.....	10,000 00
Iowa	.....	2,876 00
Kickapoo	4,493 24	.....
Cheyenne and Arapahoe	.....	21,700 00
Apache, Kiowa, and Comanche	.....	22,700 00
	250,065 29	73,237 89

Besides the perpetual and temporary annuities here shown, we are under obligation to pay aggregate sums as follows: To the Poncas, $24,000; to the Otoes and Missourias, $45,000; to the Cheyennes and Arapahoes, $240,000; to the Apaches, Kiowas, and Comanches, $360,000; making a total aggregate of $669,000.

Most of these permanent annuities have been running for over fifty years.

To the several tribes of the Indian Territory, then, we are paying and are to pay, as long as wood grows and water runs and there is a solitary Indian left in the respective tribes, a perpetual annuity of over a quarter of a million of dollars.

To the same tribes we are paying, and are to pay during the pleasure of the President, an annuity of over $73,000.

In addition we have agreed to pay them an aggregate sum of $669,000.

With this golden stream annually flowing into their coffers, with a vast expanse of the richest territory in the United States, with a surplus area of over 28,000,000 acres (for which they have no use), with the large amounts annually received from cattle syndicates for the use of their surplus lands, and with the immunity they enjoy from all responsibility for the support and defense of the national Government, no wonder they are the richest people per capita in the world, and are satisfied to snap their fingers at the demands of commerce and civilization and the cries of the homeless white citizens of our Republic who have borne the heat and burden of the day, upheld the national flag in its peril, and now ask for a quarter-section apiece of the domain they helped to preserve.

It should be remembered that only a small per cent. of these Indians are what are known as "blanket" Indians, and in need of support from outside agencies; on the contrary, about 85 per cent. of these 76,000 Indians dress wholly in white men's clothes, and about 12 per cent. more dress partially in the garb of civilization; and I hold that Indians who dress and live and eat like white people do not require to be fed by the national Government with a silver spoon.

It may prove instructive to us in this discussion to survey the past as well as the present and future of Indian expenditure. We find upon examination that we have been paying large sums annually to these same Indians for many years; and that the aggregate foots up to a large amount.

Name of tribe.	Date at which annuity began.	Amount of annuity.	Number of years annuity has run.	Aggregate.
Creek	Aug. 7, 1790	$1,500 00	96	$144,000 00

Total	.....	313,750 29	.....	14,407,089 67

Considering that no reckoning has been made of the cash and merchandise which has been given to these Indians every time we made a "treaty" with them (and we have made nearly four hundred), nor of the expenses of the Army and Indian Office in attending to their needs, but only to the cash value of the annuities paid them, one will readily see that only a small part of the cost which these Indians have entailed upon the Government has been alluded to.

EXPENDITURES OF INDIAN BUREAU 1832-1885.

I desire, Mr. Chairman, to incorporate in my remarks the following table:

Tabular statement showing the number of Indians provided for at the expense of the Government in each year, together with the annual expenditures of the Indian Bureau since its organization.

Year.	Estimated number of Indians.	Amount of expenditure.	Year.	Estimated number of Indians.	Amount of expenditure.
1832	70,000	$1,352,419 75	1859	109,500	$3,490,534 53
1833	70,000	1,802,980 93	1860	110,000	2,991,121 54
1834	70,000	1,003,953 20	1861	115,000	2,865,481 17

1855	92,500	2,772,990 78	1882	(†)	5,124,648 89
1856	98,700	2,644,263 97	1883	(†)	5,563,104 13
1857	99,000	4,354,418 87	1884	(†)	5,291,985 91
1858	108,300	4,978,266 18	1885	(†)	5,819,104 10

*For the half year, from January 1, 1843, to June 30, 1843. The statement of expenditures is by calendar years to 1843 and by fiscal years from that time. The population of the Cherokees, Choctaws, Chickasaws, and Six Nations of New York has been uniformly excluded.

† Estimated number of Indians not given in the Indian reports.

Truly, Mr. Chairman, the present honorable Secretary of the Interior was right when he said, in his last annual report—

Whatever may be said about the injustice and cruelty with which the Indians have been treated in the past, characterized by some as a "century of dishonor,"

the Government is now, as all must admit, putting itself to great trouble and expense for a very small and inutile population.
